The 2015 wildland fire season and the damage it did across Northern California as a whole is likely to be remembered for one horrifying fact, according to Los Angeles-based Fire Family Foundation Executive Director Robin McCarthy.

"This is the largest loss of property since the 1906 earthquake for firefighters," she told Lake County News.

McCarthy said that, altogether, 33 firefighters across Northern California lost their homes while they were simply out doing their jobs on the lines of the Butte and Valley fires.

Of those firefighters, 16 were in the South Lake County District. Dan McCabe, president of the South Lake County Firefighters Association, said that number included current or past South Lake County Fire and Cal Fire personnel – both paid and volunteer, as well as a board member – and their families.

The third most damaging wildland fire in California's history, the fire began on Saturday, Sept. 12, 2015, on Highway Valley Road in Cobb and peaked seven days later, according to Cal Fire.

It burned approximately 76,067 acres, primarily in Lake County, but with some of that acreage also in neighboring Napa and Sonoma counties.

The fire resulted in four confirmed fatalities, with authorities unable to confirm if a fifth man who disappeared during the fire also ultimately perished in it.

There also were four significant firefighter injuries when Cal Fire Copter 104's crews were caught in a burn over within the first hour of the fire. Cal Fire said one of those firefighters' injuries were serious enough that he did not return to work.

Cal Fire said the effort to fight the fire involved 4,400 personnel, 437 fire engines, 22 helicopters, 56 bulldozers, two airtankers, 100 hand crews, 75 water tenders, and more than 200 cooperating local government and volunteer agencies assisting from throughout the nation.

Based on Cal Fire's final damage assessment on the fire, released in January, the fire destroyed approximately 1,955 structures, including 1,308 residences, 66 commercial buildings, 558 outbuildings and 23 other structures. Another 93 structures were damaged.

All but eight of the destroyed or damaged structures were in Lake County. Two were in Napa and six in Sonoma, Cal Fire said.

This summer, Cal Fire released its final determination that the fire had been sparked by faulty wiring to a hot tub at a Cobb residence.

Cal Fire reported that it paid $59 million out of its emergency fund to fight the fire, with the state seeking additional assistance from the Federal Emergency Management Agency.

State Sen. Mike McGuire said the fire resulted in $1.2 billion in damage in Lake County alone.

More than 50 percent of acres burned in the State Responsibility Area in 2015 were in Lake County, according to Cal Fire.

And in 2015, the South Lake County Fire Protection District – one of the state's largest fire districts by land area, according to district Board President Jim Comisky – was hit especially hard.

Cal Fire said 63 percent of the district's footprint burned between the Jerusalem and Valley fires in 2015.

As a result, the men and women of the South Lake County Fire Protection District would suffer devastating losses that mirrored those endured by the community members they serve.

Help from the state, Fire Family Foundation, local friends

The Fire Family Foundation became a nonprofit in 2008, and is the charitable hand of the Firefighters First Credit Union, headquartered in Los Angeles but covering the entire state of California, McCarthy said.

She explained that it was formed in response to needs that arose from the Sept. 11, 2001, terrorist attack.

Firefighters, she explained, are part of a larger brotherhood.

The credit union had created a fund to help the firefighters' families impacted by the attack, and ultimately led to a desire to create a foundation to provide financial assistance to departments, firefighters and their families impacted by disaster.

When the Valley fire first hit early last September, the foundation decided to open a relief fund specifically for Middletown, and issued a challenge by the California Credit Union League, McCarthy said.

The foundation also partnered with Redwood Credit Union and Mendo Lake Credit Union, which already were part of fire-related fundraising efforts. "They know the community much better than we do," she said.

Ultimately, the foundation – in partnership with the California Credit Union League – provided $167,800 for care, counseling, housing and community support to assist children and families in recovering from the fire, McCarthy said.

Another piece of the funding, about $18,000, went specifically to help firefighters and came about through a separate fund called "Helping Firefighters Heal" through which Northern California fire departments could adopt the impacted firefighters, McCarthy said.

She said that funding effort – a partnership of the Fire Family Foundation and the Oakland Firefighters Random Acts – determined immediate needs and provided up to $1,000 per impacted firefighter.

McCarthy said the foundation doesn't provide cash, but offered gift cards to cover needs such as appliances, fencing, tools and, in one firefighters' case, paid for training because of loss of training paperwork.

In some cases, she said fire departments that adopted the firefighters who lost homes went out shopping and delivered the items to the individuals they were designated to help.

"It really varied depending on the individuals and where they were," she said.

McCarthy added, "This is literally what we do."

Among the foundation's efforts on the ground in Lake County, it donated money to help rebuild local youth sports programs, including the Middletown Colts, soccer boosters, Clear Lake Youth Soccer, Middletown Youth Little League and Middletown Youth Basketball, McCarthy said.

She said the foundation also donated funds to help with South Lake County Fire's Christmas event, which handed out toys to hundreds of children in December, and hosted Santa and Mrs. Claus.

The foundation also provided funding to repair the Pine Summit Recreation and Social Club, gave funds to support school garden programs – "dirty therapy" for children – throughout the burn area as well as money to help the Cobb Mountain Lions Club Relief Center.

"They've been a key player," Cal Fire Division Chief Greg Bertelli said of the Fire Family Foundation.

There also was an effort by other local firefighters to assist.

In October, the Northshore Fire Association held a pancake breakfast benefit for firefighters who lost homes in the Valley fire.

That event may well have been the most successful pancake breakfast in memory. Northshore Fire Chief Jay Beristianos said it generated $10,000 to assist the impacted firefighters.

The toll on employees

Bertelli was a battalion chief the day he responded to the Valley fire last year. Since then he's been promoted to division chief, and also is South Lake County Fire's chief.

He said the district's employees who were affected are moving forward with their lives. There is a fair amount of turnover among the district's professional firefighters, with some moving on to other jobs. But he's not aware of anyone leaving strictly due to the fire.

Bertelli acknowledged, "Everybody's a little shell-shocked."

Add to that, they're working longer hours in response to the area's wildland fires.

"And the anticipation of another one, it does hang over people's heads," Bertelli said.

It was tough enough just recovering from the Valley fire, but so see the Clayton fire impact another community so heavily, and so soon afterward, was difficult, he said.

The main thing, he said, is the health and welfare of the district's employees and their families.

Bertelli said fire seasons are getting longer every year, and it could be another few months before the 2016 fire season is over. Over the last few years, fire seasons have extended deeper into the fall months, finally being called closed at the start of December.

The months of September and October also pose particular challenges, as they're when catastrophic fires normally occur, Bertelli said.

There are concerns that the winter may not have enough wet weather. "I don't see any rain in the forecast," said Bertelli, noting that Northern California will need a lot of rain to get onto the ground to alleviate its fire conditions.

Amidst the concerns of fires here in Lake County, Bertelli said the district's Cal Fire firefighters, crews, engines and bulldozers have continued to travel to other areas to work on major incidents, such as the Sobranes, Gap and Saddle fires.

"We constantly are moving resources around," he said.

Financial realities and project planning

South Lake County Fire contracts with Cal Fire each year for service at a cost of $2.2 million. However, with 70 percent of its property tax dollars lost primarily due to the Valley fire, officials said it has required financial assistance.

McGuire and Assemblyman Bill Dodd obtained funds to backfill those obligations from the time of the fire through June, at which time Gov. Jerry Brown's new budget included another $2.2 million to cover the district's budget through the end of June 2017.

"There is no way the district can afford this contract, which is why the state is stepping in to continue to ensure there is not a blip in coverage," McGuire told Lake County News.

In addition, McGuire and Dodd managed to get another $1.3 million included in the state's 2016-17 budget to help the county cover lost revenue from property, sales and bed tax lost as a result of the Valley fire.

"The full financial impact hasn't yet been felt," Bertelli said of the Valley fire, explaining that the district is still trying to project out the budgetary impacts.

Comisky, himself a firefighter for 38 years, said one of the immediate impacts is that the district's call volume dropped significantly in the fire's wake.

He said the district is now working on a strategic plan to assess its future and what it will require to meet the needs of its community in the years to come.

Part of the focus is on fiscal responsibility – including putting as much money into reserves as possible – and creative thinking. Both will be needed as Comisky does not expect a third year of funding from the state to cover the Cal Fire contract after having received two years of that support.

Comisky estimated the district's annual budget totals between $2.6 million and $2.7 million. Of that amount, $2.4 million annually goes to the contract with Cal Fire.

In March, Comisky – along with Sheriff Brian Martin and Comisky's high school classmate and longtime friend, Board of Supervisors Chair Rob Brown – testified before a state legislative committee on behalf of fire relief assistance legislation put forward by McGuire and Dodd seeking assistance for the county.

Without Cal Fire, the district couldn't on its own afford the level of service currently offered to the community, he said.

Rob Bostock, the board's vice president, said that along with Comisky he works to keep an eye on the money.

At the open house the district and Cal Fire held on Sept. 11 to mark the fire's one-year anniversary, Bostock said that dollars and cents "is the issue."

Beyond that, speaking of his community of Cobb, he believes people will rebuild because it's a special place.

The district's roadmap for the days to come includes creating a strategic plan and finding sustainable funding, Comisky said.

While he said the situation is a "scary thing," he added, "I think we're going to be OK."

In the short-term, as rebuilding is under way, he said the district has brought on Chris Vallerga to fulfill fire captain and fire marshal duties. Vallerga will be devoted full-time to signing off permits for new construction.

"The codes have changed significantly," said Comisky, so having a staffer devoted to working with the community to meet those changes is critical.

Comisky also wants to push forward on a plan for emergency sirens – a total of seven in the district's coverage area – which will cost more than $184,000.

Sirens – one each – would be located in Loch Lomond, Cobb, Anderson Springs and Middletown, with three in HVL, he said.

Cal Fire Battalion Chief Mike Wink said Loch Lomond has siren equipment that needs to be replaced.

An overarching plan that's under way calls for a total of 28 sirens all over the county, according to Supervisor Rob Brown.

"We hear loud and clear from the community, this is what we want," Comisky said of the siren project.

There used to be sirens on stations to notify volunteers. "We quit using them years ago," said Comisky.

A question still to be answered is how many of the burned structures will be rebuilt.

For Comisky, the hope is that the community's population won't just return but will grow beyond what it was before.

Bertelli said one of the key lessons to emerge from the fire is relevant to firefighters and everyday community members alike.

Whether in business or in one's personal life, "We're all vulnerable to the effects of fire."

How Louisiana Property Owners Can Help Disaster Survivors

Gonzales (LA) Weekly Citizen, September 26, 2016

If you own a multi-family dwelling that needs repairs and are willing to lease to eligible FEMA applicants, then you may be interested in the Multi-Family Lease and Repair Program (MLRP). This FEMA program provides funds to make rental units habitable again, and at the same time helps survivors of the severe August storms and floods.

Here's how it works: After you and FEMA agree on the work that needs to be done and the associated costs, you may choose your own contractor and start the repairs. The repairs or improvements do not need to be storm- or flood-related. The value of the work will be deducted from the value of the lease agreement, but may not exceed its total value.

To qualify for MLRP funds your property must meet certain criteria. First, it must have five or more units to qualify as a multi-family dwelling. Second, it must have been previously used as a rental unit. And third, it must be located in one of the following parishes: Acadia, Ascension, Avoyelles, East Baton Rouge, East Feliciana, Evangeline, Iberia, Iberville, Jefferson Davis, Lafayette, Livingston, Pointe Coupee, St. Helena, St. James, St. Landry, St. Martin, St. Tammany, Tangipahoa, Vermilion, Washington, West Baton Rouge, or West Feliciana.

In addition, the property must be accessible to community services like schools and grocery stores, and not be located in a flood-prone area. FEMA will require a lease of exclusive use of the property as temporary housing for a period of at least 18 months. The property owner must provide all property management services, and repairs must comply with local building codes, standards, permitting, inspection requirements and other laws.

Contact the Multi-Family Lease and Repair Program at (225) 382-1464 or email FEMA-ia-dhops@fema.dhs.gov if you are a property owner interested in having your rental property repaired and assisting disaster survivors.

NFIP AND FLOOD MAPS

Central Officials Say Inspection Process Moving Along In City Hit Hard By Floods

By Amy Wold

Baton Rouge (LA) Advocate, September 25, 2016

The now-familiar piles of debris look exactly the same in front of two neighboring homes along Elkhorn Drive in Central.

Both homes got the same amount of flooding, about 40 inches or so. Both have been cleaned out of drywall and carpet, with air conditioning humming at all hours to help dry out the interiors.

However, the path forward toward rebuilding will be different for each because one is in the 100-year flood zone and one is not.

"It's in a holding pattern until a valuation can be done," said David Ratcliff, program director of Central Municipal Services, pointing to the house on the left, the one in the flood zone, on a recent trip down through parts of Central to look at home inspection progress.

The home in the 100-year-floodplain, what FEMA designates as the area at highest risk of flooding, will need an evaluation to determine if it has to be elevated. The house just a few feet to the right will only require an inspection and free permit before the homeowners can start rebuilding.

"People don't understand that," Ratcliff said.

In Central, homes fall into three categories for what homeowners need to do before rebuilding.

Home owners outside the FEMA flood zone just need to get a permit and inspection before they rebuild.

Related

A home in the flood zone that received 36 inches or less of water will need a permit and inspection and then it's ready to go, Ratcliff said. The city has determined those houses are unlikely to lend themselves to substantial damage, which is part of the threshold that provokes an evaluation of whether a structure needs to raised.

But owners of homes in a flood zone that got more than 36 inches of water are going to need an elevation certificate, which is a determination of whether the house is above the base flood elevation on FEMA maps. If the home is above the base flood elevation, then the owner just needs to get a permit from the city, which are free for rebuilding work, and then can start rebuilding.

If the home is found to be below base flood elevation, the owner will need to get a contractor estimate for repairs. If that estimate shows that repairs will cost less than 50 percent of the value of the home, the owner can get a permit and rebuild. However, if the damage estimate comes back as costing more than half of the home's value, there will be additional requirements before a home can be repaired, such as elevation.

That isn't the final say since homeowners can appeal a decision, Ratcliff said. So far, out of 1,500 or more homes that have been evaluated so far, only one has met that description of being below base flood elevation, got more than 36 inches of water and had more than 50 percent damage, he said.

The home inspections are moving along in a city where Ratcliff estimates at least 90 percent of the damaged homes have already been cleaned out.

When people are ready to go, they come in for a permit and an inspector makes an appointment for a home inspection before people can get started putting up drywall and generally rebuilding.

The city services, run by the private company IBTS, called in additional inspectors who have come in from all over the country to help out for two-week stints. They are doing building inspections of the estimated 6,000 to 8,000 Central homes that were damaged in the August floods.

Inspections include moisture tests, checking out electrical and plumbing systems, along with giving some helpful advice.

"We're doing a lot of instruction of what to do," said Jack Gleason, building official for Central.

Some of the tips include replacing the electrical inlets if they had been underwater, placing a small metal plate over studs where water pipes go through to avoid puncturing them when putting up drywall and to keep the air conditioning running to prevent the house from building up moisture.

Currently, there are four to six inspectors working during the week with six to eight working on the weekends when more people are at home. Each inspector can do about 30 homes a day, Ratcliff said. Once that is done, the city gives a certificate for occupancy.

Mayor Jr. Shelton said it can be frustrating for people to go through all the steps, but it's necessary not only to make sure homes are safe for people to start rebuilding, but for larger reasons as well.

"I've got a letter from FEMA saying if we don't make people get permits our National Flood Insurance Program is in question for the whole city," Shelton said. “It is something being done for their protection and it’s mandated by FEMA.”

One other tip city officials have is for those residents getting FEMA manufactured housing units set up on their property while they work on their homes. As soon as a person knows they’re going to get one of the mobile homes, Ratcliff said, they need to call the utility company to get a power hookup in place since it can take seven to 10 days for the necessary equipment to get set up.

So far, the city has received 138 pre-applications for the temporary housing units, a bit of a frustration for city officials. Rules have been set up by FEMA to get permits, but then FEMA contractors don’t seem to be following those rules all the time, Shelton said.

Just Wednesday morning, Radcliff said he called the FEMA temporary housing liaison to get help for a woman looking for a temporary shelter where she and her ailing husband could stay, only to be told that the FEMA representative had been reassigned.

The person didn’t know who the new representative was but said he would get the person to make contact with the city. FEMA did not respond to requests for comment about the criticism.

“FEMA is too large to operate in an emergency,” Shelton said. “It’s obvious they try to use one template for every disaster.”

Shelton said he’s had to spend large parts of his time using “common sense” to address FEMA rules that he doesn’t find logical.

For example, a renter who was flooded out wanted to get a mobile home placed at her mother’s house so she could stay in Central and her children could stay in school instead of being moved out of the area.

Related

There was concern from FEMA officials that if the trailer was placed at the mother’s home, the mother would end up living in it, Shelton said. No one, Shelton said, would want to live in these temporary homes if they had any other choice, but that’s the type of thing that has been taking up a lot of his time.

“This event could happen anywhere in the United States,” Shelton said. “You would think they’d have a procedure just for this kind of event.”

FEMA Addresses Survivor Concerns, Updates Deadlines

Donaldsonville (LA) Chief, September 24, 2016

The TSA checkout date has been extended to Wednesday, Oct. 19, 2016. FEMA will contact applicants who are eligible for the extension to notify them of their new checkout date.

National Flood Insurance Program considerations

Rates

Flood losses in Louisiana will not cause flood insurance rates to rise above scheduled annual rate

increases. Properties located in a floodplain that have federally backed mortgages are required by law

to be properly insured against known hazards, such as flooding. Anyone can purchase a flood insurance

policy if they live in a community that participates in the National Flood Insurance Program.

Coverage

The NFIP offers two types of coverage — building and contents. The mortgage lender may only

require you to purchase flood insurance for the structure. Contents coverage will cover items such as

personal belongings and furniture for an additional premium. To find your approximate flood insurance

costs and the hazard level of your area, visit FloodSmart.gov and enter the property address.

Contact your insurance agent for questions about a specific property.

Help paying for flood insurance in Louisiana

You may have to obtain flood insurance as a condition of receiving federal disaster assistance

following Louisiana’s recent severe storms and floods, but FEMA can help. FEMA may pay for three

years’ worth of premiums if you’re a homeowner or renter who receives federal disaster help and didn’t

have flood insurance. Keep flood insurance once FEMA stops paying your premiums to be considered

for certain recovery grants after future disasters.

NFIP Deadline extended

Policy holders now have 120 days from the date of loss to file a flood insurance claim. The extension

doubles the 60 day deadline NFIP usually requires.

NFIP Milestones

As of Sept. 16, the NFIP authorized and issued more than $373 million in payments to 28,900

policy holders so they can repair and rebuild.

Other survivor concerns

Re-internment: FEMA disaster assistance may be available for re-internment efforts in Louisiana

cemeteries, where floodwaters have dislodged or destroyed caskets, vaults, and mausoleums.

In privately owned cemeteries, assistance may be available if the costs are the legal responsibility of an individual and not the cemetery. Individuals seeking assistance in a privately owned cemetery should register at (800) 621-3362. For publicly owned cemeteries, assistance may be available through our Public Assistance program which reimburses local governments for infrastructure repairs. The owner and/or operator of the public cemetery must apply via Louisianapa.com.

Flood Protection May Lower Insurance

By Zita Fletcher

Rio Rancho (NM) Observer, September 24, 2016

Thanks to efforts of county floodplain managers and their team, Sandoval County property owners might get a break on flood insurance rates.

The Federal Emergency Management Agency (FEMA), which oversees the National Flood Insurance Program (NFIP), provides community flood insurance in return for local government's adoption and enforcement of a floodplain management ordinance.

The ordinance creates safe standards for structures built in flood hazard areas.

Flood-prone areas are rife throughout the county – rivers, streams, arroyos, watercourses and steep topography create dangers for homeowners during and after heavy rains.

A recent FEMA inspection found county floodplain management has gone above and beyond federal standards, creating safety conditions that earned the county a special commendation from FEMA Branch Chief Lisa Jennings.

"Sandoval County is commended for adopting this higher regulatory standard for new or substantially improved structures, which protects property from flood loss and reduces potential for human loss in all areas of the community," Jennings wrote in a letter to County Manager Phil Rios.

County floodplain managers Maria Martinez-Encinias and Brad Stebleton worked to ensure NFIP building requirements in floodplain areas surpassed federal standards. They took FEMA officials on a tour of the county's floodplain last fall.

"What they told us when they audited us is that we were doing a bunch of things that the program already does," said Stebleton, "so we should apply to become part of that so our people can get lower insurance rates."

The county has since been invited to participate in FEMA's Community Rating System (CRS), which results in a reduction in premiums for the community's flood insurance policyholders.

"They basically told us, 'You guys are doing these things, anyway. You might as well get credit for it. And it saves your residents' money,'" said Stebleton.

The CRS is similar to ISO ratings for fire protection.

"They (FEMA) are showing us how we can better educate the community through the CRS program," said Martinez-Encinias.

Martinez-Encinias, whose in-laws suffered property damage from an unexpected flood, said the county seeks greater public engagement in flood safety education.

"We have ideas," she said, describing plans to put signage on common and hazardous floodways. She also wants to arrange visits with schools to educate youth about flood safety.

"What better way is there to reach out to the community than to reach out to children and do projects with them?" said Martinez-Encinias, suggesting the creation of tiny floodway models as a teaching option.

Flooding affects both rural and urban communities across the county.

"Rio Rancho is surprisingly very flood prone," Stebleton said.

He said most common deaths in flood events are caused by people attempting to drive their cars through floodwater in the road.

"Water is more powerful than people think it is," he said.

Both managers attended CRS training courses. They hope to partner with members of the community to increase flood education and enhance their CRS rating to lower insurance rates.

"CRS is voluntary. It's not something we have to do," said Martinez-Encinias. "It's something we're doing for the community."

Commission To Comment On Convention Center Annexation

Las Cruces (NM) Sun-News, September 24, 2016

LAS CRUCES – Doña Ana County commissioners on Tuesday will weigh in on a proposed annexation of land by the city of Las Cruces for an expansion of the Las Cruces Convention Center and the construction of a hotel.

Commissioners don't have authority to interfere with annexations by the city but are given the chance to comment on them in state law, county officials have said.

The city's proposed annexation covers 7.165 acres to the south and west of the city-owned Las Cruces Convention Center, 680 E. University Ave., Las Cruces.

The Development Review Committee and county staff recommended commenting that the acreage is in a high-risk flood zone area under Federal Emergency Management Agency flood zone maps and rules pertaining to development in those zones should be followed, according to county documents.

In addition, county commissioners are set to:

The meeting starts 9 a.m. Tuesday at the Doña Ana County Government Center, 845 N. Motel Blvd., Las Cruces.

–

If you go

What:

Doña Ana County commission meeting

When:

9 a.m. Tuesday

Where:

Doña Ana County Government Center, 845 N. Motel Blvd., Las Cruces

Tsunami Inundation Zones Not The Same As Flood Zones

Maui (HI) Now, September 25, 2016

Mayor Alan Arakawa answers some of the questions submitted to his office staff.

Submit your own questions about County of Maui programs, services, operations or policies to Mayor Alan Arakawa via email at AskTheMayor@mauicounty.gov, call 270-7855 or send them by mail to 200 S. High St., 9th Floor, Wailuku, HI 96793. Questions submitted will be considered for inclusion in the "Ask the Mayor" column.

Aloha Readers,

Recently in this column, I answered a question about flood insurance and mentioned that you could find out if you are in a flood zone by looking at the maps in the white pages of your phone book.

I have since been reminded that these are not technically flood maps, but rather tsunami inundation maps. The difference is that a flood doesn't need to originate from the ocean, as does a tsunami.

Floods can occur near streams, rivers, gulches, ditches, roads or anywhere fast-running water can flow.

The 'Īao Valley flood last week is a perfect example, as that flood came from the Wailuku River overflowing.

For viewing flood maps, you can use FEMA's map service center at https://msc.fema.gov/portal.

For information on flood insurance, premiums, flood risks and other related information, go to www.floodsmart.gov.

Please note that these FEMA flood maps do not include parcel boundaries on properties. You may need to compare FEMA maps with county property tax maps.

Also, you can use the State of Hawai'i flood hazard assessment tool, which will give an approximate location of the property.

To find a particular flood zone, log on to http://gis.hawaiinfip.org/FHAT. Using the "TMK Search" on the right, you can enter the Tax Map Key or the address on the upper left "Search" window.

Once you locate the property, the tab labeled "Map Legend" on the right gives an explanation of what color is associated with which flood zones and what it means.

I apologize for the mistake last week, but hopefully with the Īao flood still fresh on everyone's mind, this expanded explanation will be both relevant and useful.

FERC Notice Starts Clock Ticking

By Melinda Stotts

Miami (OK) News Record, September 25, 2016

MIAMI – Despite great efforts by local and tribal governments to stop any changes in the operations of the Pensacola Dam Project at Grand Lake for hydroelectric power generation, the Grand River Dam Authority (GRDA) has filed an application with the Federal Energy Regulatory Commission (FERC) to permanently amend its re-licensure and the process continues to move forward.

On Sept. 22, FERC issued a public notice of the application for GRDA's amendment of license soliciting comments, motions to intervene and protests.

"GRDA believes that if granted by the Commission, the change in the rule curve under this Application will result in significant improvements to public recreation and safety during the peak recreation period each year, and eliminate the need for stakeholders to consult yearly on temporary variance to the rule curve for the remainder of the license term," Sullivan wrote, in a May 6 letter to FERC's Secretary Kimberly D. Bose, accompanying the application.

GRDA's formal request to FERC is asking for permanent amendment of the project's Article 401 reservoir elevation rule curve of Grand Lake from Aug. 16 through Oct. 31 each year as part of its renewed license.

Under GRDA's proposal, between Aug. 16 and Sept. 15 the reservoir would be maintained at 743 feet

Pensacola Datum (PD), which is up to 2 feet higher than the current rule curve.

Between Sept. 16 and Sept. 30, the elevation would be lowered from 743 to 742 feet PD.

Between Oct. 1 and Oct. 31, the reservoir would be maintained at 742 feet PD, which is up one foot higher than the current rule curve.

After Oct. 31, reservoir elevations would follow the project's current rule curve.

GRDA's application was filed on May 6, and supplemented on June 2, and again June 30 in regards to the Pensacola Hydroelectric Project. The project affects Craig, Delaware, Mayes and Ottawa counties in Oklahoma.

The City of Miami and the nine tribes of the Northeastern Oklahoma Inter-Tribal Council — the Quapaw, Peoria, Wyandotte Nation, Miami, Modoc, Seneca-Cayuga, Shawnee, Eastern Shawnee and Ottawa — have intervened directly to FERC to halt any efforts by GRDA to make amendment to their operations of the Pensacola Dam and Grand Lake levels without proper notice, input and relevant studies being completed and considered.

These intervening governments have alleged GRDA's operations of the project historically have caused backwater effect flooding, or have increased flooding in Ottawa County along the watershed upstream.

These governments also allege proper easements have never been purchased by GRDA to operate the lake at current levels, let alone with any increases.

During a consultation with the Inter-Tribal Council, tribal leaders spoke passionately about the adversity, devastation and hardships created by backwater flooding to tribal lands, homes, businesses, services, culturally and historically important property, economic revenues and tribal members.

The City of Miami makes similar arguments against the proposed rule curve changes.

Both the City of Miami and tribes have intervened to ask that no further changes be granted to GRDA until proper studies occur.

"The City of Miami intends to be a very active participant in the process to address the flooding issues that have been experienced by our community for years," Miami City Manager Dean Kruithof said in response to FERC's recent notice.

Miami's Flood Mitigation Advisory Board is meeting at 7 p.m. on Sept. 26 at the Miami Civic Center to discuss GRDA's re-application for license and the Federal Emergency Management Agency's (FEMA) flood risk maps.

The tribes are asking FERC to consider the Federal Power Act and the National Historic Preservation Act responsibilities of both FERC and GRDA required for the purpose of operation a hydroelectric facility on tribal lands.

These requirements were not met according to ITC's legal counsel. Nor was any or adequate compensation been made to the tribes.

GRDA's 786-page re-license application filing on May 6 includes a letter to FERC from GRDA CEO and General Manager Dan Sullivan outlining reasons for the amendment request.

Sullivan states in his letter the request is for purposes of promoting public safety, water quality, and recreational enhancement through a peak public recreation period at Grand Lake.

Sullivan's letter to FERC with the application states the U.S. Fish and Wildlife Service determined the application request would not adversely affect any listed species under the Endangered Species Act and the Oklahoma Department of Wildlife Conservation is in full support of the proposal.

GRDA advised the Oklahoma Department of Environmental Quality asked for water quality certification, which GRDA applied for on April 16.

Sullivan's letter states that the Oklahoma State Historic Preservation Office recommended plans for storm and drought management.

Along with GRDA's application, a Storm Adaptive Management Plan to address high water conditions upstream and downstream of Grand Lake during major precipitation events has been included.

GRDA also included a Drought Adaptive Management Plan to be followed to determine project operation if certain drought conditions occur.

According to Sullivan's letter, GRDA included in their filing comments from agencies and stakeholders, a complete record of consultation.

GRDA was granted a temporary variance by FERC on Aug.12 for this year, again despite protests form both the City of Miami and individual tribes of the NEO Inter-Tribal Council.

"In determining the appropriate action to take, the Commission will consider all protests or other comments filed, but only those who file a motion to intervene in accordance with the Commission's Rules may become a party to the proceeding," FERC Secretary Kimberly D. Bose states in the public notice.

All interested and effected parties now have 30 days from the date of the notice to file comments, motions to intervene, or protest.

According to FERC's notice adherent to the Federal Power Act, 16 USC 791(a)- 825 (r), all documents may be filed electronically via FERC's website at http://www.ferc.gov/docs-filing/efiling.asp.

Commenters can submit comments up to 6,000 characters, without prior registration, using the eComment system at http;//www.ferc.gov/docs-filing/ecomment.asp. and include name, and contact information at the end of the comments.

All filings and comments must bear in all capital letters the title " COMMENTS," "PROTEST," or " MOTION TO INTERVENE," as applicable.

FERC may be contacted for assistance toll free at 1-866-208-3676,but strongly encourages electronic filing. Documents may also be paper-filed to Kimberly D. Bose, Secretary. Federal Energy Regulatory Commission, 888 First Street, NE, Washington DC 20426. All comments should include the project number (P-1494-437).

Dewberry Proceeds With FEMA Task Order For Louisiana Rainfall And Flash Flooding Event Analysis

Sensors & Systems, September 23, 2016

Dewberry is proceeding with a task order from the Federal Emergency Management Agency (FEMA) for imagery and data interpretation of the recent Louisiana floods under the U.S. Department of Homeland Security's strategic source indefinite delivery, indefinite quantity, remote sensing to support incident management and homeland security contract.

The firm will determine impacts from the heavy rains, flash floods, and inland riverine flooding in the state. Imagery and other source materials regarding the areas of interest will be interpreted to provide flood extents; an enumeration and typing of damaged buildings; a classification of individual building damage levels; and an analysis of infrastructure damage, isolated communities, and debris accumulation resulting from the flooding events. Imagery and relevant data will range from Civil Air Patrol geotagged digital images, Synthetic Aperture Radar, field reports, and other damage observations.

Within 48 hours of the task order award, initial assessments were available and will continue to be updated as new ones are completed or as imagery is further processed. Damage assessment progress maps will be updated and sent daily until the task is complete.

Dewberry has already used National Oceanic and Atmospheric Administration Advanced Hydrologic Prediction Service (NOAA AHPS) to analyze the peak crest dates and elevations and found that historic flood crest records have been exceeded. NOAA AHPS will continue to be used to assist in the data planning and acquisition. As more information is collected, the firm will refine the flood extent boundaries created during initial assessments. Dewberry will also create a grid based on the U.S. National Grid over the areas of interest, analyzing damages to each section. This will indicate damage assessment progress and be provided to FEMA every day.

MITIGATION

Richwood Turns To Watergate For Help In Solving Middle School Location Issues

By Rick Steelhammer

Charleston (WV) Gazette-Mail, September 25, 2016

RICHWOOD — Land made available for public use by the owner of Richwood's Watergate Inn, following talks with Richwood Mayor Bob Henry Baber, could help ensure that Richwood's middle school students remain in town until a new school is built, rather than be relocated to a site outside the community.

Land already has been cleared for the lot, and a liner and crushed rocks were being put in place on Thursday following an agreement with Andreas Karas, owner of the long-shuttered inn, damaged by floods in June and in years past, and scheduled for eventual demolition, Baber said. Work is being done by United Coal Co., which has donated at least $50,000 in labor, according to the mayor.

Richwood Middle School and Richwood High School were deemed unfit for use by Federal Emergency Management Administration officials after the buildings were battered and deluged by floodwaters that swept through the Nicholas County town in late June. Richwood High School students temporarily have relocated to the former Beaver Elementary School near Craigsville, while the middle school students have been sharing space with students at Richwood's Cherry River Elementary School, which was not damaged in the flooding.

By developing a second parking lot at the lower end of the school, the existing parking lot, which lies above the floodplain, can be used to locate temporary pods for additional teaching space to reduce crowding within the middle school building. The added parking area also would eliminate concerns about a shortage of parking space, now that teachers and staff from two schools are sharing the existing lot, and include a loop road for buses to access the school.

During the last Nicholas County School Board meeting, Superintendent Donna Burge-Tetrick said the lack of adequate parking at Cherry River Elementary could result in Richwood Middle School being relocated in modular classrooms at Craigsville, according to the Nicholas Chronicle.

So far, FEMA has turned down proposals to build a new Richwood High School on the grounds of the former Richwood Area Community Hospital, and vetoed a pair of other prospective sites.

Last week, the Legislature approved an $85 million appropriation for matching funds to capture FEMA flood recovery grants totaling an estimated $339 million. Of that sum, flood-ruined Richwood High School, Richwood Middle School, Summersville Middle School, Clendenin Elementary School and Herbert Hoover High School would be allocated a total of about $130 million to rebuild.

In other flood recovery developments, Baber said the town's Rite-Aid and Dollar General stores should reopen by the end of next month, and that all of the town's flood-damaged sewer mains that once ran along the bottom of the Cherry River, have been patched and temporarily relocated under shore rocks along a bank of the stream. The repairs dramatically decreased the flow of river water entering the pipes and needlessly passing through the town's treatment plant, making it more difficult to process sewage.

The town still lacks a supermarket, and the town's emergency pantry is nearly empty, Baber said.

State Officials Tour Shell Rock Flood Damage

By Stefanté Randall

KIMT-TV Rochester (MN), September 24, 2016

SHELL ROCK, Iowa – State officials toured the town of Shell Rock as residents picked up the pieces after the flooding.

Governor Terry Branstad, Lieutenant Governor Kim Reynolds along with leaders from the Iowa National Guard and Iowa Homeland Security and Emergency Management got a firsthand look at the damage.

Mayor Larry Young says he appreciates the support his town is getting.

He also says the city took steps to make sure they were prepared.

"Well, we continued the FEMA buyout program where instead of having 35 houses that were damaged we could have had another 20 or 25 that were taken out, so that relieves some tension and we've upgraded our lift station as much as we can. That's an expensive proposition," says Young.

Dumpsters will be brought in on Monday for residents to throw away flood debris items.

Governor Branstad also made stops in Clarksville and Cedar Rapids.

Illinois Says Levee District Raised Heights Without Permit

By Jacob Barker

St. Louis Post-Dispatch, September 25, 2016

A large Illinois levee district north of St. Louis accused of building its Mississippi River levees too high has until next month to give the state a plan to mitigate flood impacts on its neighbors.

The action from the Illinois Department of Natural Resources is the latest from government agencies who say the Sny Island Levee and Drainage District hasn't complied with state and federal rules meant to manage flooding and levee districts along the river.

The Sny stretches from Quincy to Belleview in Illinois. For years, officials with the politically and financially powerful agricultural levee district have argued about levee heights with regulators who have struggled to enforce their rules.

Residents across the river in Missouri worry the Sny is illegally pushing floodwater onto their communities, but Sny officials have denied they raised levees above authorized levels. The U.S. Army Corps of Engineers estimates the Sny could push an additional 2.5 feet of water onto some areas in the Missouri counties of Marion, Pike, Lincoln and St. Charles.

According to an IDNR letter to Sny superintendent Mike Reed dated Aug. 23, the Sny Island Levee and Drainage District's work to maintain its height after flooding in 2008 was done without a state permit.

The department gave the levee district until Oct. 15 to submit a plan and a schedule to fix what it says are unauthorized levee modifications.

Except for a permit issued in 1996, no work has been authorized on the Sny levees in recent years, the state letter says.

Sny attorney Karin Jacoby of Husch Blackwell said in an email that the district is "firm in our conviction the Sny acted in accordance with applicable regulations."

"The sharing of preliminary, inaccurate or incomplete information, particularly concerning impacts of the Sny on others, has generated much unnecessary confusion," Jacoby wrote.

It's not just Illinois that has raised issues with the Sny's management of its huge levee. The corps has said the Sny's levees are built above authorized levels, something the Sny denies.

River advocates worry the Sny isn't alone and that there's little enforcement or incentive for levee districts to follow the law.

"It's really, really shocking to us to see such blatant activities, by the Sny levee district in particular, to just ignore state and federal rules at the peril of the neighbors across the river in Missouri," said Olivia Dorothy, associate director of Mississippi River management at advocacy group American Rivers.

While the corps has authorized the nearly 60-mile-long Sny District to maintain 50-year flood protection, the district has managed to win 100-year protection from the Federal Emergency Management Agency.

The FEMA accreditation means the farmers who own the fertile 115,000 acres of floodplain protected by the Sny levees don't have to buy flood insurance.

It's not entirely clear how the Sny attained 100-year accreditation from FEMA despite being authorized for 50-year flood protection from the corps. FEMA representatives have said documentation the Sny submitted to them indicated it met the agency's standards, and the corps has said it assisted with engineering work despite not authorizing higher levee heights.

"The Sny just made the modifications without telling anybody," Dorothy said. "We're not quite sure what broke down to allow that accreditation to happen, because they should have been required to provide to FEMA all necessary approvals for that accreditation."

A FEMA representative didn't immediately return a call and email requesting comment. A corps spokesman said there's little the agency can do to enforce its rules beyond making the district ineligible for federal flood repair funds, an action it took last year.

"Our final authority would be to remove them from that program," corps spokesman Allen Marshall said.

Mike Klingner, an engineer who does work for the Sny and is board president of a group representing flood control agencies in the region, said IDNR appears to have "misplaced" permitting documentation for the Sny work.

"It's quite clear they don't have all the information," he said.

The Sny plans to present more information at a meeting with the state in October, Klingner said.

Based on the information Illinois has now, it appears the Sny will have to mitigate its flood impact somehow, said Loren Wobig of IDNR's water resources office. It could purchase flood easements or engineer its levees so certain areas store water, which would allow the Sny to maintain levee height at other locations.

"There's still options for them," Wobig said.

Marion County Beats Bridge Project Deadline

By Danny Henley

Hannibal (MO) Courier-Post, September 23, 2016

Marion County is one big step closer to getting a new bridge built on County Road 104 after securing formal state permission to use federal funds on the project. The county was facing a Saturday, Sept. 24, deadline to submit the proposal for the alternate project to the state of Missouri Emergency Management Agency (SEMA).

"It's a relief," said Lyndon Bode, presiding commissioner of Marion County, of meeting the deadline.

Bode applauded the efforts of Teya Stice, Marion County coordinator, for getting everything to the state well advance of the deadline.

"Teya let us know it was a firm deadline and the county needed to have that turned in by the 24th. She was able to get that secured and turned in ahead of time," he said. "Now we're just waiting for FEMA's response. We don't anticipate any problems because everything they've asked for has been turned in. If they have any questions we can answer them and hopefully keep the project moving along."

The proposed project is like none the county has attempted before since the bridge being replaced — on County Road 104 — is not in the same location as the span for which the county is receiving federal compensation — on County Road 117. The County Road 117 bridge was swept away during July 2015 flooding.

Because of the low volume of traffic the 124-foot structure had seen on a daily basis before it was destroyed, and the projected cost of replacing the bridge (between $800,000 and $1 million), the County Commission decided not to have a new span put up on County Road 117.

If FEMA follows through and gives its blessing, as is expected, "roughly $90,000" in federal dollars will go toward the cost of the new bridge. The remaining cost of the new structure will be covered by county capital improvement sales tax funds.

Whatever amount the county winds up paying to complete the County Road 104 bridge, Marion County will be able to apply for "soft match" credits for the Bridge Replacement Off-System (BRO) program, which is administered by the Missouri Department of Transportation.

When a county pays for all or part of the cost of a replacement bridge that expense is considered "soft match" money which can then be applied as the 20 percent local match required by the BRO program, provided the "soft match" bridge is built to state specs.

Because the County Commission had already identified the County Road 104 bridge as its next span to replace, regardless of the availability of federal funds, MECO Engineering has already been doing design work on the new structure. That opens the door to starting the replacement phase sooner than later.

"There is a chance if everything works right it could be built during the winter," said Bode.

If federal funds are used the county will face a construction deadline in February 2017. Unlike the September deadline, however, an extension could be sought for the project if everything has not yet been finalized.

According to Bode, Marion County will have to build and pay for the new bridge before it will see a dime of federal reimbursement money.

Bertie County Commisioners Hold Emergency Meeting On Recovery Efforts

By Tamara Scott

WNCT-TV Greenville (NC), September 25, 2016

WINDSOR, N.C. – An emergency Bertie County Board of Commissioners meeting held Sunday shed light on the next steps of recovery.

After days of flooding, the water in Bertie County has finally receded, and now it's time to move forward.

Bertie County Board of Commissioner Chairman John Trent said their first concern is citizen safety.

"There's 42 businesses that have been affected by this flood, not including people who have been uprooted from their home which is over 50 and these numbers are gonna grow," said Trent.

Home owners, residents of Bertie County, and commissioners discussed what needs to be done in order for everyone to get back on their feet.

Many residents, like Douglas and Annette Jernigan, are currently experiencing their 3rd flood clean up.

"It's still devastating regardless it makes it hard on everybody," said Douglas Jernigan.

Annette Jernigan added, "No matter how much water you get, you still have to move out and relocate with jobs and everything like that, so it's really hard."

Emergency Services Director Mitchell Cooper said they are working hard to get people back in their homes.

"We have damage assessment teams coming in and we'll split them up to be with our county folks so we can do this as swiftly as possible and get a number back to the state to figure out how this declaration will work," said Cooper.

Once assessment results are sent in, there will be a decision on how much money can be brought in to help residents rebuild their town.

Annette said they got what they needed out of the meeting, but still have some questions. "Mainly was FEMA going to buy us out, but of course we don't know anything on that yet until they get their calculations."

Cooper said the mental health of residents who have been affected is also a growing concern.

Public health and Trillium Health officials will be available later this week.

Some commissioners will be in the state's capital later this week to vouch for the residents on recovery funds.

Governor Pat McCrory will be in Windsor on Monday with North Carolina Emergency Management Director Mike Sprayberry to assess the damage.

Tornado Alley Dead-ends Before Lake County

By Dan Moran

Lake County (IL) News-Sun, September 23, 2016

Jinx. Knock on wood.

Having established that, let's talk about a dirty little secret that really shouldn't be aired out, lest the fates be tempted: Lake County sits in a sweet spot when it comes to avoiding severe weather.

Sure, we get our thunderstorms that rip off branches and knock out power from time to time, as more than one Waukegan resident reported just this Wednesday. And ask anyone in Grayslake about the small but memorable tornado that skipped through town last year.

But, generally and most likely unscientifically speaking, Lake County — roughly 50 miles north of the undefined end of tornado alley — isn't known as the primary Chicagoland target when it comes to spring and summertime events like biblical downpours or the phrase "tornado warning."

A measure of proof is provided by the National Oceanic and Atmospheric Administration, which has a Storm Events Database that dates back to June 1950. Searching specifically for tornadoes over the last 76 years in Lake County, we find that the "number of days with an event" (which we can assume means "a tornado") is 15. Eleven of those caused damage, four caused death or injury and one resulted in death.

For the record, that fatal event was the April 1967 F4 tornado that ran from North Barrington through Mundelein and Lake Zurich, killing two motorists near Route 59 and Cuba Road. But even that dark day, we got off relatively lightly: 57 people were killed in Belvidere and Oak Lawn by other F4 twisters in the outbreak.

Now let's run, say, Will County through that same database: Between June 1950 and June 2016, there were 44 days with a tornado event — four times that of Lake County. Thirty-six caused damage, 11 resulted in injury and five recorded fatalities, including the infamous 1990 Plainfield tornado, which occurred on a sunny afternoon in our end of the region.

A little farther south, the tornado numbers since 1950 are also way up for Kankakee County (29) and Iroquois (36). In the collar counties, the same higher result is true for DuPage (22), Kane (17) and even McHenry (16).

Looking strictly at Lake vs. Will, we find our not-so-southern cousins also outpace us in severe warm-weather events like "thunderstorm wind" (171 for Will, 101 for us) and floods (35 for Will, 18 for us).

All told, there's almost a sense of guilt when Lake County residents are invited to participate in the All Hazards Mitigation Plan by the Federal Emergency Management Agency (FEMA). As the name probably doesn't imply, this is a routine exercise FEMA requires counties to perform every five years so they can remain eligible for Disaster Assistance Grants, according to information currently posted at the city of Waukegan's website (www.waukeganweb.net).

The posting includes a SurveyMonkey link for residents to complete a short Q-and-A to gauge community-disaster preparedness.

"Public input and comments are important to the (hazards) plan update," the post reads. "Survey responses provided will help Lake County prioritize natural hazards that could impact residents and property owners, and to determine how to be better prepared for natural hazard emergencies."

It is duly noted that "surveys may only be taken once," so don't even bother trying to pump up our disaster resume and squeeze more dollars out of the feds.

After clicking on our respective community name, we're asked if, "in approximately the past 15 years, you or someone in your household, while living in Lake County, experienced a natural disaster? (Check all that apply)" Along with tornadoes and severe summer storms, our choices include everything from flood and drought to "sewer backup."

They also include "earthquake," so those of us who felt the 2.0-magnitude temblor that reflected into Lake County from the 5.8-magnitude quake that hit Virginia in August 2011 can go ahead and check the box, even if all it did was rattle our dish rack in a modest way.

A similarly long and varied list of disasters large and small is included twice when we're asked which ones raise concern for our family and then for our community. Feel free to check everything, up to and including "dust storm," because this is all about getting bang for the buck.

All of us, no matter where we live, will be visited at some point by the extreme wrath of Mother Nature, so an ounce of prevention could be worth a pound of federal aid.

In fact, when it comes to the cold-weather months, Will and Lake are almost tied in the number of winter storms over the last 76 years (around 23 each) and blizzards (around 4) — so those of us living in the tranquil north shouldn't whistle too much as we pass the graveyard.

Another One Off The List: Second And Niblack Project To Start Soon

By Jenny McNeece

Vincennes (IN) Sun-Commercial, September 25, 2016

First came the Second Street project, a six-block upgrading of a major thoroughfare connecting more downtown to Vincennes University more than a decade in the making.

Then came the long-awaited River Walk, a sprucing up of Culbertson Boulevard complete with new lighting, some covered benches and an observational point over the Wabash River.

Both projects were on the city's books for years, but only recently have officials managed to get them moving. Second Street opened to traffic a year ago thanks to a federal-for-state money trade, and the River Walk is expected to open to pedestrians next month.

But there was another at the bottom of the city's list of unfinished projects — the raising of the intersection of Second and Niblack streets.

It's a major project, and because the flood gate there hasn't fit for years, it's one now being mandated by the Federal Emergency Management Agency.

So that after nearly four years of waiting, that project is finally getting underway.

"It's the last on our list," said Mayor Joe Yochum. "And I'm very excited to see it get moving."

The project is one of dozens that ensures the city will keep its flood protected status with FEMA.

Most of the needed repairs and updates have been done already. Raising the intersection and fixing the gate at Second and Niblack is one of the last on the list.

To pay for it, the city is using money left over from a $5 million federal grant secured during former mayor Terry Mooney's administration that was initially to be used to study relocating the railroad tracks to outside the city.

The money was later switched by mayor Al Baldwin to the possibility of building a railroad overpass on North Sixth Street.

After that project derailed because of a lack of community and city council support — and after another municipal election — Yochum announced he had received permission from federal officials to use what was left (about $1.75 million) to completely redo the railroad crossing at Second and Niblack.

But federal money can sometimes be difficult to spend; the process comes with much red tape to cut through.

And city officials, too, have experienced significant delays — not to mention cost overruns — in trying to communicate with CSX Corp.

But things have picked up pace over the last month, the mayor said, and he expects work could begin early next year.

City engineer John Sprague said much of the utility work has already been done, and he expects to the let the bulk of the project — the actual raising of the intersection and railway — out for bid sometime next month.

Sprague said, if all goes well with the bidding process, that crews will likely begin mobilizing in November.

And the crossing will be closed, he said, for an entire year once they do.

But Sprague said this project, as opposed to the Second Street and River Walk projects, has actually moved rather swiftly, at least as far as federal projects go.

The city signed its first contract regarding work on the intersection in May of 2013.

"So it's been in the works for just three-and-a-half years," he said. "And I'd say that's an average amount of time for a federal-aid project like this. In fact, it's probably faster than normal.

"If you think about the other two projects, those had been in the works for a decade or more," Sprague said. "So you could definitely make the argument that this one has moved rather quickly."

Sprague said the entire intersection will be closed for the duration of the project, and specific detours will be posted for motorists.

And in the end, the flood gate — which to the mayor's knowledge has never had to be installed — will be abandoned in favor of a smaller sandbag gate instead.

"It's just taken a long time to get through all this stuff," the mayor said. "It's tedious. There's a lot to it, and it can be a bit aggravating.

"But this is the last one, and it's one of the last projects having to do with our levee, too," he said. "So this is a good thing, a very good thing."

The Saints Are Coming: An Oral History

By Doug Tatum

New Orleans Saints, September 24, 2016

Drew Brees: I would have been in San Diego, California. I was playing for the San Diego Chargers. We would have been getting ready for our first game of the season.

Sean Payton: I was coaching in Dallas and we would have been in our preseason training camp.

Edge: I was in my house in France. We were between two legs of a tour and we were recuperating after a long and hard first leg and first caught the news that there was this hurricane on its way to New Orleans. Then turned on the news channels and just watched as this horror unfolded.

Mike Tirico: I was doing a full season of college football on Thursday nights and Saturdays. We were getting our season started. Like many, not in the Gulf Coast area, you were a prisoner to cable news and what was going on. It was hard to go to sleep because you were just watching and waiting and wondering with everyone else. As we know, we didn't find out really until the next day began how bad the night was.

Steve Gleason: The team had just evacuated a day or two before that. So we were in the San Francisco Bay area ahead of the preseason game against the Raiders.

Quint Davis: I was in a fetal position in a hotel room in New York City.

Doug Thornton: I remember waking up that morning at about 5 A.M. and looking out my window and seeing the trees bent over double and the rain pouring down, so that was a day that I will never forget.

Hurricane Katrina, which started out as a tropical wave off the western coast of Africa, passed over South Florida as a Category 1 hurricane, moved into the Gulf of Mexico and then came ashore at Buras, Louisiana at 6 a.m. Aug. 29, 2005. After reaching category 5 status in the Gulf, it was a Category 3 storm when it slammed into the Louisiana and Mississippi coasts with 125 mph winds, laying waste to everything in its path.

New Orleans was buffeted with hurricane-force winds and heavy rains but because it was on the western side of Katrina's eye the area was spared the full force of the storm. The initial reports were that the city had dodged a major bullet.

It hadn't.

Dennis Lauscha: When I got word that the levees had broke and the streets were flooding and neighborhoods were completely flooding, that's when we got really scared. There was a lot of concern. A lot of concern for our employees, a lot of concern obviously for our fans and the neighbors and everything else. Like everyone else, it was beyond comprehension.

Mike Tirico: To see that really as a place of survival and the shredding of the top, the skin of the roof. Those pictures. Of course, the other ones were haunting. But for me, having spent a lot of time in the Dome, covering sports, as a sports fan as well, those were the ones that allowed me to understand the enormity of what was going on here.

For the Edge, it triggered memories of U2's Super Bowl 36 performance at the Superdome in 2002 and how, in a twist of fate, being in New Orleans for that gig saved most of his key instruments from being lost in a flood that swamped the band's storage facility in Dublin.

Edge: So in some ways New Orleans saved my most precious guitars and amps because had I not been there performing at the Super Bowl in the Superdome, I would have lost them all. So here I'm looking at New Orleans and it's going through a flood and I couldn't help but think, "Oh my God. This is, in my mind and many people's minds, the city. The music city of the United States America, maybe one in the world. Maybe the most important music city in the world." What's happening here is like a thousand times worse and I just couldn't help but think about all the musicians that left their instruments behind that were destroyed in this flood.

Halfway across the country, Saints players and coaches were trying to come to grips with what they were watching on TV.

Steve Gleason: The morning after the storm hit we were getting ready for practice in the hotel there near Oakland. We had the TVs on as we were getting taped up. I remember coming down the hotel stairs and hearing that the levees had broken. Everyone was trying to contact their families and figure out what the status of their houses were. It was pretty much chaos from that point and the chaos continued for several months.

Mickey Loomis: You know, we had finished the 2004 season 8-8 but we had won our last four games, three on the road. So, we went into this 2005 season feeling like, "Hey, we've got a chance to be a decent, good football team." Then all of a sudden we're practicing on a high school field. There's concern about families, about people, our friends in New Orleans and all the things that happened that were very distracting to our football team. It was really kind of an unfair circumstance for our team, difficult.

Somehow, the Saints won their first game in Carolina when John Carney drilled a winning field goal with three seconds to play. Carney's embrace with quarterback Aaron Brooks was immortalized on the cover of that week's Sports Illustrated.

Then, they went to New York to play in a "home" game against the Giants.

Jay Rothman, MNF executive producer: We meet with the team's coaches and players for every game, you know and the meeting with Jim Haslett, I'll never forget how distraught he was about not that. San Antonio welcomed the team, but the circumstances in which they were welcomed and what they had to deal with. You know, practicing on the concourse of the Alamodome, I remember. Going to a local gym to train and workout. Practicing on high school fields and never having a home game.

The team had two five-game losing streaks, with half-attended "home" games at Tiger Stadium and lackluster efforts at the Alamodome in San Antonio.

Matters weren't helped when Deuce McAllister, star running back and locker room leader, tore his ACL in a loss to the Green Bay Packers.

The season ended with a 27-13 loss to the Tampa Bay Buccaneers on Jan. 1. The Saints were 3-13. General Manager Mickey Loomis took quick action, firing Coach Jim Haslett, who had the impossible task of trying to lead a team that had no home, no real training facilities and was missing its best player.

Steve Gleason: It was a long, unsuccessful year.

The Superdome dominates the New Orleans skyline.

The brain child of visionary Dave Dixon and the creation of the architectural firm of Curtis and Davis, the Superdome came to life on Aug. 3, 1975, a state-of-the-art domed structure that appeared had descended from outer space and taken up residence at the end of Poydras Street.

Frank Supovitz: It was just a magnificent looking structure. It was an indoor hard- walled and hard-roofed building. It was very much ahead of its time when it was built. It wasn't an air-supported dome. It just had this sense of permanence and wonder about it.

The Superdome immediately became the home of the Saints, Tulane football, the Sugar Bowl and more. And, while it was truly a multi-purpose stadium — baseball and basketball games were played under its expansive roof—for New Orleanians it was the home of the Saints.

Dennis Lauscha: It's so much more than a building. It's really a temple, if you will, for the community. Everyone comes together. There's a handful of landmarks in town, the cathedral, the Superdome. When you look up the definition of a landmark, it really is a landmark for us. Both, I think, emotionally and spiritually and community-wise."

Trombone Shorty: It's like a heart to the city, you know if you're flying from the sky or whatever it may be and looking down, I look at the Superdome as a heart to the city.

But the savage beating the Superdome took from the winds of Katrina and the resulting floodwaters caused by the failure of levee system combined with the horror experienced by the thousands of people who eventually took refuge there, caused many to question whether the building could—or should—be repaired.

Mike Tirico: I think if you're on the outside looking in, you don't know the spirit of the place, and the spirit of the people more importantly, I think you should have had doubts.

Doug Thornton: As we did the damage assessment, we realized that the mechanical systems and the electrical systems were fairly well intact. It was just the interior spaces that needed to be replaced. We brought in a team of engineers, 16 specialty consultants from around the country, took them over a month to crawl through this building with flashlights to determine that it could be salvaged. I remember the day very well. It was Sept. 30 when Paul Greismar with Ellerbe Beckett, the architectural firm we had brought in, said to me "It probably can be saved. It's going to take over two years, it will take well over $200 million, but that's assuming you don't have severe damage to your mechanical systems and that you can get rid of the mold." So that was our first glimmer of hope.

Governor Kathleen Blanco turned hope into reality.

Kathleen Blanco, former governor of Louisiana: I just kept thinking that the people of New Orleans deserved a symbol of hope, a demonstration that this city could be brought back and brought back more quickly than anyone ever imagined. I was willing to take the chances that if we invested that kind of commitment, that the Saints would also make that commitment.

That commitment was affirmed by NFL Commissioner Paul Tagliabue.

Kathleen Blanco, former governor of Louisiana: He said, "If you can get the building up for the first regular game in the 2006 season on Sept. 25," he said. "I will guarantee you that Tom Benson won't even think about leaving."

Doug Thornton: We asked Governor Blanco to sign an executive order in early December 2005 and that was critical to this project. Without that executive order, we wouldn't have been able to fast-track the construction.

Dennis Lauchsa: It was gigantic. There was so much discussion prior to the hurricane, on whether or not the Saints would be here in the long-term.

The Superdome was going to be re-built. Now the Saints had to build a new and improved team.

On Jan. 6, 2006, the Saints and the NFL held a joint press conference announcing plans for the 2006 season.

On Jan. 19, Loomis and owner Tom Benson introduced Sean Payton as the franchise's 10th full-time head coach.

Tom Benson: Well the organization, where he was, they were praising him so much, I was a little concerned.

While Payton came with a strong endorsement from Bill Parcells no one knew if the fresh-faced offensive play-caller would work.

And the hire almost didn't happen.

Payton: At the end of the season I had an interview with Green Bay and then had spoken to Mickey about taking an interview with the Saints afterwards, and then I was going to Buffalo after New Orleans.

Mickey Loomis: That was an interesting process we went through because first of all, there were a lot of jobs open that year, 10 as I recall, and you know if you lined up in order of attractiveness, we were probably 10th given the circumstances. But I knew we needed a lot of energy so I felt like we wanted to go with a young coach that had a lot of energy. I was looking on the offensive side of the ball. We had dinner and it was a quick three-hour visit and yet I remember after that meeting, 'This is our guy.'

Once Payton came on board the real work began— hiring a staff and building the team. Gary Gibbs was the first hire as defensive coordinator. Then veteran Joe Vitt signed on to be the assistant head coach and oversee the linebackers.

Sean Payton: There's a scene in Jerry Maguire where the main character Tom Cruise leaves the law firm and grabs the fish and he says "Who's coming with me?" and it was like crickets. It's quiet. Then at some point, Renee Zellweger says "I'll go," it was a little bit like that.

Mickey Loomis: There were a number of coaches who saw the condition of the city and didn't want any part of it. Yet, there was a number who wanted to come and felt like, "Hey, this is not just coaching a football team but there was a little higher purpose in coming to New Orleans and helping the city recover.

With the staff in place the next order of business was finding a quarterback to replace Aaron Brooks. Payton and Loomis quickly focused on Drew Brees, who just had his shoulder severely mangled in the final game he played in the 2005 season for the San Diego Chargers.

With his shoulder—which had recently been repaired by noted orthopedic surgeon James Andrews—Brees had a limited market. The Saints and the Miami Dolphins, coached by Nick Saban, were the only two serious players.

Mickey Loomis: Well, we were really concerned and we had a lot of doctor's reports. We did a lot of due diligence on that. Not just on the injury but on Drew himself and what we found was a young man who always defied the odds to be successful. We know it wasn't going to be matter of lack of effort. He was going to do everything he could to get his shoulder back to where he could play again.

Payton was able to convince Brees and his wife Brittany to visit New Orleans. But the recruiting visit didn't go entirely as planned.

Sean Payton: I'm driving the car, Drew in the front seat, Brittany in the back seat. I'm driving like I've been a resident for 10 years and I've only been here for a couple of months. So we went over to the North Shore to look at some housing. We came back and somewhere off the Causeway I ended up, spun around. And I was heading toward Baton Rouge. Now just over and back from the North Shore would take an hour and a half. So there's that point I look in the rear-view mirror and I see Brittany kind of nodding off and I'm thinking, "I might as well drive them to the airport and put them on the Miami Dolphins plane."

Drew Brees: "I remember looking to my left and seeing a house that was really just a concrete slab and no house. And then seeing another house that was halfway off the foundation with a truck upside-down in the living room. Then we had to stop because there was a tug boat sitting in the middle of the road upside-down and it was that moment where I looked at Brittany and I remember our eyes met and we knew that this was so much bigger than football. I think we both felt the calling there to New Orleans. That this was just not the resurgence of a football team or an organization, but that it was about the rebirth of a city.

With a quarterback in place that made preparing for the 2006 draft that much easier. Mario Williams, an imposing pass rush specialist from North Carolina State and Reggie Bush, a Heisman Trophy winning tailback from USC, were the top two non-QBs on most draft boards. A day before the draft the Texans announced they were going to draft Williams, leaving the dynamic Bush available for the Saints at No. 2.

Paul Tagliabue, NFL Commissioner: Reggie Bush

Sean Payton: It was a 9.0 on the Richter scale.

While the Saints were putting their team together, the state of Louisiana, SMG and a small army of contractors were working nearly round-the-clock to rebuild the Superdome. The state and SMG had re-financed the Dome's debt and used that extra money, along with FEMA and insurance payments, to make sure the re-built Superdome wasn't going to be the same-old building.

At the same time the NFL was working on plans to make the pregame entertainment before the re-opening game Super Bowl-worthy.

Charles Coplin: There was a guy that was working for me named David Saltz, he was a consultant, and he kept saying to me, "I can get U2 to do this." And I was like, "If you can get U2 to do this, I'll put myself on a line and basically, and say to everybody we're getting in the way, we're going to interfere because we think we can do a much bigger show."

Ezrin, a legendary music producer, became involved because he and a group of his friends in the music industry had formed a charity, Music Rising, to help all of the New Orleans musicians and bands who had lost their instruments to the flood waters of Katrina. The group's immediate goal was to raise $1.2 million to help replace instruments for 1,200 musicians.

Bob Ezrin: A few weeks after the flood, U2 are coming through Toronto they were actually playing and I was there. So we were there and I was sitting next to the Edge and being the brazen guy that I am, I said to him, "Hey, look we're going to be replacing a lot of instruments that were lost in the Gulf South, do you have any guitars you don't need?" I figured, rock star. He's going to say, "Sure" and then I'll never hear from again but he said, "I can do better than that." I said, "Here's my home number. If you come up with anything, give me a call." Sure enough, that weekend, just a few days later, I got a call from Edge, he said, "Okay, I've spoken to Yamaha. I've spoken to this one. I've spoken to that one. I've spoken to Live Nation. I've gotten these people to agree to put this money in, this company to agree to sell us instruments." He kept saying, "We, us, we." And I thought, "Okay, partner, here we go."

Edge: We started Music Rising and we're very proud to say within six months we'd started to get a lot of equipment replaced and lot of musicians back to work which was our original phase one, the music had to continue. Not just because, where music is, hope abounds. If the music is silenced it just feeds into people's sense of desperation. So bringing back music had an important role to play we felt in the regeneration of the city, but it was also the continuity. We just wanted to make sure that this wonderful tradition and music culture of New Orleans was maintained, supported, that it survived and we didn't look back in 20 years and say, "Well, the great music culture of New Orleans pre-Katrina and then afterwards had been dissipated."

Bob Ezrin: So both Edge and I made separate trips in the fall and winter of 2005 to see what was going on and it was astounding. Honestly like visiting the dark side of the moon when you went down to the 9th Ward and beyond moving. It strengthened my resolve that this was something that we had to fix. And what our thought was, was, "If they play it, others will come." If the music is playing, people will come back. Without the music, there is no heart to the Gulf. So that became our mission, put the music back.

And then Ezrin and Edge were approached by the league about playing the re-opening game.

Edge: So the initial idea was that they'd like us to put together an event that was inspired obviously by New Orleans and the music of New Orleans but might include some international artists. I thought on this for a while and said, "Well, definitely we should do something." I'm not sure what it should be at first and then Bob says, "You know maybe we could bring in a guest or two and you could perform with maybe another singer. Maybe Billie Joe from Green Day might do it." I know Billie Joe so I reached out and said, "Would you be interested?" It's a kind of pretty amazing opportunity to perform at such an event. So Billie Joe reaches out and says, "I'm in. Great. What are we going to do?"

Bob Ezrin: So Edge came up with this song called "The Saints Are Coming" by a little known band called the Skids, a little known punk band. I vaguely knew the song but the minute I played it again, I went "Oh, my God this is perfect."

Edge: I thought for a couple of days and then it just came to me. This song. My favorite song when I was like 17 years old, written and performed by a band called the Skids from Ayrshire in Scotland was this song called "The Saints Are Coming." I thought, wow that's obvious because Billie Joe was so inspired by music of punk rock and we started out as a band kind of post that musical movement so a lot of our roots are punk rock roots. It's the perfect combination for us to sing that song.

So I called Billie Joe and said, "What about the 'The Saints Are Coming?'" I'd sent him the song and he loved it. So that was our first idea and we're very happy about that. Then I was playing the tune and I shared this idea with Bono and Adam and Larry and the idea, "Well you know, maybe we could get the whole band to come along. That would be really cool." So I asked them what they thought. … They said, "Okay, it sounds like it could work." With one of these things it's kind of once you get one little piece of the puzzle in place, you can start to get the other things. I talked to Billie Joe, I said, "Billie Joe, I think maybe U2 might come on board. What about Green Day? What about the whole band?" He said, "I think that would be really cool. Let me go and check."

So bit by bit, we got everyone on side for this idea. Then we happened to be recording in London at Abbey Road with Rick Rubin so we looked at diaries and it turned out that Green Day were free. So they flew over and spent like three days in Abbey Road in the same room that the Beatles recorded all their most important studio recordings and we had two days of amazing time playing together and recording. Of those sessions, that song was the strongest thing that we came out with. It seemed like at that point a no-brainer to lead with that track and of course we made it a benefit for Music Rising, so it earned a lot of money for our charity. Then that came out to a lot of attention and we knew then that was absolutely had to be part of our performance at the Superdome.

Quint Davis was brought on board to help stage the production and legendary Grammy's producer Ken Ehrlich was hired to run the TV production of the performances.

Quint Davis: We had two or three days of run-throughs to stage because we had this giant thing that we built that had to roll in and out. We didn't just have U2, we had U2 and Green Day. And then we had like Trombone Shorty and Kermit Ruffins. We had two whole brass bands. We had two whole Social Aid and Pleasure Clubs.

Charles Coplin: This was one of those shows where everybody was pushing in the right direction. Everybody's hearts were in the right place. And seeing these musicians on stage and the way things were being planned and the music that Bob Ezrin, the producer, put together, the rehearsals were really, really special. When Bono started to improvise "Beautiful Day" and after the flag and the colors come out, you really started to get goose bumps.

Edge: You know, it's funny, we showed up at the Superdome and I think we were all kind of a little nervous because there was so much that had to be done in that rehearsal you know, integrating Trombone Shorty and the other musicians and two bands that hadn't really played together that much so the sound check and all was quite a high, an intense moment.

Trombone Shorty: I don't think I ever captured that emotion again, years later, it was just a monumental thing – that moment let us know that if we had any doubt of coming back to New Orleans, we are here now and from this moment we can build and make sure this city is OK."

The 2006 Saints gathered for training camp at Millsaps College in Jackson, Miss., about three hours north of New Orleans. Practices were hard, temperatures were hot and the Saints looked like a team a long ways away from being a playoff contender.

Sean Payton: Obviously, it was going to be a tough camp. We were going to try and to really challenge the players and build a foundation and really create an environment where toughness was going to be what made it. There weren't many restrictions then. We were going two-a-day. It was hot, obviously. I would say it was one of the more difficult training camps in our league's history.

Drew Brees: You could maybe relate it to the weeding out period of a boot camp or of a military training where you are trying to find the best of the best and you're trying to set the tone and you're trying to break everybody down and to a point where you can build them back up together as well as a unit and truly build a foundation on what will be our organization moving forward and I think that was the vision that Sean Payton had in his mind when we went to Jackson.

Mickey Loomis: Man, it was tough but the players that came through that I think they would all say, "As tough as that was, it made us better."

Sean Payton: Honestly, the season started off in training camp and I would say average to poor. We struggled in some of those preseason games, Deuce was still recovering from an ACL. Drew still wasn't 100 percent.

Drew Brees: We were abysmal during the preseason and listen, a part of that was because we were gassed. That training camp was so physical and so tough and so long and so draining, by the time you got to the games, you didn't have anything left. Guys were fighting for survival really. In general terms, you were each day, at some point during practice, you just went in survival mode, which is like how do we get through this?

The Saints started the season at Cleveland and scratched out a victory.

Sean Payton: That was an important win, it was a low-scoring game. Then we go to Green Bay and we fall down 13-0, but we bounce back and are able to get back in the game.

Mickey Loomis: I felt like that Green Bay game was pretty important to us.

But nothing was going to be more important than the re-opening game, which pitted the Saints against their longtime rival, the Falcons, also undefeated.

Drew Brees: I think one of the best things Sean did was he took the entire team to have our Friday practice which took place on a Saturday in the Superdome prior to the Monday night game. This, for many of us was our first time in the Dome, ever and certainly post-Katrina for the guys that had been there. It was a bit eerie and we got through the practice and sitting there just imaging all that had taken place over the past six months or certainly year. Then, at the end of practice he calls us all up and the lights go out and then up on the JumboTron he plays a video for us just kind of documenting the storm, the devastation, what had happened in the Dome. Then what this game represented for so many people and there wasn't a dry eye amongst the team as we watched that video. We all knew right then and there that we were going to win this game because we had to.

Sean Payton: I remember our focus being just on the routine and making sure players knew how to get to the stadium, more than 50 percent of the team hadn't played the year before. And so, we had valet parking, we had the hotel we were staying at, making sure they beat traffic. There were all these steps in place just to make sure on Monday they were ready to play the game.

Steve Gleason: The two things I remember that were unique to my experience were, they wanted every player to use the red carpet valet service that was right in the middle of the arriving crowd. I didn't want to do that. So, I drove in the back entrance and parked in my spot. The other moment was during the National Anthem, minutes before kickoff. I vividly remember looking across the field and seeing the Falcons and looking up at the crowd in the Dome and seeing the fans thinking, 'It is impossible for us to lose tonight.

Sean Payton: It was only going to be a special night if we won. In other words, we did not want to have the re-opening and the nationally televised game and lose the game. It had to be with us winning, because it was one of those once in a lifetime moments that was much bigger than the sport itself.

Mike Tirico: Never seen a stadium for a regular season game like that, a Super Bowl-type energy in the building. But it was different because it was real passion. It came from the heart. It wasn't just hey our team is playing. No, our city is playing.

Frank Supovitz: One of the things that I thought was important was to do some form of a reveal. Something that said, "Okay, now the Superdome is open," and we did that with the big banner reveal on the outside of the building.

Archie Manning: I get a call; I don't recall if it was from the Saints or the Superdome people. They were going to have a countdown; people were going to be out there. They weren't going to open the dome until 5:30 or something. "We're going to have a countdown, we'd like for you to get up on this big deal and count it down." I said, "Shoot yeah, I'm honored. I'll be there."

Frank Supovitz; Once inside when the preshow started, pregame show started, the U2 and Green Day performance was just one of these things where even during the rehearsal, when we were watching rehearsal, we were looking at each other and saying, "This was an important thing to do. This is not something you even have to pay us for, I would do this for free."

Robin Roberts: Now, please welcome two of the world's greatest rock and roll bands, U2 and Green Day, ushered in by some of New Orleans' finest brass musicians.

Bob Ezrin: Billie Joe comes out and starts singing 'House of the Rising Sun.' And of course this a room where just one year before people had been dying and the smell of that was still in the air.

Keith Spera: When Billy Joe Armstrong sang, 'There is a house in New Orleans, they call the Superdome,' I mean I still get chills when I think about it now. Incredible, how they tailored that moment and it couldn't have been more effective and more powerful."

Bob Ezrin: Then, the came the statement of defiance: the saints are coming. And everyone had come to this Saints game. This was, in a way, this was New Orleans standing up. This was New Orleans getting off its knees and standing up and saying to the world, "We're back."

Trombone Shorty: You can hear when we're walking up, the people that ran on the field, oh my God, this is amazing to play with U2 and Green Day and represent the city and that part, when he mentioned the names, that wasn't part of the rehearsal, so I had no idea that he was going to do that. But, I do remember being on stage, all of those people and when he mentioned each one of our names, you can hear like a big roar in the crowd and that was a very, very proud moment for all of us to be able to be representatives in our hometown on that stage.

Edge: I think when we saw the response of the crowd at the event, I think we realized that this was a coming together of so many things and it was, it's significance started to dawn on me particularly. After the show, it was really getting out and talking to people. The locals, Quint, Trombone Shorty, his cousins and musician friends and guys from Preservation Hall started to realize that this actually, this is big. This is big, bigger than I thought.

Dennis Lauscha: It was almost like an alarm clock. For the last year, year and a half, since Katrina had hit, we'd been living in a nightmare and the alarm was going off. The song was waking us up.

Bob Ezrin: When the show was over we had a big gathering in the dressing room of U2 and Bono, unaccustomed as he is to public speaking, gave a little speech about the meaning of this thing. And acknowledged everybody that was involved and there was a feeling of kind of solidarity in the room. We had just made history.

Charles Coplin: Another cool thing was when the show was over and pregame was over, I remember just walking towards the stage and Larry Mullen, the drummer of U2 who I had not spoken with at all, slapped me five and I slapped him five and we went on our way.

Edge: And well I had no idea was that the song “The Saints Are Coming” was going to be adopted in the way it has been and I have to say that I was very proud to realize that that has happened. It was great fun to talk to some of the guys from the Skids and kind of explain to them because they were like had no idea what was going on so suddenly for them to have one of their songs be such an important part of a sports team on another side of the world. It was kind of mind-blowing for them.

Music: are coming. I say no matter how I try I realize there’s no reply. The saints are coming.

Sean Payton: We were in the locker room when that took place. So now when you see the video of it and you hear it, you just think of that night. I think every one of us felt fortunate and blessed to be in a position to be a part of the recovery. If you didn’t at the beginning, you quickly got on board and recognized this was more than we got into this sport for. I wanted to become a coach, but this was about a bigger thing than just winning games.

Two of the main icons of New Orleans music, Irma Thomas and Allen Toussaint, came onto the field to perform the anthem.

Irma Thomas: Normally I do the anthem acapella, but this particular time they decided to pair me up with along with Allen Toussaint. We did a quick rehearsal backstage, well backstage as the Dome is backstage, and that was the first time I actually sung it with accompaniment.

Irma Thomas: Oh say can you see, by the dawn’s early light.

Sean Payton: One of the challenges for any artist singing a national anthem was you got a lot to lose and not a lot to gain. We hear about the mistakes made during anthems. Every once in awhile you hear about Whitney Houston hitting out of the park. Irma Thomas hit it out of the park. At that moment, that was the person who should have been singing the anthem. You have goose bumps, you’re numb, you’re trying to stay in the moment, but it was special.

Irma Thomas: And the rockets’ red glare, the bombs bursting in air.

Irma Thomas: It was odd because once finished singing it, normally they start applauding, but for some reason on that day, if there wasn’t a good 30-second pause, which 30 seconds on TV is a long time, a good 30-second pause before everybody started applauding. There wasn’t a dry eye in the house, including mine. For some reason it just meant, we were home. There’s a big difference when you realize you’re in a place where you think you would not be and it hits you. For 30 whole seconds, we just stood there and went wow, we are home.

Trombone Shorty: She was singing from a different place. She was singing to make sure the city, this was the beginning to us rebuilding. You can hear it in her voice how touching it was for her to be able to be there and represent at that level. And then for us to come along, it just captured everything that New Orleans has from football to music to the queen of soul.

Drew Brees: It still gives me chills to hear the U2 and Green Day ‘The Saints Are Coming ‘and it’s awesome. So many New Orleans legends in and around that as well. Like you said, Irma Thomas and Allen Toussaint. We knew that it was going to be a spectacle. We knew that “Monday Night Football,” two undefeated teams, the re-opening of the Dome, I mean just all the festivities that come along with that and yet there was a laser focus on our team and we knew we had to take care of business and we knew we had to start fast, too. And I don’t think we could have started that game off any better than we did.

Mike Tirico: A moment, almost unimaginable 13 months ago is here. The NFL, the Saints, back in New Orleans. Back in the Superdome. Russell from the five. And a nice return to the 25-yard line. That brings Michael Vick and the Atlanta Falcons out to the field. Vick lost the football! Goes out of bounds, New Orleans did not have possession. It’s still Atlanta ball, but it’s fourth down. Fujita came in and freed it out of Vick’s hands.

Sean Payton: The plan wasn’t to rush the first punt. I don’t know if we had a plan in regards to when we were going to rush the punt. Typically, you rush six. When you rush it you rush eight. John Bonamego, our special teams coordinator, just as third down had been run, he said, “Do you want to rush this first one?” So my reaction was “Yeah!” But it’s not like we spent all week deciding that we were going to rush the first punt. But where the ball was on their side of the field, we did and Steve did a great job. He timed it up.

Steve Gleason: I was a little surprised to hear the block call after the first series, especially in the field position, which usually calls for a return. The scheme is an interior stunt where I cross from the right A-gap to the left A-gap. Sure enough, the Falcons had some confusion on their assignments. They tried some bizarre slide scheme which I’d never seen in eight seasons. So, I actually didn’t hit the A-gap like it was drawn up. Because they used the slide technique, I actually ended up unblocked and the B-gap opened up for me.

Drew Brees: I remember we had it in the plan and it was one of those, hey right moment and hey we got the look that we wanted on that first punt. So as I'm standing there, I'm trying to act cool. It's kind of one of those acting jobs where you don't want to act too excited about what's happening down there with the punt, you know I kind of look like I'm getting locked in for the drive but in the back of my mind I'm thinking alright we've got the punt block on. Come on Steve-o, come on Gleason. And then sure enough it sets up perfectly and he blocks that punt and it was like a shotgun blast.

Mike Tirico: to punt and it's blocked! It's rolling inside the five and it's going to be covered by the Saints for a touchdown. Oh baby! What a moment, just listen to this croud!

Mike Tirico: In the back of my mind I had thought later on that afternoon as I was kind of going to the game that if the Saints do score the first thing I want to say is 'Touchdown New Orleans.' It wasn't 'Touchdown Saints,' it was a New Orleans moment. With the energy that was in the building, it had built up through the music and then that play, it was just the perfect time. I remember saying 'Touchdown New Orleans.' I've done that in other places, just kind of put my hands out to make sure nobody said anything. There was nothing any human alive could say that could be better than that moment.

Jay Rothman: I give Tony Kornheiser credit because words in the moment were priceless, I thought.

Tony Kornheiser: You could not have scripted this any better than it just happened for the New Orleans Saints. Everybody thought that the wave of emotion would come in with the Saints. If you were the Falcons, the first thing you had to be afraid of was being swept away in that particular wave of emotion and that is exactly what happened. Now those people that look to the New Orleans Saints as something that would uplift them, uplift the city, uplift the entire Gulf region, they just had it.

Zach Strief: But that moment to me was the defining moment in the city's rebirth. It was a belief that the city could be better than it was before and that is such a rare and unusual thing to be part of as an athlete.

Quint Davis: It was transcendent. What happened, in our experience, was that what we did in the music and the song was tied to the punt block from 'The Saints are Coming.' They came. They blocked the punt. They scored a touchdown. They won the game.

Sean Payton: I just remember the noise. I remember Curtis DeLoatch scoring and spiking it. But I can't recall Steve's reaction because it was just so loud. It was kind of a we scored. We aren't going to get shut out in this game. Scoring first with that crowd was significant in that, it was as loud a stadium that night that we, that I've ever experienced.

Mickey Loomis: You're just pumped up and excited and the crowd has never been that loud ever. Then, there's tears being shed. Man, it's just a perfect play at a perfect time.

Kathleen Blanco, former governor of Louisiana: I don't think I've been to any ballgame or any other event with a crowd of people that were more joyful and just shouting for joy when Steve Gleason blocked that ball.

Dennis Lauscha: All of the times that there seemed to be that we could have turned a corner as an organization and we went the wrong way. For some reason, that night it felt like we finally turned the corner and we were heading in the right direction.

Jay Rothman: It's the most impactful, it's the most impactful game I've done on literally over a thousand events, not just football – baseball, basketball and just because of the responsibility we had that night and the meaning. The meaning of what that game was for the people. The game was secondary to the event and the rebirth of a city. So that made that night, more than anything, super special for all of us.

Steve Gleason: There was so much emotion and passion in the Dome that night. The people of New Orleans had spent the previous 12 months being devastated and frustrated and angry. This was their chance to release all those emotions and to let the world know the city of New Orleans was back. Because I had been in New Orleans for the previous six seasons, at least to some degree, I understood the culture and mentality of New Orleanais. I was dating, and would later marry into a New Orleanais family. I also endured the chaos of the previous 13 months. As a result, the significance of the block, even in the moment immediately after the play, was not lost on me.

Drew Brees: Complete elation. It was an eruption. It was such a bang bang. If you didn't know that we were going to win prior to that moment, then you knew that there was going to be from there on in and basically it was a resounding, not only are we going to win this game but New Orleans, we are back.

Sean Payton: I can't split this ball up five hundred thousand ways. I can't do that. I can't cut it up into five hundred thousand pieces to give to everybody in this city. But, this game ball is going to everybody in this city. This city is getting this game ball from our organization, this team. This game ball is going to the city of New Orleans.

The impact of Sept. 25, 2006 – the performances of U2 and Green Day, Irma's national anthem, Steve Gleason's block – still resonates today, 10 years later.

Irma Thomas: To be at the Dome, back in the Dome, no matter what the situation was outside. It was a way to get away from thinking about, "Well I gotta get my house together. I gotta do this, I gotta do that." You can forget it. For whatever time you were spending in that Dome, all of that just went away for that moment. It was a come together. It was just special.

Trombone Shorty: It was bigger than the football game for us, for the city, for the team, for the musicians, it represented more than just football.

Kathleen Blanco, former governor of Louisiana I think that a lot of credit goes to the Saints. Drew Brees was fairly new at the time and he took the city to heart, he became the symbol of a winning team and that was the other thing that happened. The Saints transformed themselves, from a team on the margins to a winning team. That elevated the whole state.

Sean Payton: You didn't realize it at the time, but all of a sudden you found yourself in this event at this period of time, that you realized it was going to be something you remembered long after you were here.

Dennis Lauscha: I think it was a sign that hey, we can do it. We can be a championship organization. We can deliver a championship. We can be a championship city. We can be a championship community. We are different. That's what makes New Orleans so great. We do things a little bit differently, but that doesn't mean we can't be successful and can't be champions. That night again was the first step in our journey to winning a championship and it was one heck of an experience.

Edge: Well, I have to say for me personally it's probably the pinnacle because this was an initiative that I started. The idea, the genesis of this song was something that came to me in response to that request to perform so you know, it was very personal to me. In the sort of U2 context, I think it's way up there because it's everything that U2 are about as a band. You know, we were so proud to being able to give back in this way. And so the fact that the song lives on in this way was totally unforeseen and just an incredible, I would say an honor.

Brees: I'd say my lasting memory from the Monday night game, the re-opening of the Dome, the Atlanta Falcons was just the feeling that we can really accomplish anything. I mean who would have thought, a year earlier after everything that had transpired, that we would be sitting here doing this? Certainly just go back six weeks prior to that during training camp. Who would have thought that we would be sitting here having this moment? I mean, we felt like we can do anything, we can accomplish anything. I'm not just talking about the team, scoring touchdowns, winning football games. I'm talking about the city, the people, like New Orleans is not just going to come back, we're going to come back stronger than ever."

Resiliency And Affordability Focus Of Edgemere Planning Study

By Katie Honan

DNAinfo, September 24, 2016

EDGEMERE — A new supermarket, increased resiliency measures, and better streets and sidewalks are part of a plan to reinvigorate the bayside Queens neighborhood of Edgemere, officials said.

City officials released their report on the Resilient Edgemere Community Planning Initiative on Saturday, which completes a year of planning workshops in the neighborhood on the low-lying Rockaway peninsula.

Around 250 people attended the workshops, and questionnaires were sent to the neighborhood's 1,700 households, according to the city.

The plan features a five-year timeline of work that's focused on protecting the area from future flooding, creating more commercial opportunities and building affordable housing, according to the Department of Housing Preservation and Development.

The city nearly 20 years ago designated Edgemere as an urban renewal area, but work and progress has since stalled, according to City Councilman Donovan Richards.

Residents lack resources, and even the streets and sidewalks need major work. At the workshops, officials found residents desired basic improvements like better transportation, stores and flood protection.

"Many of their ideas in particular is stuff that was promised," he said.

Major issues found through the workshops included protection from the flooding that's common during rain storms and high tides — with an eye towards future storms similar to Hurricane Sandy.

"We want to find ways to alleviate tidal flooding as we wait for FEMA funding" for larger projects, he said.

Part of the resiliency measures include long-term buyout options for homes closest to Jamaica Bay, officials said. So far, five homeowners have agreed to be relocated. While the city won't force anyone out, they "wanted to make sure that there were options," according to Richards.

Throughout the Urban Renewal process, residents were promised more commercial development, but the plans never came to fruition, he said.

A new supermarket on NYCHA-owned land by the Beach 41st Street Houses will be built over the next two years, officials said.

In addition to better streets — which recently underwent a massive rebuilding and repaving project — residents spoke about better traffic signals and more green spaces.

And a major component to the study was maintaining residential affordability, even as major investment comes through.

"We want to make sure that even as property values go up we're not pricing people out," Richards said.

Superintendent Lauds Support Of VB Voters

By Kenneth Fry

Van Buren (AR) Press Argus-Courier, September 23, 2016

The support of voters in Tuesday's school election was overwhelming, according to Dr. Harold Jeffcoat, superintendent of the Van Buren School District.

By a margin of 681 for to 313 against, voters approved a three-mill increase, which would generate roughly $1 million per year for much needed facility improvements, including replacing the district's aging bus fleet, updating classroom technology and building a more competitive salary schedule.

Voters also approved the restructuring of four bonds, which would generate one-time revenue totaling approximately $8 million for facility improvements.

"Now, the work begins," Jeffcoat said. "While it will take some time for all pieces to fall into place, we are well on our way to making significant improvements throughout the district."

He said the district will initiate the process of restructuring the four bonds with funds expected sometime after the Christmas break

"These dollars will be paired with funds made available through the Arkansas Facilities Partnership program," Jeffcoat said. "At this point, all projects have been approved by the state but funding amounts have yet to be determined. We should know the degree of financial support from the state by the end of this school year."

In addition to state aide, he said the district will begin the process of applying for partnership funds through Federal Emergency Management Agency for two tornado shelters, one at City Heights Elementary School and the other at Northridge Middle School.

The millage increase will allow the district to begin work on improving the district's certified and classified salary schedules.

"Our personnel policy committees definitely have their work cut out for them this year," Jeffcoat said. "Any changes made to the salary schedules will be reflected in contracts for the upcoming school year."

Jeffcoat said the election results were the result of a team effort.

"With nearly 1,000 votes cast, we had 69 percent in support of our school district's vision for progress," he said. "We are truly blessed to live in a community that is confident in us as educators and willing to invest in the future for our kids."

Jeffcoat also congratulated Carman Young on being re-elected to the school board. She will serve a five-year term for Zone 4. Young received 156 votes to 95 for Bob Robinson.

"I would like to thank the school board for its continued support and vision throughout this process," Jeffcoat said. "We would not be where we are today if it wasn't for their bold leadership and desire for greater success for our school district and community. When they publicly voted 7-0 to pursue this campaign, they set the stage for a very bright future for the Van Buren School District.

Jeffcoat said the result of this election is further proof that Van Buren is on the rise.

"What an exciting time to be a Van Buren Pointer," he said.

Also Tuesday, Mulberry voters voted 157 to 6 to continue the district's current millage, Mountainburg continued its millage 11 to 2, Alma continued its millage 41 to 13 and Cedarville its millage 6 to 1.

Candidates for Alma Position 2, Alma Position 6, Cedarville Position 2, Mountainburg Position 2, Mulberry Position 5 and Mulberry Position 1 ran unopposed.

Bellevue Joins Effort To Fix Levees

By Eugene Curtin

Bellevue (NE) Leader, September 26, 2016

The Bellevue City Council voted 6-0 Sept. 12 to contribute $3 million to an almost $28 million fund that will be used to strengthen 19 miles of levee that protects the base from the Missouri River.

The levees also protect thousands of developable acres south of the base.

The Sarpy County Board Aug. 30 made the same $3 million commitment Aug. 30.

Other contributors are the State of Nebraska, which will contribute $13.7 million, and the City of Omaha, which will contribute $3 million.

The Papio-Missouri River Natural Resources District will contribute $5 million, a contribution that might climb to $7 million, potentially raising the total cost to almost $30 million.

John Winkler, general manager of the Papio-Missouri River NRD, has said he hopes construction will begin next year.

The work should take two years to complete, he said.

The work is being conducted by order of the Federal Emergency Management Agency, which has threatened to decertify the levees if the improvements are not made.

That would leave Offutt, and thousands of developable acres, listed as sitting in a floodplain.

Decertification would put the base at greater risk of closure, and would make the area south of the base undevelopable.

U.S. FIRE ADMINISTRATION

Millard To Be Honored At National Memorial Service

Portage (WI) Daily Register, September 25, 2016

The 35th annual National Fallen Firefighters Memorial Service will honor four Wisconsin firefighters who died in the line of duty. They are among the 79 firefighters who died in 2015 and 33 firefighters who died in previous years who will be remembered at the official national service at the National Fire Academy in Emmitsburg, Maryland, on Oct. 9.

Firefighter Lawrence W. Millard will be among those honored. Millard, 56, of the Endeavor Moundville Fire Department, died after he was struck while directing traffic at the scene of a motor vehicle accident on Dec. 11, 2015.

Others from Wisconsin include Firefighter Leslie W. Fryman, 58, of the Rosendale Volunteer Fire Department; Lt. Michael P. Miller, 45, of the Green Bay Metro Fire Department; and Firefighter Dale J. Wege, 59, of the Pine Lake Volunteer Fire Department.

Their names will be added to the National Fallen Firefighters Memorial on the Academy grounds. The national tribute is sponsored by the National Fallen Firefighters Foundation and the Department of Homeland Security's U.S. Fire Administration.

Families will receive flags flown over the U.S. Capitol and the National Memorial. Members of the fire service, honor guard units and pipe and drum units from across the country will participate in this national tribute.

For a complete list of fallen firefighters being honored, visit www.firehero.org.

Tax-lien Sales Can Ignore Charleston's Most Neglected Properties

By Elaina Sauber

Charleston (WV) Gazette-Mail, September 24, 2016

This is the first of a two-part story about the system of tax lien sales in West Virginia and how they're connected to the growing problem of vacant and blighted properties in the capital city.

Three years ago, Janie Hamilton moved back to her childhood home on Woodland Drive, only to discover the prominent, Colonial-style house next door that once anchored the hilly neighborhood had become a living nightmare.

In the 1960s, she remembers, its previous owners lovingly tended to the home and grew flowers and vegetable gardens in the backyard.

The charming home from Hamilton's youth has now been vacant for more than a decade. What remains now is a kudzu-covered ghost of Hamilton's memories. She refers to it as "the jungle."

The large front porch is completely inaccessible — the weeds and brush render the front door invisible.

The side entrances aren't boarded up, creating easy access for the homeless and trespassers.

The inside, Hamilton said, is just as bad. What hasn't been pilfered over the years is strewn around the house. The kitchen has been all but gutted. An upstairs bedroom is filled with stacks of newspapers and magazines reaching toward the ceiling. Mold grows up the walls from where water made its way inside over the last decade. Tufts of feathers and fur from curious animals litter the floor.

"There's just filth all over the house," said Hamilton, who admitted to trespassing in the house shortly after moving back home.

As the home's physical state worsened, its owner Kenneth Nicholas, a relative of the previous owners, stopped paying property taxes.

Eventually, the property's liens were auctioned off at a Kanawha County tax sale in 2014 for $2,000.

The lien purchaser, an Atlanta-based limited liability company, took title to the property in April after Nicholas failed to redeem it. It remains to be seen whether the new owners will make improvements to the property.

"I'm here alone, 60 years old, and I'm here fighting a jungle," Hamilton said.Investing in debt

Hamilton's story is just one example of West Virginia's tax lien system and its trickle-down effect across the capital city's neighborhoods.

Proponents of tax lien sales, which are used in at least 30 states, argue that the process is a tool for cash-strapped local governments to quickly collect on debt. The county receives the amount it's owed for property taxes immediately after the liens are sold — and it also gets to pass off the burden of collection to a private third party.

Critics argue that the practice perpetuates the cycle of delinquency that frequently accompanies long-vacant, low-value properties because there's no way to ensure investors will make them safe and habitable.

As Charleston's Building Commission scrambles to consistently update its vacant building registry — a list of roughly 400 empty, blighted properties in the city — it's losing the battle of addressing those that have been cycled through the tax lien system.

A Gazette-Mail investigation found that nearly 170 of those vacant properties — more than 40 percent — have gone through the tax lien system at least once in the past decade. Many of these properties are clustered on the West Side flats around Mary C. Snow Elementary, and also in various neighborhoods on the West Side hill.

The county collects between $1.5 and $2 million at each tax sale, according to Kanawha County Tax Deputy Allen Bleigh.

West Virginia state code declares that selling tax liens provides for the transfer of delinquent properties "to those more responsible to, or better able to bear, the duties of citizenship than were the former owners;" and for the reduced cost to the state and local governments.

Each November, the Kanawha County Sheriff's Office holds two-day tax lien sales, where scores of investors, local attorneys and representatives of out-of-state hedge funds bid on liens for at least the amount due in property taxes. In some cases, that's as little as a few hundred dollars.

The most savvy investors buy hundreds of liens at each sale. Per state code, the lien buyers become the collectors of the debt they purchase. Over the next 18 months, they're responsible for contacting the owners or heirs to give them a chance to pay back the debt and redeem the property.

The economic incentive for buying tax liens has little, if anything, to do with the real estate itself. Rather, the industry is driven by the high interest rates owners must pay to keep their property — that's how investors turn a profit.

During the redemption period, the buyer collects 1 percent interest on their investment monthly for up to an 18-percent return if the property is redeemed. If it's not, the lien buyer has a legal right to take title to the property.

The identity of the Woodland Drive property's new owner is murky at best. The deed was granted to Christiana Trust, a subsidiary of Delaware-based WSFS Bank. Christiana Trust is actually the custodian for a Georgia-based hedge fund, GSRAN-Z, LLC, which is also named on the tax deed application.

A custodian is a third party that oversees an investors' assets to ensure the lender receives its money if the investor defaults.

Like most tax sale investors, Christiana Trust profits from collecting on the liens it purchases in bulk at tax sales.

It makes sense, then, that investors benefit from researching property tax liens before the sale to determine which ones are most likely to be redeemed by the owners.

It's a familiar practice that real estate attorney Frank Alexander, a co-founder of the national Center for Community Progress, has studied over the years. He believes selling tax liens to private investors is damaging to communities in the long run.

"How do they maximize revenue? They want to buy the tax liens with the highest probability of redemption," he said. And the longer investors wait to collect on the debt, he said, the more interest they accumulate.

More than 2,000 liens were sold at the 2015 Kanawha County tax sale. About 25 percent of those properties are within Charleston city tax districts, Bleigh said.

During the 2014 tax sale, Christiana Trust purchased 206 liens as custodian for GSRAN-Z — for more than $1.5 million.

After the 18-month redemption period concluded, only eight of those properties — 3 percent — weren't redeemed by their owners, including the one next to Hamilton's house.

But what happens to the 3 percent of properties that aren't redeemed — and why would an investor take title to them?

"The rational reason is that it's convinced the value of the property is greater than the lien amount, and can sell it immediately," Alexander explained.'Common misconception'

Shawn Means, executive director of Habitat for Humanity for Kanawha and Putnam, first learned about tax lien sales years ago, when people would offer to donate their properties to the organization to get tax write offs.

But there was a problem: Many of those people offering to donate properties didn't own them.

"After chasing down numerous potential donations and finding out that either they had purchased a lien and never had a deed issued, or the lien had been resold, I started learning more and more about the process," Means said.

A major issue with tax lien sales, he said, is that many people don't understand what they're buying.

"There's a very common misconception that if you go to a sheriff's tax sale and buy a lien, you're actually buying the property," Means said.

Habitat works to build safe, affordable homes for area families, but Means said it's not realistic to build new homes in neighborhoods peppered with blighted, tax-delinquent structures.

"We have these neighborhoods that become huge tracts of delinquent properties, [which] tends to degrade neighborhoods even more," Means said. "Habitat's mission is to provide decent shelter

... it's very difficult to accomplish that when most properties in a community are decimated by time [and] neglect, with no incentives for owners to take care of their property." 'A crude instrument'

Georgia attorney and investor John Ramsey heads GSRAN-Z, the investment fund that bought the lien on the property next to Hamilton's home.

Barely a month after GSRAN-Z, via its custodian Christiana Trust, took title to 1240 Woodland, it filed a quitclaim deed in the Kanawha County Clerk's Office, transferring the title to NR Deed, LLC, another company linked to Ramsey — its listed address is identical to his Atlanta law office.

Local attorney John Kennedy Bailey, who does due diligence and legal work for Ramsey's investment groups, said it's common for investors to use one company to purchase tax liens, and another to take ownership over the few that aren't redeemed.

"Generally, the entities that lend money to buy liens are not interested in owning houses at the end," Bailey said. "There's basically a separation between raising money to go to these sales, and then dealing with whatever property might come out of the process."

Bailey said Ramsey's business practice is to rehabilitate and sell the properties his firms acquire via tax liens, but said finding reliable construction crews poses issues.

"It's just very hard to get people to do rehab work that are both affordable [and] show up every day and work," Bailey said. "[They] struggle to find someone in between who will get it fixed at a reasonable price."

Numerous calls to Ramsey for this story were not returned.

A similar scenario played out last year when GSRAN-Z took title to 837 Watts St., after the lien it bought for $2,700 at a 2013 tax sale wasn't redeemed. The firm immediately transferred it via quitclaim deed to NR Deed.

Today, 837 Watts is still empty, untouched and barely visible from the street. No one cuts the grass or trims back the weeds, which keeps the property concealed.

In other cases, local investors who become owners of unredeemed properties have no interest in dealing with the headache of housing and building code violations that frequently accompany such buildings, so they transfer them to someone who does.

"That's a problem inherent in the tax sale," Bailey said. "Most of the houses that [aren't] redeemed have some underlying problem or issue that makes it more likely they'll be vacant properties."

Because investors tend to buy only the most valuable and low-risk liens, Alexander argues local governments are actually losing money in the long run.

"If a tax lien investor bought $10 million in tax liens, they're probably going to make between $1.8 and $2 million in 12 months," he said. "[Local governments] get the base taxes paid as of the day of sale, but they're

... giving up a positive income stream."

But the problem goes further than governments losing out on interest to the private sector — it also means they're still burdened with the worst properties that no one wants to bid on.

"The local government is stuck with the properties the market doesn't want to buy liens on," Alexander said. "It hurts neighborhoods because nothing is done on the weakest properties."

By selling the most valuable liens, Alexander argues, local governments end up keeping the problem of low-value, blighted properties.

In 2013, nearly 700 of the 2,030 properties, or 34 percent, whose liens went to the Kanawha County tax sale received no bids.

Over the past three years of tax lien sales, on average, more than one-third of the listed properties received zero bids.

In those cases, the no-bid properties are then certified to the state Auditor's Office, where they sit for another 18 months before being sent off to the Deputy Land Commissioner for another public auction.

"It's a crude instrument for reducing the number of vacant properties," Bailey said.'We've been neglected'

Some of Charleston's bleakest examples are clustered around the West Side hill, especially west of Garvin Avenue. The steep, unforgiving terrain quickens foundation issues.

Livingston Avenue is just half a dozen blocks north of Washington Street, but the sound of traffic is replaced by the roar of insects. The occasional car rolls slowly by. Bits of trash, food and condom wrappers sprinkle the roadside beneath power lines weighed down by years of untrimmed vines and ivy.

Margaret Wilkinson moved into a house on the 1500 Block of Livingston Avenue recently, and is familiar with the West Side's reputation as crime ridden. The slew of vacant homes surrounding her own doesn't put Wilkinson's mind at ease.

Another neighbor, who owns her home, worries that someone will break into the empty house next door and start a fire. The owner of the neighboring structure, NAJ LLC, is headed by local attorney Bob Johns.

Johns is listed as a member or manager for nearly half a dozen LLCs that have purchased more than 1,000 tax liens since 2012.

During the 2013 tax lien sale, NAJ paid the county more than $438,000 for 227 liens. Roughly 75 percent were redeemed by their owners during the subsequent 18 months.

Attempts to reach Johns for comment were unsuccessful.

A while back, Wilkinson said, she walked to another vacant house at 1544 Livingston — what's left of it, anyway. The house's charred remains are still visible from the street, but a shed that sits on the property was untouched.

Inside the shed was evidence of squatters — just a few hundred yards from Wilkinson's home.

"I went up there and just looked around. I saw an electric cord. There was a book bag, a bed and everything," she said.

A 2015 report from the U.S. Fire Administration found that 7 percent of all residential building fires occur in vacant structures, based off data from 2010 to 2012.

At 37 percent, "intentional fires" were the leading reported cause of fires in vacant, residential buildings.

Several of the houses on Livingston have been demolished, but someone still owns the empty lots that have since grown into thick, invasive tangles that completely block out the view of the city below.

Because the owners don't cut the weeds back, they grow up and down — and through — the power lines that criss-cross above the street. Power outages are common, Wilkinson says.

Shawn Little, a 20-year veteran with the Charleston Fire Department, is also working with tax lien opportunities.

He owns five lots in the 1500 Block of Livingston. Just one still has a house on it — shuttered and empty. The rest have melded in with the other empty lots that seem forgotten by their owners.

"I don't want to comment, period, on what I do on my days off," Little said.

Wilkinson said she thinks the city could be doing more to address vacant and problem properties.

"I don't think it's fair — people going in these abandoned houses, doing their drugs or staying there. They [could] catch it on fire, then the next house will catch on fire," Wilkinson said. "It feels like we've been neglected."

Coming Monday: One property's long line of questionable ownership, loopholes in West Virginia's tax lien system and possible solutions to address them.

DHS/FEMA GRANTS

UA Seeks Gift To Start Cybercrime Institute

By Jaime Adame

Arkansas Democrat Gazette, September 24, 2016

FAYETTEVILLE – A proposal for a new University of Arkansas at Fayetteville research institute devoted to cyberterrorism and cybercrime has been submitted to an anonymous donor, according to the university.

UA would create a cybercrime database for the state attorney general's office as part of the proposal. For the attorney general, the project would be "a resource for investigators to easily access a database containing names and in particular cyber crime information," Judd Deere, a spokesman for Attorney General Leslie Rutledge, wrote in an email.

Deere said the attorney general's office has committed $100,000 to support the proposal, with the money coming from settlements in previous litigation involving the office.

The proposed UA cyberterrorism/cybercrime institute hinges on additional funding from the anonymous donor, based on university documents.

The university declined to name the donor or release the proposal. Mark Rushing, a UA spokesman, in an email said the donor is a foundation.

A document from UA's Terrorism Research Center, on campus since 2003, stated the center "submitted a proposal to an anonymous donor to create a specialized 'institute' focusing on cyberterrorism and cybercrime."

The proposal calls for "interdisciplinary, undergraduate and graduate certificate programs in cybersecurity and intelligence analysis," according to the document prepared by the center.

The document that discussed the proposed institute was a summary of center activity that was put together to help UA's ongoing planning process under new Chancellor Joe Steinmetz. Other departments submitted similar documents.

UA released the departmental summaries in July.

The center's summary stated the proposal "was accepted for funding, but a delay in obtaining matching money" halted the donor's gift. The document continued: "We expect this opportunity to remain available this year and are hopeful of receiving these funds later this fall."

Rushing, in an email, said the donor is now reviewing the proposal with no timetable for a decision.

The Terrorism Research Center, led by Brent Smith, hosts what's known as the American Terrorism Study.

The project "provides a comprehensive record of persons indicted in federal courts as a result of FBI 'terrorism enterprise' investigations," according to the center's website. It's also described as "the nation's longest running research project on terrorism in the United States."

The center has collaborated with other UA centers. The proposed cyberterrorism and cybercrime institute would include researchers from the university's Center for Advanced Spatial Technologies and computer scientists from the university's Center for Information Security and Reliability, according to the document prepared by the center.

Smith did not respond to email and phone requests for an interview.

Top U.S. officials have warned about the dangers of cybercrime and cyberterrorism.

"The nation's networks, communications, and data are increasingly at risk from diverse and persistent threats," Adm. Michael Rogers, chief of the National Security Agency, told Congress last year.

The threat of cyberterrorism in part depends on how the term is defined, said Meg King, director of the Digital Futures Project at the Woodrow Wilson International Center for Scholars in Washington, D.C.

"We haven't had an incident connected to cyber that is a massive loss of life," King said. She said she'd estimate the number of true cyberterrorism attacks at "very, very few."

Terrorist groups thus far have not been making cyberattacks a priority, she said.

"Those capabilities are fairly low for now," King said.

UA, in declining to release the proposal, cited an exemption in the Arkansas Freedom of Information Act for records that give an advantage to competitors or bidders.

"The requested proposal, if released, would harm the University's ability to compete with other entities for scarce funding resources, including disclosure of craft knowledge developed by the University," a university spokesman said in declining a request for disclosure.

The university cited Arkansas Code Annotated 25-19-105 (b)(9)(A), which says files that shall not be made public include those "that if disclosed would give advantage to competitors or bidders and records maintained by the Arkansas Economic Development Commission related to any business entity's planning, site location, expansion, operations, or product development and marketing, unless approval for release of those records is granted by the business entity."

The search for a sponsor comes as public universities are receiving less money from state and federal governments, said Jennifer Victor, an associate professor of political science at George Mason University.

Schools "are pretty much forced to look for other types of funding," said Victor, who serves on the board of the Center for Responsive Politics. The nonprofit organization tracks the influence of money in politics and public policy.

She said a donation broadly earmarked for counterterrorism research would be appropriate.

"But what you want to be suspicious of are restrictions on donations that would restrict academic freedom in some way," Victor said.

Rushing, in an email, said "it wouldn't be appropriate to speculate about any potential restrictions" associated with the donor's gift.

Before UA establishes a new institute, a review takes place involving faculty, academic deans, Steinmetz and UA System officials, including the university's board of trustees, Rushing said.

Thomas Holt, a criminal justice professor at Michigan State University, said in an email that several universities have research centers devoted to cybercrime and cybersecurity issues, including the City University of New York's John Jay College of Criminal Justice.

"With respect to research on cybercrime/terror, it is increasing, especially in the social sciences as criminologists and sociologists are increasingly interested in these issues. So it is a hot area of study," Holt wrote.

UA and Michigan State have partnered on a proposal to the National Institute of Justice. The project would involve studying policing and terrorist plots, according to the Terrorism Research Center document.

Elsewhere in Arkansas, the National Cybersecurity Preparedness Consortium, formally established in 2014, consists of five members that include the Little Rock-based Criminal Justice Institute, part of the UA System. The consortium has received various federal grants, including $3 million last year from the Federal Emergency Management Agency.

DHS Testing Mobile, Attribute-based Identity System For First Responders

By Zack Martin

SecureID News, September 23, 2016

The need to properly identify first responders at incident sites has been an ongoing challenge for more than a decade. Federal, state and local governments have been trying to figure out the best way to know who has arrived at a scene while also ensuring that they have the proper qualifications to be there.

For years Homeland Security and FEMA wanted smart cards issued to first responders. Multiple programs were launched, but complications led to the majority being scrapped.

The logical next step – as with most identity projects these days – seems to be the leveraging of the first responders mobile devices. One such project is being piloted by the Kantara Initiative and the Command, Control and Interoperability Center for Advanced Data Analysis (CCICADA). Based at Rutgers University in New Jersey, CCICADA is a Homeland Security Center of Excellence.

Called Mobile Device and Attribute Validation (MDAV), the system enables a first responders smartphone to send encrypted information about their credential to another smartphone used by local authorities managing a response operation. In this manner, the credentials can be instantly verified and access granted to the scene.

The identity and access management system enables local management to access a certificate authority database containing current status and other information about emergency responders. Responders' smartphones hold their credentials or attributes, and once verified, local authorities can be assured of who is onsite and their expertise. Examples of expertise can include hazardous material training, fire fighting or medical training.

Currently, first responders present badges or other forms of ID to check-in with local authorities in a disaster situation. This is a time-consuming process and doesn't truly verify the individual, the agency they represent or their expertise.

"This isn't an identity problem, it's about attributes and how you get someone on the ground who is qualified and has the necessary skills," says Steve Wilson, founder of Lockstep Technologies, the company developing MDAV.

What sets this system apart from others is that it provides only the necessary attributes and nothing more, Wilson says. With the Homeland Security grant, Lockstep wants to build a proof of concept, show how it can work and then add use cases.

Two particular areas of interest are age verification and mobile driver licenses, Wilson says. Typically when someone needs to have their age verified they pull out a driver license or passport, which displays date of birth plus a variety of additional data elements that are not necessary. With this system a mobile device could communicate that the individual is the appropriate age without giving up excess personal data. The same use case would be relevant for mobile driver licenses. Instead of showing an address the system could just confirm residency or age.

MDAV uses x509 digital certificates, Wilson says. "The cryptography is pretty standard, you can go into the phone and sign stuff with the certificate once you put the credential on the phone," he explains.

Rutgers University in New Jersey is home to the Command, Control and Interoperability Center for Advanced Data Analysis (CCICADA), a group that is looking at different areas of identity and access management as well as privacy for Homeland Security, says Dennis Egan, assistant director at CCICADA.

CCICADA is a Homeland Security Center for Excellence and will be searching for and funding different projects. The Kantara Initiative is helping to find worthy projects that the center might be able to help get off the ground, Egan says.

The projects work in three phases. The first is a six-month project where an organization will produce a design for a system, identify customers and partners and submit it for assessment by Homeland Security and CCICADA. Phase two is building a prototype – which has a longer time span and involves more money – while the final phase is a full-blown pilot, Egan explains.

The center has been open for a little more than a year, and to date only has projects in phase one. Egan expects some to move forward shortly as others in the pipeline begin the process.

Someone Revived The Baltimore Gazette To Spread Fake News

Baltimore City Paper, September 23, 2016

The Baltimore Gazette, a newspaper that existed very briefly just after the Civil War, has returned online as a site to spread fake news stories and other nonsense.

One article in particular, "ATLANTA OFFICER KILLS BLACK WOMAN, INJURES CHILD, FOLLOWING BREASTFEEDING ARGUMENT," caught the attention of the online sleuths at Snopes.com after it apparently went viral. Search "Baltimore Gazette" on Facebook and you'll find a number of people who have been deceived by the breastfeeding story or are trying to prevent others from doing the same.

The Gazette's "article" is a rehash of a bogus story that ran in a bogus source, the National Report, in 2014, Snopes reported yesterday in a post that has been shared more than 20,000 times.

Other stories on the site appear to be similarly fake, even though the innocuous, newspaper-ish name, basic web design, and dry tone of the prose could lead some—particularly people who don't live here—to be easily deceived. But there are plenty of signs that the site is full of it.

Most of the articles are written by "BG Staff," with no proper byline given, and it appears the earliest article was published a few days ago, on Sept. 20.

A local story about an 11-year-old girl hit by a minivan in Woodberry is riddled with falsehoods. It says she was hit near a school at 4041 W. 41st St., Ridley Elementary, that does not exist and says she is a student at Dwyer Middle School, another made-up school. The site also "reports" the incident was being investigated by the "County Sheriff's Office," despite it happening in the city.

In other big local news, according to the Gazette, a man made off with Sudafed from a Walgreens on East Fayette Street. Reporter "Dan Stevens" learned from a "Baltimore Police Department media release" the pharmacist thought the man was "casing the place." The suspect, not surprisingly, in light of the racial undertones of some of the articles, is described as an "unknown black man."

BPD spokesman T.J. Smith says the story "doesn't appear to be true" and notes that the phone number listed for anyone with information to contact is not affiliated with the department.

The other two national news stories on the site are related to the rioting in Charlotte, and both—that "anyone caught looting will have welfare and food stamps revoked for life" and that Charlotte will receive $80 million from FEMA—are unsubstantiated. The FEMA food stamps one was debunked by Snopes too.

They are positive about one thing, though: "Here's How Homeschooling is Changing America."

The URL for the website was registered in July 2015 through Domains By Proxy, a company started by GoDaddy.com founder Bob Parsons that keeps owner information marked private. An email inquiry to the totally legit-sounding BALTIMOREGAZETTE.COM@domainsbyproxy.com was not immediately returned.

Interestingly enough, the site did just put up a post about a police-involved shooting in Baltimore County this afternoon, a story that is developing right now in real time—perhaps an attempt to look more credible. But the three-sentence post is aggregating the reporting of WBAL-TV.

Also, the Baltimore Gazette lists its offices at 612 E. Pratt St. There is no such address—the entire 600 block of E. Pratt is occupied by Lockwood Plaza, at 600 E. Pratt, the home of Marshall's, Panera Bread, Fogo de Chão, and other retail stores.

In sum, the Baltimore Gazette is basically your conservative wingnut uncle's email chain trying to masquerade as a credible news source. Don't buy into it.

FIRE GRANTS

Alle-Kiski Valley Fire Departments Get $1.2M From FEMA For New Equipment

By Jodi Weigand

Pittsburgh Tribune-Review, September 25, 2016

Seven fire departments in the Alle-Kiski Valley will be able to replace aging gear and air packs thanks to recently awarded federal grant money.

The volunteer fire departments are New Kensington, Upper Burrell, Brackenridge's Pioneer Hose, West Deer Company No. 2 and No. 3, Vandergrift No. 1 and Lower Burrell No. 1 (Kinloch).

Each received a grant from the Federal Emergency Management Agency's Assistance to Firefighters program.

The grants total nearly $1.2 million. Each department must provide 10 percent of their grant in matching funds.

The primary goal of the program is to help firefighters and other first responders obtain equipment, protective gear, emergency vehicles, training and other resources.

Pioneer Hose Co. Chief Rick Jones said the $68,000 grant the departments received will replace their 12 air packs.

He said the department bought the breathing apparatus used from another department and they're at least 20 years old.

"They have to be certified every so many years, and they get costly to repair," Jones said.

He said this is the first time the department has gotten a FEMA grant in the 17 years he's been chief.

"I'm very excited," Jones said. "I don't know how we would have afforded to replace them if we didn't get it."

New Kensington Assistant Fire Chief Ed Saliba Jr. said they applied for a departmentwide grant. The $441,000 the department is getting will benefit each of the city's five fire companies.

The money will be used to replace all 52 breathing apparatuses, which includes the tank, harness and mask; and 36 sets of gear, which includes coat, pants, boots, gloves, helmet and a hood.

The breathing masks are 14 years old, just one year shy of the recommended replacement date, and the gear is about 10 years old.

Breathing apparatus cost about $7,000 each, and a set of gear is about $3,000, Saliba said.

He said without the grant money, the department couldn't afford to buy this much equipment at once.

"For us to spend that kind of money, we'd basically go broke," Saliba said, "because on top of that we have vehicles to maintain, rescue tools to maintain and upgrade, and everyday expenses.

"What we will be purchasing will be an upgrade to what we currently have and be able to provide good protection for the firefighters and for the people we're there to help."

Applying for a departmentwide or regional grant appears to have been a common way to seek money.

Ted Hereda, Lower Burrell (Kinloch) Volunteer Fire Company No. 1 chief, said the federal government encouraged multi-department grants.

"The more product you buy, the better price you get," he said.

"It's easier for the government to approve one large grant rather than five or six individual ones — especially if it's in the same area," said Bryan Fitch, chief of the Upper Burrell Volunteer Fire Department.

West Deer Volunteer Fire Company No. 3 applied for a regional grant for its department, West Deer No. 2 and Richland and North Hampton volunteer fire departments.

The $436,000 grant will be divided between the departments based on the amount of gear that each needs to replace.

"We were all faced with the same need at the same time," said Jim Wiegand, chief of West Deer No. 3. "Finances are tight, and, with the cost of the equipment going up, budgets buy less and less."

Upper Burrell VFD applied for the grant along with Kinloch.

Their $145,000 grant will buy 28 full sets of turnout gear for each department.

Fitch said their current gear is about 12 years old.

"(The grant) saves us from having to get a loan or spending money that we could use on other equipment," Fitch said.

Tom Schaeffer, chief of Vandergrift Fire Department No. 1, said that without grant money his department wouldn't be able to afford to replace its 14 breathing apparatuses. The department received about $99,000.

"The ones we have now were purchased with a federal grant in 2002," he said. "It's a nice program."

Desert Hills Fire District Awarded $71,810 Grant

River Scene Magazine (AZ), September 25, 2016

The Desert Hills Fire District has been awarded a $71,810 Emergency Management Agency (FEMA) Assistance to Firefighters Grant (AFG) for the replacement of their protective clothing commonly known as "turnouts" and helmets.

The National Fire Protection Standards (NFPA) calls for the complete replacement of firefighters protective clothing every 10 years and protective clothing currently in use is at their maximum useful life as described in NFPA 1971 standards.

According to FEMA, the primary goal of the Assistance to Firefighters Grants is to enhance the safety of the public and firefighters with respect to fire-related hazards by providing direct financial assistance to eligible fire departments for the purchase of new equipment.

Interim Fire Chief Pat Dennen said, "We are very excited to receive this grant. It will allow us to provide the best possible protective clothing for our personnel when they encounter environments that are in immediately dangerous to life or health (IDLH) atmospheres – and we would like to publicly thank FEMA for considering and funding our grant applications."

Captain Steve Bunn and Captain Jason Sayre were credited with writing the grant application.

ICYMI: Antonia Fire Gets $1.6 Million Grant To Hire 14 Firefighters

By Tracey Bruce

Jefferson County Leader, September 25, 2016

The Antonia Fire Protection District will nearly double its staff thanks to a grant from the Federal Emergency Management Agency.

The $1,597.826 grant will be used to hire 14 firefighters and pay their salaries for the next two years to allow the district to meet safety standards set by the National Fire Protection Association (NFPA), Assistant Chief Glenn Nivens said.

Currently, the district has 17 employees but cannot meet NFPA standards that require four firefighters on a truck.

Currently, Antonia sends two firefighters on each truck.

"They call it two in and two out," Nivens said.

When four firefighters are on a truck responding to a fire, two can go in the structure (if they determine it to be safe) and two can remain outside the building to monitor the situation or relieve the firefighters, Nivens said.

"It will increase the safety of our people (firefighters) and of citizens," Nivens said.

Nivens said most smaller fire departments and districts cannot meet the NFPA standards because of the cost.

"It's something all districts strive for, but how do you finance it and make it happen?" he said.

Fire Chief John Newsome wrote the grant, and this is the second time the district has applied for it, Nivens said.

Once the 14 firefighters are hired, Antonia's staff will swell to 31 employees. The district will strictly follow federal guidelines in the hiring process, Nivens said.

"We will be dotting the i's and crossing the t's," he said. "There's a lot of paperwork to read. We don't want to violate the grant contract and be responsible for that money."

Nivens said the district hopes to hire firefighters by the end of the year.

Two years after receiving the federal grant, however, the additional staff will no longer be supported.

"It's something the district will have to look at," Nivens said.

"There is no way the budget can support 14 additional people and maintain it."

He said the board will have to decide at that time whether to ask residents for a tax increase to maintain the additional staff.

BFD Gets $633,746 Federal Grant

By Randy Patrick

Kentucky Standard, September 26, 2016

The Federal Emergency Management Agency has awarded a $633,746 grant to the Bardstown Fire Department for hiring and training volunteer firefighters.

"This grant is a huge win for the city of Bardstown, its citizens and the Fire Department," said Capt. Todd Spalding, who handled the grant application. "The grant is 100 percent funded. No matching contributions have to be made by the city."

NEWS AROUND THE COUNTRY

HURRICANE RECOVERY

City To Get Storm Damage Update

By Buster Thompson

Citrus County (FL) Chronicle, September 26, 2016

The Crystal River City Council will get another update Monday on the city's recovery from Hurricane Hermine. As of Saturday, Florida was still awaiting a federal disaster declaration from President Barack Obama, which would allow the Federal Emerge

The Crystal River City Council will get another update Monday on the city's recovery from Hurricane Hermine.

As of Saturday, Florida was still awaiting a federal disaster declaration from President Barack Obama, which would allow the Federal Emergency Management Agency to assist the state and affected counties.

Crystal River officials approved $1 million Sept.

10 for two rounds of storm debris pickup prior to a presidential declaration.

Pikes Peak Observatory Would Further Solar Science, Education

By Billie Stanton Anleu

Colorado Springs (CO) Gazette, September 24, 2016

A new scientific endeavor in Colorado Springs could help safeguard the nation's electric grid, satellites, aircraft, spacecraft and radio transmissions and save hundreds of billions of dollars.

The first step is a biggie at 14,115 feet. It requires putting an observatory atop Pikes Peak – perhaps the only high-altitude site in the world with year-round access, a continual power source and hundreds of thousands of visitors a year.

The mountaintop observatory has been a two-decade quest by Dimitri Klebe, founder of the Pikes Peak Observatory and space content specialist for the Denver Museum of Nature & Science.

But he and Robert Sallee, board chairman of the National Space Science & Technology Institute, remain undeterred.

"We understand that the process may take (another) three or more years, but we are willing to stay the course," Sallee said last week.

The proposal has been lauded as a way to lure more people to the city's most famous icon, to spur more science, technology, engineering and math (STEM) education, to enlighten and entertain visitors and to complement the impending new Summit House.

But it could do so much more.

Scientists will be able to test instruments and learn how the sun affects the Earth.

When a big storm on the sun sends magnetized clouds through the atmosphere to Earth, for example, currents shoot through the ground and endanger everything from electrical grids to oil pipelines, said NSSTI board member Mark Miesch, a scientist with the National Center for Atmospheric Research High Altitude Observatory (HAO).

The potential effect is billions of dollars in losses. But hundreds of billions would be lost if a large solar storm hit, Miesch said.

Compare that with the $108 billion tab for Hurricane Katrina, the worst natural disaster in the U.S.

That's why space weather – the HAO's focus – is so important to the $1 billion-a-year satellite industry, utilities, airlines and others.

It's so important that the federal government has created a National Space Weather Strategy and Action Plan.

And in June, U.S. Sen. Gary Peters, D-Mich., introduced the Space Weather Research and Forecasting Act to the Senate to better predict and mitigate the effects of space weather. Co-sponsors are U.S. Sens. Cory Gardner, R-Colo. Gary Peters, D-Mich., and Cory Booker, D-N.J.

Forecasts are critical. A solar flare can disrupt radio transmissions, which are very important to the military.

Flight attendants traveling between London and Colorado can build up significant amounts of radiation, but planes can dodge a solar storm by changing routes or flying lower.

"But you don't want to do that unless you're sure. It costs a lot of money," Miesch said. "In order to improve forecasts, you need to increase understanding."

And that's a primary aim of the observatory, which would start with an 18-foot-diameter dome that can withstand 200 mph winds. It will be equipped with a viewing deck, a main 1-meter PlaneWave telescope for various kinds of research and a Lunt 6-inch H-Alpha Solar Telescope geared for sun studies. The entire installation would cover only 900 square feet.

Small telescopes, particularly with the sensors used today, collect more light than the older, bigger telescopes did, so they're more efficient for their size, Klebe said.

They also fill a niche for research needing a big view of the sky, such as finding planets around other stars. That can't be done through bigger telescopes, which only observe a smaller slice of sky, he said.

The 1-meter telescope will be the largest in Colorado, and it will be used by Colorado College, the Air Force Academy, the University of Denver and the University of Colorado at Boulder, among other educational and scientific institutions. It will be the biggest telescope in the Air Force Academy's international Falcon Telescope Network.

The solar telescope will be equipped with a camera, with images displayed in the Summit House, the city or on the Internet. And both scopes can be operated remotely.

Another instrument, an All Sky Visual and Infrared Analyzer, will record atmospheric conditions and phenomena, providing a 180-degree hemispheric perspective. A modified version of the instrument will identify smoke and ash particles in the atmosphere to help the Forest Service with swift response to wildfires.

The push will be to increase understanding not only among scientists, but also among students – including undergraduates from tribal colleges.

"We appreciate that Pikes Peak is a sacred space for Native Americans (including the Utes) and would not build anything there without their blessing," Miesch said. "We want them to be a partner in this. We want to inspire individuals of all backgrounds to pursue science and technology careers."

Construction of the observatory first requires obtaining a permit from the U.S. Forest Service. The observatory team will request a 15-year permit. An environmental impact statement also is needed, and the scientists would like to establish a private-government partnership to accomplish the EIS.

In 2019, the new Summit House is to be erected and the Army's High Altitude Research Laboratory on the peak will be moved. The following summer, the original research lab will be demolished, the site prepared and the observatory installed, if all goes according to plan.

Use of that site for the observatory reduces impacts on the fragile permafrost and is scientifically advantageous in relation to prevailing winds.

The Pikes Peak Observatory is expected to greatly enhance the new Summit House's destination value.

But tourism wasn't the motive for Klebe, who incorporated the observatory as a nonprofit in 1997 with a group of astronomers, astronauts, engineers and educators.

As a researcher at the University of Denver, whose telescope on Mount Evans closes in winter, he saw Pikes Peak as the ideal site for infrared astronomy and education.

In addition to the observatory, the group plans to deploy mobile science labs to remote schools to advance science and technology education.

Its mission, in addition to advancing scientific research, is "to promote the understanding and enjoyment of the universe through education at all levels, media presentations, environmental studies, historical preservation, cultural exhibits and the expansion of tourism to benefit the community."

FLOODS

Evacuations To Begin In Cedar Rapids

By Chelsea Keenan

Cedar Rapids (IA) Gazette, September 24, 2016

CEDAR RAPIDS — As the city braces for the Cedar River to crest at about 24 feet early next week, city officials are asking residents in flood-affected areas to evacuate their homes and businesses by 8 p.m. on Sunday.

The evacuations, while not mandatory, are highly recommended and strongly encouraged, said Mayor Ron Corbett during a 10 a.m. news conference on Saturday at the Ice Arena.

"We know it is a very stressful event for someone to leave their home, leave their belongings and walk away," Corbett said. "Our home is our castle, a sacred place, our sanctuary — and to walk away is difficult."

Evacuations are a necessary safety precaution, and those who choose to stay in their homes are not only risking their lives, Corbett said, but the lives of emergency crews who will have to rescue them.

"Mayor (Kay) Halloran was able to proclaim in 2008 that there were no fatalities," Corbett said. "When you look at flooding around the country, not every mayor and community can say that. I hope next week, a week from today, I can stand before the people of Cedar Rapids and proclaim the same, that there were no lives lost."

Earlier projections were for the Cedar River to crest at 24.5 feet. But the National Weather Service lowered that forecast to 24 feet at 5 p.m. Saturday.

A curfew will be put into effect from 8 p.m. on Sunday until 7 a.m. Monday. Seventy-three check points will be put up throughout areas expected to be affected by the flood. Several hundred Army National Guard members as well as state law enforcement are standing by for additional help.

Some 5,800 parcels are included in the evacuation plan, which covers homes and businesses in areas that could be hit if waters crest at 28 feet. City officials said those impacted should anticipate to be out of their homes and businesses for up to one week until water recedes and inspection teams are able to ensure their is no danger.

To see a list of the area to be evacuated, go to www.cedar-rapids.org.

Cedar Rapids Animal and Control has asked pet owners to use its services only as a last resort. Pet owners evacuating their homes should seek to board pets at animal day cares, veterinary offices or with friends and family to save space for pet owners with no other options, officials said during the news conference.

Alliant Energy plans to keep power on as long as possible. Crews will evaluate on a block-by-block basis, giving advance notice to residents when they can. Home and business owners also can call to request their power be shut off.

Elderly and disabled residents who are evacuating can schedule transportation services and help through Linn County Emergency Management, (319) 892-6500.

The American Red Cross opened a shelter Saturday at Cedar Hills Community Church, 6455 E. Ave. NW. A second shelter tentatively is scheduled to open on Sunday, with more to open as needed.

Individuals may stay at the shelter until they are able to get back in their homes. The shelters can accommodate individuals with special needs, officials added.

City officials have asked residents to stay clear of the downtown area and other affected neighborhoods, including NewBo, Time Check and Czech Village, so that crews are able to get around more easily and work to secure the areas with HESCO barriers, berms and sandbags.

Entrances into downtown closed, including Fifth Street SE and Sixth Street SE, and from First Ave. E to Eighth Ave. SE. Bridges on First, Second and Third Avenues also are closed.

The city is working with Iowa Department of Transportation and will restrict Interstate 380 on and off ramps into downtown.

‘Ready and willing’

Also on Saturday, city and county officials briefed Gov. Terry Branstad, Lt. Gov. Kim Reynolds, Sens. Chuck Grassley and Joni Ernst, and U.S. Rep. Rod Blum on the community’s efforts to mitigate floodwaters.

“We stand here ready and willing to do whatever we can to help in this effort,” Branstad told the Linn County Board of Supervisors.

The supervisors on Saturday unanimously declared a state of emergency for the county, which allows the board access to emergency funds, opens up mutual aid possibilities and the potential for Federal Emergency Management Agency funds. The amount would depend on actual damage costs.

Branstad on Friday issued a proclamation of disaster emergency for 13 counties, including Linn, Black Hawk, Buchanan and Cedar. The proclamation allows state resources to be used and activates the Iowa National Guard — something he has not done since 2011.

Branstad said on Saturday while in Cedar Rapids that he learned early on in his tenure as governor to be proactive and assure that assistance is given in a timely fashion.

“In this case, we’re being really proactive and proclaiming a disaster before the water gets here,” he said.

Reynolds said they are receiving updates two to three times a day and will likely be back next week.

“This is never a good situation, but there is a stark difference from 2008, from a preparation standpoint,” she said.

The federal and state officials spoke with Corbett and other city officials in Kingston Village, on the west side of the river and across from the McGrath Amphitheatre. At the same time, city crews were working diligently to put up a temporary barrier in front of the amphitheater.

Blum told Corbett he was impressed by the organization and dedication of city employees and volunteers working together to prepare the city. It was a sentiment echoed through out the day by city leaders and other elected officials.

“Iowans helping Iowans,” Blum said.

Cedar Rapids Residents Flee Homes Ahead Of Expected Floods

By Mahita Gajanan

Fortune, September 25, 2016

Residents are evacuating low-lying parts of Cedar Rapids, Iowa following a request from authorities to leave the area by Sunday night due to a flooding risk from the rising Cedar River.

KCRG reports that evacuation and curfew starts at 8:00 PM Sunday the evacuation will begin at Sunday at 8:00 pm with a curfew starting at that time, too. “Even if you do not expect to take on water, the fire department warns water may prevent emergency services from reaching you,” KCRG noted.

Water levels rose in Cedar Falls and Waterloo, both about 55 miles upstream from Cedar Rapids. The rise was slightly lower than expected, but still reached large enough levels to create a flood. CNN reports that flooding already claimed two lives this week in western Wisconsin’s Vernon County.

The National Weather Service predicted the Cedar River will crest 23 feet in Cedar Rapids, Iowa’s second-largest city, on Tuesday morning. If that crest comes to bear, this will be the second worst flood in Cedar Rapids history. Residents living in about 5,000 downtown homes near the river were asked to leave. Officials said it could be days before they can return home.

The city has been preparing for a second major flood ever since 2008. According to the Gazette, that flood crested at 31,12 feet, which qualified as a 500 year flood and caused billions in damages. The New York Times noteded that Cedar Rapids was once known as "the city would never flood" after near misses in 1851, 1966, and 1993 when the Cedar River swelled dangerously but stayed the course.

The Associated Press reports city workers and volunteers have worked for days to build a temporary system of levees to hold the floodwater. KCRG also reported that local utilities were working on rerouting or cutting off gas and electricity in anticipation of the flood and "could not guarantee service" as the situation unfolds. Animal services have ale been accepting pets ahead of time, according to KCRG.

The Midwest flooding comes a little over a month since devastating floods struck Baton Rouge, Louisiana and surrounding parishes. Some 86,500 people filed for federal aid and 40,000 homes were damaged, with many homeowners lacking flood insurance. The Wall Street Journal reports that, a month later, recovery has been slow as residents rebuilt not only homes, but small businesses and infrastructure. Cedar Rapids has been similarly struggling even eight years after the previous record-breaking flood.

Gov. Branstad Activates Iowa National Guard For Flood Response; Disaster Declarations Issued For 13 Counties

By Erin Murphy

Cedar Rapids (IA) Gazette, September 23, 2016

JOHNSTON — Gov. Terry Branstad on Friday afternoon activated the Iowa National Guard and issued disaster declarations for 13 northern and Eastern Iowa counties experiencing flooding.

The proclamation allows for state resources to be used toward flood mitigation efforts.

"In a situation like this, in major cities like Waterloo and Cedar Rapids, obviously we have a little time to prepare, and we want to do everything we can for the state to assist the communities and do the best job we can to avoid and mitigate damage," Branstad said in a news conference at Iowa National Guard Joint Forces headquarters in Johnston.

The disaster proclamation makes grant money available for low-income families affected by flooding. The grants are available through the state Department of Human Services.

Branstad said the state has dispatched more than 120,000 sandbags and four dump truck loads of sand, deployed or staged 22 water pumps, placed or staged 48 pallets of flood barriers, and placed 50 traffic barricades.

He added that he spoke with Cedar Rapids Mayor Ron Corbett on Thursday.

Adjutant General Tim Orr said the Iowa National Guard will begin its work by sending liaison teams to communities in the affected region to determine further resources.

"This really is to try and assess what the needs and requirements are," Orr said. "Right now we have no missions that have been tasked to the Guard for soldiers or equipment.

"... The key to any successful operation is getting out in front of it. And that's what we're really trying to do now, is identify potential needs so we have time to respond."

Branstad, Orr, Lt. Gov. Kim Reynolds and Homeland Security and Emergency Management director Mark Schouten on Saturday will tour Cedar Rapids as well Clarksville and Shell Rock. Reynolds said they also likely will tour more areas in the coming days.

This is the first time the governor has activated the National Guard since flooding on the Missouri River in 2011, Branstad said.

U.S. Sen. Chuck Grassley, of Iowa, said the federal Army Corps of Engineers, the Federal Emergency Management Agency and the National Weather Service also are involved in flood response efforts.

Branstad Meets With Linn County About Flood Efforts

By Mitchell Schmidt

Cedar Rapids (IA) Gazette, September 24, 2016

CEDAR RAPIDS — Gov. Terry Branstad, along with Lt. Gov. Kim Reynolds, U.S. Sens. Joni Ernst and Chuck Grassley and other state officials, met Saturday with the Linn County Board of Supervisors for a briefing on local flood efforts and offer words of encouragement.

"We stand here ready and willing to do whatever we can to help in this effort," Branstad said.

The supervisors on Saturday unanimously declared a state of emergency for the county, which allows the board access to emergency funds, opens up mutual aid possibilities and the potential for Federal Emergency Management Agency funds. The amount would depend on actual damage costs.

The state of emergency will be for yesterday through next Thursday, Sept. 29.

Steve Estenson, the county's incident commander, expressed his confidence in the county's efforts, considering the lessons learned in 2008.

"In 2008, if you would have said 24.5 (feet of water), we wouldn't have really known what that meant," he said. "We feel that with the resources available now, we're very much prepared and we have a great respect for when the water gets here, there's not much you can do but wait it out until the water goes away."

Branstad Issues Disaster Proclamation For 13 Counties In Flood Path

By Erin Murphy

Waterloo-Cedar Falls (IA) Courier, September 24, 2016

JOHNSTON – Iowa Gov. Terry Branstad on Friday activated the Iowa National Guard and issued disaster declarations for 13 northern and eastern Iowa counties experiencing flooding, including several in the Cedar Valley.

The proclamation allows for state resources to be used toward flood mitigation efforts.

Heavy rains in recent days caused rising levels on the Cedar, Shell Rock and Maquoketa rivers in Northeast Iowa, causing flooding in some communities and the likelihood of flooding in more across eastern Iowa.

Officials expected the flooding to be significant, although not to the extent of the 2008 floods in eastern Iowa.

Branstad and Lt. Gov. Kim Reynolds visited Clarksville on Saturday, along with U.S. Sens. Charles Grassley and Joni Ernst, to survey damage there. A levee breach overnight Thursday caused significant flooding and some evacuations in that community overnight Thursday and early Friday. The nearby Butler County city of Greene also was hard hit, as was Waverly in Bremer County.

Cities from Mason City all the way to the Mississippi River have seen flooding or could feel its effects by early this week.

In a news conference at Iowa National Guard Joint Forces Headquarters on Friday, Branstad said the river is expected to crest in Cedar Rapids on Monday night, and in communities south of Cedar Rapids in the days that follow.

"We just have to deal with whatever situation comes our way. We need to be as well-prepared as possible," Branstad said. "In a situation like this, in major cities like Waterloo and Cedar Rapids, obviously we have a little time to prepare and we want to do everything we can for the state to assist the communities and do the best job we can to avoid and mitigate damage."

Branstad said the state already is working with communities to address flooding. He said the state dispatched more than 120,000 sandbags and four dump truck loads of sand, deployed 22 water pumps, 48 pallets of flood barriers and placed 50 traffic barricades.

Adjutant General Tim Orr said the Iowa National Guard sent liaison teams to communities in the impacted region to determine what resources are needed.

"I think the key to any successful operation is getting out in front of it," Orr said. "And that's what we're really trying to do now, is identify potential needs so we have time to respond."

Branstad, Orr, Reynolds and Homeland Security and Emergency Management director Mark Schouten on Saturday also toured Shell Rock and Cedar Rapids. Reynolds said they likely will visit more areas in coming days.

Branstad said it is the first time he has activated the National Guard since flooding on the Missouri River in 2011.

The disaster proclamation makes grant money available for low-income families impacted by flooding. The grants are available through the state Department of Human Services.

Grassley said the U.S. Army Corps of Engineers, the Federal Emergency Management Agency and the National Weather Service also are involved in flood response efforts.

Linn County Supervisors Declare State Of Emergency

By Mitchell Schmidt

Cedar Rapids (IA) Gazette, September 24, 2016

CEDAR RAPIDS — The Linn County Board of Supervisors declared a state of emergency for the county due to impending flooding.

The board on Saturday unanimously approved the declaration, which allows the board access to emergency funds, opens up mutual aid possibilities and the potential for Federal Emergency Management Agency funds. The amount would depend on actual damage costs.

The state of emergency will be for yesterday through next Thursday, Sept. 29.

Updated projections put the Cedar River's crest at 24.5 feet on Monday evening, and Linn County incident commander Steve Estenson said the latest forecast shows high floodwater lingering in the county longer than first anticipated.

"Now it looks like after it spikes, it's going to plane off slower, so we may have water here for a longer duration, based on the model," he explained.

The Linn County Sheriff's Office closed Friday and has been surrounded by eight feet of HESCO barriers to protect the building up to as much as 29 feet of water, Estenson added.

Linn County Jail also has closed, with inmates being relocated to neighboring counties. The County Courthouse and Juvenile Justice Center are preparing to close Monday.

The Jean Oxley Public Services Center, 935 Second St. SW, also will be closed on Monday, with many services relocated temporarily to the Community Services Department, 1240 26th Avenue Ct.

Estenson added that the county is working closely with the city of Cedar Rapids and other communities such as Palo — which began some mandatory evacuations Saturday — to coordinate sandbagging efforts and provide aid.

Flood Summary: Sandbagging, Evacuations In Eastern Iowa

KCCI-TV Des Moines (IA), September 23, 2016

Iowa Gov. Terry Branstad has signed a disaster proclamation for 13 northeast Iowa counties affected by flooding. It activates the Iowa National Guard to assist in preparedness and in response when there's damage.

Authorities say flash flooding is occurring across several counties in Iowa after a second night of heavy rains.

View video | Current weather alerts

The National Weather Service says storms are impacting the areas that saw downpours on Wednesday night. A flash flood warning has been issued for parts of Story, Butler, Cerro Gordo, Franklin and Bremer counties until early Friday morning.

Authorities in Cedar Falls, Waterloo, Cedar Rapids and other cities are mobilizing resources to handle flooding from the Cedar River.

The rain-swollen river already has left its banks upstream, forcing evacuations at several communities along its path through northeastern Iowa.

On Friday the National Weather Service was predicting less-than-record crests, but officials say at least moderate flooding seems a certainty.

Officials were contacting people in the North Cedar area of Cedar Falls, telling them about the rising water and offering aid in evacuation. Officials closed floodgates in Waterloo, and Cedar Rapids officials deployed portable dams, barriers and pumps in preparation for flooding before Monday's expected crest at 24 feet. That's 7 feet below the June 13, 2008, record of just over 31 feet.

Sen. Chuck Grassley today met with top staff for Iowa Gov. Terry Branstad to discuss preparation efforts for expected flooding in the Cedar Valley. Grassley also has talked with Cedar Rapids Mayor Ron Corbett. Grassley made the following comment on the flooding preparation efforts so far.

"The governor's office is working with counties and cities on flood preparation, mitigation and response. Federal agencies including the Army Corps of Engineers, the Federal Emergency Management Agency, and the National Weather Service are involved. Communities including Cedar Rapids that were struck by prior floods, including the devastating 2008 floods, have done a lot of work to protect their residents from flooding. As I have before, I'm ready to help the state and communities with whatever they need from the federal government, whether it's disaster assistance or making sure farmers have their federal crop insurance needs fulfilled. The flooding is coming at a critical time for farmers with many crops still in the field and not yet ready to be harvested.

"Emergency management officials urge drivers to be careful and follow road closure alerts as closely as possible. Tree limbs hidden under water can be a safety concern. Shelter is an important need to keep in mind, and volunteer agencies are anticipating areas where people can be housed. Schools may not be option since school is in session."

CHARLES CITY

People in Charles City are being asked to stop all water use that goes down a drain or toilet.

KCRG reports a water pump at the Sewer Wastewater Treatment Plant failed on Friday, causing the issue. This comes after significant rainfall and flooding in that area earlier in the week.

Water from the tap is still safe to drink.

AMES

Four to five inches of rain fell in Ames Thursday night, causing flash flooding around the city.

Video submitted to KCCI from T.J. Kleckner showed 2 to 3 feet of water standing in city streets.

Several cars near Jack Trice Stadium were submerged up to the windows. A total of 14 vehicles were damaged there.

Grand Avenue and Lincoln Way were just two of the streets affected.

By around 3:00 a.m., most of the water had gone down. The city did issue an alert that low-lying areas around Squaw Creek could experience flooding.

They warned residents of apartments on South 4th and 5th streets to move their vehicles to higher ground.

City officials said lightning caused damage to equipment at two Ames Municipal Electric Services substations, interrupting service to several hundred customers. Power was restored by 12:45 a.m.

CLARKSVILLE

The police chief says several people have been forced from their Clarksville homes by floodwater from the swollen Shell Rock River.

Chief Barry Mackey said Friday morning that water overtopped the levee that runs down the east side of the river west of the Butler County community of about 1,400 people. The chief says several homes are surrounded by water, including his. He spoke from the home of another police officer that sits on higher ground.

Mackey says Clarksville Skilled Nursing and Rehabilitation Center and Westside Assisted Living Suites has been evacuated as a precaution.

The National Weather Service has issued a flash flood warning for parts of Story, Butler, Cerro Gordo, Franklin and Bremer counties.

GREENE

About 60 homes in the northeast Iowa town of Greene took on waist-deep floodwaters from the Shell Rock River.

Butler County Emergency Manager Mitch Nordmeyer said this reminded him of the devastating 2008 flood that caused extensive damage.

People in the towns of Clarksville and Shell Rock filled sandbags in preparation for the river's crest there Friday.

Audrey Smith's husband had to be rescued after the tractor he used to try and retrieve a freezer of meat from the couple's home in Butler County was swamped.

Smith told the Waterloo-Cedar Falls Courier they'd worked all night to remove items from their home, but they didn't finish before floodwaters arrived.

Water was 4 feet high during the 2008 flood and the Smiths rebuilt. Smith said: "Guess what? We aren't rebuilding again."

MASON CITY

Authorities say about 100 people are being evacuated from two apartment complexes in Mason City in northern Iowa.

Cerro Gordo County emergency management spokesman Michael Groesbeck says Chelsea Creek has left its banks, forcing the evacuations.

The National Weather Service says more than 2½ inches of rain has fallen in the past 12 hours at Mason City and more is in the forecast. The Winnebago River sits 2 feet over flood stage of 10 feet and is expected to crest at 14.2 feet early Friday morning, near the top of the dike on the north side of Mason City.

The city says an emergency shelter has been set up for those who've been evacuated.

FEMA Urging North Iowans To Prepare For Another Round Of Rains And Flooding

By AJ Taylor

KIOW-FM Forest City (IA), September 24, 2016

With active flooding underway in parts of Iowa and the threat of more to come, the Federal Emergency Management Agency (FEMA) is urging Iowans to be ready to take life-saving actions on short notice.

"Additional rainfall, even in smaller amounts, when combined with an already saturated ground, could quickly lead to hazardous conditions," said FEMA Region VII Administrator Beth Freeman. "It's critical that Iowans prepare now to do what's needed to be safe in the wake of current and near-term flooding, as well as other severe weather."

FEMA's Region VII office in Kansas City, Missouri has been in regular contact with emergency management officials in Iowa as both agencies actively monitor severe weather and flooding in many parts of the state.

"This flooding is a serious situation for many Iowans," Freeman added. "We can't stress enough how important it is for citizens to stay informed of ever-changing conditions, to follow official emergency instructions, to have an emergency plan for all members of the family, including pets, and to be ready to quickly put that plan into action."

Flooding is not unfamiliar to many Iowans but it helps to refresh on the immediate steps to stay safe:

Be Informed/Know the Danger:

Keep track of severe weather and flood forecasts, and take them seriously. To do that:

Monitor newspaper, radio and TV reports of current and predicted weather conditions;

Keep a NOAA Weather radio turned on and charged up to get alerts around the clock;

Set mobile devices to alert with the latest weather information. Make it easy by downloading and using afree

FEMA app, which provides real-time weather alerts from the National Weather Service for up to five locations anywhere in Iowa or the nation. The app also provides valuable safety tips to help families prepare for, and recover from, more than 20 natural and man-made hazards, including how to make a family communication plans, a customizable checklist of emergency supplies and maps of open shelters and disaster recovery centers. The app is available on the Apple App Store and on Google Play.

Plan for the Worst:

Severe weather can strike suddenly so have a plan to stay safe and take life-saving action if needed. The plan should include:

Actions to take if it's necessary to shelter-in-place;

Where each person/pet will go to get out of danger;

How each person/pet will get to a place of safety;

How family and friends will communicate with one another if evacuation to or from different locations becomes necessary.

For more information on creating an emergency plan, visit

www.Ready.gov or

www.beready.iowa.gov.

Be Ready:

Gather essential items in one place if evacuation is needed. Those should include:

Wallets, purses, car/house keys, eyeglasses, cash, credit cards;

Medicine and basic first-aid supplies;

Daily living supplies for infants/young children, family members who are elderly or have access and functional needs, and pets;

Important information such as numbers for bank accounts, insurance policies (health, auto and property) and credit cards;

Important phone numbers of relatives, employers, schools and medical professionals such as pharmacies, physicians and veterinarians;

Chargers for mobile devices;

One or more changes of clothes. Include long pants, socks, boots and/or sturdy shoes;

Bottled water and high-protein, non-perishable food such as a peanut butter, tuna and nuts.

Talk through the emergency plan with all family members so that everyone knows what to do.

If there is time, consider making a more complete emergency supply kit for homes and cars. To learn how, visit www.Ready.gov or

www.beready.iowa.gov.

Know What to Do:

Understand severe weather terms and know what to do for each.

Watch means a specific type of threat (flooding, tornadoes) could be forming;

Warning means take action. Life/property threatening conditions are occurring or imminent.

Heed emergency instructions. If told to evacuate, go immediately!

Move immediately to higher ground if flash flooding is possible. Don't wait to be told. DO NOT DRIVE THROUGH FLOOD WATER, even if you know the road. Turn around, don't drown!

Abandon mobile homes. They offer little to no protection, even if tied down.

Don't touch downed power lines or objects in contact with downed lines. Report electrical hazards, downed lines and gas leaks to the police and utility companies.

Don't re-enter damaged structures without first checking to see if they are safe.

Henderson County Holding Special Meeting To Address FEMA Debt

By Elizabeth Meyer

Hawk Eye (Burlington, Iowa), September 24, 2016

OQUAWKA, Ill. — Henderson County officials will meet in a special session Tuesday to discuss a near half-million-dollar debt the Federal Emergency Management Agency claims it is owed.

Following the record-breaking 2008 flood, FEMA distributed money for the county's cleanup efforts. Though the grant was awarded by FEMA, the Illinois Emergency Management Agency was tasked with administering the funds.

Henderson County officials received notification earlier this month it owes IEMA — which then would reimburse FEMA — $471,791 due to mismanaging flood relief funds.

Based on a 2011 audit by the U.S. Department of Homeland Security, the county received $3.7 million worth of ineligible funds from FEMA, according to the Galesburg Register-Mail.

The administrative ruling filed in July by IEMA argued "Henderson County did not comply with all applicable federal ... laws and regulations," thus rendering some work ineligible for reimbursement.

"It is not the type of work, but the failure to comply with Federal laws and regulations, that renders the work ineligible," the document stated.

The audit specifically referenced 23 "small" demolition projects and asbestos testing on 13 properties, in which federal funds were "not expended on eligible work."

Henderson County appealed in 2013, which reduced the debt to its present cost.

FEMA has requested the debt be repaid by next June, nine years after the historic flood. But if the money is not repaid, the county may face halting several vital agencies, including the health department, sheriff's office and transportation services.

"We're continuing to work with them (Henderson County), and we're hopeful that it will work out in a way that works for everyone involved." IEMA communications manager Patti Thompson told The Hawk Eye Friday.

"These are things that happen during difficult times, but when there has been public assistance granted, there is a lot of review and everything to try and help them work through it."

FEMA Says Important Deadline Approaching For Flood Victims

By Sabrina Wilson

WVUE-TV New Orleans, September 23, 2016

HAMMOND, LA –

FEMA is reminding flood victims that the deadline for registering for assistance related to the August flooding is fast approaching.

"The deadline to register is October 13 and we've had 146,000-plus individuals register for federal assistance," said FEMA External Affairs Specialist Steven Solomon.

But flood victims who have registered said they are still waiting to hear back from FEMA.

"I need help around here to help me get all of this stuff out of here," said Bobbie George, a widow who has mold growing in her flood-damaged home in Independence.

She moved to the small town after losing her home to flooding 11 years ago during Hurricane Katrina. There is a gaping hole in her roof and ceiling, as well. Plastic bins catch water when it rains. George said she had a small flood policy when the flooding happened last month, but not enough coverage to pay for all of the damage her home sustained. Now, her carport is filled with clothes and other items she has tried to salvage.

"I have some comforters, blankets," said George.

FEMA said it is working hard to process applications for assistance.

"Working to do everything we can to ensure eligible survivors get the federal assistance they're entitled to," said Solomon.

He said once flood victims sign up, an inspection typically follows. H said they have made great progress.

"We've completed 99.3 percent of those inspections. We have nearly 100 inspectors still out in the field," Solomon said.

But the agency has taken a lot of criticism from flood victims, as well as members of Congress over the pace of getting manufactured housing units to the people who need them. They are not the same as the tiny, travel-type trailers doled out in the New Orleans area after Katrina.

"As a last option, nothing else is working, and the individual is eligible, we bring in what we call a manufactured housing unit. So these are not trailers like you see pulled by car, these are like single-wide homes with rooms and doors and windows," said Solomon.

He said FEMA is assisting people who have been forced to take shelter in hotels and motels.

George said she would welcome a FEMA trailer while repairs are made to her home. Solomon could not say how many flood victims have received the manufactured housing so far.

"I don't have numbers for that," said Solomon.

Solomon urges flood victims to sign up with FEMA if they have not already, and he also warned against scam artists. He said all FEMA workers have identification, and victims should ask to see it before providing any information.

He also warned against people showing up stating that they are third-party contractors who can help speed up the assistance process.

"There are also folks who pretend that they can facilitate the process between the survivor and FEMA for a fee, that's an out-and-out scam. No one can make the process go any quicker, or any better," Solomon said.

Louisianans Can Get Smithsonian Preservation Advice

Donaldsonville (LA) Chief, September 23, 2016

Experts from The Smithsonian Institution will be on hand in Baton Rouge to demonstrate how to salvage valued possessions that got wet in the flood.

The event will be held on Saturday, Sept. 24 at 10 a.m. to 5 p.m. at the FEMA Disaster Recovery Center at Celtic Studios, 10000 Celtic Drive, Baton Rouge.

Baton Rouge Mayoral Candidates Address Traffic, Public Safety And Flood Recovery During Forum

By Annie Ourso

Baton Rouge (LA) Business Report, September 23, 2016

Five candidates running for Baton Rouge mayor tackled traffic, public safety, education and flood recovery topics during a forum hosted today by several architecture, engineering and construction groups.

The candidates discussed their vision for the parish, with some laying out specific plans or programs to support and, of course, reiterated their campaign platforms during the forum that took place at Drusilla Seafood.

"The mayor has to bring people together," said Darryl Gissel, a realtor and former head of the state Republican party who is running as an independent. Asked how he plans to unite the parish, Gissel said it's not that difficult: learn to work with the Metro Council.

Every section of the parish has felt at some point that it hasn't been well served, Gissel said. The divides are visible, and they affect every issue the parish encounters, he said.

State Sen. Mack "Bodi" White focused on flood recovery efforts as he addressed the crowd. It's difficult to get federal attention, White said, but the parish must have the help of Congress and the Federal Emergency Management Agency if it hopes to recover.

White, a Republican, also touched on education, an issue he's passionate about. He mentioned the high rate of males in East Baton Rouge Parish who don't graduate high school. Along with flood recovery, White said, his top issues would be education, transportation and crime.

"This mayor's race is a very important turning point in the parish and city of Baton Rouge," White said.

Metro Councilman John Delgado also touted a message of uniting Baton Rouge. Delgado, a Republican, laid out some specific plans for public safety, traffic and education.

He said he would increase the number of law enforcement officers and give them the tools they need to protect the parish. Delgado supports the city-parish's Green Light Plan for road improvements, and for alternatives to interstate travel, he supports the BUMP plan, a northern loop and a southern bypass down Nicholson Drive. Delgado also advocated for the council and mayor to have more of a role in creating a stronger education system.

"For too long, it's been someone else's job," he said.

Greg LaFleur, a Democrat and former LSU and NFL player, shared his past job experiences as an athletic director at colleges such as Texas State University and Southern University. He also worked for a while at the Baton Rouge Marine Institute and said he would implement some of its program in parish schools.

LaFleur also addressed his arrest in Houston for allegedly soliciting a prostitute. He was later acquitted of that charge. He related his run-in with police to the Alton Sterling shooting and explained how having one bad officer can lead to problems. LaFleur also listed his top concerns as traffic, jobs and education.

Former Metro Councilman Smokie Bourgeois, a Republican, discussed traffic issues, saying that he would implement a rapid response motorcycle team to tend to wrecks, and he criticized the money spent on the oft-maligned Capital Area Transit System.

After candidates addressed the audience, they were assigned to separate tables, each with their own moderator, to answer 17 questions prepared beforehand by the organizations hosting the event. The organizations included local chapters of Louisiana Engineering Society, the American Institute of Architects, Louisiana Associated General Contractors, American Planning Association, American Society of Landscape Architects, American Council of Engineering Companies and American Society of Civil Engineers.

Seven candidates did not attend the forum: former state Sen. Sharon Weston Broome, state Rep. C. Denise Marcelle, Beverly "B.J." Amador, Braylon Hyde, Rufus Craig, Byron Sharper and Cade Williams.

Complaint Filed Against Opelousas Mayor Over Mayor's $13k Paycheck

By Holly Duchmann

Opelousas (LA) Daily World, September 24, 2016

A formal complaint was filed with the District Attorney's office alleging Opelousas Mayor Reggie Tatum illegally paid himself nearly $13,000 in overtime for working after the flooding in August, despite being a salaried public official.

The complaint was filed by former Opelousas police officer Paul Gennuso after a preliminary payroll document for some of the executive department of city workers was leaked onto Facebook last Wednesday showing Tatum received a check for $12,972.96.

Gennuso said the mayor illegally paid himself for the time Tatum spent running the shelter at the Civic Center in Opelousas after the heavy flooding in August.

"It's common knowledge in the city of Opelousas, that Mayor Tatum is using his authority as Mayor to defraud the City and (Federal Emergency Management Agency) by receiving an illegal payment from the City of Opelousas, for events that took place during the recent flooding," said Gennuso in his letter to District Attorney Earl Taylor.

Gennuso said it is against city ordinance for the mayor to receive overtime payment. He is also alleging that the funds Tatum used to pay himself with require city council approval before being spent.

Tatum contests that he's been following FEMA regulations word-for-word, and that during the disaster under FEMA guidelines city employees can be repurposed, and it was after he was repurposed as the shelter director that he was eligible for overtime. He also denied that the funds used had to be cleared by the city council first.

"Normally a salaried employee, a mayor, does not receive overtime, but according to these FEMA (regulations), you can get overtime because it says that if you are salaried in an emergency, you can be repurposed," said Tatum.

FEMA was unable to be reached in time for publication.

His pay rate was converted to an hourly scale from his normal mayoral salary by a payroll clerk, and once he hit more than 40 hours, he became eligible to be paid time and a half like any other employee, Tatum said.

Tatum said he worked at the shelter, day and night, for 21 days, which is the entire length of time the shelter was open.

Tatum also said the city and local law enforcement, including the FBI, is investigating who leaked the preliminary payroll document because it showed employees full names and last four digits of their Social Security number, which Tatum insists in very dangerous.

"This document they posted on social media, first of all, is illegally obtained and an incomplete document because it's not something I approved to be sent out of our office and has city employees names and Social (Security numbers) on it, and that's just illegal to post it all over social media," said Tatum.

The Daily World has requested copies of any and all documents showing the mayor's time sheets, requests for payment and salary/payroll checks for the month of July, August and September, including his regular salary and any and all overtime.

The DA's office was unable to be reached for a comment in time for publication.

Flood Recovery Damage Assessment

By Brittany Kemmerer

KEYC-TV Mankato (MN), September 23, 2016

WASECA, Minn. –

Flood recovery efforts continue over in Waseca.

Senator Amy Klobuchar and Representative Tim Walz visit Waseca to assess the flood damage in the area.

"First of all the number one thing is to keep people safe. It's been so fortunate that no one has died yet and then the second thing is to start cleaning people out assessing the damage so we can see if it meets the federal requirements to get FEMA help," U.S Senator Of Minnesota, Amy Klobuchar said.

If it doesn't quite make the federal requirements after the assessment is reviewed, the state kicks in.

Klobuchar says over the years the state has done a better job at making this a more orderly process.

"It used to be just a mess and now while it's a mess from the rain we at least have a process in place to try to get federal funding," Klobuchar said.

Federal requirements are based on public infrastructure damage.

You've got culverts, you've got bridges, you've got roads closed, you've got a library roof that fell in in Waseca. There are tons of crops and farms," Klobuchar said.

As a member of the agriculture committee, Klobuchar says it's important to look at the long term effects.

"A lot of these fields are going to be damaged; it's going to kick in the crop insurance, hard time for our farmers because they were just ready to harvest," Klobuchar said.

Waseca County may face more flooding issues.

"And that's really the unfortunate part. Maybe we could deal with this but if there's a lot more rain it's going to be tougher because the ground is so saturated already," Klobuchar said.

Some Waseca County residents have been forced out of their homes due to the flooding.

Waseca County is working on open up a school for certain hours to allow people to come take showers.

Rice County Staying Alert As Flooding Mitigates; Klobuchar Visits Faribault

By Philip Weyhe

Faribault (MN) Daily News, September 24, 2016

Though Waseca, Owatonna, and other cities farther south saw the worst of the damage, Rice County is getting plenty attention, as it attempts to deal with and recover from flooding concerns over the last few days.

Sen. Amy Klobuchar, D-Minn., Sen. Vicki Jensen, D-Owatonna, and Rep. Brian Daniels, R-Faribault, paid a visit to the Faribault Wastewater Treatment Plant Saturday afternoon to get a look at what the city is dealing with at the site. On Thursday, Public Works Director Travis Block led an effort to get a berm built up on the river side of the facility for the third time in six years.

In 2014, upon the second time of building the berm, the city looked to build it permanently. However, due to funding rules from the Federal Emergency Management Agency, the berm had to be taken down, in order for the city to receive $120,000 in reimbursement.

Klobuchar was on site Thursday to learn. She said she was impressed by the efforts to allay any flood damage in the city, but her message seemed to be that it might be time for Faribault to look at a longer-term situation at the wastewater site.

“We’ve seen, during this flooding, that there are multiple federally-funded projects that can provide aid,” Klobuchar said. “There are mitigation projects that make a big difference.”

Klobuchar also visited the flooded site at the Faribault Woolen Mill.

The 2016 flooding has yet to impact the treatment facility with the berm providing a more-than-effective barrier. Block said Saturday that the rains expected Saturday evening weren’t likely to raise the Straight River to levels any more dangerous to the facility.

According to Rice County Sheriff Troy Dunn, flood levels in Faribault started slowly decreasing by Friday evening.

However, in Northfield, the Cannon River continued to rise, slowly, over Friday night and into Saturday morning. The river in Morristown also continued to rise slowly over that time, according to Dunn.

“We’re definitely hoping for less, rather than more, rain Saturday night,” he said. “We have three or four county roads that are going to need some more work.”

The Northfield Police Department issued a press release Friday evening and again Saturday morning, providing details on the flooding status in the town. According to the Saturday release, the river reached its highest point early Saturday at 900.88 feet above sea level, which is 7.5 feet above levels from the previous Wednesday.

Police Chief Monte Nelson also expects the Cannon’s levels to remain high for “quite some time.” Sechler and Babcock parks have both been closed in the city. The downtown walk bridge, bicycle bridge and Fourth Street bridge are all closed to vehicle traffic, though the latter is open to foot traffic.

In Faribault, the Woolen Mill continues to be surrounded by water, as Alexander Park remains flooded. Second Street Northwest was still closed Saturday afternoon from Fairgrounds Drive to 14th Street Northwest, due to water in the road, in front of the Alexander Park entrance.

Sheriff Dunn is asking all residents, throughout the county, to exercise caution near flooded areas, and to stay out of the river waters.

“I try to be proactive in telling people not to go kayaking, tubing, whatever,” he said. “That’s not a smart thing to be doing. Right now, I just don’t think being on the water is safe.”

The National Weather Service is predicting a 90 percent chance of rain late Saturday and early Sunday, with potentially 0.5 to 1 inches coming down in Rice County. City and county departments will continue to monitor flood levels and road conditions through the weekend.

Sandbagging Continues Friday In Faribault

KSTP-TV Minneapolis-St.Paul (MN), September 23, 2016

With the potential for more rain, businesses and residents are ready for whatever Mother Nature and the river throw at them in the coming days.

For residents like Sarah Stradler, it meant sandbagging and getting everything off the ground in the basement. Businesses, like the Caves of Faribault, are protecting property with berms and sandbags.

Meanwhile, the city has built a berm to protect the wastewater treatment plant.

Sandbagging efforts are continuing Friday with help from Shattuck-Saint Mary’s students.

The state of emergency is the city’s third for flooding since 2010. The emergency declaration will allow the city to seek reimbursements from the state and FEMA if a spending threshold is met.

Flooding isn’t just causing problems in Faribault. Schools in St. Clair and Waseca remain closed Friday as cleanup from the heavy rain continues in those areas.

St. Clair School Resumes Monday

By Brittany Kemmerer

KEYC-TV Mankato (MN), September 25, 2016

ST. CLAIR, Minn. –

The city council met this morning to discuss the cleaning up process.

“We’re going to get in contact with blue earth county and see if they can assist in removing and dealing with the sand,” St. Clair Mayor, Marvin More said.

The city also shows concerns with the landfill.

"People are going to have carpets furniture hazardous things and how we're going to deal with all of that," More said.

Blue Earth County is having a board meeting tomorrow to discuss FEMA help.

The city hopes to fix the sewer plant within the next few days.

"We're waiting for the water to get a little lower so we can get inside the buildings and then the engineers will assess of all the damage that's done," More said.

The city also shows concerns for the people and what they can do to prevent this from happening again.

"Some of them have been through this three times in six years. It's a tough, tough deal. We're hoping we can get other government agencies to help us figure out how we can prevent this from happening. It's an uphill battle," More said.

But part of the city's normal routine returns tomorrow, with school resuming.

"There will be some inconveniences, but there are no showstoppers. We should be able to have class as usual," Superintendent, Tom Bruels said.

Students will have a two hour late start.

"We want to be able to give them a little time to get things back in order before the students come in. We anticipate this to be the only two hour late start," Bruels said.

The food service staff has prepared lunches that require a minimal amount of water.

"We're not allowed to use the showers or the restrooms so we've brought in trailer based toilet facilities and we'll be using those. We don't anticipate a major problem," Bruels said.

Sunday Brings Little Rest To Waseca, St. Clair

By Mark Fischenich

Mankato (MN) Free Press, September 25, 2016

From Waseca to St. Clair, residents were feeling a bit blessed Sunday after days of rain-driven misfortune. Predicted storms came, but they didn't drop heavy torrents on areas already struggling after several-months-worth of typical rainfall dropped in less than 24 hours.

"I didn't even see it on my rain gauge," said Marvin Moore, mayor of flood-ravaged St. Clair. "So we lucked out there."

Mankato, which has plenty of wet basements but not the major problems of areas to the east and southeast, had four-tenths of an inch overnight. Waseca, where overflowing lakes have collapsed basements and where 14 inches of rain has affected hundreds of homes, received less than two-tenths of an inch of new rain.

Road work

For highway workers keeping an eye on inundated roads and overwhelmed bridges, it's mainly about waiting for water to recede and inspections to begin.

The Minnesota Department of Transportation was able to reopen the last closed section of Highway 14 near Janesville at 9 a.m. Sunday.

Highway 83 remained closed just north of St. Clair at a bridge over the Le Sueur River, and Highway 30 east of Mapleton had nearly a half-mile stretch that remained at least partly under water Sunday, said Jed Falgren, a district maintenance engineer for MnDOT.

The hope is to get both of those roads reopened sometime Monday, but that can happen only after the water drops and the roads and bridges can be checked for problems under daylight, Falgren said. Avoiding another major downpour helped.

"It might slow its retreat," Falgren said of the relatively light rains effect on the Le Sueur River. "But it shouldn't bring it up much."

In fact, the level at the Highway 83 bridge dropped about two inches from 8 a.m. to 2 p.m. Sunday.

Enough water was surging under the bridge late last week that crews put 60,000 pounds of weight on the span, using portable concrete median barriers, to keep the bridge in place. That appeared to be successful and the weight was removed on Sunday.

Nine other sections of state highway in the area were also impacted by the storm but were reopened to traffic earlier. Dozens of county and township roads also remain closed.

Water-logged junk

In Waseca, water receded enough for clean-up operations to begin on many properties over the weekend. Waseca opened a debris collection site at the fairgrounds for people looking to get rid of flood-soaked appliances, electronics and general waste such as carpet, wood and damaged personal possessions. The collection site will be open from noon to 7 p.m. until further notice.

Janesville also set up a site near the water tower at Teal and Front Streets for the disposal of demolition waste and other garbage but is not accepting appliances and electronics. New Richland has a waste disposal drop-off site near its public works building, and Waldorf, starting today, has one west of the local school.

In each case, hazardous waste is not accepted and residents are asked to fill out paperwork to help the municipality obtain potential reimbursement from the Federal Emergency Management Agency.

A lengthy agenda

St. Clair held an emergency City Council meeting Sunday morning, officially declaring a disaster and beginning the planning for clean-up.

The city's wastewater treatment plant is underwater, meaning sewage and other waste water from homes is going directly to the Le Sueur River. That, along with concerns that the city's one remaining lift station could be overwhelmed, has prompted the importation of dozens of portable toilets.

Residents have water service but are asked not to flush toilets, take showers or put any water — even from hand-washing — down the drain. Instead, people are using basins for tooth-brushing and washing before tossing the water on to their lawns.

On Sunday a trailer full of portable toilets arrived at the St. Clair school, and classes will resume Monday — albeit with a two-hour-late start — for the first time since Wednesday. A week's worth of school lunches have been planned that require very little water usage.

Moore also asks potential volunteers from the region to keep St. Clair in mind in the days ahead. The city was flooded with kindness late last week, but the mayor said help will be needed again once the clean-up starts — including helping people carry heavy, water-logged items from homes and scrubbing up basements.

"I'm dreading the clean-up process," he said.

Cyclones in the forecast

St. Clair residents will have an opportunity to cheer for inclement weather Monday night. The St. Clair High School Cyclones ("Fear The Wind") will be taking on the visiting United South Central Rebels at 7 p.m. in a football game rescheduled after being postponed by the flood.

Moore expects many St. Clair residents will be ready for some high school football despite their exhaustion.

"It's got to be better than sitting at home thinking about this," he said.

And the Cyclones on the field are the only nasty weather in the forecast. As recently as last Friday, the long-range forecast showed a chance of storms for each of the ensuing 10 days.

The revised forecast from the National Weather Services shows not even a hint of rain on Monday, with sunny skies and dry nights through the entire week.

County, Townships Continue To Fight To Get FEMA Aid

By Julie Clements

Butler County (KS) Times-Gazette, September 24, 2016

What's happening: Find out what the townships are doing after being denied FEMA assistance for the flooding in May.

The townships in Butler County are continuing to battle to get assistance to repair their roads damaged by flooding back in May.

Several townships, especially those in the southwest part of the county, saw significant damage to their roads during May and have continued to deal with heavy rains since then, but FEMA is denying assistance to the townships.

"FEMA sent down a group of inspectors," said Emergency Management Director Jim Schmidt of the May flooding event. "We've never had any of our officials treated the way they were treated. I was very disappointed in their attitude and demeanor. The state folks were great. They kind of got blindsided that these other folks were showing up."

Schmidt said FEMA had given them unrealistic demands.

"We've been doing this for a long time," he said. "We know when we turn in a preliminary damage estimate we might be off by 5, maybe 10 percent at the most."

He said they knew what was required in the past, but FEMA changed those rules on them without telling them.

"None of us knew this had even happened," Schmidt said of the changes. "We found out that over half a million in what we would consider normally eligible damage had been reduced to $9,000. We weren't the only ones."

Darryl Lutz, public works director, said they were being required to document the condition of the road before the disaster and after it happens. They also are requiring the roads to be barricaded until they are repaired.

Schmidt added if it was just rock washed off that was not allowable damage.

Lutz said there were just a lot of things from a practical standpoint that aren't feasible when a township is trying to respond to an emergency with minimal resources.

Lutz said they had material washed off of the roads, ditches eroded and water ways that don't have the capacity to handle the amount of water that fell.

"Several townships have been hit four times with major rainfall events," Lutz said.

One of those townships hit hard was Augusta Township.

Nick McClure, Augusta Township trustee, said the biggest thing was not getting the help they have depended on in previous years.

"Now FEMA doesn't want to apply any of their grants," he said. "Everything they say was caused from the flooding, they don't want to take care of anymore."

But he said their township budget only takes care of the maintenance each year, not replacing all of the material that was washed down the river three times for them this year.

"It is a challenge," he said.

While some of their roads saw a lot of damage, others had less damage, but in all, 50 percent of the roads in Augusta Township saw some type of damage.

"What's hardest on the roads is the damage when it rains six inches at one time," McClure continued. "It is hard on the roads and ditches."

During the May rain, the roads in Augusta Township were impassable for two days, blocking people in their homes.

"This year is worse than any we have had in the past and they (FEMA) don't want to participate in it," he said. "We really, really need it now and they don't want to help."

Since mid-May, Butler County has seen from 20 inches up to 40+ inches depending on where you are in the county.

The county has not given up though. They have filed an appeal with FEMA with the help of the State of Kansas.

One problem with the first time FEMA came down was that it was during harvest season so it was hard to have township people spend two days going through the process.

"We worked with the state and they came back down," Schmidt said. "We got a meeting with our townships and they spent an entire Monday morning in here with the state going back out and re-looking at some of the things so we could do an appeal. Now one of the requirements is we have an impact statement. There is just a number of new hoops.

"It is really making it hard on these townships."

Most townships are represented by volunteers with maybe one person hired to grade the roads.

The biggest challenge would have been barricading all of the roads. Townships don't have that many barricades or enough manpower.

Schmidt pointed out people also still need to get through to feed cattle and do other tasks.

"These are people who have really no idea of how we do things in the heartland," Schmidt said. "There was actually a comment made on one of the other visits: 'Well, you guys ought to pave all of these roads'."

Schmidt has heard there have been conversations that maybe the barricading requirement is not going to be enforced, but there are still other issues they are fighting.

FEMA has 60 days to respond to the appeal, which was filed about a month ago. Schmidt also has heard from Rep. Mike Pompeo and Sen. Pat Roberts' offices.

"Our fear is for us in emergency management if this is the new standard of what we're going to be looking at to get a disaster declaration," Schmidt said. "When you have a half million in damages and your townships are going to have to absorb that, that's the whole point of having FEMA."

So now, the county and townships are waiting to hear back from the appeal.

"If we lose the appeal it is a whole new ball game," Schmidt said.

While the townships have done what is necessary to keep the roads passable, they are waiting to see if they get FEMA assistance to do the major repairs.

"It's kind of scary," Schmidt said. "This is taxpayers' money, whether FEMA or local, but when you are sharing it with 30 people it is a lot more expensive than when sharing it with a few million."

Just one township had more than $100,000 in damage.

Now they are waiting and hoping they win the appeal.

"One of the things that gets lost is people say it's FEMA money, but it's tax money," Schmidt said. "Let's be smart about how we spend it but let's not kick the whole support system out without saying we're going to do this slowly."

Schmidt's biggest concern is if this request is denied, they may never qualify again for flooding assistance on their township roads.

"We just hope and pray it's not going to set a precedent," he said.

County, Townships Continue To Fight To Get FEMA Aid

Schmidt's biggest concern is if this request is denied, they may never qualify again for flooding assistance on their township roads.

"We just hope and pray it's not going to set a precedent," he said.

Kanawha County W. Va. Schools Gets $1.5 Million Grant For Flood Relief

By Mike Kennedy

American School and University, September 23, 2016

The Kanawha County (W.Va.) district is receiving a $1.5 million federal grant for flood recovery efforts.

The funding from the Federal Emergency Management Agency will help Kanawha County repair and replace facilities damaged or destroyed in June flooding, as well as other flood-related issues, according to a news release from West Virginia's two U.S. senators.

The flooding caused serious damage to several Kanawha County schools. District officials have determined that Hoover High School and Clendenin Elementary School sustained too much damage and will have to be rebuilt.

Earlier this month, FEMA approved the district's plan to place portable classrooms at Elkview Middle as a temporary home for Hoover High School and at Bridge Elementary to accommodate students who attended Clendenin Elementary School.

TORNADOES

Massive Cleanup Underway Following Two Tornadoes In Utah

By Pat Reavy

Deseret (UT) News, September 23, 2016

WASHINGTON TERRACE, Weber County — As emergency officials continued Friday to add up the damage caused by a destructive tornado in Washington Terrace, the massive cleanup also got underway.

As of Friday afternoon, 21 homes in Weber County — primarily in Washington Terrace, Riverdale and South Ogden — were determined to be "uninhabitable" because of major structural damage, and building inspectors were still counting, said Weber County Sheriff's Lt. Nate Hutchinson.

About a dozen of those homes are total losses, Hutchinson said.

"The damage is so extensive that we're talking major, major overhaul just to get them back up and working. Some of them are without roofs, or have shifted off their foundations," he said.

The total damage from Thursday's storm, Hutchinson said, was expected to grow into the millions.

"We're looking at well over $1.5 million at this point, and to be honest, I think that's going to be pretty low," he said.

That early estimate is based on homes "that will need major renovations," and not the hundreds of others that suffered some type of property damage. It also doesn't include cars and other vehicles damaged in the storms, Hutchinson said.

"Most of these cars are total losses. We've had cars tipped over. We had one camping trailer picked up and moved several houses in the air and landed in the neighbor's yard down the street," he said.

Weber County Emergency Management Services has been in contact with officials from the Federal Emergency Management Agency to begin the process of applying for federal aid, Hutchinson said.

On Friday afternoon, Gov.Gary Herbert walked through neighborhoods that suffered the worst devastation. He called the scene “a little bit stunning.”

“We’re not used to tornadoes,” Herbert said, calling the “sporadic” damage in the neighborhoods “kind of unsettling.”

Herbert praised county and city officials, saying the response to the disaster was fast and thorough.

“I came here expecting to see a lot of debris, kind of a war zone, that we’ve seen at other times,” he said. “I come here and it’s mostly all cleaned up. And so it just tells me that the people in charge here are really doing good things.”

The governor said disasters frequently bring communities closer together.

“It gives us an opportunity as people to serve our neighbors,” Herbert said.

Cleanup was also underway Friday in southern Utah, where the National Weather Service confirmed that a tornado with 110 mph winds ravaged a 25-yard area in Garfield County near Panguitch, causing heavy damage to several structures and minor damage to several more homes.

Yardley Insurance Agency, 609 N. Main, Panguitch, was the hardest hit. A house next to it also suffered damage when the roof from the insurance business was blown off.

“It pretty well touched down here and wiped us out for the time being. But honestly, we feel mighty blessed because it could have been worse,” owner John Yardley said.

In northern Utah, Thursday’s tornado initially touched down in the southwest section of Washington Terrace and moved northeast. A five-block area from about 5200 South on 50 West to 4700 South and 300 West was hardest hit, Hutchinson said.

From there, the tornado “skipped like a rock,” he said, leaving the ground and touching down again in the 4600 block of 200 East.

“It really took a toll on the homes in that neighborhood,” he said.

Approximately 50 residents were evacuated Thursday night either because of damage or for safety precautions because of a teetering tree or power pole that could fall, or a gas leak.

Of the 21 homes that were determined to be uninhabitable, Hutchinson said, “it’s gonna be awhile” before those people will be able to return to their homes.

In Riverdale, a couple of mobile homes were blown over and destroyed by the wind, he said.

Most of the 50 displaced residents stayed with other family members Thursday night, Hutchinson said. The Red Cross put up four families in local hotels.

Other areas of Weber and Davis counties also suffered damage from strong winds associated from the storm front. The National Weather Service recorded a gust of 81 mph in South Ogden on Thursday, and 101 mph at Ogden Peak.

Hutchinson said “dozens” of extra sheriff’s deputies began patrolling those neighborhoods Thursday night and would continue to do so until further notice to deter potential looters.

The Weber County Landfill, he said, is accepting all green items for free while the cleanup effort is ongoing.

Although a tornado did not hit Antelope Island, the storm produced strong enough winds that the roof of a barn was blown off. Fielding Garr Ranch, which survived a wildfire in July, will be closed until further notice, according to Utah State Parks officials, because of damage caused to several structures.

“The ranch will reopen after park staff have assessed the situation and determined it is once again safe,” the Park Service said in a prepared statement.

The damage forced at least four school closures Friday: Bonneville High School, T.H. Bell Junior High, Washington Terrace Elementary and Roosevelt Elementary. Hutchinson said the schools were closed mainly for safety, particularly for students who would have had to walk through the tornado-ravaged neighborhoods to get there. But he expected all schools to be open again Monday.

At the height of the storm, approximately 38,000 people were without power in Davis and Weber counties. By late Friday night, approximately 1,130 customers remained without power in Ogden, South Ogden, South Weber, Riverdale and Washington Terrace. And about 930 customers were without power in Clearfield, Clinton, Hooper, Layton, Syracuse and West Point.

“We still have lines going down, poles catching on fire, and there’s just a lot of cleanup,” said Rocky Mountain Power spokesman Paul Murphy.

There was no time estimate as to when power would be fully restored to all customers, Murphy said. Extra crews were being brought in from Wyoming and Idaho to help fix the damaged lines, he said.

The power outage indirectly contributed to a mobile home fire in Clearfield about 9:10 a.m. Friday when a generator being used to power the home caught fire. The fire was determined to be accidental, though the mobile home likely is a total loss, fire officials said.

Emergency officials say despite the widespread damage, they were extremely thankful that no major injuries were reported. Hutchinson said there was one report of a resident who suffered a broken arm, and another report of a person who suffered a foot injury when a car he was standing next to was lifted by the tornado and landed on his foot.

WILDFIRES

Extreme Weather Cost U.S. Taxpayers $67 Billion

By Erin Auel And Alison Cassady

EcoWatch, September 24, 2016

One of the most visible and immediate ways climate change has affected—and will continue to affect—Americans is through extreme weather exacerbated by rising global temperatures.

Aerial image of flooding in New Orleans following Hurricane Katrina in 2005.

Between 2005 and 2015, the annual average temperature in the U.S. exceeded the 20th-century average every year, with increases ranging from 0.15 degrees Celsius to 1.81 degrees Celsius above normal. Moreover, the federal government's most recent National Climate Assessment concludes that as temperatures continue to rise, extreme weather events and wildfires will increase in frequency and intensity.

Climate change will worsen heat waves, winter storms, and hurricanes. It will exacerbate extremes in precipitation, leading to more severe droughts and wildfires in some areas and heavier rainfall and flooding in others. And when the damage is done, taxpayers will be left to pick up the bill.

When extreme weather strikes and state and local governments are overwhelmed, the federal government must often intervene. In the worst cases, the president can declare an emergency or a major disaster, which releases federal funds for the damaged areas. The Federal Emergency Management Agency (FEMA) provides financial assistance to local, tribal and state governments, as well as individual households, after the president declares an emergency or major disaster.

The Center for American Progress (CAP) examined FEMA data on weather- and wildfire-related disaster declarations between 2005 and 2015 to identify trends in FEMA disaster spending, which is funded by U.S. taxpayers. CAP found that:

Between 2005 and 2015, FEMA issued more than $67 billion in grants to assist communities and individuals devastated by extreme weather and wildfires. Overall, FEMA spent about $200 per U.S. resident for disaster assistance during that time period.

FEMA provided the most disaster assistance to Louisiana and New York, which, combined, received more than half of the agency's total assistance over the 10-year period due to damage caused by Hurricane Katrina and Hurricane Sandy, respectively. Texas, Mississippi, and New Jersey rank third through fifth for FEMA disaster spending between 2005 and 2015.

The states that received the most FEMA disaster assistance spending per capita were Louisiana ($4,345), Mississippi ($1,607), North Dakota ($843), and New York ($807). In North Dakota, unprecedented flooding events in 2009 and storms in 2011 caused substantial damage, driving up per-person costs among a smaller state population.

These findings likely underestimate the true federal cost—and thus the cost to taxpayers—of extreme weather. FEMA provides assistance in response to the worst natural disasters—those that triggered emergency and major disaster declarations. As a result, the findings do not include the costs of smaller but still destructive storms, costs borne by private insurers, and other government spending, such as the U.S. Department of Agriculture's disaster assistance program.

As the climate warms, these types of extreme weather and wildfire events could impose an even greater burden on American communities and taxpayers. In order to prepare for this reality, communities must invest in climate-resilient infrastructure and integrate climate considerations into their development plans.

Findings: FEMA Is Spending Billions on Natural Disasters

Between 2005 and 2015, the president issued 832 separate emergency or disaster declarations for which FEMA provided either public assistance—defined as funding for state, tribal, and local governments—or individual assistance in the form of grants typically made to homeowners and renters whose home damage was not covered by homeowners insurance.

Between 2005 and 2015, FEMA spent $67.7 billion on household and public assistance in response to presidentially declared emergencies and major disasters. Of this amount, $14.36 billion was spent on individual and household assistance, and public assistance outlays to state, tribal and local governments made up the rest—$53.31 billion.

During this 10-year period, there were extreme weather and wildfire events in all 50 states, the District of Columbia, and several U.S. territories and throughout all seasons. Severe storms were the most frequent cause of disaster declarations, with 470 distinct declarations across the examined time period.

Although less common than severe storms, hurricanes caused the most damage. Between 2005 and 2015, FEMA spent $49.5 billion on public and individual assistance to help communities recover from hurricanes. FEMA spent $12.7 billion for assistance related to severe storms over the same 10-year period.

Hurricanes accounted for eight of the top-10 costliest disaster declarations between 2005 and 2010, including hurricanes Katrina, Sandy, Ike, Wilma, Rita, Gustav, Irene and Isaac.

Accordingly, although the total assistance by state varied widely, FEMA directed significant disaster spending to states that experienced historic hurricane damage during the period examined. These states include Louisiana and Mississippi, where Hurricane Katrina hit hardest in 2005, and New York and New Jersey, where Hurricane Sandy landed in 2012.

Nationwide, FEMA spent more than $22 billion in assistance responding to Hurricane Katrina, including allocations for states that provided assistance related to evacuations. The agency provided nearly $16 billion in household and public assistance grants in response to Hurricane Sandy.

Non-hurricane events can cause significant and costly damage as well. In August 2016, Baton Rouge, Louisiana, experienced historic flooding from torrential rainfall. As of Aug. 23, the floods had killed 13 people, and more than 100,000 people had applied for federal assistance. Preliminary analysis from Climate Central and the National Oceanic and Atmospheric Administration found that increased temperatures due to climate change increased the likelihood of intense downpours in Louisiana by 40 percent.

Floods are among the most costly extreme weather events that can hit an area, as they can destroy large areas of property and can take a long time to recede. Between 2005 and 2015, flooding caused eight of the 10 costliest non-hurricane disaster declarations and occurred across several different regions.

Looking at the per-capita costs of extreme weather reveals that these disasters have a profound impact on individuals and communities. Louisiana received $4,345 per person in FEMA disaster spending between 2005 and 2015, the most of any state. Mississippi received the second-highest amount per capita—more than $1,600. Overall, FEMA spent about $200 per U.S. resident for disaster assistance between 2005 and 2015.

Damage is not just limited to coastal areas. States in the central U.S. with relatively small populations have been hit hard by extreme weather and subsequently received significant assistance from FEMA. North Dakota, for example, ranks third for per-capita FEMA assistance over the analyzed decade due largely to eight distinct flooding events. Iowa ranks fifth for per-capita FEMA spending and seventh for total spending because of severe storms that caused major statewide flooding in 2008. Of the 10 states with the highest per-capita spending, half are located in the central U.S.

Conclusion

Extreme weather is already costing taxpayers and the federal government valuable public dollars and resources. Americans have recognized these costs; in a 2015 New York Times survey, 83 percent of respondents said that unmitigated climate change poses "a very or somewhat serious problem in the future."

Because of the damage already caused to the climate, communities in the U.S. and around the globe will experience more frequent and intense extreme weather events, even if world leaders take immediate action to cut greenhouse gas emissions.

Faced with this reality, FEMA has proposed a rule that would establish a deductible for disaster assistance in order to encourage states to make investments in resilience measures before disasters occur. This rule could incentivize states to invest in climate-smart infrastructure to minimize the financial and human toll of extreme weather.

The FEMA proposal is one among many efforts to push communities to better prepare for storms, floods, and other natural disasters—an effort made even more urgent because of climate change—rather than focusing only on responding to a disaster's aftermath. Resilience, however, is only one prong in a coordinated response to climate change. The world must also focus on mitigating the worst impacts of climate change by reducing greenhouse gas emissions and transitioning the global economy to cleaner, low-carbon forms of energy.

Methodology

CAP examined FEMA data on presidential declarations of major disasters and emergencies between 2005 and 2015. The data reflect the two primary disaster declaration types: major disaster and emergency. CAP analyzed FEMA data on public and individual/household assistance spending in response to these declarations. The data were last updated on July 12.

For the per-capita analysis in Table 3, CAP used population data obtained from the U.S. Census Bureau. To calculate the per-capita costs by state, CAP averaged the state population totals from 2005, 2010 and 2015. The national per-capita figure in Table 3 reflects FEMA disaster assistance to all 50 states, the District of Columbia, and the U.S. territories.

CAP developed a methodology for excluding and including disasters to ensure the analysis only includes declarations that reflect the types of events that could become more common with unmitigated climate change.

We included public and individual assistance payments made in response to major disaster declarations and emergency declarations for the following types of incidents: coastal storms, drought, flooding, freezing, hurricanes, mudslides from flooding, severe ice storms, severe storms, snow, tornadoes, typhoons and wildfires. We excluded public and individual assistance payments made for the following types of incidents that occurred between 2005 and 2015: water main breaks, terrorism, explosions, earthquakes, chemical spills, tsunamis, the 2009 presidential inauguration, bridge collapses and volcanoes.

ZIKA VIRUS

Miami Neighborhood's Zika Outbreak Likely Curtailed By Aerial Spraying

New Zika cases in Wynwood have apparently stopped, but transmission continues in Miami Beach

By Melanie Evans

Wall Street Journal, September 23, 2016

Full-text stories from the Wall Street Journal are available to Journal subscribers by clicking the link.

Double Dose Of Pesticides Stops Zika Mosquitoes, CDC Says

Two pesticides were needed to stop Miami's Zika-carrying mosquitoes

NBC News, September 23, 2016

It took a double dose of pesticides that kill both adult mosquitoes and their larvae to stop the first outbreak of Zika virus in Florida, health officials said Friday.

They said while aerial spraying of pesticides may be controversial and frightening to some people, they've shown it's safe when done right and that it killed off the mosquitoes that were spreading the virus.

An aerial banner is flown over the South Pointe Park pier on Sept. 6, 2016, in the South Pointe Park area in Miami Beach, Fla. Aerial spraying of the insecticide naled is scheduled over South Beach, where more mosquitoes have tested positive for the Zika virus. In a statement Tuesday, Miami-Dade County Mayor Carlos Gimenez said the flights recommended by Florida health officials and the U.S. Centers for Disease Control and Prevention will begin Thursday and continue for a month. Alan Diaz / AP

"Aerial spraying is an effective addition to mosquito control on the ground. In fact, it's been the most effective tool," Dr. Tom Frieden, director of the Centers for Disease Control and Prevention, told NBC News.

Florida is still fighting a second outbreak in Miami Beach. There are also individual cases across the state. Three new local cases were reported Friday, bringing Florida's total count to 105 cases — 95 in residents and 10 among people infected while visiting the state. "As soon as aerial spraying was done, mosquitoes plummeted and transmission slowed."

The CDC and Florida's department of health on Monday declared the Zika outbreak over in Miami's Wynwood neighborhood. Thirty people who lived, worked or visited there had tested positive for Zika. Most had been in or around a work zone with many areas of standing water.

It took several weeks to get the outbreak under control, and aerial spraying of the pesticide naled, plus use of ground sprays that disperse larva-killing bacteria, is what ended the outbreak, the CDC says.

Officials started out using sprayers loaded with Bacillus thuringiensis israelensis (Bti), a species of bacteria that can kill developing insect larvae in water. It is sold in mosquito dunks and pellets that homeowners can buy to treat ponds or other standing water. It's effective but takes time to work.

Related: Activists Protest Mosquito Spraying in Miami Beach

"Despite extensive ground-based efforts, Zika continued to spread among people. As soon as aerial spraying was done, mosquitoes plummeted and transmission slowed," Frieden told reporters in a telephone briefing.

"Aerial application appears to be our strongest tool. Aerial spraying with Bti that controls the young mosquitoes and naled is currently the most effective tool in the Zika prevention toolbox."

But aerial spraying alone doesn't work, either, Frieden said. "In the areas that only used naled, mosquito populations rebounded," he said. "So the one-two punch is important."

The Aedes aegypti mosquito that carries Zika is especially hard to kill. Frieden likes to call it the "cockroach of mosquitoes" because it's so difficult to control. It lives in and around houses and can breed in tiny amounts of water.

Aedes spreads not only Zika, but dengue, yellow fever and chikungunya viruses. No one's been able to eradicate populations since governments stopped spraying DDT in the 1970s.

Related: Study Rules Out Birth Defect Doubts

The CDC and state health department officials said the naled spray that was used is not dangerous to people when sprayed in ultra-low doses.

"Less than one ounce of naled per acre is used for aerial spraying, which might explain the absence of observed negative health effects during and after aerial spraying," they wrote in a joint report. Other studies have tested people after naled has been sprayed and find little evidence of it in their bodies. "In the areas that only used naled, mosquito populations rebounded."

Zika is a threat mostly because of what it does to developing babies. It attacks their brains and nervous systems, causing a wide range of birth defects, from horrific brain damage to subtler effects on vision. There's no way to protect a fetus if the mother is infected.

Travelers from other Zika-affected areas carry the virus with them — often unwittingly, because most people infected don't have symptoms. Zika can cause a rash, headache and fever and, rarely, it can cause neurological side-effects.

Zika can spread sexually but it only causes outbreaks where Aedes aegypti mosquitoes live.

CDC: Aerial Spraying Curbed Zika Transmission In Wynwood

Fox News, September 23, 2016

The Centers for Disease Control and Prevention (CDC) announced Friday that aerial spraying with the controversial pesticide naled in Wynwood helped curb the region's mosquito population, thereby halting active local transmission of the Zika virus. In a press release, the CDC declared that ground spraying to fight Zika was not sufficient to suppress active transmission in the arts hub of Miami, which was the first area of local transmission in the continental United States.

Health officials identified 29 people, including one in Broward County and 28 in Miami-Dade County, who were infected with Zika via local transmission from late June to early August. A cluster of those cases occurred in Wynwood.

Naled, which can be toxic to humans in large quantities, elicited protests from locals who were concerned about its dangers. Europe has banned the use of naled. However, active transmission did not stop until Florida health officials began an aerial spraying plan that included naled and bacillus Thuringensis, according to the CDC.

"After mosquitoes persisted and infections continued despite ground-based spraying, aerial spraying knocked down mosquitos rapidly and was associated with interrupting transmission of Zika in Wynwood," CDC director Dr. Tom Frieden said in the release. "When faced with the potentially devastating outcomes of microcephaly or other serious brain defects that Zika can cause during pregnancy, we must use the best available tools to prevent infection. According to EPA assessments, when used properly, aerial spraying with naled for mosquito control doesn't pose a risk to people or the environment."

Officials cleared Wynwood of active local transmission in Zika on Monday, as no new local cases have surfaced in the region since early August.

Zika Virus: CDC Hails Aerial Spraying In Killing Wynwood Mosquitoes

By Daniel Chang

Miami Herald, September 23, 2016

Aerial spraying of insecticides over Wynwood in August was so successful at interrupting the spread of Zika that federal health officials on Friday heralded the approach as "a new era" in the fight against mosquito-borne diseases — even as a local biologist who reviewed Miami-Dade surveillance data said that the air attack did not work as well as advertised.

As Zika continued to spread in a 4.5-square-mile area of Miami Beach, where the health department reported three more local infections on Friday, Centers for Disease Control and Prevention Director Tom Frieden delivered a cautiously enthusiastic endorsement of aerial spraying with two different pesticides — one that takes out adult mosquitoes, the other that kills eggs and larvae.

In a teleconference with State Surgeon General Celeste Philip, Frieden highlighted a new CDC report co-authored by Florida scientists showing that the combined aerial approach delivered results that on-the-ground efforts alone, such as truck spraying and backpack fogging, could not have accomplished in Wynwood.

"We cannot know with certainty that the control measures ended transmission, and of course the virus could come back tomorrow," Frieden said, noting that the CDC report was not based on a controlled study but rather "a rigorous analysis" of mosquito surveillance data from Wynwood.

"But, having said that," he said, "the findings are clear. Despite extensive ground-based efforts, there remained large numbers of mosquitoes, and Zika continued to spread among people in the area. As soon as aerial spraying was done, mosquito populations plummeted and monitoring found no more people infected in the weeks after the aerial application."

On Sept. 19, the CDC lifted a travel advisory that warned pregnant women to avoid the area because the Florida Department of Health had not found any new mosquito-borne Zika infections in 45 days — meeting the federal agency's standards for suggesting that mosquito-borne transmission of the disease is no longer occurring.

30 Number of people with mosquito-borne Zika infections linked to Wynwood

Though no new Zika infections have been reported in Wynwood since early August, Philip Stoddard, a Florida International University biology professor and the mayor of South Miami, said the evidence that aerial spraying significantly reduced mosquito counts in the area is not so clear cut.

Stoddard said he had not yet seen the CDC report on Friday. But he has reviewed Miami-Dade mosquito surveillance data for Wynwood gathered during roughly the same period — July 27 through Sept. 9 — examined in the CDC's report.

He produced a study, which has yet to be published, and found that four rounds of aerial spraying of the pesticide naled over Wynwood did not have a lasting effect.

"If they can find something that works, God bless them," he said. "But the naled started showing a lot of promise and then it stopped working. This is a problem."

Stoddard said there was a decline in Wynwood's mosquito counts associated with spraying of the larvacide BTI. But he added that other efforts, such as a door-to-door campaign to remove standing water and other mosquito breeding grounds, may have had a bigger impact.

"I'm encouraged by the BTI findings," he said. "But you can't be sure the BTI is what was doing it."

As soon as aerial spraying was done, mosquito populations plummeted.

CDC Director Tom Frieden

For the uncertainty, Stoddard blamed federal and state health officials for not designing a more rigorous study of the ongoing public health crisis, which has led to more than 105 local mosquito-borne infections, most of those in Miami-Dade. An additional 773 travel-related Zika cases also have been reported in Florida, including 90 pregnant women.

"They dropped the ball," he said. "They did not design a controlled test. These data are extremely important, and you would think they would have a statistician to help them design a study that would have given them the information they needed. But they did not do that."

During the news conference, Frieden repeatedly stated that the CDC report produced by Florida officials was not a controlled study. He also emphasized that what worked in Wynwood may not work in other areas, including Miami Beach. Stoddard said his review found naled alone "never worked in Miami Beach."

Still, Frieden said the data strongly suggested that the combination of naled and BTI had emerged as a new weapon in the fight against Zika and other mosquito-borne diseases.

"In the balance between protecting pregnant women and the next generation against devastating birth defects, we're encouraged that there is now a new tool that appears to have had such dramatic results in Wynwood."

Zika cases reported in Florida as of Sept. 23

* Counties of pregnant women are not disclosed.

It Takes Two Chemicals To Knock Out Mosquitoes That Carry Zika

'One-two punch' shows promise in knocking out mosquitoes that carry Zika, CDC reports

By Helen Branswell

STAT, September 23, 2016

Aerial spraying of the insecticide naled, followed by a product that targets mosquitoes when they are in the larval stage, may be responsible for a sharp drop in Aedes aegypti mosquitoes in a part of Miami where local transmission of the Zika virus was first found, the

Centers for Disease Control and Prevention reported Friday.

CDC Director Dr. Tom Frieden said the apparent success of the combination in the Miami neighborhood of Wynwood may represent a new standard for control of Aedes aegypti mosquitoes.

"It appears that the aerial application of this one-two punch has the ability to rapidly interrupt transmission," Frieden said during a media conference Friday.

article continues after advertisement

"The findings are quite striking," he added. "Those who've worked in the field of arbovirology and control of diseases spread by Aedes aegypti and have looked carefully at this data are struck that we haven't seen similar control in other diseases spread by this particular mosquito species."

Aedes aegypti mosquitoes are extremely difficult to control. The females, which need a blood meal to procreate, prefer to bite humans. As a result, they live close to people, in or around homes. They need only small amounts of water to lay their eggs — as little as the amount that a discarded bottle cap could hold — which adds to the difficulty of getting rid of this species.

The bugs are resistant to some of the chemicals that have been used against them in the past, which is why public health officials turned to the combination of naled and a biological product called Bacillus thuringiensis subspecies israelensis — Bti — that kills larvae.

Naled alone didn't appear to knock down the mosquito populations as successfully, Frieden said. It was tried in a different part of the city.

The CDC's report noted that local hospital admission records were checked to see if people came in complaining of respiratory problems or skin rashes followed spraying of the chemicals. There was no evidence that happened.

A number of protesters in Miami objected to the spraying. And earlier, Puerto Rico dropped a plan to use this approach there over public objections.

Duane Gubler, an expert in mosquito transmitted diseases, was cautious about interpreting the results, saying several methods of mosquito control were used in the Wynwood neighborhood, and it's not clear the drop in mosquitoes can be attributed to the aerial spraying.

A former head of the CDC's dengue branch in Puerto Rico, Gubler had been skeptical of the aerial spraying plan before the work was undertaken.

Insecticide Spraying Working Against Florida's Zika Mosquitoes: Officials

By Steven Reinberg

HealthDay, September 23, 2016

Aerial spraying of insecticides seems to be stopping the spread of the Zika virus in south Florida, health officials said Friday.

Seventy-four confirmed cases of the mosquito-borne infection that causes devastating birth defects have been reported in the state, the only state in the nation to report any local infections.

A combination of insecticides was needed to beat back the Aedes aegypti mosquito that carries the virus, according to the U.S. Centers for Disease Control and Prevention and the Florida Department of Health.

While ground spraying was ineffective, aerial spraying with the insecticides naled and Bti (bacillus Thuringensis) dramatically reduced the mosquito population and local transmission of Zika, CDC Director Dr. Tom Frieden said during an afternoon media briefing.

"This really heralds in a new era of [mosquito] control," Frieden said. "It appears that the aerial application of the one-two punch has the ability to rapidly interrupt transmission. It doesn't mean that the area is immune from future spread, but the findings are quite striking," he added.

These pesticides kill both the insect and its larvae, preventing the birth of new mosquitoes, Frieden said.

Aerial spraying is part of a comprehensive mosquito-control program that also includes encouraging people to get rid of standing water on their property and protect themselves against mosquito bites as well as using ground spraying in hard-to-reach areas, Frieden said.

This breed of mosquito has been particularly hard to control, Frieden said. And it's impossible to know if spraying will work in the long run, he added. But after spraying, the mosquito population in the Miami area dropped significantly, as evidenced by the low numbers of insects found in mosquito traps, he said.

The initial Florida outbreak started in late June and ran through early August. In Miami's Wynwood neighborhood, 30 people were identified as having been infected with Zika virus through local mosquito-borne transmission. In Miami Beach, 44 confirmed cases have been reported so far, according to Dr. Celeste Philip, Florida's surgeon general, who also spoke at the briefing.

Transmission of the virus in Wynwood stopped quickly after aerial spraying with both chemicals, Philip said. Since early August, no new cases of locally transmitted Zika have been reported in Wynwood, the health officials said.

Any new cases of Zika infection have been among people who brought the infection with them from areas outside the United States, Philip said.

The Zika epidemic has been centered in Latin America and the Caribbean, with Brazil reporting the largest numbers of infections and the birth defect microcephaly, which causes babies to be born with extremely small heads and underdeveloped brains.

In Miami Beach, aerial spraying stopped only recently, so it's too early to know if it will be as effective as it was in Wynwood, Frieden said. However, early results appear to mirror those seen in Wynwood.

Despite concerns about the effect of these pesticides on humans, Frieden said they are safe when used as directed, and no short-term health problems have been reported.

To reduce the risk of local Zika transmission within the United States, the CDC recommends that people returning from places with ongoing infections should use mosquito repellent every day for three weeks and follow the CDC's guidelines to prevent sexual transmission of Zika.

The Zika virus doesn't pose a significant health threat to most people, except pregnant women and fetuses.

The virus can be spread by infected men and women to their sex partners. There is no vaccine or treatment for Zika.

The CDC advises that partners of pregnant women use a condom to guard against sexual transmission during pregnancy.

The results of the aerial spraying efforts were reported Sept. 23 in the CDC publication Morbidity and Mortality Weekly Report.

SOURCES: Sept. 23, 2016, media briefing with: Tom Frieden, M.D., M.P.H., director, U.S. Centers for Disease Control and Prevention; and Celeste Philip, M.D., M.P.H., Florida Surgeon General and Secretary; Sept 23, 2016, Morbidity and Mortality Weekly Report

Mayors Say State Told Them To Keep Zika Mosquito Sites Secret

By Daniel Chang

Miami Herald, September 25, 2016

The mayors of Miami-Dade County and Miami Beach on Sunday accused the Florida Department of Health of lying after the state agency said last week that it never told local officials to hide the locations in Miami Beach where mosquitoes carrying the Zika virus were captured.

Florida's health department strongly denied instructing local officials to keep the information confidential — and said the decision was entirely up to Miami-Dade — after the Miami Herald reported on Friday that a county attorney said the state agency had ordered them to keep it a secret.

The statement was made during a court hearing for the Miami Herald's lawsuit against Miami-Dade seeking the locations of traps in Miami Beach where mosquitoes carrying the Zika virus were captured this month. The suit seeks disclosure of the locations on grounds that the information would help the public make decisions about precautions to take if they live or work nearby, and also inform the community debate on the use of the controversial insecticide naled.

On Sunday, Miami-Dade Mayor Carlos Gimenez, who is facing a runoff election in November, pushed back against the Florida health department's denial with a written statement repeating that the agency had ordered secrecy in regards to the locations.

"During multiple meetings, phone calls and conversations, officials from the Florida Department of Health explicitly stated to county officials that information identifying the addresses of traps containing mosquitoes positive for the Zika virus is confidential during active, ongoing epidemiological investigations," Gimenez said in the statement.

At least five traps in Miami Beach have captured mosquitoes that tested positive for Zika, but Florida officials have identified only one place: the Miami Beach Botanical Garden, which had been closed three days prior to the announcement.

"It is disturbing that the Florida Department of Health is denying previous directives to maintain confidentiality of the trap locations," Gimenez said in the statement. "At the end of the day, this is about the health and safety of our community, and we have been carrying out the express orders of the Florida Department of Health as it relates to disclosure of mosquito-trap information."

Miami Beach Mayor Philip Levine corroborated Gimenez's statement, which added that the state health department had ordered the information kept secret to protect the privacy of residents living in the areas where Zika-positive mosquitoes were captured.

Levine said he was present when Florida health department officials, including Miami-Dade Director Lillian Rivera and state Surgeon General Celeste Philip, instructed county and city officials not to disclose the locations. He said Florida Agriculture

Commissioner Adam Putnam also told him that the health department had ordered the information remain confidential.

"Mayor Gimenez is only doing what the state told him, his staff, me and my entire staff, specifically, that they would not permit the county to release the information on the locations," Levine said Sunday. "Lillian Rivera said it multiple times that she has been instructed and the department of health will not permit the locations of the traps to be released. That's No. 1. No. 2, I remember hearing the state surgeon general saying it directly to us, Celeste Philip. And No. 3, Adam Putnam told me and the city manager directly in my office that. In fact, I reaffirmed it with Commissioner Putnam on the phone the other day, and he was dumbfounded."

Mayor Gimenez is only doing what the state told him, his staff, me and my entire staff, specifically, that they would not permit the county to release the information on the locations.

Miami Beach Mayor Philip Levine

Representatives for Florida's department of health and agriculture did not immediately respond to the Herald's request for comment on the mayors' statements. Jennifer Meale, a spokeswoman for the agriculture department, replied to the Herald's request in an email Sunday.

Meale's statement: "In consultation with the Department of Health, we believe the locations of the traps are exempt per 381.0031(6), F.S.," a state statute governing information gathered during epidemiological investigations.

On Friday, the health department issued a written statement denying the agency ever muzzled the county.

"The statements made by the county today are completely false," Mara Gambineri, a health department spokeswoman, said in an email. "At no time did the Florida Department of Health instruct Miami-Dade County to withhold the location of mosquito traps. This is solely the decision of the county."

Miami-Dade remains the only place in the nation identified as having active spread of Zika by mosquitoes, specifically in a 4.5-square-mile area of Miami Beach between Eighth and 63rd streets from the ocean to the bay.

As of Friday, Florida's health department reported a total of 105 local mosquito-borne Zika infections, most of those in Miami-Dade. An additional 773 travel-related Zika cases also have been reported in Florida, including 90 pregnant women.

At least five traps in Miami Beach have captured mosquitoes that tested positive for Zika, but Florida officials have identified only one place: the Miami Beach Botanical Garden, which had been closed three days prior to the announcement.

Adult, Larval Insecticides Pack Deadly Punch To Mosquitoes, Zika: U.S.

Metro Health Confirms Two New Cases Of Zika In San Antonio

By Silvia E Foster

San Antonio Express-News, September 23, 2016

Two new Zika cases have been confirmed in Bexar County, the San Antonio Metropolitan Health District announced Friday.

The number of reported cases in Bexar County was 13 at 11 a.m. on Friday, but later in the day the district had identified two more, bringing the total to 15 confirmed cases in San Antonio. All the cases were contracted outside the country, officials said.

The virus travels through mosquitoes. While relatively harmless for the average person, it has been linked to birth defects. — pregnant women infected with Zika could give birth to children with microcephaly, or abnormal brain development.

On Feb. 1, the World Health Organization declared Zika an international public health emergency.

In June, there were only eight reported cases of Zika in San Antonio. Last week, three more cases were identified. Also last week, a mosquito was found in Bexar County with a different virus: West Nile.

Metro Health recommended residents take preventative measures to deter mosquitoes from their home by frequently cleaning out or upending containers that hold water, which are often breeding grounds for mosquito eggs. The agency suggests covering up exposed skin and using repellent to avoid getting bitten. Pregnant women are discouraged from traveling to Zika-affected areas, including much of Latin America.

The Texas Department of State Health Services updates its Zika count by county every day. Friday, there were 201 confirmed cases of Zika on the statewide list; that didn't include the two new San Antonio cases reported Friday afternoon.

There have been 3,358 cases of Zika in the United States and of those only 43 were locally acquired, according to the Centers for Disease Control and Prevention.

Puerto Rico Reports 2nd Death Tied To Zika-related Condition

Associated Press, September 23, 2016

SAN JUAN, Puerto Rico (AP) – Health officials in Puerto Rico say a 75-year-old man infected with Zika has become the second person to die from a paralysis condition linked to the mosquito-borne virus.

Authorities said Friday that the man died this month after developing complications from Guillain-Barre. They noted he had previous health issues including diabetes, asthma and a history of cancer.

The first victim was a man between 35 and 45 years old who died in July after contracting Zika and developing Guillain-Barre.

There are 22,358 people with Zika, including 1,871 pregnant women. This is of concern to health officials who anticipate babies being born with severe birth defects.

A total of 170 people infected with the virus have been hospitalized. Two people who had Zika coupled with other unrelated medical conditions have died.

EMERGENCY PREPAREDNESS

Great Central ShakeOut Coming Up

Washington (IN) Times-Herald, September 24, 2016

The Great Central U.S. ShakeOut is four weeks away – Oct. 20 at 10:20 a.m. – and the Indiana Department of Homeland Security is encouraging Hoosiers to register and participate in this drill promoting earthquake safety preparation and awareness.

Indiana is exposed to a serious threat of earthquakes along the New Madrid Seismic Zone – located 180 miles southwest of Evansville – and the Wabash Valley Seismic Zone, which encompasses parts of Southeastern Illinois and Southwestern Indiana.

The ShakeOut is an opportunity to practice proper safety measures in the event of an earthquake, and participating is simple and only takes a few minutes. Here's how it works: on Oct. 20 at 10:20 a.m., participants should drop to the ground, take cover under a table or desk and hold on as if a major earthquake were happening.

The days leading up to the ShakeOut are a great time to check houses, workplaces or schools for potential earthquake hazards and to create a preparedness kit that can be used for a variety of situations, not just earthquakes. Disaster kits should include water and food for all household members, first-aid supplies, flashlights and batteries, medication, items for pets, and extra clothing. For information on disaster kits and emergency preparedness, visit GetPrepared.in.gov.

To learn more about how individuals, families or organizations can participate in the 2016 Great Central U.S. ShakeOut and to register, visit GetPrepared.in.gov. Registration is free and open to everyone.

The ShakeOut is the largest earthquake drill in the Central United States, and it's led by local emergency management agencies, IDHS, the Indiana Geological Survey, the Indiana Department of Education, the Central United States Earthquake Consortium, the Federal Emergency Management Agency and the U.S. Geological Survey.

A total of 2.3 million people in the Central U.S. region have registered so far, and Indiana is currently in the lead with more than 561,000 registrants. Other states participating include Alabama, Arkansas, Illinois, Kentucky, Mississippi, Missouri, Ohio, Oklahoma, Iowa, Nebraska, Louisiana, Kansas and Tennessee. Last year, Indiana had nearly 700,000 Hoosiers register for the drill.

Missouri's Annual Earthquake Drill To Be Oct. 20

Liberty (MO) Tribune, September 26, 2016

JEFFERSON CITY — Registration is open for the 2016 Great Central U. S. ShakeOut earthquake drill in October. More than 450,000 Missourians are already registered to participate in the annual drill, which teaches people how to protect themselves in an earthquake.

More than 2 million people are signed up in 14 central U.S. states that could be impacted by a major New Madrid Seismic Zone earthquake.

At exactly 10:20 a.m. Thursday, Oct. 20, participants will practice Drop, Cover, Hold On:

- Drop to your hands and knees, under a table or a desk if you can;
- Cover your head and neck with your hands and arms; and
- Hold on until the shaking stops.

Experts say this method is the best way to protect yourself from falling debris, which is the most likely cause of injury during an earthquake in developed nations with modern building standards.

"It's very important for people to immediately know what to do to protect themselves because earthquakes occur without warning," said State Emergency Management Agency Director Ron Walker in a press release. "If you and your family know in advance how react and take cover, it could prevent serious injury."

To sign up for the ShakeOut, visit www.shakeout.org/centralus. Once registered, participants receive regular updates on the drill, as well as information on earthquake preparedness and safety. The ShakeOut website also includes many resources, including manuals, videos, audio drill broadcasts and earthquake scenarios.

From 1811 to 1812, the New Madrid Seismic Zone, which includes southeast Missouri, produced some of the largest earthquakes ever in the continental U.S. A major earthquake in this area could result in damage in much of southern and eastern Missouri, including the St. Louis area.

To learn more about earthquakes in Missouri and how to prepare, visit www.sema.dps.mo.gov/earthquake_preparedness. The site includes brief videos that show how to conduct a ShakeOut drill.

American Red Cross Volunteers Are Ready; Volunteers Teaching Public How To Prepare For Cascadia Earthquake

By Peter Madsen

Bend (OR) Bulletin, September 25, 2016

Theresa and Richard Grimes keep their emergency suitcases packed and ready to go. As on-call American Red Cross disaster service volunteers, the husband and wife — together and individually — have deployed many times with less than 24 hours' notice.

"If they call me today at 3 o'clock, I'm ready to go tomorrow morning," Theresa said.

Among The Red Cross Cascades — which serves Oregon and Southwest Washington — the Grimeses are two of approximately 2,500 regional volunteers and 1,400 disaster relief volunteers who drop everything to help survivors. Responsibilities are wide-ranging yet typically involve food and water distribution and sheltering concerns.

However eerily, the Grimeses — and the Red Cross — know their next deployment may be in their own backyard in response to Cascadia Rising, the catch-all term for the earthquake and tsunami that seismologists say are poised to strike the Pacific Northwest.

"It's easy to think, 'It'll never happen to me,'" she said. "Even I think that — it's human nature. But Mother Nature has no boundaries."

As a way to spread awareness about Cascadia Rising, the Red Cross has launched its Prepare Out Loud presentation throughout Western and Central Oregon.

The presentation, which began in June and has reached 2,000 people, is a Cascadia earthquake crash-course. It covers the science and history of the Cascadia subduction zone, human behavior during disasters, what to expect during and after an earthquake, how to locate loved ones and how much food, water and supplies a person will need.

Steven Eberlein, a Red Cross foundations director and the presentation's creator, is particularly concerned about what he calls the culture of preparedness.

"The cultural problem we have with preparedness is we don't expect each other to prepare. It's not part of our social dynamic yet," he said. Cascadia earthquake preparation will catch on the same way people quit smoking and began wearing seat belts — when people see their peers changing their behaviors.

Based in Portland, Eberlein, 39, said Prepare Out Loud was inspired by his relief work in Sri Lanka after the 2004 Boxing Day Tsunami. He was already there, working as a teacher for a different international aid organization, when a subduction zone earthquake off the coast of Indonesia — more than 1,000 miles away — sent a massive wave rolling westward. Sri Lanka didn't feel the 9.0-magnitude earthquake but its tsunami killed more than 30,000 people on the island alone.

The pending Cascadia earthquake, if it's a full rip along its 700-mile fault line, will also register around 9 on the Richter Scale. Earthquakes this strong shake for four to six minutes. Eberlein said Cascadia Rising will be on par with the earthquakes and tsunamis that originated near Indonesia and, in 2011, Japan — two of the strongest earthquakes ever recorded.

Cascadia's fault

The Cascadia subduction zone, located 80 miles from the Pacific Northwest coast and running parallel, stretches from Northern California to Vancouver Island. Along this fault line, the Juan de Fuca oceanic plate is sliding gradually under the North American tectonic plate. Over time, pressure has gradually accumulated, which unleashes a massive earthquake and resultant tsunami, on average, every 243 years. As scientists have recently learned, the Cascadia subduction zone is 76 years overdue.

From California to Canada, 7 million people will be directly impacted by just the shaking, said Eberlein. This makes it a much more difficult relief operation than, say, a San Francisco earthquake where the damage is relatively isolated and relief is more easy brought from the outside.

According to a 2015 Pulitzer Prize-winning New Yorker article, the Federal Emergency Management Agency estimates 13,000 people will die in the Cascadia earthquake and tsunami. The odds of a Cascadia earthquake and tsunami happening in the next 50 years are about 1 in 3.

"Right now we have a situation where millions of us will directly impacted by the largest natural disaster to ever hit North America," Eberlein said.

Richard Grimes, 74, who is also a Red Cross Cascades board member and head of sheltering, said he was briefed about Cascadia Rising years ago during his 26-year tenure as a police officer in Eugene. Now living in Bend (he said the move had nothing do with Cascadia Rising), the Grimeses attend the Red Cross Cascades Disaster Academy in Salem twice a year where they take refresher courses. Volunteers learn how to administer relief to the survivors of a variety of disasters, including floods, tornadoes, earthquakes, hurricanes and wildfires.

"We've taken every class you can take. On paper we're qualified to do anything the Red Cross wants us to take," Richard said. He also attended a weeklong Cascadia Rising exercise a few months ago that simulated disaster scenarios in Central Oregon. In one simulation, the Wickiup Dam ruptured, and he and his team were responsible for sheltering 10,000 people displaced from the La Pine area.

"That was an eye-opener," Richard said. "We thought we would use the fairgrounds as a sheltering spot for refugees, but they said 'No, you can't use that area because FEMA is going to be using it.'"

Eberlein said preparation for a natural disaster ultimately comes down to the individual. He recommends visiting "Aftershock," an Oregon Public Radio's interactive online feature, where users punch in their zip code and learn about their area's seismic risks and what they can do to prepare. Of Bend, the site says: "The shaking here is moderate. You feel it. It wakes up anyone who's sleeping. Books and knick-knacks are falling off shelves. Windows and dishes are breaking." It may take several weeks for Bend to repair damages to its natural gas lines, according to the site.

Eberlein said, "No one has power over time and space. After an emergency, we expect help, but there is no magic button to get you everything you need. Today is when you have power over time and space."

Answering a call

The Grimeses have responded to numerous natural disasters, including the December 2015 floods in Portland and Seattle. In 2005, Theresa helped out in Louisiana for 31 days after Hurricane Katrina. She recently deployed to the area again; this time to Baton Rouge, where she served meals to flood survivors from a Red Cross emergency response vehicle. It was her eighth deployment in 14 months.

"You have to take a break," said Theresa, 64, adding that between the heat, humidity and the physical and emotional toll "it was the hardest work I ever did."

Theresa described a lasting memory serving meals in a Baton Rogue apartment complex. She met parents of two young children who lost their jobs because of flooding, and they were in the process of losing their apartment, too, which was succumbing to mold. Being able to provide sustenance to their two young children was the parents' top priority. Theresa said she was gratified to guarantee them two hot daily meals. Before she returned to Bend, Theresa said she made it clear to the survivors there would be a Red Cross volunteer to take her place.

"Being there, (showing) affection, understanding, giving a hug, a smile" goes a long way, she said. "I would do it again in a heartbeat."

Small Business Disaster Plan App Helps Prepare For The Worst

Kansas City (MO) infoZine, September 23, 2016

Small Business Disaster Plan App Helps Prepare for the Worst

Follow Monday, September 26, 2016 Kansas City infoZine

Manhattan, KS – infoZine – If you own or manage a small business, a disaster like any one of these could put a major dent in your work and your bottom line.

A new phone app won't fix such problems, but could help a business start operating again more quickly and easily.

The Small Business Disaster Plan app is available free for iOS and Android tablets and smartphones. It was developed by the North Dakota State University Extension Service and Myriad Mobile, Fargo, N.D.

"We used FEMA's ready.gov information for businesses and the Extension Disaster Education Network's Ready Business training program to integrate with the functionality of the tablet and smartphone," said Bob Bertsch, the NDSU web technology specialist who led work on the app's content. "Yes, there are online templates for business disaster plans, but this app provides portability and functionality."

The Extension Disaster Education Network is a collaboration of land grant universities focused on reducing the effect of disasters through education. Kansas State University is a part of EDEN and shares preparedness tips on its Prepare Kansas blog.

"There are two things that I have heard small-business owners say repeatedly: The first is, they never have enough time. And the second is, 'Where did I file that?'" said Glenn Muske, NDSU extension rural and agribusiness enterprise development specialist.

The Small Business Disaster Plan app takes on both of those, Muske said, by letting you fill out important disaster plan information, along with supporting photos right from your smartphone or tablet – which you always have with you.

"Of course, you should save the information in the cloud, too, in case your phone or tablet is lost," he added.

The app lets you enter information for your business, including basic and contact information, emergency planning, evacuation, insurance information and more.

Plans should be reviewed annually, Muske said, so the app uses your phone's alerts to remind you to review the information at a designated time in the future.

The content can be downloaded as a csv file. The app also encourages you to upload the content to a cloud service such as Dropbox, iCloud, Drop or a similar service for backup.

"Planning is never high on anyone's list," Muske said. "But think how easy the process is when the structure is there and you just need to fill in the blanks. That's exactly what this Small Business Disaster Plan app provides. And because September is National Preparedness Month, it's a great time to get your business prepared for disasters."

Development of the Small Business Disaster Plan app for tablets and smartphones was supported by a grant from the National Institute of Food and Agriculture, U.S. Department of Agriculture.

Nationwide Test Of Emergency Alert System To Take Place September 28

Newtown (CT) Bee, September 24, 2016

On Wednesday, September 28, at 2:20 pm EDT, the Federal Emergency Management Agency (FEMA), in collaboration with the Federal Communications Commission (FCC) and the National Weather Service, will conduct a nationwide test of the Emergency Alert System (EAS).

The test is scheduled to last approximately one minute. An alert message will clearly indicate that the alert is a test of the EAS.

The message of the test will be similar to the regular monthly test message of the EAS, normally heard and seen by the public: "This is a national test of the Emergency Alert System. This is only a test."

The alert will be transmitted in English and Spanish and will include both audio and the text of the test message, which can be used to populate an accessible video crawl.

All EAS participants — radio, television, cable, and direct broadcast satellite system providers — are required to participate in this nationwide test.

The nationwide test will assess the reliability and effectiveness of the EAS, with a particular emphasis on testing FEMA's Integrated Public Alert and Warning System (IPAWS), the integrated gateway through which common alerting protocol-based (CAP-based) EAS alerts are disseminated to EAS participants.

These improvements will help ensure that all members of the public, including non-English speakers and individuals with disabilities, will receive emergency information.

According to the FCC, the test will provide an opportunity to evaluate this and other measures that the FCC has adopted to address issues identified in connection with the 2011 Nationwide EAS Test.

EAS participants are required to file reports with the FCC after the test, which the commission will analyze to determine how the test performed.

Wireless Emergency Alerts (WEA) will not be part of the test; the public will not receive test alerts over their mobile devices.

General information about the Emergency Alert System and the test is available on FEMA's website at fema.gov/emergency-alert-system.

Okmulgee County Firefighters Train In Swift Water Rescue

By Christina Good Voice

KOTV-TV Tulsa (OK), September 24, 2016

OKMULGEE COUNTY, Oklahoma –

Okmulgee County Emergency Management sponsored two days of Swift Water Rescue Training for 22 firefighters Friday and Saturday.

The training was held at Okmulgee Lake and taught the firefighters the "skills necessary to effect safe rescues in high water emergencies," the OCEM stated in a news release.

The training was held in coordination with Tech ResQ.

The funding to purchase safety equipment and to conduct the training was provided for by an SLA funding grant from FEMA.

"Over the last several years there are now nearly 50 firefighters trained in our county," said Mark Conklin with OCEM.

Nationwide Emergency Alert Tests Set Sept. 28

Dyersburg (TN) State Gazette, September 25, 2016

On Wednesday, Sept. 28, at 1:20 p.m. CDT, the Federal Emergency Management Agency (FEMA), in collaboration with the FCC and the National Weather Service, will conduct a nationwide test of the Emergency Alert System (EAS). The test is scheduled to last approximately one minute. All EAS Participants include radio, television, cable and direct broadcast satellite system providers – are required to participate in this nationwide test. The nationwide test will assess the reliability and effectiveness of the EAS.

During the first test a text message will be sent out clearly stating that the alert is only a test of the EAS. The test is scheduled to last approximately one minute. The message of the test will be similar to the regular monthly test message of the EAS. Wireless Emergency Alerts (WEA) will NOT be part of the test; the public will not receive test alerts over their mobile devices.

Big Bear Valley C.E.R.T. Training In October

Inland Empire Weekly (CA), September 25, 2016

Big Bear Lake, California – WHAT IS CERT? The objective of the Big Bear Valley Community Emergency Response Team or BBV-CERT is to provide public education, training and opportunities for volunteers to support community and family safety. To educate citizens to be better prepared to take care of themselves, family, friends and neighbors in the event of a disaster of any type until emergency responders can arrive.

The next CERT class is scheduled for the week of October 17th thru October 21th from 5:45 pm to 9:45 pm at the Paradise Training Center located at 417 Grenfal in Big Bear City (Corner of Grenfal and Paradise). There is no fee to attend this 20 Hour CERT training class. There is a pre-requisite for this basic CERT training course, individuals need to complete the FEMA ICS-100 and ICS-700 training series by going to http://training.fema.gov.is/ Those wanting to attend this CERT class must be at least 18 years old.

CERT team members are trained in disaster preparedness with basic disaster response skills such as light search and rescue, disaster medical operations, fire safety, First Aid, CPR, and much more. Our CERT team members can assess structure safety after a disaster, whereas they can ask you to remain outside your home because of safety concerns. CERT team members can also do basic medical assessment and get quicker medical treatment from the triage units that will be set up. This is Big Bear Valley's way of making sure you, and our community is safe and gets medical evaluation and basic lifesaving treatment.

Those wishing to attend the upcoming 20-hour CERT training can register by emailing Kristin Saukel, CERT President, at k.saukel@verizon.net. Check out the Big Bear Valley CERT website at www.bbvcert.org.

NASA's 'Daily Minor Planet' Warns Of Impending Asteroid Collisions

By Coburn Palmer

Inquisitr, September 24, 2016

Scientists agree the Earth is vulnerable to killer asteroids, and although NASA has identified thousands of the dangerous space rocks, there hasn't been a way to notify the public of an impending collision until now.

The Minor Planet Center, the NASA-funded organization responsible for tracking asteroids, comets, and other near-Earth objects, now has a news service dedicated to releasing information on dangerous space rocks.

Dubbed the Daily Minor Planet, the news service is dedicated to educating the public on the latest asteroid facts, said Matt Holman, astronomer and director of the Minor Planet Center.

“Most people don’t realize how common asteroid flybys are. We want the Daily Minor Planet to educate readers in an entertaining way, so the next time they see a doom-and-gloom asteroid headline, they’ll know where to go to find the facts.” [Image by Mode-list via iStock]

The name of the asteroid news service comes from a mashup of Clark Kent’s newspaper in Superman, the Daily Planet, with the names of asteroids and celestial objects.

Almost every day the Earth is threatened with an asteroid collision, and on those days the Daily Minor Planet will publish information on the passing space rock including its name and distance to our planet. When there’s no imminent threat, the news service will feature a newly discovered asteroid.

Sign up for the asteroid newsletter.

The planet was forced to acknowledge the danger of falling space rocks in 2013 when a previously undiscovered asteroid exploded over the Russian city of Chelyabinsk injuring 1,000 people.

Russia responded by cobbling together an untested planetary defense system made from Cold War-era ICBMs the country plans to fire off at incoming asteroids.

An international group of scientists led by astrophysicist and Queen guitarist Dr. Brian May, along with Apollo 9 astronaut Rusty Schweickart, responded by creating Asteroid Day.

Asteroid Day is celebrated every year on June 30, the day of the largest asteroid impact in modern history, the Tunguska event. In 1908 a space rock believed to measure almost 330 feet wide exploded over a Siberian forest, destroying more than 1,200 square miles with an explosive force 185 greater than the nuclear bomb dropped on Hiroshima during WWII, former astronaut Dr. Thomas Jones told the Observer.

“Big answer, big picture is we are 100 percent positive Earth is going to be struck again by an asteroid, and those range from small to large. If we do nothing, we are bound to be hit eventually by an asteroid that is damaging enough to destroy civilization.”

An asteroid would need to measure at least half a mile in diameter to threaten the future of mankind, but even a small space rock could do considerable damage if it managed to strike the Earth, Jones told the Observer.

“The largest hazard remaining is the smaller ones, those that are about 100 to 150 meters across, and those could do regional damage. One could destroy several states in the U.S. for example.”

NASA’s Planetary Defense Coordination Office is responsible for notifying the president and managing FEMA’s response to any asteroid emergency. [Image by Aunt_Spray via iStock]

There are currently only a few ways to protect the Earth from falling space rocks, not including the untested Russian idea of shooting nuclear missiles at them. One idea is a gravity tractor where a spacecraft flies over an asteroid and the mutual gravity between the two objects gradually moves the dangerous space rock away from its collision course over several months.

A more popular theory, the impact deflection method, basically involves shooting an object at the asteroid at such a high speed the velocity changes the speed of the space rock and makes it miss its appointment with Earth.

Another possible deflection method involves shooting lasers at the incoming asteroid to vaporize part of it; the destruction of the rocks moves the asteroid off its collision course.

Ambulance Company Closings Directly Impact EDM

By Allison G. S. Knox

EDM Digest, September 24, 2016

On August 31, 2016, The Journal of Emergency Medical Services (JEMS) reported that the Johnston Ambulance Service in Goldsboro, NC abruptly closed its doors, leaving hundreds of people without employment.

JEMS reported that the ambulance service was the largest private ambulance service in the area and thousands of patients who used this service would need to find another ambulance company for their non-emergency transportation needs.

It is devastating any time an organization closes its doors for the hundreds of people suddenly without employment. Despite the fact that Johnston Ambulance Service was not running emergency 911 calls, the idea that they would no longer be serving the public is a matter of emergency management concern.

Ambulance companies having financial trouble is not news, though, and is an issue that affects ambulance agencies throughout the country. An ambulance company closing its doors may not have a big influence on local level emergency response if they do not answer 911 calls. It can, however, affect large scale emergencies if the federal government needs to step in to assist in the emergency. Emergency Support Functions

The federal government has included "emergency support functions," which are essentially, packages of resources based on needs and based on the scope of the emergency. FEMA lists these emergency support functions in detail on their website.

Ambulances are part of this function and serve as a vital component of federal level response to a major disaster. Without this assistance, and without the resources in a region, the management of an emergency can become complicated as this important resource isn't available. Disaster Management Plans, Revisited

Emergency managers are tasked with the important job of making sure their emergency plans are functional, updated and have the appropriate resources to effectively manage a disaster. When ambulance companies close down because of financial reasons, it can be devastating to an area for the loss of employment for hundreds of people.

Because ambulance companies like Johnston do not respond to 911 calls, it can be easy for lawmakers to forget about their direct impact to emergency management. Emergency managers, though, need to carefully revisit their emergency management plans when ambulance companies are dismantled for how they may affect their emergency responses–even when those companies are not responsible for managing 911 emergencies.

Whenever an organization is no longer in business, it can be hard for a community to recover from the loss. Where ambulances are concerned, emergency managers need to take how their loss affects their community and the resources they plan to use in an emergency. At the federal level, emergency management officials will need to figure out how to make up for this type of loss in regions throughout the country.

Mashpee Senior Center

Falmouth (MA) Enterprise, September 23, 2016

Arts & Crafts Class: Create A Decoupage Vase

Create beautiful vases to showcase your favorite fall arrangements using wine bottles and colorful scrapbook paper! It is fun and easy to design these lovely pieces, and all materials will be provided. This class will be held on Monday, September 26, at 1 PM. There will be a small fee. A reservation (required) may be made at the front desk or by calling 508-539-1440.

Talking With Your Doctor Workshop

Take an active role in your health care. How well you and your doctor talk is one of the most important parts of getting good health care. But, talking to your doctor isn't always easy. It takes time and effort on your part as well as your doctor's. On Tuesday, September 27, at 2:30 PM, Betty Blackham from the Visiting Nurse Association of Cape Cod will be presenting a free workshop offering some tips and tools to use to prepare for a doctor visit and get the most from the visit. Reservations are appreciated and can be made at the front desk or at 508-539-1440.

Cape Cod Senior Appreciation Picnic

This event is sponsored by the Barnstable County Deputy Sheriff's Association. Join them on Wednesday, September 28, from 11 AM to 1 PM for a K-9 demonstration, a free lunch for seniors, and bingo games with prizes. Location: Bass River Beach Parking Lot (aka Smuggler's Beach), Yarmouth. For more information, call Joseph Gordon 508-563-4319.

CARES Program: Hope Dementia & Alzheimer's Services

This program is specifically for people with memory impairment and their care partners. CARES provides an opportunity for families affected by memory impairment to participate in two separate support groups—held simultaneously—that provide information, guidance, and respite to care partners; and, conversation and socialization for those with memory impairment. The sessions are available at Mashpee Senior Center on the second and fourth Wednesday each month, from 1:30 to 3:30 PM; the next meeting will be September 28. To register or for more information, call Hope Dementia & Alzheimer's Services at 508-775-5656.

Drivers are needed to provide transportation to medical appointments on Cape for ambulatory seniors. We ask that the volunteer drivers accept a minimum of two trips per month. A typical trip is three hours. A volunteer would need a reliable vehicle, automobile insurance and a good driving record. Drivers must have a congenial rapport with seniors.

Reception desk/secretarial workers are also needed. These volunteers must be able to handle phone calls, follow the procedures for handling appointments, be able to handle several things at the same time, and be a friendly presence for people coming in to ask questions.

Newsletter preparation: The day before the newsletter mailing takes place, we need volunteers to help set up and organize the newsletter stations for the volunteers the next day.

If you have any special skills, talents, or interests you would like to share with other seniors at Mashpee Senior Center, call Deborah Converse, volunteer coordinator, at 508-539-1440.

The Low Income Home Energy Assistance Program (LIHEAP), more commonly known as the Fuel Assistance Program, is administered by South Shore Community Action and provides low income households with help in paying heating bills. The Mashpee Senior Center will assist residents in completing a fuel assistance application. Appointments will be available on Mondays from 1 to 3 PM beginning September 27. The program officially starts November 1. Income eligibility for a family of one is $34,001; a family of two is $44,463. Once the application and documentation are complete, they will be sent to South Shore Community Action in Plymouth, who will determine eligibility.

Please note that the following documents should be brought to the appointment: all sources of gross income for all members of the household; a heating bill showing the account number; electric bill; copy of a mortgage statement or front page of the lease agreement; homeowners insurance; real estate tax bill; photo identification; Social Security numbers; and birth dates. Call the Mashpee Senior Center to set up an appointment at 508-539-1440.

Telephone, e-mail, and door-to-door scams are continuing at a rapid rate.

Asked to pay back taxes with an iTunes gift card? It's a scam!

Scammers have come up with yet another way to get people to part with their hard-earned money. This time they are getting people to buy iTunes gift cards and share the code on the back of the card.

Are you oversharing on public WiFi?

Connecting to the Internet in a public space like a coffee shop, the library, or an airport is a wonderful modern convenience, but it comes with significant risk. Public WiFi is never private, so we're asking for your help in preventing WiFi fraud!

Now is the time to prepare in case Mother Nature pays us an unwelcome visit. You can find detailed preparedness information on the National Weather Service website, www.nhc.noaa.gov/prepare/ready.php, and at FEMA's ready.gov site for hurricanes at www.ready.gov/hurricanes. To prepare for a hurricane, here are some of the following measures to take to protect you and your family:

Build an emergency kit and make a family communications plan; learn community hurricane evacuation routes and how to find higher ground; determine where you would go and how you would get there if you needed to evacuate; make plans to secure your property; be sure trees and shrubs around your home are well trimmed so they are more wind resistant; clear loose and clogged rain gutters and downspouts; plan to bring in all outdoor furniture, decorations, garbage cans, and anything else that is not tied down.

Don't forget about your pets! Check out Cape Cod DART at www.capecoddart.org for complete details, but here are some basics: Know which shelters in your area are pet-friendly. If you go to a shelter, if possible bring a crate for your pet. Prepare an emergency go-kit for your pet including at least three days of food in an airtight, waterproof container, at least three days of water specifically for your pets, and an extra supply of your pet's meds in a waterproof container. List the name and contact information for your pet's veterinarian. Keep up-to-date copies of your pet's registration information, adoption papers, vaccination documents, and medical records in a clean plastic bag or waterproof container in your kit.

Local shelters are at Barnstable Intermediate School, 895 Falmouth Road, Hyannis; Falmouth High School, 874 Gifford Street, Falmouth; Sandwich High School, 365 Quaker Meetinghouse Road, Sandwich. (Those designated as pet-friendly will be determined at the time of the emergency.)

NATIONAL PREPAREDNESS MONTH

NATIONAL PREPAREDNESS MONTH: The Communication Plan

By Leandra McLean

Walpole (MA) Times, September 25, 2016

Editor's note: This is the second in a three-part series submitted by the Walpole Health Department.

The basic theme behind preparedness is to be ready for an emergency, and there are a number of different ways to accomplish this. The next time a disaster strikes, you may not have much time to act. Planning ahead reduces anxiety!

Your family may not be together if a disaster strikes, so it is important to think about the following situations and plan just in case. Consider the following questions when making a plan:

- How will my family/household get emergency alerts and warnings?
- How will my family/household get to safe locations for relevant emergencies?

- How will my family/household get in touch if cell phone, internet, or landline doesn't work?
- How will I let loved ones know I am safe?
- How will family/household get to a meeting place after the emergency?

Before a disaster happens, it is a good idea to have a conversation with those in your support network: your friends, family and neighbors. Let them know your needs in an emergency situation; ask them how they could assist with your plan and whether they would be willing to help. Consider that during some emergencies travel is severely limited and they may not be able to get to you.

Have a family communication plan! A family communication plan includes a local contact and an out of state contact and meeting places if you have to evacuate from your home or from the area.

- Carry family contact information in your wallet (both home and cell numbers)
- Make sure to choose an out-of-town contact person, in case you need to evacuate your area
- Post emergency numbers near all of your phones. Include the numbers of those in your support network and consider having alternative plans for contacting those in your network
- Keep a list of important school and business numbers with you

Please take your dogs and cats with you if you have to evacuate!

National Preparedness Month

Marshfield (MO) Mail, September 24, 2016

While most people don't like to think about worst case scenarios, giving them their proper consideration can ultimately offer peace of mind.

September is National Preparedness Month and it is a great time to get your home and family ready for a range of emergencies. Here are three steps to take.

STOCK UP

Every home should contain a supply kit that includes a surplus of nonperishable food items, as well as fresh bottled water. The Federal Emergency Management Agency (FEMA) recommends one gallon per person in your household per day for three days.

FEMA also recommends that the kit include prescription medications for everyone in the family, personal hygiene items, a flashlight, extra batteries and matches, amongst other items. For a complete list, visit fema.gov.

FREE YOURSELF FROM YOU PHONE

While we all know that smartphone technology and other mobile devices offer us useful information, in an emergency scenario these devices may lose their signal or their battery life. Stay prepared and informed no matter what happens with wearable technology that is not at the mercy of a cellphone tower or a battery that needs to be recharged every few hours.

For example Casio's PRO TREK PRG300 timepieces feature functions like an altimeter, compass and barometer (great for staying aware of changes in temperature or air pressure). They also deliver this information hands-free, which can be useful any day of the week but extra valuable in an emergency.

GEN INSURED

Is your home and property properly insured? Know what your homeowners insurance covers and determine whether it is sufficient to meet your needs. For example, homeowners insurance policies do not typically cover flooding, which requires separate coverage. Learn more about your home's primary risks and get covered now, before it's too late.

No one has a crystal ball that can see into the future, so to best protect your family and your home, get prepared for everything.

ORV Chapter Of American Red Cross Offers Tips For National Preparedness Month

By Stephanie Stanley

Pike County (OH) News Watchman, September 24, 2016

September is National Preparedness Month, and the Ohio River Valley Chapter of the American Red Cross reminds locals to "prepare your home, make a plan, and be informed", not just in September, but throughout the entire year.

"Everyone needs to be prepared. You never know when an emergency might occur," said Debbie Smith, community executive for the ORV Chapter of the American Red Cross. "With September being National Preparedness Month, this is a perfect time to begin creating a kit, establishing a plan and making sure you're ready for any of the emergencies that might strike at a moment's notice."

The Red Cross has put together "a few helpful tips" to assist locals in being prepared for the unexpected when disaster strikes.

To keep preparedness and disaster information at their fingertips, locals are encouraged to download a free Red Cross mobile app.

"A great place to begin is with the all-inclusive emergency app which covers 17 different types of emergencies, quizzes, alerts, and information on what to do before, during, and after an emergency," said Smith. "Or, the Red Cross offers 17 individual apps that range from first aid to hurricanes to wildfires or earthquakes."

According to Smith, children and adults will equally enjoy the Monster Guard app, which helps to teach preparedness for real-life emergencies at home "with the help of friendly monsters."

"Monster Guard and all Red Cross apps can be found in the Apple App Store and the Google Play Store for Android, or by searching redcross.org," said Smith.

To be prepared before an emergency strikes, locals are encouraged to have an emergency kit containing a three-day supply of non-perishable foods and water (one gallon per person, per day, for drinking and hygiene), a battery-powered or hand-crank radio (NOAA Weather Radio, if possible), a flashlight and extra batteries, first-aid kit, medications, and medical items, copies of important documents (proof of address, deed/lease to home, passports, birth certificates, and insurance policy information), and extra cash.

"Having things in one place and close at hand can make a difference for everyone in the household," said Smith. "Store your kit in an easy-to-carry container that someone can use at home or take with them in case they have to evacuate."

The Red Cross also recommends people have a two-week supply of supplies available at home at all times.

"The Red Cross Store has items available, ranging from a hand-crank radio to a fully-stocked deluxe emergency preparedness kit," said Smith.

According to Smith, seven people perish each day and another 36 are injured in house fires. For this reason, locals are reminded of the importance of installing a working smoke alarm in the home.

"Home fires are the biggest disaster that people face. Your chance of survival can be doubled by one simple move — installing smoke alarms," she said. "If there's a fire, a smoke alarm will alert you long before you smell the smoke or see the flames, giving you precious time to escape. The Red Cross will install them for free. Just make an appointment by calling (740) 354-3293."

In addition to installing smoke alarms, Smith says "the other vital part of surviving a home fire" is developing a fire escape plan and practicing it with your family.

"Walk through your home and locate all exits and escape routes, and do not forget to include windows," she said. "Always pick a place to meet outside. Make sure your family practices a fire escape plan at least twice a year."

The key to safety is being informed, said Smith.

"Know what situations may occur where you live. Make your families familiar with what to do during tornadoes, floods, and extreme heat and cold," said Smith. "Winter is right around the corner, so now is the time to learn what to do during a winter storm. Remember that emergencies like fires and blackouts can happen anywhere, so everyone should be prepared."

The Red Cross also offers first aid/CPR/AED classes "to help everyone recognize and respond appropriately to cardiac, breathing, and first-aid emergencies.

"Learn first aid and CPR/AED so that you have the skills to respond in an emergency before help arrives, especially during a disaster when emergency responders may not be as available," said Smith.

The Red Cross' CPR/AED program offers the following benefits: two-year certification with free digital course, free downloadable digital course materials or affordable print course materials, free access to digital course materials, branding images and materials, easy access to certificate printing and tracking, and a "concise learner-centered course" designed "to emphasize hands-on skills."

For more information, visit the Ohio River Valley Chapter of the American Red Cross, located at 1801 Robinson Avenue, in Portsmouth, or visit redcross.org.

As Potential Peril Approaches, Be Prepared And Connected

By Glenn Rolfe

Sussex County (DE) Post, September 24, 2016

GEORGETOWN – Sussex County is not immune to natural or man-made disasters.

Flooding precipitates evacuations.

High wind knocks out power.

Snowstorms and blizzards can deal a paralyzing punch.

When disaster strikes, be like Boy Scouts: Be prepared.

That is the timely reminder from the Sussex County Emergency Operations Center, during the county's observance of National Preparedness Month in September.

Disaster kits, planning ahead with a game-plan and social media connections are vital ingredients in the recipe for public safety and safe-sledding through emergencies, says Sussex County EOC Director Joseph Thomas.

Sussex County Emergency Operations Center

Director Joe Thomas monitors weather updates at the EOC in Georgetown.

"I am a firm believer everyone should have a disaster kit. Although we typically talk about flooding in this county, the fact is that anything could happen at any given time. I know we don't see a lot of them in this area but there could be a potential for a tornado," said Mr. Thomas. "Out west, they deal with wildfires and you see people's homes destroyed, and when they are told to evacuate they have to evacuate very quickly. So having that kit at the ready is probably very important, actually, because now you don't have to take the time to put everything together."

Disaster kits should include a three-day provision of essentials: food and water, prescriptions and medicines, a flashlight with batteries, a battery-powered radio and money – as in cold cash.

"People think of food and water. You don't think about the fact that you need to have cash because nine times out of 10 power is out. You can't use ATMs if the power is out," said Mr. Thomas. "We tell people to put your insurance documents in some sort of plastic; something that won't get damaged or wet."

Kits are designed to "help you get through after a storm. FEMA, the federal assistance is typically two to three days getting to us. So if you've got three-days' worth of supplies that you can be self-sufficient, then when help does arrive you just go from one transition to another," said Mr. Thomas.

Stay connected

Before and during an emergency event, Mr. Thomas urges people if possible to stay in touch with social media, including those at the county level as well local media.

"We do a very robust social media posting. We typically will post on Facebook and Twitter; that is continuously updated all of the time," said Mr. Thomas.

Information would encompass weather conditions, forecasts, road closures and shelter openings and locations.

When sufficient information warrants, press releases are sent to all local media outlets.

During the Superstorm Sandy event in the fall of 2012, Sussex County launched another informational element: You Tube.

During the height of that storm that hammered New Jersey and impacted Sussex County, notably its coastal communities, Sussex County Director of Communications Chip Guy recommended the county climb another rung up the ladder.

"Chip said need to 'up our game.' We did You Tube videos," Mr. Thomas said. "That really got a good response. One of our first responses was from the governor (Jack Markell). He came down. He and I did one, about two or three minutes along."

Emergency Preparedness

On the county's website – www.sussexcountyde.gov – in the "Citizens" tab is information on emergency preparedness, hurricane information, shelters, evacuation plans.

Also on the county website is the Sussex County Emergency Operations Center, which includes local weather advisories, hurricane and flood safety, Smart911 and the emergency notification system.

The Delaware Emergency Notification System (DENS) is a notification system designed to notify Delaware residents in the event of an emergency in their area.

The Sussex County Emergency Operations Center, along with the Delaware Emergency Management Agency, encourages residents who exclusively use mobile telephones to register their numbers in a statewide database that will be used for the Delaware Emergency Notification System.

To register your mobile telephone, call or log on to http://public.coderedweb.com/CNE/BF1D885328BF.

Sussex County's EOC can be followed on Facebook (https://www.facebook.com/SussexCountyEOC) and Twitter (https://twitter.com/sussexctyde_eoc).

AMERICA'S PREPAREATHON!

Community Briefs

Aurora (IL) Beacon-News, September 25, 2016

ESO performs score to Chaplin's 'City Lights'

The Elgin Symphony Orchestra will present Charlie Chaplin's silent film masterpiece "City Lights" with the orchestra, led by Resident Conductor Stephen Squires, performing the movie score live on Friday, Oct 7 to Sunday, Oct. 9.

Even though silent films were on their way out, Charlie Chaplin's "City Lights" was an instant success when released in January 1931, according to a news release. It has consistently been listed as one of the most influential films of all time and directors like Orson Welles, Stanley Kubrick, George Bernard Shaw, Federico Fellini and Woody Allen rate "City Lights" as one of their favorite movies, the release stated.

Squires has conducted for many artists, including Frederica von Stade, Samuel Ramey, Janos Starker, Pinchas Zuckerman, Shmuel Ashkenasi, John Browning, Leon Bates, Stewart Goodyear, Richard Stoltzman, Ani Kavafian, Wendy Warner, James Tocco, Kevin Cole, Vadim Gluzman and most of the principal players of the Chicago Symphony and Lyric Opera orchestras, according to a release. He has premiered over 80 new works.

Squires received his musical training at the Preparatory School of the Eastman School of Music and the Crane School of Music, in New York, and he earned his master's degree in instrumental conducting/trumpet performance at California State University, Northridge, the release stated.

The film runs 90 minutes without an intermission. Popcorn is provided by Mama Lee's Gourmet Popcorn. Sponsors are WDCB Radio, The Palmer Foundation and EFS Foundation.

For tickets, which start at $30, call 847-888-4000 or go to ElginSymphony.Org.

The ESO City Lights performance and film screening is part of A Celebration of Music from the Golden Age of Cinema and Radio, a project of the ESO, Chamber Music on the Fox and the Gail Borden Public Library.

Emergency management program in Aurora

In partnership with America's PrepareAthon, the city of Aurora Emergency Management Agency will host its first Aurora PrepareAthon to help residents prepare for potential emergencies and disasters.

The Aurora PrepareAthon will be held from 6 to 8 p.m. Oct. 3 at the Aurora Police Department, 1200 E. Indian Trail.

Attendees will learn how to create a family disaster plan, assemble an emergency kit and prepare for specific hazards through group discussions, drills and exercises, event organizers said.

The Aurora PrepareAthon is free and open to the public, but space is limited and registration is mandatory. To reserve a seat, go to https://aurora.seamlessdocs.com/f/PrepareAthon

The biggest trees in Kane County

A guided hike to see some of the biggest trees in Kane County will visit the sites of some of the local champions in the Kane County Big Tree Program. During the walk, there will be a little tree identification and how trees are measured in the Big Tree Program.

- Saturday, Oct. 8, from 10 to 11:30 a.m. at Bliss Woods Forest Preserve, located at 5S660 Bliss Road, Sugar Grove.
- Wednesday, Oct. 12, from 1 to 2:30 p.m. at Hannaford Woods Forest Preserve, located at 5S002 Merrill Road, Sugar Grove.
- Saturday, Oct. 22, from 10 to 11:30 a.m. at Glenwood Park Forest Preserve, located at 1644 S. River St., Batavia.

Advance registration is required for this free program. Call 630-444-3190 or e-mail programs@kaneforest.com.

To view a full roster of Forest Preserve District nature programs, go to www.kaneforest.com.

'Coffee with a Cop' in St. Charles

Participants can enjoy complimentary coffee and talk with St. Charles Police Chief Jim Keegan and St. Charles police officers at the inaugural "Coffee with a Cop" event at McDonald's at 915 W. Main St. Thursday.

The event will run from 8:30 to 10:30 a.m.

"We have so many ways to communicate these days, between smartphones, apps and social media. But sometimes face-to-face conversation is best," said Keegan. "We look forward to getting out and meeting St. Charles residents. This gives them a chance to get to know us in a casual atmosphere."

PRIVATE SECTOR

$376 Million In Loans Approved For Homeowners, Renters And Businesses

Gonzales (LA) Weekly Citizen, September 25, 2016

WASHINGTON – Maria Contreras-Sweet, the Administrator of the U.S. Small Business Administration (SBA), issued the following statement before a hearing of the U.S. Senate Committee on Small Business and Entrepreneurship examining the federal response to recent floods in Louisiana.

"The SBA's commitment to provide disaster assistance to our fellow citizens in their greatest hour of need is one of our most important duties. I have made it my priority to ensure that our services are delivered as quickly and effectively as possible.

Right now, SBA team members are providing financing, resources and counseling to Americans facing devastation and despair in 20 different states, including the 22 parishes in Louisiana. Day and night, the SBA's committed professionals are on the ground in unfamiliar places, manning hotlines, setting up disaster recovery centers, assessing damage, and processing loan applications. I am proud and inspired by their compassion and dedication.

Recently in Ascension Parish, I saw home after home bearing the mark of high water lines, as families piled their ruined possessions out front, a lifetime of hard work and memories washed away by the rising waters. In Denham Springs, I walked down North Range Avenue to visit the city's famous antique stores – entire inventories of irreplaceable treasures lined the roadway, destroyed.

It's one thing to see photographs or videos of the devastation, it's quite another to see the loss of so much reflected in people's eyes. These are images I will never forget.

I visited two of our eight business recovery centers, where homeowners and business owners are able to talk with SBA staff and apply for federal disaster assistance. In the month since the flooding began, SBA has deployed 356 staff members to Louisiana, who are working in concert with FEMA. We have received more than 21,000 loan applications and approved more than $376 million in financing.

This is our largest disaster since Superstorm Sandy hit in 2012. As part of our disaster recovery work, we continually apply lessons learned and endeavor to make the process simpler for the survivors who depend on it. In the 11 years since Hurricane Katrina, we have been working hard to automate and streamline our application, approval and disbursement processes – shaving weeks off the time it takes for homeowners and small business owners to get the help they need to rebuild.

When the rains hit Louisiana in August, we implemented many of these advancements and improvements – which meant that we didn't have to wait for the water to go down before rolling up our sleeves and getting to work.

Throughout the first month of this disaster, 97 percent of SBA disaster loan applications have been submitted online through our newly updated, secure website. In addition, our loss verification teams have been using the latest advances in technology to make desktop assessments of damaged properties by downloading the footprints of affected homes and businesses.

Based on our experience in Superstorm Sandy, we revised our regulations to increase the unsecured loan limits for both physical damage and economic injury loans to $25,000. This change allows SBA to ensure that those first, crucial funds get into the hands of renters, homeowners and business owners in Louisiana more quickly. And we've called in our reserves to make sure there are enough trained professionals in our call centers, in our processing centers and on the ground.

We have made significant progress in reducing our processing and disbursement times. We will continue to do everything we can to further streamline our process, without sacrificing the integrity and compassion that we aim to include in everything we do.

The SBA and our team of tireless men and women will do everything we can to give the people of Louisiana the tools and resources they need to rebuild. And we will keep working until the job of recovery is done. Even after losing nearly everything and facing desperate and tragic conditions, Louisianans continue to step forward to offer help to neighbors and strangers alike. I remain in awe of their mettle, resiliency, and generosity."

FEMA Help Is Still Available

Eunice (LA) Today, September 24, 2016

Baton Rouge, La. –

It is now more than a month since the record flooding and storms of August.

If you or anyone you know is still having problems finding suitable accommodations, it is not too late to register with FEMA for assistance with your housing needs.

FEMA cannot duplicate insurance payments, but survivors should register even if they have insurance because underinsured applicants may receive help after their claims have been settled. And remember that FEMA grants do not have to be repaid. FEMA assistance is nontaxable and will not affect your eligibility for Social Security, Medicaid or other federal benefits.

Applying for disaster assistance is essentially a two-step process – registering with FEMA and completing a U.S. Small Business Administration disaster loan application. This process ensures that you will be considered for all programs you may be eligible for. There is never any charge for registering or applying. If approved for the loan, you are under no obligation to accept it. But the examination of your SBA application will determine what other types of assistance you may be eligible for.

Disaster survivors may register the following ways:

Online at DisasterAssistance.gov with any computer, smartphone or tablet.

By phoning Applicants who use or Video Relay Service may also call .Persons who are deaf, hard of hearing or have a speech disability and use a TTY may call 800-462-7585. The toll-free numbers are open from 7 a.m. to 10 p.m., seven days a week. Multilingual operators are available.

At a disaster recovery center. To find the nearest one, go online to the disaster recovery center locator at asd.fema.gov/inter/locator.

A free multilingual guide to the types of assistance available can be found at fema.gov/help-after-disaster.

County Officials Satisfied With Drive-through Flu Clinic Results

By David Danzis

New Jersey Herald, September 25, 2016

HOPATCONG – Although county health officials may have wanted to attract larger numbers, Saturday's drive-through flu clinic was an operational success.

Emrick G. Seabold, acting administrator/health officer of the Sussex County Department of Environmental and Public Health Services, said the three-hour exercise in the parking lot of the Hopatcong Public Works was very well organized and proved that the county's health department could distribute vaccines on a large-scale in the event of an emergency.

"We're satisfied that we could handle a large-scale event," Seabold said. "The clinic's success is a testament to the Emergency Preparedness Team staff and all our volunteers."

Several service areas allowed for motor vehicle access and vaccinations were administered through the window. Patients were encouraged to bring along signed consent forms to expedite the process, but paperwork was available at the site.

Sixty-six vaccines were distributed on Saturday, according to Tracy Storms-Mazzucco, health educator for the county's Emergency Preparedness Team.

"As an exercise, we were still satisfied," she said. "We're pleased with the results."

The drive-through point of distribution plan was developed by the Emergency Preparedness Team with the assistance of the state Department of Health. The exercise was an attempt to simulate operations in the event of a public health emergency.

The plan is adaptable and may also be used by Sussex County Office of Public Health Nursing as an annual flu clinic in the future.

Seabold said, "lots of credit," should be given to the volunteers and to the Borough of Hopatcong for organizing and executing the event.

"It takes a lot to put something like this together," he said. "We very much appreciate Hopatcong and the students from the college (Sussex County Community College) who helped today."

Several organizations participated in the exercise, including the state Department of Health, Sussex County Department of Environmental and Public Health Services, Sussex County Sheriff's Office and Bureau of Emergency Management, county government and administration, Board of Chosen Freeholders, Medical Reserve Corps, Warren County Health Department, Warren County CERT, Hopatcong Borough Police Department, borough government and administration, Hopatcong Community Emergency Response Team and Sussex County Community College.

Latah County Receives FEMA Funds For Local Emergencies

By Taylor Nadauld

University Of Idaho's (ID) The Argonaut, September 25, 2016

Four local organizations will receive funds from the Federal Emergency Management Agency (FEMA) for its 33rd distribution phase, said Cretia Bunney, executive director of United Way.

The news came after an announcement that Latah County was chosen to receive $11,812 in federal funds by the Emergency Food and Shelter National Board Program. It is down from the $12,683 the county received during the last phase, Bunney said.

Frances Trevisan of St. Vincent De Paul, a nonprofit Catholic organization that received a portion of the FEMA funds, said she writes grant applications that her organization can use to give back to the Moscow community.

The organization relies solely on outside donations, Trevisan said. As a Catholic agency, members come from both St. Augustine's and St. Mary's Catholic churches in Moscow, where collections are held four times a year for the agency.

"That's our only regular money that we know we're going to do every year," Trevisan said.

Trevisan recently submitted an application on behalf of the agency asking for $5,500 worth of FEMA funds. She said she was not yet aware how much the organization will actually be allocated. In the last phase, Bunney said St. Vincent De Paul received $4,179.

Other agencies receiving funds include Latah County Community Action Partnership, Alternatives to Violence of the Palouse and JK Good Samaritan Food

Bank. They were the only agencies to apply, Bunney said.

The local agencies that applied were required to meet certain conditions, said Elizabeth Prasil, account executive at Appearances and Marketing Promotions, in a press release. This included being a private voluntary nonprofit or unit of government, having an accounting system, practicing nondiscrimination, having demonstrated the capacity to deliver emergency food or shelter programs and having a voluntary board if they are a private voluntary organization.

Bunney said the application process can be a lot of work, though Trevisan said FEMA applications are actually easier to submit than others.

An agency's application must include a narrative with the amount they are requesting and an explanation for the request, a capacity statement that includes references to an accounting and service delivery system, a statement agreeing to educate staff and volunteers about available referral resources and a list of the organization's board of directors, Prasil said in the press release.

Agencies can apply to use the money for several categories including served meals, mass shelter, supplies and equipment, rent and mortgage, other food, other shelter, rehabilitation and utility assistance, Bunney said. Most applications are submitted for mass shelter, other shelter and food.

St. Vincent De Paul volunteers spend the funds on other shelters, including hotel rooms for people or families who have nowhere to stay, Trevisan said.

"You get inspired by people, too. It's amazing," Trevisan said. "There's nothing like making you feel like, whenever you feel like your life is hard, and then you see what some people are going through, with their illnesses, or their disabilities, or their mental health issues or whatever, and you just realize how blessed you are because they have such challenges."

Trevisan was one of the founding members of the Moscow conference of St. Vincent De Paul. She and several others have remained active volunteers ever since. Trevisan said she was president of the conference for 10 years before she began writing grant applications and the role was turned over.

The organization works to help those who are poor or in a crisis by distributing money, meeting with people in need and running a hotline that Trevisan said gets anywhere from five to 25 calls a day. She said the organization has an estimated 20 active members and 50 associate members.

"It's good work. We like it," Trevisan said.

POLITICAL COMMENTARY, COLUMNS AND EDITORIALS

Our Views: Homeowners Need Federal Help Now

Baton Rouge (LA) Advocate, September 24, 2016

As flood victims across south Louisiana plummet toward possible financial ruin, Congress cannot offer them a parachute long after they've crashed.

It's a simple reality of life that if help doesn't arrive when it's needed, then it can be little or no help at all. That is why we're heartened by news that some $500 million — what's billed as a "down payment" on flood relief for Louisiana — has been included in a larger bill to fund the federal government. We urge members of Congress to approve the provision.

Much federal aid has already flowed to the state through the Federal Emergency Management Agency and other federal agencies. But given the scale of the flooding, Louisiana needs a lot of extra federal help that only Congress can approve. President Barack Obama has come out in favor of a more than $2 billion aid package. It would include help for infrastructure, other recovery needs and, perhaps most importantly, housing assistance.

U.S. Sen. Bill Cassidy, a Baton Rouge Republican, said he's confident that Louisiana will get a flood aid package, although the timing is uncertain. Congress could approve the package before it recesses or when it returns in December, or perhaps approve some parts of the aid now and other parts later. Louisiana native and National Public Radio congressional correspondent Cokie Roberts, in a Baton Rouge speech on Tuesday, also predicted that an aid package would eventually be approved.

But around kitchen tables right now, flooded homeowners are putting pencil to paper to determine if they can afford to rebuild. In many cases, part of that calculation involves what help, if any, they might receive from Washington. As Congress dithers — and the prospect of long-term uncertainty looms — those homeowners might opt to walk away from distressed properties and start over somewhere else.

"For folks who are struggling now, the same amount of money has a greater impact now than it does later," Cassidy told The Advocate. "That's what I'm stressing to people."

The future of many south Louisiana neighborhoods —and the health of local businesses and tax bases they support — are at stake.

That is why Washington must act now rather than later to advance Louisiana's recovery.

Louisiana Flood Of 2016 Made Worse By Growth-focused Policies

By JR Ball

New Orleans Times-Picayune, September 23, 2016

There's nothing new about flooding in southeast Louisiana. But in the Baton Rouge area, at least, the devastation wreaked by heavy rains is getting worse.

Suburban growth into areas with a history of flooding is putting more houses, businesses and lives at risk. Every new road, bridge, levee or other human-made structure further obstructs — and slows — the natural drainage patterns within the Amite River Basin, where the Amite and Comite rivers flow into Lake Pontchartrain. And long-discussed projects intended to mitigate flood damage in and around Baton Rouge remain under-funded and far from finished.

"Damage from these natural disasters is only going to get worse because we've overbuilt our capacity to manage existing risks," said professor Edward Richards, who has written extensively on coastal and floodplain issues as director of the program in law, science and public health at LSU's Law Center. "Our drainage system is blocked up."

The Louisiana Flood of 2016 killed 13 people, displaced tens of thousands of others, caused an estimated $8.7 billion in damage and destroyed some 60,000 houses. Gov. John Bel Edwards is requesting $2.8 billion in federal recovery money, and more than 73,000 households across 20 parishes have been approved for Federal Emergency Management Agency aid.

Louisiana hasn't seen a natural disaster of this magnitude since 2005, when storm surge from Hurricane Katrina or the failure of levees and floodwalls submerged much of New Orleans and St. Bernard Parish and parts of St. Tammany and East Jefferson. The causes of the two events were different, and the damage inflicted by Katrina was far more tragic and extensive. But both share this bond: Decisions by human beings to allow development in known flood areas, and their failure to complete flood mitigation projects, increased the devastation.

"We keep saying this won't happen again, but it does keep happening and it will continue to happen," said Craig Colten, the Carl O. Sauer professor of geography at LSU and a longtime student of why communities expand in harm's way. "After each one of these events we say we've learned our lesson, but then we ignore what we've learned."

No one is suggesting that rainfall totals seen in mid-August— when some spots saw more than two feet of rain in 72 hours— will become the norm. But flooding in the Baton Rouge area and across the Capital region, as it has for centuries, will happen again. And rapid and largely unchecked growth in the suburbs of Baton Rouge and neighboring Livingston and Ascension parishes, coupled with a degraded natural drainage system, is putting more people in harm's way.

Absent drastic measures to make suburban growth safer and to improve watershed drainage, the widespread destruction caused by these floods will almost certainly become more common, more expensive and more deadly. "We keep rolling the dice hoping disaster won't strike twice," Colten said, "and we keep losing."

What's troubling is how much damage was done to property outside the "100-year flood zone," where there is a 1 percent chance of flooding in any given year. No doubt that's partly due to the freak nature of the August storm, considered a "1,000-year event."

Yet experts warn it's a mistake to chalk up this as a once-in-a-millennium happening. The accuracy of FEMA's flood-prediction maps is not perfect, and a recent study by the nonprofit Resources for the Future found someone living in the 500-year flood zone was as likely to be flooded as someone living in the 100-year flood zone. Those inside the high-risk 100-year flood zone are predicted by FEMA to have a 26 percent chance of flooding over the life of a 30-year mortgage.

"It's wrong to create a false sense of security by saying this flooding only happened because it was a 1,000-year rain," Richards said. "There's been numerous flooding in this area in the past, and it won't take a 1,000-year rain to do it again.

"If you got two or three feet of water in your home, it doesn't matter if the next storm is a 100-, 500- or 1,000-year event; your house is going to flood again."

Moreover suburban sprawl is pushing deeper into the floodplain. In the city of Central, incorporated in 2005, 75 percent of the property is in the 100-year flood zone, Colten said. The mayor, Jr. Shelton, said as much as 90 percent of the houses and businesses sustained flood damage.

In neighboring Livingston and Ascension, two of the fastest-growing parishes in the state, real estate developers are racing to build along the Comite and Amite rivers and in the area where the two waterways converge and spill into Bayou Manchac during floods.

These are all areas that have repeatedly flooded in the past, yet local officials are doing little either to slow the growth — in fact, they're encouraging it— or impose stricter safety standards within the 500-year flood zone.

"This was a huge rainfall, but it didn't have to be such a huge flood with so much devastation," Colten said. "So much development has been allowed since 1983. We have created this situation."

The year 1983 is important. That's when much of the same area suffered extensive flooding, causing damage of $344 million – $831 million in today's economy. It was the fourth flood along the Amite River in 11 years, prompting Rod Emmer, long-time director of the Louisiana Floodplain Managers' Association, to call for tougher flood zone construction standards, including elevation standards above FEMA's minimum requirements, and flood-reduction projects. Significant flooding in the Baton Rouge area also occurred in 1990 and 1993, and in 2001 Tropical Storm Allison dropped 19 inches of rain over a two-day period, swamping much of the region.

After the 1983 flood, local officials adopted a series of measures to improve water flow and better manage backwater flooding, which is water building up faster than it can be drained. By 1990, planning departments in Baton Rouge and Denham Springs had upgraded floodplain construction standards above the FEMA baseline, and Ascension Parish and Central largely followed that lead.

Those tougher standards are why Frank Duke, the Baton Rouge planning director, disputes blanket statements that explosive suburban growth everywhere amplified the flood damage. "Growth didn't contribute to the flooding," said Duke, citing post-1990 developments that did not flood in Baton Rouge. "I do agree that anything built prior to 1990 did have an impact."

That's not the case elsewhere in the region. A residential development under construction in Watson, in Livingston Parish, flooded badly in August, and much of hard hit Central was built after 1990. Duke acknowledged that suburban growth in areas prone to flooding "does complicate issues if you don't provide for the proper mitigation."

One of those is the Comite Diversion Canal, designed to carry water surge from the Comite River west across East Baton Rouge Parish to the Mississippi River. It would reduce flooding risks, especially outside the 100-year flood zone – if it's ever completed.

The project was authorized in 1986, and voters in East Baton Rouge, Ascension and Livingston parishes approved a property tax in 2000 to help fund construction. But much of it remains unfinished. U.S. Rep. Garrett Graves of Baton Rouge said 20 percent to 25 percent of homes that sustained flooding in August would have been spared if the canal were operational.

Even the diversion canal is no magic bullet solution, however. Some members of Louisiana's congressional delegation, already committed to securing an estimated $211 million in federal money to finish the canal, are now pushing to expand the project to include overflow from the Amite River.

Others, including Colten, wonder why local government officials gave the OK to new developments in floodplains near the Comite when it was clear that completion of the diversion canal was nowhere in sight? "Everyone understands the importance of growth and new tax revenues," he said, "but those decisions put lives at risk."

Rather than raising building standards to account for repeated flooding in the presumably lower-risk 500-year flood zone, officials now are scrambling to relax standards for rebuilding flooded houses.

The Baton Rouge Metro Council on Sept. 14 voted to waive existing regulations and exempt some 32,000 households outside the 100-year flood zone from having to elevate their flood-damaged homes. The night before, frustrated residents of Denham Springs, the region's hardest-hit city, packed a public meeting to complain about regulations that could require them to elevate their homes before securing a permit to repair or rebuild.

In Central, the mayor and City Council members vowed to roll back rebuilding standards to the FEMA minimum. "If we have to start elevating our houses and demolishing them, Central's going to turn into a ghost town," said Shelton, the mayor.

Colten argues these officials shouldn't be easing standards, but, rather, expanding them to make the 500-year flood zone the baseline at-risk designation. "It's a tough job because they're trying to protect the financial resources of their constituents, but long-term safety is more important than short-term finances."

Elected officials also are pushing to have FEMA not count the August flood when determining the region's base flood elevation, which is the height that inundation waters are expected to reach in a 100-year flood. New buildings and those significantly damaged by storms must be constructed one foot above that base elevation. "I don't want it to count," said Baton Rouge Metro Councilman Trae Welch, asserting it would be unfair for such a "rare event" to have such a significant impact moving forward.

"We just had a 1,000-year flood that literally was 6 feet above the 100-year base flood elevation," said Central City Councilman Jason Ellis. "It would be ridiculous if every single one of us had to go raise our houses above a 1,000-year flood event."

Colten, however, said those who want to exclude the August event as the flood of record are ignoring reality. "If you don't, then it's likely these homes will flood again in the future. People don't want to deal with the truth of the situation."

When Congress approved the Disaster Relief Act of 1950, enabling the federal government to provide relief and recovery funds, Colten said, it gave the region a false sense of security and a willingness to allow development in higher risk areas. Making the risk even more tolerable is the National Flood Insurance Program, created in 1968 after Hurricane Betsy flooded New Orleans three years earlier. The intent of the insurance program was to provide affordable, government-subsidized flood coverage for homes already at risk of flooding. In exchange, local communities are supposed to prevent new development in high-risk areas.

Not only have local governments largely ignored their role, but also local officials routinely threaten lawsuits whenever FEMA attempts to expand the 100-year flood zone, where homeowners must carry private flood insurance. Most of the houses damaged in the Louisiana Flood of 2016 did not carry flood insurance because they were located outside FEMA's high-risk zone. And instead of limiting development, the flood insurance program has opened the door for more expensive homes, constructed on concrete slabs, to be built in areas likely to flood.

"It's been 50 years of unintended consequences," said Richards, the LSU law professor. "A program designed to help has made the problem worse."

Louisiana leads the country in severe repetitive loss properties, according to FEMA records, with more than 7,200 of the National Flood Insurance Program's 30,000 multi-flood homes. One house in Batchelor, in Pointe Coupee Parish, according to the Natural Resources Defense Council, has flooded 40 times over the past four decades, collecting $428,379 in insurance payments. Since 1978, repeat loss properties in the state have received $1.22 billion in flood insurance payments — 22 percent of all repetitive loss claims in the U.S., according to the council's research.

"We need to change the emphasis of the NFIP from a rebuilding program to a risk mitigation program," said Rob Moore, a flood policy analyst at the council. "It currently addresses people's short-term need to get their life back in order, not the long-term risk."

The flood insurance program is $23 billion in debt, much of that due to massive payouts after hurricanes Katrina and Rita in 2005 and Sandy in 2012, prompting some to wonder whether federal officials will do what those at the local level will not: impose higher elevation rules on development, expand at-risk flood zones and broaden private insurance mandates.

"Why should the federal government keep bailing us out if we're not willing to build safer communities in areas that we know will experience flooding," asked Richards. "People are right saying what happened in August was rare, but what they won't acknowledge is a 100-year rain, which is common, may do 90 percent as much flooding. Are we ready for that?"

Hurricane Rita: Lessons Learned

Lake Charles (LA) American Press, September 24, 2016

Today, Sept. 24, marks the 11th anniversary of the day that Hurricane Rita made landfall between Holly Beach, Louisiana and Sabine Pass, Texas with 120 mph winds and an enormous storm surge.

Rita did $12 billion damage and about 120 deaths were attributed to the hurricane throughout its existence. Seven of those deaths were directly storm related, such as winds, storm surge, floods and other oceanic events. Other deaths attributed to the hurricane were the result of traffic accidents, fires, crimes and other incidents.

Southwest Louisiana was particularly hard hit in the storm because it was in the northeast quadrant, known as the "dirty side" of tropical event. Rainfall from the hurricane peaked in Central Louisiana at 16 inches.

Studying such historic events have great value to us today and to future generations, because the teach us lessons that can help us survive future disasters.

Here are some of the lessons learned:

Local officials had been practicing for such disasters for years, and had been dealing with evacuees from Hurricane Katrina for weeks. Local government was much more efficient than federal agencies such as the Federal Emergency Management Agency.

The large-scale evacuation was largely successful. Officials learned it was better to call for an evacuation too early than too late.

Evacuation routes needed to be improved. It took some people 13 hours and more to get through the traffic jam between Lake Charles and Alexandria and other destinations north.

Rita's straight-line winds did much damage, as did tornadoes, explaining why some streets saw horrific damage, and other homes a block or two away escaped unscathed.

Residents who remained at home during the storm spent nerve-racking hours huddled in an interior closet or lying in a bathtub. Many who survived that experience said, "Never again."

Residents who live along waterways received unexpected damage from the storm surge.

Roofs, buildings and furnishings can be replace, lives cannot.

It takes weeks to repair ravaged electrical substations, transformers, poles and lines. People also learned life without electricity is miserable.

Help from neighbors and volunteers are a vital to the recovery of individuals, families and getting life back to normal.

We've still got another month left in this hurricane season, so here are some additional tips: stay alert, keep informed by the

American Press

and other news media; make sure you know the evacuation routes; have personal plans for evacuation; have emergency, supplies ready, such as food, water and medicine; keep your vehicle in good running order, and help elderly relatives or friends if needed.

Learning the lessons of history is always a good idea, particularly from great natural disasters such as Hurricane Rita.

SAFER Grant Will Make City Residents, Businesses Safer

By Anna McCann, Merritt Machinery LLC President

Lockport (NY) Union Sun Journal, September 25, 2016

As the owner of a city business near the recent HTI fire, I was disappointed to read the Union-Sun & Journal's negative opinion concerning the Common Council's approval of the Staffing for Adequate Fire and Emergency Response (SAFER) grant, which will provide funds to hire four additional firefighters at no cost to the city. Your editorial board may have agreed with the council and firefighters had you done some research on fire standards.

According to the Federal Emergency Management Agency, the SAFER grant was created to help fire departments increase or maintain the number of "trained, 'front line' firefighters available in their communities. The goal of SAFER is to enhance the local fire departments' abilities to comply with staffing, response and operational standards established by the National Fire Protection Association."

In the case of the HTI fire, Lockport Fire Department was unable to bring its aerial ladder truck to the fire scene due to being understaffed. This fact was confirmed by Chief Brady at the recent meeting of residents affected by the HTI fire. The ladder truck would have required a minimum of seven men, but the department's current staffing level is six men.

NFPA Standard 1710 is based on the review of many studies, evaluations and reports citing empirical data on fire department response time and fire mitigation. The NFPA technical committee's review of this data clearly demonstrates that for safe, effective and efficient fire suppression and rescue operations, each responding fire apparatus must be staffed with four firefighters, and "requires five to six personnel for high tactical hazards (high-rises, large commercial occupancies, industrial complexes, large multi-dwellings, geographical restrictions, etc). If the ladder truck crew is expected to perform both engine and truck work simultaneously, they should be staffed with additional personnel."

That means more than six men are required for the Initial Rapid Intervention Crew when responding to a fire in a typical 2-story house. The NFPA recommendation for fighting the typical house fire is 17 men. How many firefighters do you think are required for initial response to an industrial tire fire?

Standard 1710 further states "given that the progression of a structure fire to the point of flashover generally occurs in less than 10 minutes, two of the most important elements in limiting fire spread are the quick arrival of sufficient personnel, and equipment to attack and extinguish the fire as close to the point of its origin as possible."

City firefighters responding to the HTI fire lacked the two most important elements, sufficient personnel and equipment. This was proven by their inability to obtain adequate water source immediately upon arrival. The ladder truck is a more effective platform than an engine for a large fire.

I commend Alderman Anita Mullane for supporting the four-man SAFER grant application in 2015. Unfortunately, the mayor did not agree, and broke a 3-3 tie vote of the council by voting against it. Had the city applied for and received the grant last year, the firefighters' initial response to the HTI fire would have included the ladder truck.

Could that have prevented the fire from spreading? Most likely, and it may have prevented the smoke and soot damage to not only neighboring residences, but homes like mine 7 miles from the fire scene that were also affected, along with the endangerment of city firefighters and some 200 volunteer firefighters that responded to the mutual aid call.

Those calls work both ways, as was the case in the deployment of city firefighters to the Badger Drive house fire in the town of Lockport. An extra man on a platoon would save city overtime costs by eliminating the need to call in off-duty firefighters during mutual aid calls.

Your opinion stated "accepting the SAFER grant ends up insulting to the city Fire Board, which has stood by its decision that a six-man minimum shift staffing level is adequate to keep city residents safe." I find it interesting that four of the five members of the Fire Board — Dr. Jeffrey Schratz, Christopher Prucha, former alderman Pat Schrader and current Alderman David Wohleben — all live in the 4th Ward. The fifth member, former alderman Kitty Fogle, was appointed to the board in January by Mayor McCaffrey despite being voted out of office last November. Why aren't members appointed from all regions of the city? Perhaps the fire board and your editorial board would have a different opinion of the SAFER grant if their homes and offices were located in the vicinity of the HTI fire.

In March, the new council voted 5-1 to apply for the four-man grant. Alderman Wohleben cast the only "no" vote and the mayor also voiced her opposition during discussions prior to the vote. It's sad that it took a major fire to change their minds at last week's vote, most likely because voting "no" would have been political suicide.

As a business owner, I pay city taxes and do my part in supporting local organizations and keeping my property neat and orderly. In return, I expect to be protected in the event of an emergency, whether it's a fire, accident or medical event. As Alderman Abbott stated while running for office last year, "We are paying a premium tax rate; so therefore, we need to provide quality services to our residents. Quality services is not a perk, it is an obligation."

The SAFER grant will make Lockport residents and businesses safer, at no cost to taxpayers, for the next 2 years. As for the city's long-term financial future, given the legacy costs of the 10-year police contract negotiated by the mayor and corporation counsel just before last year's elections, the city may be bankrupt in 10 years, waiting for another state bailout but that's another story. When do you plan on printing that one?

Minimize Risk, Have Emergency Plans On Farms

By Anita Deming

Plattsburgh (NY) Press Republican, September 25, 2016

Farm Safety Week is dedicated to reminding rural communities that agriculture is one of the most dangerous occupations in the U.S., and farm injuries and fatalities are preventable through implementing safety plans and using common sense.

The most recent data from the U.S. Department of Labor indicates that farming accounted for 568 fatalities, with an estimated 70,000 injuries. Farming is particularly dangerous as people (including seniors and children) live on farms 24 hours, so any accident is counted as farming related.

Other factors include large unpredictable animals, large hardened steel equipment sometimes operated on hills, chemicals, increased potential for fires and long, exhausting hours during planting and harvest.

Planning and preparation can help farmers and homeowners minimize risk on their property and protect their loved ones and employees. There are many places to find information on preventing accidents and minimizing their impact. I recommend the Extension Disaster Education Network (EDEN): http://eden.cce.cornell.edu. They have lists for emergency kits, "go bags" and training videos.

In addition to accidents and weather disasters to prepare for, there are several occupational hazards such as hearing loss, repetitive joint damage, lung impacts from breathing dust and zoonotic diseases. For information on these hazards, contact New York Center for Agricultural Medicine and Health (www.nycamh.org). They can come to your farm to audit for your risk factors.

Minimizing risks using personal protective equipment and doing jobs the right way every time can help workers avoid illness and injury. Still, emergency situations can happen when you least expect it, and the first few minutes are crucial.

It's important to have a plan and ensure that everyone knows what to do in a fire, power outage, pesticide exposure, illness, injury or other sudden emergencies. This plan should include: evacuating procedures, steps to ensure the safety of others, who to contact and a safe meeting area. Things such as an emergency phone call list for emergency services, hospitals, power and repair services. Also designate an emergency contact person to coordinate communications within your family.

Just a little bit on our emergency response system: When you contact 911 they will ask you for details of the emergency to determine the level of response needed and whether it is a potential terrorist or mass casualty problem. Providing 911 GPS addresses will help tremendously in finding the accident site.

In certain cases, they may activate special teams, such as the high angle rescue team for silo rescues or the Self Contained Breathing Apparatus (SCBA) team for entering certain manure storages. If the incident is widespread as were the Irene washouts, the State Emergency Management System (SEMO) or even the Federal Emergency Management Agency (FEMA) will be activated.

The first steps in a disaster are to rescue injured people, if there are too many for the town to handle then they will activate the Mutual Aid Plan. As the disaster goes on we move to identifying the impact on people, roads and other public systems with an eye toward evaluating if this disaster qualifies for state or federal funding. This means you will be asked for estimates of the economic value of your losses over and above personal losses.

Phones will likely be out, so if you have access to phones, please find out how your neighbors are doing and relay that information as well. If you have to relocate, each town has emergency shelters, and there are county animal response teams for your animals. Be sure to include resources for your pet in your go bag.

So remember that "Safety is No Accident," and your time preparing and insuring against disaster may save lives in addition to money. Contact your local CCE office for more information on what you can do to prevent and minimize accidents.

Anita Deming is the executive director of Cornell Cooperative Extension, Essex County, and is the coordinator for Adirondack Harvest. Reach her at 962-4810, Ext. 409, or ald6@cornell.edu.

Commentary: State Response To Hoosick Falls Has Echoes Of Love Canal

As with earlier environmental crisis, state looks to feds for money to clean up mess

By Bruce W. Dearstyne, Author

Albany (NY) Times Union, September 24, 2016

Recent state Senate hearings in Hoosick Falls about PFOA contamination of drinking water have featured an effort by state officials to put some of the responsibility on the federal Environmental Protection Agency. State Health Commissioner Howard Zucker accused the agency of shifting its standards on what constitutes an unsafe level of the chemical.

It's not the first time the state has tried to draw the federal government into a state environmental crisis. That happened in 1978-1980 during the health crisis at the Love Canal area in Niagara Falls.

In 1978, residents there discovered their homes had been built at the site of an abandoned canal used by Hooker Chemical to dump toxic chemicals, some of them carcinogenic. The long-buried chemicals were leaching into people's basements and bubbling out in backyards. The state responded slowly but began buying up homes and relocating people closest to the site. There was at that time no dedicated federal funding for cleaning up toxic sites.

In August 1978, Gov. Hugh Carey convinced President Jimmy Carter to declare Love Canal a federal disaster area. After months of negotiation, the Federal Disaster Assistance Administration (predecessor of today's Federal Emergency Management Agency) agreed to provide limited funding only to partially reimburse the state for the cost of demolishing homes closest to the site.

In May 1980, the EPA conducted what was supposed to be a confidential study of the health effects at Love Canal. It found many people suffering from "supernumerary acentric chromosomes," which sounded frightening. Leaked to The New York Times, the report set off a new round of panic and demand for more government action at Love Canal.

The new federal report documented "extraordinary exposure to cancer, birth defects, and crippling and possibly killing diseases," the governor said. Permanent relocation was "the only reasonable way to deal with the trauma being experienced by area residents," he said. The state had already spent more than $40 million; now the federal government needed to step in because the EPA report had caused so much fear.

At about the same time, the Love Canal Homeowners' Association, which had been organized to demand government help, invited two EPA officials who happened to be visiting Niagara Falls to meet with residents to discuss the EPA study. Once they were inside, the citizen activists refused to let them leave. They listened to citizens' complaints. Media representatives were allowed into the building to report the event. An angry crowd gathered outside. Someone outlined the letters "EPA" with gasoline on the grass and set it on fire.

In the evening, FBI agents and U.S. Marshals from Buffalo, and Niagara Falls police, escorted the EPA men safely out of the building. Love Canal people demanded answers and action from Washington;

otherwise, said Homeowners' Association President Lois Gibbs as the federal officials were driven away, "this will look like a Sesame Street picnic."

Carey's demand and Gibbs' direct action shifted the focus to Carter, who was running for re-election. In late May, he announced the EPA would provide enough funding to relocate all affected residents, on a matching basis with New York funds. On Oct. 1, Carter flew into Niagara Falls to sign the legislation authorizing the promised funds and also money to clean up another waste site in the region. "I don't believe Governor Carey has ever overlooked an opportunity to remind me of the problems of Love Canal," he told the crowd.

Federal largesse was enough to get the job done. Affected families were relocated, their homes and other buildings were razed, the landfill was capped, and a facility was built to monitor, collect and treat any additional runoff.

But New York's gratitude was limited. In the November 1980 election, Jimmy Carter carried Niagara County but lost New York, and the election, to Reagan.

The Love Canal crisis led to stronger state and federal restrictions on dump sites and to the creation of the Superfund for cleanup of sites contaminated by hazardous materials. (Some of those funds may help Hoosick Falls and other towns with PFOA issues.)

Though Hooker Chemical denied responsibility, asserting that the dumping had been legal under the lax state and federal rules in the 1940s and early 1950s, its successor company, Occidental Petroleum, ended up paying large fines to the federal and state governments. The company also paid undisclosed amounts to residents who sued, and agreed to assume responsibility for the treatment facility that the state had built to deal with chemicals still seeping out at the site.

Saint Gobain, the company allegedly responsible for the contamination at Hoosick Falls (and possibly other sites), has so far picked up much of the tab for remedial work, such as installation of filters.

But New York officials seem to be setting up the case to tap federal resources, much as Carey did back then.

In an Aug. 30 letter to EPA, the health and environmental conservation commissioners said the state had already spent $25 million and anticipates at least $50 million more. Asserting that the EPA's "changing, conflicting guidance" on what constitutes a safe level of PFOA had caused "undue public confusion" and has "aggravated the situation, causing undue expense to our agencies," they asked for federal reimbursement of state expenses.

Federal EPA Administrator Gina McCarthy responded that her agency's health advisories were clear and consistent and implied that New York officials may have misunderstood them. She urged the New Yorkers to "move beyond accusatory letters" and work with EPA to resolve the crisis.

Like the residents of Love Canal, the people of Hoosick Falls and other affected areas want answers and help from government health experts. They may also expect someone to pay for their health risks and ordeal. The Rensselaer County Legislature just passed a resolution asking for a federal tax credit for residents of Hoosick Falls and Petersburgh, one of the other communities affected by PFOA contamination.

"Regarding the missing link of liability, if health-related dangers are detected, what are we as a people willing to spend to correct the situation? How much risk are we willing to accept? Who's going to pick up the tab?"

Those were the words of an EPA administrator discussing Love Canal 37 years ago. But they could just as easily describe the outstanding questions in Hoosick Falls today.

Bruce W. Dearstyne is the author of "The Spirit of New York: Defining Events in the Empire State's History."

Fallen Firefighters Define True Heroism

Wilmington (DE) News Journal, September 24, 2016

As is too often the case, it has taken a tragedy to remind us that heroes are not comic book or movie characters. They do not seek or bask in any spotlight.

They seek only to help others. To them, it is not a job. It is their life's passion.

Heroism is not a physical gift. It is an all-too-rare psychological strength – the ability to recognize when others are in danger and confront that danger head-on. Most of us flee danger. Heroes face it with calm and poise, all in the name of holding suffering and sadness at bay.

They do not need to be told that others need help. It is their instinct. And when the work is done and the danger has passed, the heroes retreat quietly, knowing full well that danger will emerge in another form or fashion within hours or even minutes.

Christopher Leach and Jerry Fickes are heroes. We will not use "were" because the sacrifice Christopher Leach and Jerry Fickes made will not soon be forgotten.

The two died early Saturday when a floor collapsed above them as they looked for residents in a burning Wilmington rowhome. According to the

Wilmington Fire Department, firefighters became trapped some 20 minutes after arriving on the scene. Four other WFD firefighters were injured.

According to the U.S. Fire Administration, Christopher Leach, Jerry Fickes were the 64th and 65th American firefighters to die in the line of duty in 2016. The previous two died in separate incidents on Wednesday.

How Saturday's tragedy happened is under investigation.

Why it happened is less of a mystery. Christopher Leach, Jerry Fickes and their comrades entered 1927 Lakeview Road because their minds were fixed on saving people. On helping. On putting others' lives ahead of their own.

If you've met a firefighter, you know that a passion for the vocation is woven through the fabric of their being. They love their comrades. They love the equipment. They love life at the station. They love being on the job. The members of Ladder Co. 2 and Squad 4, like their counterparts around the world, did not become firefighters on a whim. Nor do they often leave the service to find "more rewarding work."

Christopher Leach and Jerry Fickes will always be members of the Wilmington Fire Department. They will always be firefighters.

May they always inspire others to be heroes.

Guardia Nacional Comienza Distribución De Plantas Eléctricas

Telemundo, September 26, 2016

Guardia Nacional comienza distribución de plantas eléctricas

Por CYBER NEWS

Publicado sábado 24 de septiembre de 2016

La Guardia Nacional de Puerto Rico (GNPR) informó el sábado que comenzaron este fin de semana con la distribución de generadores de electricidad suministrados por la Agencia Federal para el Manejo de Emergencias (FEMA).

En un parte de prensa, la GNPR detalló que en la noche del viernes escoltaron a la Policía con tres camiones tácticos hasta las instalaciones de FEMA en Caguas para recoger tres plantas generadoras, que fue luego transportadas hacia Gurabo y Yabucoa.

La planta que tenían sufrió una avería, por lo que el Municipio de San Juan les suplió una. (Publicado viernes 23 de septiembre de 2016)

"Con este apoyo de nuestra Guardia Nacional reafirmamos el compromiso y deber de ayudar a alivianar la situación de emergencia que enfrenta Puerto Rico. Estoy muy orgullosa y agradecida de mis ciudadanos-soldados que siempre están presentes para actuar en cualquier situación de emergencia arriesgando de alguna forma sus vidas", expresó la ayudante general de Puerto Rico, Marta Carcana.

El jueves a través de una Orden Ejecutiva, el gobernador Alejandro García Padilla activó a la GNPR para la distribución de estas plantas generadoras de energía.

Mientras defendía las cifras oficiales ofrecidas por la AEE, se interrumpió el servicio de energía eléctrica. (Publicado viernes 23 de septiembre de 2016)

El director de FEMA en Puerto Rico, Alejandro de la Campa, manifestó el jueves que el gobierno federal puso a disposición del país unas 77 plantas de energía tras el apagón masivo del miércoles que dejó a 1.5 millones de abonados sin luz y a miles sin servicio de agua.

Presidential Disaster Approved For 19 Iowa Counties

Associated Press, November 1, 2016

DES MOINES, Iowa (AP) — President Barack Obama has approved a major disaster declaration for 19 Iowa counties because of storms and flooding in September and October.

That makes federal funding available to state and local government agencies and some nonprofit organizations.

The money will help perform emergency work and the repair or replacement of facilities damaged by the severe storms and flooding that occurred between Sept. 21 and Oct. 3.

The Federal Emergency Management Agency says additional designations may be made at a later date if requested by the state and warranted by the results of further damage assessments.

Most of the counties are in northeast and north-central Iowa but Des Moines County is southeast Iowa also is included.

Obama Declares Federal Disaster In Iowa

Quad-City (IA) Times, November 1, 2016

DES MOINES — President Barack Obama designated 19 Iowa counties as eligible for federal assistance to help repair and rebound from at least $22 million that results when severe storms caused extensive flooding along the Cedar River from Sept. 21 to Oct. 3.

Obama signed a presidential disaster proclamation Monday declaring that a major disaster exists in parts of Iowa and ordered federal aid to supplement state and local recovery efforts in the affected areas of Allamakee, Benton, Black Hawk, Bremer, Buchanan, Butler, Cerro Gordo, Chickasaw, Clayton, Delaware, Des Moines, Fayette, Floyd, Franklin, Howard, Linn, Mitchell, Winneshiek and Wright counties.

Federal funding is available to state and eligible local governments and certain private nonprofit organizations on a cost-sharing basis for emergency work and the repair or replacement of facilities damaged by the severe storms and flooding in the designated counties. Federal funding also is available on a cost-sharing basis for hazard mitigation measures statewide.

W. Craig Fugate, administrator of the Federal Emergency Management Agency (FEMA) within the U.S. Department of Homeland Security, named James N. Russo as the federal coordinating officer for federal recovery operations in the affected area.

FEMA said additional designations may be made at a later date if requested by the state and warranted by the results of further damage assessments.

Last month Iowa Gov. Terry Branstad signed a letter asking Obama to issue a presidential disaster declaration for public assistance as a result of damage sustained in 19 Iowa counties. However, the governor's request did not include activation of the federal Individual assistance program as the damage incurred to private homes during flooding did not meet FEMA's criteria.

The governor requested funding under FEMA'S public assistance program, which is used to rebuild damaged infrastructure that may include roads, bridges, culverts and other public facilities, or to cover costs of emergency work during, and debris removal after, the storms.

A joint federal, state, and local preliminary damage assessment of the 19 counties found the severe weather caused an estimated $22 million worth of damage that could be eligible under the public assistance program. The governor also requested funding to conduct hazard mitigation activities for the entire state.

In Linn County, the damage estimated at $12,742,469 includes about $11.3 million for the city of Cedar Rapids, about $630,000 for the county, $314,000 for the city of Palo and $373,000 for the Mercy Medical complex, Benson said. Damage to infrastructure in upstream Black Hawk County totaled at least $3,423,005 and Butler County's damage assessment totaled $1,633,164.

In conjunction with Iowa's latest severe weather event, Branstad announced the creation of a flood recovery task force — comprised of state and local agencies — to address the unmet needs of impacted residents as part of an effort to assist Iowans in their recovery from flooding and severe weather. The task force will focus on working with communities to develop long-term housing recovery options, according to the governor's office.

Obama Declares Federal Disaster In Iowa, Makes Aid Available

By Rod Boshart

Cedar Rapids (IA) Gazette, November 1, 2016

DES MOINES — President Barack Obama designated 19 Iowa counties as eligible for federal assistance to help rebound from at least $22 million in damages caused by extensive flooding along the Cedar River from Sept. 21 to Oct. 3.

Obama signed a presidential disaster proclamation Monday declaring that a major disaster exists in parts of Iowa and ordered federal aid to supplement state and local recovery efforts in the affected areas of Allamakee, Benton, Black Hawk, Bremer, Buchanan, Butler, Cerro Gordo, Chickasaw, Clayton, Delaware, Des Moines, Fayette, Floyd, Franklin, Howard, Linn, Mitchell, Winneshiek and Wright counties.

Federal funding is available to state and eligible local governments and certain private non-profit organizations on a cost-sharing basis for emergency work and the repair or replacement of facilities damaged by the severe storms and flooding in the designated counties. Federal funding also is available on a cost-sharing basis for hazard mitigation measures statewide.

Craig Fugate, administrator of the Federal Emergency Management Agency within the U.S. Department of Homeland Security, named James N. Russo as the federal coordinating officer for federal recovery operations in the affected area.

FEMA said additional designations may be made at a later date if requested by the state and warranted by the results of further damage assessments.

Last month, Iowa Gov. Terry Branstad signed a letter asking Obama to issue a presidential disaster declaration for public assistance as a result of damage sustained in 19 Iowa counties. However, the governor's request did not include activation of the federal Individual assistance program as the damage incurred to private homes during flooding did not meet FEMA's criteria.

The governor requested funding under FEMA's public assistance program, which is used to rebuild damaged infrastructure that may include roads, bridges, culverts and other public facilities, or to cover costs of emergency work during, and debris removal after, the storms.

A joint federal, state, and local preliminary damage assessment of the 19 counties found the severe weather caused an estimated $22 million worth of damage that could be eligible under the public assistance program. The governor also requested funding to conduct hazard mitigation activities for the entire state.

In Linn County, the damage estimated at $12,742,469 includes about $11.3 million for the city of Cedar Rapids, about $630,000 for the county, $314,000 for the city of Palo and $373,000 for the Mercy Medical complex, Benson said. Damage to infrastructure in upstream Black Hawk County totaled at least $3,423,005 and Butler County's damage assessment totaled $1,633,164.

Steve Estenson, Linn County risk manager, said flood insurance should cover any damage to the interior of the county courthouse and sheriff's office, which saw some water damage.

Anything after that would be submitted to FEMA, he said.

Cedar Rapids City Manager Jeff Pomeranz said expenses in a "typical disaster" are covered by 75 percent federal money, 10 percent state and 15 percent local. FEMA must still write project worksheets to identify costs, he said.

"The declaration is good news, and will help Cedar Rapids as we work towards recovery," Pomeranz said. "We appreciate the quick response of the Governor, FEMA and the Department of Homeland Security, as well as the President for signing the declaration."

In conjunction with Iowa's latest severe weather event, Branstad announced the creation of a flood recovery task force — comprised of state and local agencies — to address the unmet needs of impacted residents as part of an effort to assist Iowans in their recovery from flooding and severe weather. The task force is to focus on working with communities to develop long-term housing recovery options, according to the governor's office.

Obama Disaster Declaration Includes North Iowa

Mason City (IA) Globe Gazette, November 1, 2016

North Iowa counties are among 19 in the state that are now eligible for federal assistance to help rebound from extensive flooding along the Cedar River from Sept. 21 to Oct. 3.

President Barack Obama signed a proclamation Monday declaring a major disaster exists in parts of Iowa and ordering federal aid to supplement state and local recovery efforts in the affected areas. At least $22 million in damage was caused by the storms and flooding.

Counties in the proclamation are Allamakee, Benton, Black Hawk, Bremer, Buchanan, Butler, Cerro Gordo, Chickasaw, Clayton, Delaware, Des Moines, Fayette, Floyd, Franklin, Howard, Linn, Mitchell, Winneshiek and Wright.

Federal funding is available to state and local governments and certain private nonprofit organizations on a cost-sharing basis for emergency work and the repair or replacement of facilities in the designated counties. Federal funding also is available on a cost-sharing basis for hazard mitigation measures statewide.

W. Craig Fugate, administrator of the Federal Emergency Management Agency, named James N. Russo as the federal coordinating officer for federal recovery operations in the affected area.

FEMA said additional designations may be made later if requested by the state and warranted by further damage assessments.

Last month Gov. Terry Branstad signed a letter asking Obama to issue a presidential disaster declaration. However, the governor's request did not include activation of the federal Individual assistance program because the damage incurred to private homes during flooding did not meet FEMA's criteria.

The governor requested funding under FEMA'S public assistance program, which is used to rebuild damaged infrastructure that may include roads, bridges, culverts and other public facilities, or to cover costs of emergency work during the storms and debris removal after.

Branstad also announced the creation of a flood recovery task force with state and local agencies to address unmet needs of affected residents to assist them in their recovery from flooding and severe weather.

The task force will focus on working with communities to develop long-term housing recovery options, according to the governor's office.

Hurricane Matthew Took A Big Bite Out Of Southeastern States' Beaches

By Greg Allen

NPR, November 1, 2016

Beaches in the Southeastern U.S. took a tremendous beating last month from Hurricane Matthew. The U.S. Geological Survey has found that the storm washed over and damaged 15 percent of sand dunes on Florida's Atlantic Coast, 30 percent along Georgia's coastline and 42 percent of the dunes on South Carolina beaches.

In Florida, few coastal areas were hit harder by the hurricane than the 18 miles of dunes and beaches in Flagler County. County Administrator Craig Coffey says, "What Matthew did to us essentially [was] eat about 30 feet of coastline all the way along the county, and created a bunch of breaches through that dune system."

Matthew also washed out a big chunk of coastal highway A1A in Flagler Beach. The state and county are working to have that road repaired and open within 45 days. Fixing that highway is important, Coffey says. But he is equally worried about damage to the county's beaches and dunes, which provide the community with important protection from tides, wave action and storm surge.

When Hurricane Matthew overtopped and breached Flagler County's beaches, some 800 homes were flooded. Coffey says, "We're trying to figure out how can we protect those for next hurricane season so we don't have more breaches. We literally were fighting breaches in about 10 locations." Flagler County is hoping federal money will be available to help it begin restoring the dunes, which provide protection for hundreds of coastal homes.

Many other communities are facing similar problems. The USGS says 53 miles of dunes were damaged and overtopped in Florida. In Georgia, 32 miles of shoreline were affected. Seventy-seven miles of dunes were damaged in South Carolina.

Hilary Stockdon, a research oceanographer at USGS, says a survey of the beaches compared aerial photos taken before and after the storm. It showed extensive beach erosion all along the Southeast Atlantic coast, Stockdon says, "where waves removed sand from beaches and sharply eroded sand dunes. There were locations where houses were undermined or roads were undermined. And we also saw locations where the sand was pushed inland."

After small storms, Stockdon says, beaches and dunes can recover naturally. With major storms like Hurricane Matthew, though, sand is washed inland and bulldozed away, she says. Restoring sand dunes after those events often requires big engineering projects.

Haley To Visit Lowcountry To Discuss Hurricane Matthew

Associated Press, November 1, 2016

RIDGELAND, S.C. (AP) – Gov. Nikki Haley is heading to the Lowcountry to talk about recovery from Hurricane Matthew.

The governor's office said Haley will be in Ridgeland on Wednesday as part of a relief event. The event is set from 11 a.m. to 3 p.m. at the Jasper County Farmers Market.

Federal, state and nonprofit organization officials will be available to answer questions from residents of Beaufort, Jasper, Colleton and Hampton counties about help families and businesses after the storm.

Those who visit the event can register for financial help from the Federal Emergency Management Agency. They can also apply for disaster loans from the U.S. Small Business Administration.

The U.S. Department of Agriculture Farm Service Agency will also be on hand to provide information for farmers about crop losses and damage.

Kinston Remains Short On Hotel Rooms After Hurricane Matthew

Associated Press, November 1, 2016

KINSTON, N.C. (AP) — The impact of Hurricane Matthew continues to be felt in Kinston's hotel market.

WITN-TV in Greenville reports (http://bit.ly/2ekuHyu) four of the city's six hotels were flooded. The Hampton Inn on U.S. 70 Bypass had 21 inches of water on the first floor, where 26 guest rooms were destroyed.

General manager Travis Baker says the hotel still has no power and is awaiting an inspection of flooded transformers so they can get temporary power back into the building.

Baker said the goal is to reopen by the middle of next month.

Visit Kinston director Jan Parson estimates the city will lose between $70,000 and $95,000 in occupancy taxes due to the loss of hotel reservations. The money helps market the area to attract visitors and help with tourism.

McCrory: Hurricane Relief Timetable Includes Special Session

By Gary Robertson

Associated Press, November 1, 2016

RALEIGH, N.C. (AP) — Gov. Pat McCrory said Tuesday he expects to call lawmakers to a special session next month on Hurricane Matthew relief for eastern North Carolina, looking to Congress for supplemental aid first and developing policy based on recommendations from committees his administration created.

Addressing the first meeting of one panel assigned to examine the damage and pinpoint unmet needs, McCrory and other administration officials told participants the actual recovery will be long and hard.

"It won't be a sprint. It will be a marathon," said McCrory Chief of Staff Thomas Stith, who is also the panel's chairman.

The storm raked the eastern half of the state 3½ weeks ago, dumping up to 17 inches of rain and leading to record flooding along rivers and in the towns and cities adjoining them. Authorities said there were 28 storm-related deaths. While federal damage assessments are continuing, state officials earlier estimated $1.5 billion in damage to 100,000 homes, businesses and government buildings. That doesn't count agricultural losses.

"Our state has gone through a very traumatic, violent and emotional disaster," McCrory told the Hurricane Matthew Recovery Committee, but "now we need to reinvent ourselves on how do we recover from this."

McCrory laid out a plan that in which the bipartisan committee — comprised of elected leaders, business people, government officials and citizens — would tour hard-hit areas. In early December the panel would fashion recommendations for recovery assistance that wouldn't be covered with existing funds. A separate panel of emergency management officials would consider more technical issues related to federal and state assistance and address immediate needs.

The governor said he would turn in the state's request for federal disaster assistance on Nov. 14 and wait for Congress to approve it. The state would have to provide matching funds and cover items not included in supplemental federal funds. McCrory said he envisioned calling a special legislative session for early December, although the date could move up depending on the speed of Congress.

"I am confident that we'll be able to recover and rebuild even stronger than what we had before in many of these areas impacted," he said.

The General Assembly likely would be asked to create state recovery programs and permit spending from the state's reserve fund, now close to $1.6 billion. Laws also would be amended to exempt some schools from the required minimum number of days or instructional hours they must be open.

State Budget Director Drew Heath told the committee the state has enough disaster funds to meet immediate needs through January, when the legislature convenes its two-year session. But McCrory told reporters waiting until then to act would hamper long-term recovery planning.

The governor said he wanted the recovery committee to raise private and corporate funds to address permanent housing and small business aid. State officials said 250 people are still in shelters and more than 1,500 displaced households are still living in hotels.

The committee's members include former Gov. Beverly Perdue, ex-McCrory budget director Art Pope and current University of North Carolina system President Margaret Spellings.

McCrory Suspends Non-essential Travel For State Workers

Associated Press, November 1, 2016

RALEIGH, N.C. (AP) – The Latest on the Alabama pipeline explosion and its impact on North Carolina: (all times local):

6:45 p.m.

Gov. Pat McCrory has signed an executive order waiving some requirements to allow trucks to deliver gasoline and to protect consumers from price gouging.

McCrory's latest executive order is an extension of an order issued for Hurricane Matthew. The order waives maximum hours of service for drivers and temporarily suspends vehicle size and weight restrictions to allow transport of gasoline. Extending the state of emergency also extends price gouging laws to help protect North Carolinians from excessive gas prices at the pump. The governor took similar action during an earlier disruption to the pipeline in September.

The governor has suspended non-essential travel for state employees. McCrory also directed the Department of Environmental Quality to work with the Department of Agriculture to use different gasoline formulas to increase access to supplies from northern states.

___

4:20 p.m.

North Carolina Gov. Pat McCrory said his administration was monitoring the explosion at an Alabama pipeline for possible disruptions to the state's gasoline supply.

McCrory said Tuesday that his office is preparing for all options in response. He later urged citizens not to participate in panic buying, saying it would only make the situation worse.

The governor said the pipeline provides 70 percent of North Carolina's gasoline supply.

Earlier. North Carolina Attorney General Roy Cooper announced the state's law regarding price gouging was still in effect. It was initially implemented after the same pipeline was disrupted by a leak in September. It was triggered again after Hurricane Matthew struck the eastern part of the state.

McCrory, a Republican, and Cooper, a Democrat, are opposing each other in the 2016 governor's race.

___

3:58 p.m.

North Carolina Attorney General Roy Cooper is reminding residents that the state's price gouging law remains in effect in the wake of a fatal explosion in Alabama that shut down a pipeline supplying gasoline across the Southeast.

A previous shutdown of the same gas pipeline in September triggered the law, which went into effect again in October by Hurricane Matthew and remains in effect statewide.

Cooper's office is currently investigating businesses for possible price gouging related to Hurricane Matthew as well as for alleged gas price gouging due to problems with the pipeline in September. He advised residents that if they see excessive prices at the pump, they should call his office.

Cooper is the Democratic candidate for governor in North Carolina, challenging Republican incumbent Pat McCrory.

Largest US Oil Pipeline Shut Off After Deadly Blast

AFP, November 1, 2016

The largest gasoline pipeline in the United States remained shut off Tuesday in the southern state of Alabama following an explosion that killed one and injured five, as crews battled to control the resulting wildfire.

The blaze broke out Monday afternoon in Shelby County after an excavator being used by contractors hit the Colonial pipeline and sparked an explosion, the company said in a statement.

"After the incident occurred, Colonial shut down its two main lines, which traverse Shelby County," the company said.

Fuel Prices Up And Down East Coast Spike After Ala. Pipeline Explosion

By Steven Mufson

Washington Post, November 1, 2016

For the second time in less than two months, a major breach closed down a key gasoline pipeline, driving up fuel prices and demonstrating the vulnerability of the entire Eastern Seaboard to an accident on a single piece of infrastructure.

Just before 3 p.m. Monday, a track hoe used for excavation struck Colonial Pipeline's Line No. 1 in Shelby County, Ala., breaking the 53-year-old steel pipe and igniting the gasoline inside. One worker was killed and five severely injured. The fire sent flames and black smoke billowing high into the sky and was still burning Tuesday afternoon.

The accident took place just a few miles from the site of a Sept. 9 leak from the same pipeline. The leak closed down the pipeline for 12 days, sparking long lines for gasoline in Georgia, Tennessee and Alabama.

Colonial's Line No. 1, 36 inches in diameter, carries approximately 1.3 million barrels a day of gasoline from Houston to Linden, N.J., branching off along the way to provide more than a third of the supplies for the entire East Coast.

"I think the issue of pipeline safety is important, given several recent high-profile accidents," said Jason Bordoff, director of Columbia University's center on global energy policy. "It certainly is a reminder of the vulnerability of East Coast gasoline supply."

Bordoff said the Energy Department had considered creating a reserve for refined products after Hurricane Sandy, in part because of the East Coast's dependence on limited pipeline infrastructure. Hurricane Katrina also caused gasoline shortages in places such as Atlanta because refineries along the Gulf of Mexico could not supply the southeastern portion of the pipeline network. But no reserve has been created.

Gasoline prices before taxes and fees soared Tuesday more than at any time since 2008. Early in the day, prices jumped 15 percent but finished the day up 4.6 percent at $1.4841 a gallon after the company said it hoped to reopen the pipeline Saturday afternoon. But Barclays analysts said the outage could last longer. “In an optimistic scenario,” they wrote, “Line 1 remains shut for at least another month, as the fire is put out and repairs and safety inspections take place.”

“It’s a very fragile system,” said Andre LeBlanc, vice president of Petroleum Marketing Group, which supplies more than 1,400 gas stations, from Maine to Tidewater, Va. “As we’ve seen over the past two months, this can be very impactful to us.”

Michael O’Connor, president of the Virginia Petroleum Convenience and Grocery Association, said that 70 percent to 80 percent of the gasoline and diesel for the state’s 5,000 fuel stations come through the Colonial pipelines. Colonial’s line No. 2, which parallels line one, carries diesel.

“That is a lot of dependence on one source,” he said, adding “you have to look at the 99.5 percent of the time when things are working like finely tuned Swiss watch.”

Throughout the Mid-Atlantic, wholesalers made plans for trucks to pick up supplies in ports such as Baltimore and in northern New Jersey. O’Connor said Virginia Gov. Terry McAuliffe (D) had not lifted emergency measures imposed during Hurricane Matthew. Those measures eased limits on truckers and also relaxed weight restrictions on trucks carrying fuel.

In addition to concerns about the reliability of supplies, the latest pipeline accident exacerbates anxiety about pipelines in general. Environmental groups have been opposing both oil and natural gas pipelines from North Dakota to New England.

Colonial, founded in 1962, is owned by a group that includes Koch Industries, an affiliate of the KKR buyout firm, Caisse de dépôt et placement du Québec, and a Royal Dutch Shell affiliate. The company’s two pipelines form a 5,500-mile network.

The Sept. 9 leak occurred in the original pipeline construction and dumped about 7,370 barrels of gasoline into man-made ponds about 460 yards away, according to the Pipeline and Hazardous Materials Safety Administration. The ponds were once used for waste from strip mining.

The PHMSA, recently given expanded authority to order pipeline closures, said later that a crack was discovered on a buckle in the pipe. PHMSA regulators ordered Colonial to limit the volume of gasoline flow so that pipeline pressures did not exceed 80 percent of ordinary levels.

To restore the pipeline to service, Colonial used a stretch of pipe to bypass the leak.

Then on Monday, a crew working for a contractor was excavating the pipeline in preparation for the removal of the bypass when it hit the gasoline line.

For now, Colonial is literally focusing on getting the smoke to clear. The company said about 4,000 barrels of gasoline had burned or leaked since the explosion. Fire departments from three counties and two cities have teamed up with state and federal agencies to put out the fire. The firefighters had already been busy battling wildfires after weeks of drought.

The company said it also had laid containment booms at two locations along the Cahaba River. It said it did so “out of an abundance of caution.”

Firefighting crews built a 75-foot-long earthen dam to contain burning fuel, Reuters reported. Two wildfires caused by the explosion burned across 31 acres of land, officials said.

“Given these two recent disasters, we call for the federal government to conduct an immediate investigation into the Colonial Pipeline Company so that those impacted are fully compensated and no community is forced to face the risks Shelby County and so many like it around the country do on a daily basis, “ Lena Moffitt, director of Sierra Club’s Dirty Fuels campaign, said in a statement.

In North Carolina, Attorney General Roy Cooper told residents that the state’s anti-price-gouging law remains in effect, ABC News reported. Gov. Pat McCrory (R) urged citizens not to indulge in panic buying that could create artificial shortages.

Watch This Rare “Medicane” Tropical Storm Take Shape In The Mediterranean

By Angela Fritz

Washington Post, November 1, 2016

A rare, ostensibly bizarre storm formed in the Mediterranean over the weekend. It was a tropical storm, which is uncommon for that region simply because the Mediterranean Sea is usually too cold.

This odd storm started as an average low-pressure system on Saturday, east of Malta. What made it different was the exceptionally warm water in the Mediterranean Sea. The water temperature there is running 5 to 6 degrees above average for this time of year, which means it was around the special 80-degree mark that tropical storms usually need to develop.

Strong thunderstorms bubbled up in the system on Saturday and Sunday, and the pressure dropped. The atmosphere was moist and warm enough for the storm to become “warm core” — the signature difference between something like a hurricane and the day-to-day storms we get in the mid-latitudes.

Scott Bachmeier, a research meteorologist at the University of Wisconsin, has been tracking the storm since the weekend. He said "it developed over the Ionian Sea between Italy and Greece, initially moved southwestward, and then turned to the east where it eventually produced a wind gust to [60 mph] and caused some damage on the Greek island of Crete on 31 October. A wind gust to [57 mph] was also seen from a ship report at [1 p.m. local time Friday]."

The storm didn't have a name because the National Hurricane Center doesn't cover the Mediterranean Sea. However, it did reach tropical storm status, according to the Weather Channel.

The last time a storm like this occurred in the Mediterranean was in November 2011. The satellite division of NOAA designated it "Rolf."

The storm dissipated on Monday — though not before it slammed Malta with strong winds. Giant waves crashed on the shoreline in St. Julian's Bay and other east-coast locations, which experienced the strongest winds. The waves stopped traffic and damaged hotels, according to the Times of Malta:

Vicious winds are lashing the Maltese islands leaving a trail of damage, especially at the Radisson Hotel in St Julian's which was flooded after strong waves smashed through its windows.

The police today issued a warning advising the public to avoid coastal areas and seafronts such as Triq Borg Olivier in St Julian's due to high waves crashing onto land. Seawater had flooded one side of the Strand in Sliema.

A resident said the strong sea waves even smashed cars into the Park Towers Mall in St Julian's.

The Times of Malta even reported a strange slimy substance washing ashore. People blamed local fish farms, which denied responsibility:

Meanwhile, a glutinous slime was washed into Portomaso but fish farms have categorically denied it had anything to do with them.

Joseph Caruana, Fish & Fish director, said: "This slime has absolutely nothing to do with us. We have asked the government to carry out an investigation to establish this once and for all, and we're going to keep putting pressure until it's resolved."

Still, a reader reported seeing amounts of "strange slime like big snowflakes or foam from a washing machine being washed up by the waves" along the Coast Road, making the roads slippery and dangerous to drivers.

Wednesday's Forecast: Soggy Central, Warm East

By Doyle Rice

USA Today, November 1, 2016

Showers will dampen the central U.S. on Wednesday while the East sees another warm day.

Central U.S.: Showers and thunderstorms will fall along a slow-moving cold front from the southern Plains to the Upper Midwest. Some of the heaviest rain will be in Missouri, Illinois, Wisconsin and Michigan.

East: Warmer than normal temperatures will dominate the eastern half of the U.S., with temperatures as much as 20 degrees above normal through Thursday in some areas.

West: Other than some afternoon rain in western portions of Washington and Oregon, most of the western U.S. will be clear and dry on Wednesday.

Weather history for Nov. 2: In 1743, the first tropical storm in America to be measured accurately by scientific instruments was detected by Harvard professor John Winthrop in Cambridge, Mass. In 1989, almost four feet of lake-effect snow piled up in Ironwood, Mich.

Flood Of Weather Warning Terms Fuels Confusion

By Doyle Rice

USA Today, November 1, 2016

When you hear there's a "flood watch" in your town, do you know what that means? What about a "flood warning"? And what in the world is a "flood advisory?"

Do you have to think about which one is worse?

The National Weather Service is aware there is confusion around the watches, warnings and advisories it issues and is considering making small to potentially dramatic changes to how the agency lets Americans know when and where dangerous weather threatens.

The rampant befuddlement over the terms prompted the launch a few years ago of the hazard simplification project, an endeavor that's continually seeking input from the public, said Eli Jacks, chief of the agency's forecast services division. In the next few weeks, a survey asking for comments on winter weather and flooding hazard terms will be available on the project's website.

So what, exactly, do the names mean? At the most basic level, a watch means there's the potential for hazardous or dangerous weather, while a warning indicates hazardous or dangerous weather is imminent or occurring, the weather service said. Meanwhile, an advisory is issued for hazardous weather that is also imminent or occurring but is "less serious than a warning."

Therefore, a watch is typically the first product issued, followed by either an advisory or a warning, depending on the severity of the weather hazard.

Baffled yet?

One simple reason for the confusion is that both watch and warning start with the letters "wa," while another is that advisory "doesn't have any specific connotation," Jacks said.

Not only are the three levels befuddling, there are also too many of them: In all, the weather service transmits a whopping 122 different watches, warnings and advisories, all the way from Air Quality Alert to Winter Weather Advisory. Some of the more obscure ones include Ashfall Warning, Freezing Spray Advisory and Lakeshore Flood Watch.

"If you look at the current suite of flood watches and warnings, there are more than even I was aware of," said University of Georgia meteorologist Marshall Shepherd.

"With so many types of warnings, it is not surprising that some might downplay a deadly flood threat like we saw in Louisiana earlier this year," he added, recalling the disaster that killed 13 people and destroyed nearly 150,000 homes.

The impetus for the project was partly due to twister outbreaks in Alabama and Missouri in 2011 that killed hundreds of people despite widespread tornado warnings, Jacks said.

"What can we do better?" he wondered.

Shepherd said the KISS principle (Keep It Simple Stupid) still works. "I learned this as a child and think it can apply with our weather warnings," he said.

If the entire system is overhauled, what should the terms be replaced with? Jacks said the weather service is looking at many options, such as switching to the color-coded (yellow, orange, red) warnings some European countries use, or possibly different wording, such as warning of low, medium or high impact events.

But a switch isn't necessarily simple or easy, Jacks said, as some emergency managers and municipalities have the watch, warning and advisory terms already baked into their systems.

Though a widespread change could still be a few years away, Jacks said, tweaking or reducing the confusing terms could happen sooner. "This is a very complex issue," he said. "We've got to get it right."

A tornado moves through Tuscaloosa, Ala. Wednesday, April 27, 2011. Hundreds of Americans were killed by tornadoes in 2011 despite widespread warnings. (Photo: Dusty Compton, AP)

U.S. Top Court Skeptical Toward State Farm Hurricane Fraud Appeal

By Lawrence Hurley

State Farm, Whistleblowers Facing Off At U.S. Supreme Court

Chicago Tribune, November 1, 2016

Two whistleblowers from Ocean Springs, Miss., are headed to the U.S. Supreme Court Tuesday to defend the guilty verdict they won against State Farm Fire & Casualty Co. for defrauding the National Flood Insurance program after Hurricane Katrina.

The Supreme Court is set to hear oral arguments on State Farm's appeal Tuesday — 11 years and two months after the hurricane.

The court has agreed to consider one question in the case a federal jury decided in Gulfport: whether attorneys for the whistleblowers, Cori and Kerri Rigsby, violated federal law by disclosing the lawsuit to members of the media while it was under seal in 2006. A whistleblower lawsuit is sealed, so federal prosecutors have time to investigate the alleged government fraud and decide whether to undertake prosecution.

The Rigsbys, who worked as State Farm claims adjusters after Hurricane Katrina, proceeded with the case after the government decided against intervening. The sisters proved at trial in 2013 that State Farm charged policy limits of $250,000 to the federal flood program while minimizing wind losses the insurance company owed on the claim of Biloxians Thomas and Pamela McIntosh.

The case included an infamous sticky note in the McIntosh file, attached to an expert report blaming wind for the loss, that said, "'Put in Wind File. DO NOT Pay Bill. DO NOT discuss.'"

Ozerden ordered Bloomington-based State Farm to pay $750,000 in damages in the case, with the Rigsbys set to receive 15 percent. However, the Rigsbys have not been compensated for pursuing the claim because of the appeal.

The Supreme Court's decision to consider the case will not necessarily change the jury's verdict. If the question is resolved in State Farm's favor, an attorney for the Rigsbys has said, the court could allow the fraud verdict to stand or set it aside.

The federal trial judge and the 5th U.S. Circuit Court of Appeals found early disclosure had not harmed the case and also that the Rigsbys previous legal team, not the women, had leaked the lawsuit.

The 5th circuit also upheld the jury's verdict and directed the judge in the case, Sul Ozerden, to allow the Rigsbys to examine other State Farm claims for evidence of fraud. State Farm has denied any wrongdoing. The broader fraud investigation also has put on hold pending the appeal's outcome.

The Supreme Court calendar shows that New York attorney Kathleen M. Sullivan is set to argue the case for State Farm, while Tejinder Singh of Bethesda, Maryland, is the attorney for the Rigsbys. Both attorneys are experienced appellate practitioners.

Supreme Court Hears Last-ditch Appeal From State Farm In Katrina Case

By Lydia Wheeler

The Hill, November 1, 2016

The Supreme Court grappled Tuesday with whether to let State Farm off the hook for the more than $3 million it's been ordered to pay for fraudulently billing the government in the aftermath of Hurricane Katrina.

The company says a lawsuit that two contracted insurance adjusters filed against it on behalf of the government in 2006 should be dismissed because their attorney, who is no longer on the case, violated a court-ordered seal when he leaked case evidence to three media outlets.

Justice Stephen Breyer said it's a serious thing when someone deliberately breaks a court seal and delivers the contents of a lawsuit to the press.

But Tejinder Singh, the attorney for the two whistleblowers, argued that the information given to the media was not for attribution. He told the justices Tuesday that journalists have ethics and are not allowed to quote material that's been given to them on background.

If your goal is to tar and feather the defendant, Sighn said, you do that by leaking the lawsuit to the press, not by leaking evidence.

But Chief Justice John Roberts countered that the press could easily put two and two together and realize that a complaint has been filed.

Under the False Claims Act, whistleblowers can sue on behalf of the government and receive a portion of the damages awarded. But the act requires the lawsuit to be kept sealed from both the public and the defendant for at least 60 days to give the government time to decide if it wishes to intervene.

A lower court awarded the sisters who brought the lawsuit, Cori and Kerri Rigsby, a 30 percent share of the $7358,250 award against State Farm and $2.9 million in attorney's fees and expenses.

Justice Anthony Kennedy asked whether State Farm was seeking any other sanction other than dismissal.

The attorney for the company, Kathleen Sullivan, argued that dismissing the case is the only appropriate way to punish whistleblowers who violate a court ordered seal when suing on behalf of the government.

"If you affirm, you are sending a message to every relator in the country: Leak away," she said.

The Extreme Unwisdom Of Burning Forests For Fuel

By Jane Maslow Cohen And Cindy Morris

The Hill, November 1, 2016

A bipartisan coalition in the U.S. Congress is pressing hard to advance a dangerously destructive environmental policy. It would require the Environmental Protection Agency to define biomass—energy obtained from wood-- as a carbon-neutral, renewable fuel, like solar power and wind. The EPA and its Science Advisory Board are opposed. They should be.

The idea is to kindle a mass market in the incineration of forests to generate electricity. If it succeeds, biomass technologies will be eligible for new funding in the race inspired by the 2015 Paris Agreement toward carbon-neutral fuels. Representatives of forest-rich states seek to wedge their desired mandate into three major bills now pending before Congress. One, the North American Energy Security and Infrastructure Act, is up for reconciliation now: Only the Senate bill includes the provision.

If this move becomes national policy, it will displace decades of international efforts to reduce forest loss from the use of wood for fuel, inviting emulation world-wide. Biomass combustion has been a source of serious atmospheric pollution. It releases 150 percent more greenhouse gases per unit of electricity than coal; and 400 times more than natural gas. Forest-destruction generates a double loss: Forests are the earth's largest terrestrial carbon sinks. As policy analyst Mary S. Booth observes, "From the atmosphere's point of view, decreasing a carbon sink has the same effect as increasing pollution from another source."

Proponents claim that biomass combustion would be carbon-neutral: While forests' combustion would release their carbon dioxide stores, newly-planted trees would restore carbon sinks in a repeating cycle.

Opponents respond that the carbon sinks that new trees provide could not occupy the same time-frame as the atmospheric carbon that would be released. The lag is non-trivial: Saplings take 40 to 50 years to absorb the carbon released by mature trees, leaving their heat-trapping gases in the air. A study commissioned by Massachusetts caused the state to abandon biomass subsidies for this cause.

But the most pervasive mistake the biomass enticement represents is that it is framed by a carbon-centric mindset that ignores the essential relationship between forests and the hydrological and energy cycles. Forests are not merely convenient closets for carbon storage. An outpouring of international research has been discovering and validating the unique, irreplaceable influence of forests on the natural regulation of the earth's climate through their generation of the land-atmosphere circulation of water and their maintenance of the patterns that distribute solar energy, with coolant effects. Forests play these interdependent roles through the atmospheric transport of moisture across land masses at regional and continental scales; the evapotranspiration of vast quantities of water from the earth's surface to the lower atmospheric boundary layer, where liquid water is converted to rain and snow; the filtration and storage of moisture, which forests' diverse structures pull from the atmosphere and guide underground, thereby mitigating drought and moderating floods; and the modulation of solar energy, through the natural cooling systems that forests are.

Until forests' crucial roles in the generation of planetary well-being can be reliably handed off to other natural or humanly-designed agents, it will be dangerous-- and perverse beyond measure-- to destroy forest placement and function in the misguided production of yet another heat-trapping fuel. Because such a move by the United States would put the Paris Agreement at grave risk, it is hard to imagine a worse signal to send-- or a worse time to send it.

If need be, the President should veto any bill that would cripple the unique capabilities of forests, on which all life depends.

Jane Maslow Cohen is a law professor at the University of Texas at Austin. Cindy E. Morris is a senior scientist at the French National Agricultural Research Institute (INRA) in Avignon and an Affiliate Professor at Montana State University in Bozeman. Both belong to an international science network that studies the interaction of landscapes with atmospheric processes.

The views expressed by authors are their own and not the views of The Hill.

Small Earthquakes Recorded In New Hampshire On Halloween

Associated Press, November 1, 2016

MANCHESTER, N.H. (AP) – Seismologists say small earthquakes were recorded in the New Hampshire towns of Salisbury and Andover on Halloween.

The United States Geological Survey says a 1.8-magnitude earthquake was centered in Salisbury at 2:47 a.m. Monday.

At 2:58 a.m., a 1.6-magnitude earthquake was registered in Andover.

There were no reports of any damage or injuries.

Heads Up! How NASA's Super Fast New Asteroid Detector Works

NBC News, November 1, 2016

Earthlings, always trust a Scout to have your back.

NASA's new asteroid detector, a computer program aptly named Scout, is the celestial equivalent of the person who yells "heads up" as a baseball comes barreling toward the stands.

Scout is a computer program designed to detect Near Earth Objects that could be on track for impact with Earth in a matter of days or weeks.

Scout works by scanning data from NASA's network of telescopes and assessing the likelihood of a Near Earth Object's slamming into Earth. It's then able to have other telescopes around the world confirm its findings.

"We can get a heads-up immediately, within an hour of the data being reported," Paul Chodas, manager of NASA's Center for Near-Earth Object (NEO) Studies at the Jet Propulsion Laboratory in Pasadena, California, told NBC News. Cholas has been part of the team working on refining Scout over the past year.

A Near Earth Object is a comet or asteroid with an orbit that brings it within 30 million miles of Earth's orbit. NASA and its partners have a catalogue of around 15,000 Near Earth Objects that don't appear to pose threats to Earth any time soon.

Scout has already proven to be useful spotting the smaller objects as they near Earth. Chodas compared them to "a dot moving in the sky."

A Scout report issued Tuesday shows that a tiny rock will whiz by Earth on Wednesday at a distance of 58,500 miles. When it looked like an asteroid would make a close pass with Earth last weekend, Scout was able to determine that it would pass 310,000 miles away, giving Earth a roomy buffer zone.

Finding Threats Early

Scout also has a big brother, Sentry, which is designed to keep track of objects over the course of the century.

Kelly Fast, program manager for Near Earth Objects Observations at NASA, told NBC News that tools like Sentry and Scout are part of the first line of defense, allowing the space agency and its partners to "find them and keep track of them."

"The goal would be to have decades of lead time if there is something that could be a problem in the future," she said.

Anything larger than 30 to 50 meters could survive entering Earth's atmosphere and have the potential to inflict damage around its impact site, according to NASA.

Rob Landis, program executive for the Planetary Defense Coordination Office, told NBC News there's a mantra that sums up the work they do detecting Near Earth Objects: "Find them early."

"There is probably no greater gift that the space agencies of the world can provide humanity than to know the time and place of an impact event and to plan a response to it," he said.

Managing the Risk of an Impact

Whether it's decades or days, NASA has conducted a few simulations with the Federal Emergency Management Agency, Landis said, allowing them to outline how they would respond to a potential close call.

NASA has never needed to mitigate a threat from a Near Earth Object. However, the agency has a number of concepts in the works so it's ready if the need ever arises.

One of those is set to be demonstrated as part of the Asteroid Redirect Mission, which is slated for 2021. While the scope of the project is intended to test tech to be used on a future Mars mission, it will also demonstrate a key planetary defense method call the "gravity tractor."

After capturing a boulder from the surface of an asteroid, NASA hopes to use the spacecraft's gravitational force to slowly alter the rock's trajectory.

Another possibility is the kinetic impactor method, which would work by sending one or more large, high-speed spacecraft into the path of a Near Earth Object, with the goal of changing its path.

Still, NASA says decades or more may be needed to successfully deflect a potential thread from a large asteroid using the kinetic impactor method.

"It's like having a reasonable insurance policy," Landis said. "God forbid you ever have to use it, but you can plan ahead as best as one can."

Asteroid Warning System Found "City-Killer" Object Heading Toward Earth

By Andrew Follett

Daily Caller, November 1, 2016

NASA's new asteroid warning system detected a large "city-killer" asteroid hurtling toward Earth less than a week before it narrowly missed.

The rock, officially named 2016 UR36, was first detected Oct. 25 by a telescope in Hawaii and passed by Earth five days later. The asteroid missed by a distance of only 310,000 miles, around 1.3 times further away than the Moon. That's incredibly close in space terms.

2016 UR36 could be up to 82 feet across, roughly comparable in size to the meteor that exploded over Russia in February 2013, causing hundreds of injuries.

If 2016 UR36 had slammed into Earth, it would have struck with a force 55 times stronger than the atomic bomb that destroyed Hiroshima near the end of World War II. That's more than enough force to level a city.

NASA director Charles Bolden told reporters in 2013 that the only response to a such a late detection of an asteroid set to collide with Earth was to "Pray."

Global asteroid detection programs found more than 15,176 near-Earth objects of all sizes with 1,562 new near-Earth objects being identified this year alone, according to International Astronomical Union's Minor Planets Center. These newly discovered near-Earth objects are part of a much larger population of more than 700,000 known asteroids in our Solar System.

NASA and its European partners are now focused on finding objects that are 450 feet in diameter or larger, which could devastate a city or country if they struck Earth.

In the event an asteroid couldn't be prevented from hitting Earth, the Planetary Defense Coordination Office would work with Federal Emergency Management Agency (FEMA), the Department of Defense, and other federal agencies to coordinate disaster response.

The federal "omnibus" budget approved last month includes $50 million for near-earth object observations and planetary defense, up from just $4 million in 2010.

Four asteroids came uncomfortably close to Earth early last month, according to NASA's Asteroid and Comet Watch.

A different asteroid came disturbingly close to Earth in March, and was 16 times closer to Earth than the Moon. It actually passed closer to the world than many communications satellites. Though Earth is safe for now, NASA's Center for Near-Earth Object Studies identifies a 1-in-250-million chance the asteroid could impact Earth on Sept. 28, 2017.

NASA created the anti-asteroid Planetary Defense Coordination Office in January, to defend Earth from impacts that could potentially end humanity.

FEMA HOUSING

Berkeley Residents Approved For FEMA Assistance Following Hurricane Matthew

Goose Creek (SC) Gazette, November 1, 2016

Residents in Charleston and Berkeley counties who suffered significant damages to their property during Hurricane Matthew can apply for individual assistance through the Federal Emergency Management Agency.

Gov. Nikki Haley's office reported Tuesday that the two counties join 22 others that have been approved. Dorchester County was approved last week.

The federal program will provide money for temporary rental assistance, home repairs, low-cost loans and other needs.

Survivors can register at www.disasterassistance.gov or by calling 800-621-3362. The toll-free numbers will operate every day from 7 a.m. to 10 p.m. until further notice.

FEMA Offers Help To Renters

Walterboro (SC) Press and Standard, November 1, 2016

With so much attention given to businesses and homeowners, survivors who are renters may think they are not eligible for disaster assistance even though they suffered losses from the storms and floods spawned by Hurricane Matthew. But they are.

Like homeowners, renters must first register with the Federal Emergency Management Agency (FEMA):

Go online to DisasterAssistance.gov. Call toll-free 800-621-3362 (711, voice or video relay services) or 800-462-7585 (TTY). Lines are open daily from 7 a.m. to 10 p.m. until further notice.

Visit one of the nine Disaster Recovery Centers (DRCs) operating in Beaufort, Dorchester, Florence, Horry, Marion, Orangeburg and Williamsburg counties. Find the DRC closest to you at "Quick Links" on DisasterAssistance.gov. Representatives from FEMA, the U.S. Small Business Administration and various state agencies are on hand to answer questions.

Registering with FEMA is the first step toward qualifying for disaster assistance, which may include grants to help renters and homeowners pay for temporary housing, personal property replacements and other serious disaster-related needs not covered by insurance.

After registering with FEMA, renters may also be eligible for low-interest loans from the U.S. Small Business Administration (SBA). SBA offers such loans to businesses of all sizes, private non-profit organizations, and homeowners as well as renters. SBA loans to renters may cover the cost of repairing or replacing lost or disaster-damaged personal property.

For more information on SBA loans, call SBA's Disaster Assistance Customer Service Center at 800 659-2955 or 800 877-8339 for TTY; email disastercustomerservice@sba.gov or visit http://www.sba.gov/disaster. Applicants may also apply online at https://disasterloan.sba.gov/ela for the Electronic Loan Application on SBA's secure website.

More Than 15,000 Claims Made To FEMA

By Bob Shiles

Robesonian (NC), November 1, 2016

.LUMBERTON — The Robeson County Board of Commissioners was told Monday night that more than 15,000 claims totaling have been made to FEMA by people who have suffered damage to Hurricane Matthew, and that number is growing.

The commissioners met with representatives of FEMA and other government agencies providing recovery assistance to discuss what the county's role should be in helping residents and businesses rebound from destruction resulting from Hurricane Matthew.

"We need to get everyone on the same page," Jerry Stephens, chairman of the county board, said during Monday's special meeting of the commissioners and federal and state agencies. "Every one has their own regulations and requirements. I'd like to see us develop some way to track the progress that we all are making."

Stephens requested that county officials be given updates from agencies as they move forward with efforts to help those who lost their homes and personal property and need assistance to get back on their feet.

In addition to FEMA, those present at Monday's meeting included representatives of such agencies as the U.S. Small Business Administration, the U.S. Department of Housing and Urban Development, the Lumberton Housing Authority, and state emergency management officials. All agreed that disaster recovery in Robeson County is going to take years.

Jan Stout, a FEMA spokesperson, told the commissioners that there are 587 Robeson County families temporarily being sheltered in hotels and other temporary accommodations. She said that 15,361 individuals have registered with FEMA to receive some kind of financial and housing assistance totaling $16 million in claims.

FEMA and the Small Business Association have set up at one-stop shop at the former Kmart building on Roberts Avenue in Lumberton. Those who believe they have a claim to make can file it there.

The commissioners listened to presentations by the different agencies outlining what they hope to accomplish in both the short- and long-term recovery processes.

Commissioners David Edge and Roger Oxendine told the FEMA representatives that they are hearing complaints about how FEMA determines eligibility for long-term and short-term housing.

Stout said every claim is addressed individually and every letter explaining ineligibility needs to be read carefully. Ineligibility can be for numerous things, including a wrong Social Security number listed on the individual's registration, she said.

Tract Aupperlee, individual assistance branch director for FEMA, said that eligibility for assistance from her agency is currently running at 40 percent. She said that a single household potentially could receive up to $33,300 in FEMA assistance.

Commissioner Tom Taylor said that small business owners like himself are not receiving assistance that they deserve.

"We're not getting help," he said. "We had money lost because people are not spending."

Tamara Jackson, with the U.S. Small Business Administration, told Taylor that her agency provides loans to businesses of 4 percent. Loans are also available for qualifying individual homeowners and renters for as low as 1.563 percent, she said.

"Four percent is not helping us as small businesses," Taylor said. "We can do better than that at a bank."

Stephens told Taylor that the county's first priority needs to be addressing issues related to residents who have been displaced from their homes.

"I'm more concerned with the folks in the hotels and their mental state," he said. "I don't want to focus first on those who just lost money."

Ed Ellis, the leader of the HUD team working to getting displaced families in public housing back in their homes, said his agency is working closely with local public housing providers to get public housing available as soon as possible. He also said his agency is working closely with those disaster survivors from public housing to meet their housing needs.

Ellis said that those individuals living in public housing should contact their individual providers or HUD so that it can be determined how their needs can best be addressed.

Those who choose to contact HUD should call the agency's field office in Greensboro at 336-547-4000, said Ellis.

Larry Russell, executive director of the Lumberton Housing Authority, said that 375 of the authority's 729 apartments, located in five locations throughout the city, suffered damage during the hurricane.

FEMA Struggles To Find Housing For Hurricane Matthew Victims

WRAL-TV Raleigh (NC), November 1, 2016

Goldsboro, N.C. — Three weeks after Hurricane Matthew tore through North Carolina, three shelters remain open, including one in Goldsboro.

As of Tuesday, about 250 people remained in shelters across the state following the storm, according to FEMA.

Teresa King and her 17-year-old son have been staying at the School Street Learning Center for three weeks.

"All of us who are still here really want to get out of here," she said. "I can't take it no more. It's just too much."

A FEMA representative came by Tuesday to help King and the others who have called the shelter home since Matthew, but a manager said it has not been easy finding housing.

Deborah Roberson, her husband and brother have been living in a shelter since the flood waters destroyed their home. The family was renting the home and did not have flood insurance. They lost everything.

This week, Roberson and her family finally found a new place to rent.

"FEMA gave me some money so it's alright though. I'm going to find me somewhere to stay so it's alright," she said.

Officials were working through different options in an effort to house the remaining families as soon as possible. Mobile homes could possibly be brought in to help.

Brunswick County Now Eligible For FEMA Assistance

WECT-TV Wilmington (NC), November 1, 2016

NEW HANOVER COUNTY, NC (WECT) –

Brunswick County was added to the list of counties available for FEMA assistance in southeastern North Carolina on Tuesday.

Residents living in Pender, Columbus, and Bladen counties were already elligible for FEMA assistance

New Hanover and Brunswick counties are designated to receive public assistance for things such as damage to roads and bridges. Those with flooding damage in counties not named can still register with FEMA.

Disaster assistance for homeowners from FEMA may include grants to help pay for temporary housing, essential home repairs, and uninsured and under-insured personal property losses.

Debra Young joined WECT's First at Four on Monday to explain how FEMA could help residents.

Businesses of all sizes can obtain a low-interest disaster loan from the U.S Small Business Administration.

In order to apply for federal disaster assistance you can register online, by phone at 800-621-3362, or apply via the FEMA app which you can download on your mobile device. Make sure to have your social security number, address of the damaged residents along with a description of the damage, information about insurance coverage, a current telephone number, a mailing address and a bank account along with routing numbers for direct deposit of funds.

After registering, if there is house damage, you may receive a call from a FEMA inspector who will make an appointment to come to your home and inspect the damage. FEMA does not charge for any service whether it is the inspection or help filling out your application. They also do not endorse any commercial businesses, products or services. There is no such thing as a FEMA contractor. If you suspect fraud, call the North Carolina consumer hotline at 877-566-7226. FEMA employees wear an official identification badge, so make sure to ask to see it.

Once the inspection is complete you will receive a determination letter from FEMA. Be sure to read the letter in its entirety. Some people do not immediately qualify for help and the letter will tell you the reason. It may just mean that you are missing one of the required pieces of information.

Even if you had minor damage or losses be sure to register. Many times structural and other types of home damage do not show up until months after the event.

FEMA Opening Center Downtown To Process Hurricane Matthew Claims

By David Chapman

Jacksonville (FL) Daily Record, November 1, 2016

Duval County residents quickly responded after being made eligible last week for post-Hurricane Matthew federal assistance.

Of the 33,000 people in Florida who have registered with the Federal Emergency Management Agency, almost 3,400 were from Duval County.

It's an "impressive" start, said retired Gen. Montague Whitfield, a local liaison with the federal agency.

Starting today, that local number could swell even larger.

The agency is opening its first Duval County Disaster Recovery Center with experts available to assist residents and register them for financial help, if they're eligible.

The center is open 9 a.m.-6 p.m. Monday-Saturday at the Prime Osborn Convention Center.

Winfield told the City Council Neighborhoods, Community Investments and Services Committee on Monday that additional centers could open later.

Experts at the center are not available on the agency's website or over the telephone.

Possible financial assistance is available to residents who are uninsured or underinsured. Those with the proper level of insurance are not eligible for FEMA assistance.

"We will be here until the job is completed," Winfield told the committee.

"Completed" in this instance is when it's deemed all citizens in a disaster-declared area have been reached.

Winfield told the group flooding often is a common issue, but it depends on the level of severity.

Major damage might mean flood water has reached a dwelling's subfloor.

Other major damage might be a tree through a roof. Even food spoilage at a business or employer that impacts an ability to work could merit assistance.

FEMA grants will help homeowners and renters pay for those types of repairs, temporary housing or replacing personal property.

Additionally, the U.S. Small Business Administration is offering low-interest loans to all businesses hindered by the storm.

Prior to today's center opening, FEMA officials were going door-to-door in impacted areas to help residents register.

People also have been calling in or using the agency's website, disasterassistance.gov.

As of Monday afternoon, there was $12.5 million in total individual and household program funding approved for Hurricane Matthew-impacted areas. To date, 4,212 applications have been approved.

As for the city's application, the expanded declaration also made harder-hit area infrastructure — like the Jacksonville Beach public pier and Huguenot Memorial Park — a possibility for funding.

Deadline Approaching For FEMA Assistance From August Floods

WGNO-TV New Orleans, November 1, 2016

NEW ORLEANS (WGNO) – Louisiana residents affected by the widespread flooding in August have two weeks left to file for assistance.

The cutoff for all Federal Emergency Management Agency assistance is November 14.

Assistance ranges from grants to cover rent to temporary housing, home repair, medical and dental expenses, and even funeral and burial costs.

Disaster assistance submissions go to the U.S. Small Business Administration, which handles the loans.

Anyone displaced or affected by the flooding can register with FEMA online at disasterassistance.gov, by phone at (800) 621-3362, or through the FEMA app.

You can also register for assistance at any FEMA disaster recovery center. To find a disaster recovery center near you, call the FEMA helpline or text DRC and your zip code to 43362.

For more information, contact SBA's Disaster Assistance Customer Service Center at (800) 659-2955, disastercustomerservice@sba.gov, or SBA.gov/disaster.

NFIP AND FLOOD MAPS

Mohave County To Receive FEMA Grant Funding

By David Louis

Havasu (AZ) News-Herald, November 2, 2016

As part of its ongoing efforts to update floodplain and risk maps throughout Mohave County, the flood control district plans to put $650,000 in Federal Emergency Management Agency grant funding to use.

The FEMA Cooperating Technical Partner grant will be presented as a consent agenda item during Monday's Mohave County Board of Supervisors meeting.

Through this grant funding a new risk analysis and mapping will be conducted in Lake Havasu City in the coming months. Similar projects also will benefit the cities of Kingman and Bullhead City.

In these fiscally challenging times, the FEMA grant – with a 25 percent matching grant split – will give the county a big bang for the $215,000 it will spend, said Nick Hont, chief engineer for Mohave County flood control district, and director of development services.

"Lake Havasu definitely has risks and the hydrologic studies were done way back in the '60s when they built the levies that protect the city," Hont said. "I am very proud of this program. I believe we are the only county in Arizona that gets this funding almost consistently every year."

The CTP program is designed to improve the floodplain mapping, as well as to create risk map that pinpoints areas that need to be addressed, said Shannon Summers, floodplain programs manager.

"This is intended to help communities update their floodplain maps or identify risks and potential solutions," Summers added. "Projects that could fall under this grant include a flood warning plan, a master drainage plan or just finding out where the water goes."

The CTP grant helps identify problem areas that other grant money can be used to correct.

With more than 20,000 communities in the National Flood Insurance Program, there is a significant challenge keeping flood hazard maps current.

The CTP Program is an innovative approach to creating partnerships between FEMA and participating NFIP communities, regional agencies, state agencies, tribes and universities that have the interest and capability to become more active participants in the FEMA flood hazard mapping program.

"This is a very powerful tool that we started using in 2010 when we received $350,000 to do floodplain mapping in Fort Mohave, north Lake Havasu and Golden Valley areas," Summers said.

The result of the mapping removed more than 2,400 parcels from FEMA high hazard area designation.

"The maps here had been fairly rough," Summers said. "They hadn't been looked at by FEMA for a long time – some of them were as old as 1980. We've been working really hard in the past six years to completely overhaul our mapping system and make sure they are all accurate and the residents are getting a fair assessment of their risks."

Not only is flooding one of the most common and costly disasters, flood risk also can change over time because of new development, weather patterns and other factors. FEMA is working with federal, state, tribal and local partners across the nation to identify flood risk and help reduce that risk.

In late 2014, Mohave County started incorporating the cities into the CTP grant application.

"There are a lot of benefits to this grant program," Summers said. "For the cities of Kingman and Bullhead they received LIDAR mapping at one foot intervals that was paid for through the CTP grant, which provided updated topographic data for their entire city. Not only can they use this data for hydrologic analysis – finding problem areas and solutions – but land developers can use the information to make good decision about future development."

In 2015, FEMA embarked on a multi-year project to update floodplain risk maps throughout the nation.

The FEMA Risk Mapping, Assessment and Planning — or Risk MAP program — helps communities such as Lake Havasu identify areas of potential flooding and provides information to enhance mitigation efforts.

County Approves Flood Report

Lebanon (TN) Democrat, November 1, 2016

As a part of the Federal Emergency Management Agency's Community Rating System program, the Wilson County/Watertown floodplain administrator must make an annual report of activities that were undertaken to fulfill the requirements of the federal CRS program.

The report was presented to and accepted by the Wilson County Commission on Oct. 18. Watertown's annual report was presented to and accepted by the Watertown City Council on Oct. 11.

Wilson County has maintained membership in FEMA's Community Rating System program since 2013.

The program rewards local communities for continued compliance with their locally adopted flood management prevention programs and for adopting heightened regulatory, record keeping, outreach and mitigation efforts regarding flood hazard in their communities.

CRS is a voluntary program for NFIP-participating communities. The intended goals of the program are to reduce flood losses, facilitate accurate insurance ratings and to promote the awareness of flood insurance. For more information on the NFIP's CRS program, visit fema.gov/business/nfip/crs.shtm. For more information about the NFIP, a program administered by the Federal Emergency Management Agency, visit floodsmart.gov.

Wilson County has participated in the National Flood Insurance Program since Aug. 27, 1975 in the emergency program and since June 15, 1984 in the regular program, making flood insurance available to its citizens and property owners. Since entering the NFIP, FEMA has witnessed Wilson County make increased strides in the administration and enforcement of its floodplain management program. The results of these efforts have been a safer, more disaster-resistant community.

As a part of the program, Wilson County is required to maintain and update a locally approved Flood Damage Prevention Resolution and Program. The Wilson County Flood Damage Prevention Resolution, or "Floodplain and Floodplain Management Ordinance" as it is commonly referred to, is maintained within the context of the Wilson County zoning resolution. The flood damage prevention resolution was last updated May 18, 2009.

The CRS program positively affects the flood insurance rates for 548 policy holders in unincorporated portions of Wilson County and an additional 13 within the city of Watertown as a result of their like enrollment.

For a complete copy of either report, contact the Wilson County Planning Office at 228 E. Main St. in Lebanon or Watertown City Hall at 8630 Sparta Pike in Watertown.

Wilson County planning director Tom Brashear may be reached at the Wilson County Courthouse in room 5 or at 615-449-2836.

MITIGATION

President Signs Iowa Disaster Declaration To Make Aid Available

Cedar Rapids (IA) Gazette, November 1, 2016

President Barack Obama has declared a major disaster exists in Linn County and 18 other Iowa counties and has ordered federal aid to supplement state and local recovery efforts in the area affected by severe storms and flooding during the period of Sept. 21 to Oct. 3.

Federal funding is available to state and eligible local governments and certain private non-profit organizations on a cost-sharing basis for emergency work and the repair or replacement of facilities damaged by the severe storms and flooding.

The presidential declaration applies to the counties of Allamakee, Benton, Black Hawk, Bremer, Buchanan, Butler, Cerro Gordo, Chickasaw, Clayton, Delaware, Des Moines, Fayette, Floyd, Franklin, Howard, Linn, Mitchell, Winneshiek, and Wright.

Federal funding is also available on a cost-sharing basis for hazard mitigation measures statewide.

FEMA said additional designations may be made at a later date if requested by the state and warranted by the results of further damage assessments.

UPDATE: Obama Declares Federal Disaster For NE Iowa

By Pat Kinney

Waterloo-Cedar Falls (IA) Courier, November 1, 2016

CEDAR FALLS — A federal flood disaster declaration is good news for local governments in 19 Iowa counties but does little to help as many as 700 homeowners and businesses in Black Hawk and Butler counties damaged by flooding, local officials said Tuesday.

President Obama designated 19 Iowa counties as eligible for federal assistance to address least $22 million in damage from flooding in late September and early October.

The assistance will help local governments with damage to public facilities and cleanup, not individual property owners. That may leave some home and business owners in a lurch.

"When we applied for this presidential declaration we knew we were not going to get individual assistance. We just didn't have the numbers," said Mitch Nordmeyer, Butler County emergency management coordinator. About nine of the 19 counties unsuccessfully tried to get individual assistance.

The fall flood was nearly as bad as 2008 in Butler County, Nordmeyer said. Butler County had 521 private properties affected, from minimal damage to homes that were destroyed. Most were in Clarksville, Greene and Shell Rock. About 79 of those were rated as being in the "major damage" to "destroyed" category, below the federal threshold for individual assistance.

"It's going to be a big deal here. We're working a number of angles with the state of Iowa to figure out ways to help people with unmet needs. ... It's a slow process," Nordmeyer said.

Cedar Falls officials estimated estimated about 165 properties in that city sustained some kind of flood damage — about 60 percent of some 270 properties the city inspected. Those properties are in the flood-prone northern part of the city, many of them in the North Cedar area.

"This was a little bittersweet," Mayor Jim Brown said of the disaster declaration. "The city's getting reimbursed for its expenses, but nothing we saw related to the folks affected in northern Cedar Falls." Like Butler County, Brown said Cedar Falls officials are looking at all avenues to help affected individual residents and businesses.

One avenue Nordmeyer and Cedar Falls officials mentioned is a Federal Emergency Management Agency grant program that allows for acquisition, relocation or elevation of buildings in a flood area. Grant requests would be reviewed on a case-by-case basis and depend on funds available.

Black Hawk and Butler counties had the second- and third-largest losses of the $22 million in damage incurred by public entities in the 19 counties. Black Hawk had $3.4 million damage and Butler $1.6 million. Linn County had the most at $12.4 million.

U.S. Sen. Charles Grassley's office also noted individual home and business owners may apply for low-interest loans through the U.S. Small Business Administration. Call Grassley's Waterloo office at 232-6657 with any concerns or questions.

Waterloo had the largest amount, at $1.9 million, of the $3.4 million in flood damage in Black Hawk County.

"Our early estimates are $840,000 for emergency protective measures and debris removal and approximately $1 million in repairs needed to streets, city parks and trails," Waterloo chief financial officer Michelle Weidner said.

Cedar Falls incurred nearly $900,000 including sandbagging and installing Hesco barriers on the Cedar River flood control levee.

Mayor Brown said city officials met with U.S. Sen. Joni Ernst's office for assistance in expediting federal U.S. Army Corps of Engineers approval of a plan to raise the downtown levee by three feet. Grassley already has written a letter to Corps officials requesting expedited approval since the city secured funding though the state two years ago.

Counties included in the presidential disaster declaration Allamakee, Benton, Black Hawk, Bremer, Buchanan, Butler, Cerro Gordo, Chickasaw, Clayton, Delaware, Des Moines, Fayette, Floyd, Franklin, Howard, Linn, Mitchell, Winneshiek and Wright counties.

Benton County Part Of Federal Disaster Aid Declaration

Iowa City (IA) Press-Citizen, November 1, 2016

Benton County is among 19 in Iowa that were declared eligible for federal disaster aid, the Federal Emergency Management Agency announced Tuesday, Nov. 1.

The aid will supplement state and local recovery efforts in the area affected by severe storms and flooding during the period of Sept. 21 to Oct. 3. More than 10 inches of rain fell in those storms, in some instances coming in a few short hours. Vinton, Benton County's seat, was among the hardest-hit areas.

The President's action makes federal funding available to state and eligible local governments and certain private nonprofit organizations on a cost-sharing basis for emergency work and the repair or replacement of facilities damaged by severe storms and flooding.

Also part of the disaster declaration were Allamakee, Black Hawk, Bremer, Buchanan, Butler, Cerro Gordo, Chickasaw, Clayton, Delaware, Des Moines, Fayette, Floyd, Franklin, Howard, Linn, Mitchell, Winneshiek, and Wright counties.

Federal funding is also available on a cost-sharing basis for hazard mitigation measures statewide.

James N. Russo has been named as the Federal Coordinating Officer for federal recovery operations in the affected area. Russo said that additional designations may be made at a later date if requested by the state and warranted by the results of further damage assessments.

Haley To Visit Conway For Hurricane Matthew, Flood Relief Event

South Strand News (SC), November 1, 2016

Gov. Nikki Haley will visit Conway this week as part of a statewide tour promoting assistance and relief for survivors of Hurricane Matthew and the flooding of the Waccamaw River that followed.

On Friday, Nov. 4, Haley will arrive in Conway as part of the Team South Carolina Hurricane Matthew relief event, scheduled to take place between 11 a.m. and 3 p.m. at the Conway Recreation Center, 1515 Mill Pond Road.

Haley will be joined by other state and federal officials to help those residents affected by the storm and the subsequent flood. Residents will be able to register for financial assistance from the Federal Emergency Management Agency, apply for disaster assistance loans with the U.S. Small Business Administration, apply for food and financial assistance with the S.C. Department of Social Services, discuss insurance options with the S.C. Department of Insurance, learn about unemployment options through the S.C. Department of Employment and Workforce, and receive free well water testing kits and tetanus shots from the S.C. Department of Health and Environmental Control.

Governor Nikki Haley will visit Conway on Friday, November 4, for a Team South Carolina Hurricane Matthew relief event. Team South Carolina Waccamaw River Day will serve residents impacted by the storm from Horry and Georgetown counties and will be held from 11:00 AM – 3:00 PM at the City of Conway Recreation Center.

For those impacted by river flooding in the Waccamaw River area caused by Hurricane Matthew, the Team South Carolina event will serve as a one-stop where residents can find out about resources available to families and businesses to aid recovery. Team South Carolina events bring together representatives from state and federal agencies and non-profit organizations to assist those in need in the wake flooding and other destruction caused by Hurricane Matthew.

At the Team South Carolina Waccamaw River Day residents can:

Register for financial assistance from FEMA

Apply for disaster loans from the U.S. Small Business Administration

Learn more about repairing and flood proofing their home from FEMA

Get information about assistance for farmers with crop losses or damage from the U.S. Department of Agriculture Farm Service Agency

Apply for unemployment benefits from the S.C. Department of Employment and Workforce

Apply for food and financial assistance from the S.C. Department of Social Services

Get information about mental health and other healthcare services from the S.C. Department of Mental Health and the S.C. Department of Health and Human Services

Get help with insurance claims from the S.C. Department of Insurance

Receive a free kit to test well water from the S.C. Department of Health and Environmental Control

Receive a free tetanus shot from the S.C. Department of Health and Environmental Control

WHO: Gov. Nikki Haley, state and federal officials, and non-profit organizations

WHAT: Team South Carolina Waccamaw River Day

WHEN: Friday, November 4, 11:00 AM – 3:00 PM

WHERE: City of Conway Recreation Center, 1515 Mill Pond Road, Conway, SC 29527

Fort Worth Considers Buying Flood-Prone Homes

KTVT-TV Dallas, November 1, 2016

FORT WORTH (CBSDFW.COM) – The City of Fort Worth is looking into purchasing a number of homes that are prone to flash flooding. The idea is to turn those properties into green spaces, maintained by the city and designed to allow floodwaters to flow through them without causing serious damage or injury.

The houses are all located in the Arlington Heights area, near the intersection of Interstate-30 and Hulen Street, southwest of the Fort Worth Cultural District. There are at least 30 homes that might be eligible for the program. Those flood-prone homes would be purchased and then promptly demolished.

According to city press secretary Cheraya Pena, the Arlington Heights neighborhood was built upon a creek bed half a century ago, and flooding has been a major problem for its homeowners. Those residents have been dealing with high water for years, and city officials have spent just as long searching for a solution.

Millions of dollars were spent on drainage improvements that should have eased the flooding concerns. And yet, just this past June, people found themselves under four feet of water. “It did not work,” resident Karen Abrams said over the summer. “It is rapid and rolling through backyards and driveways.”

“They need to get this crap fixed,” Abrams continued. “Period.”

At the time, Fort Worth city council member Dennis Shingleton explained that the drainage repairs were only designed to stop flooding during normal rains, and that no fix was available for torrential downpours. “When you get 3.7 inches of rain in one hour, very difficult to plan for that,” he said.

The idea of the city buying these high-value homes, tearing them down and repurposing the property was discussed back then too, with a decision on this matter fast approaching.

Money for purchasing the homes would come from FEMA grants. The Fort Worth City Council will decide on November 15 if they should apply to receive this financial assistance. Pena explained that other options are being explored by officials as well, however, she did not offer further details.

A similar plan was discussed eight years ago, but residents at the time refused to sell. According to the proposed plan, only the homeowners who choose to accept the offer will be included in the program. City officials will not force any residents to vacate their homes.

There has already been some debate between neighbors, with opinions coming from both sides. A number of homeowners are happy to see the city take action, but others are worried about what it would mean for the overall look of the Arlington Heights neighborhood.

NEWS AROUND THE COUNTRY

HURRICANE RECOVERY

Disaster Unemployment Assistance, Legal Aid Extended To Nassau

Fernandina Beach (FL) News-Leader, November 1, 2016

Gov. Rick Scott announced Friday that the federal government has expanded Disaster Unemployment

Assistance for residents of Nassau and Seminole counties who have lost jobs as a result of severe storms and flooding during Hurricane Matthew, according to a news release.

In a separate announcement Tuesday, the Federal Emergency Management Agency said free legal aid is available for eligible low-income survivors in the 17 counties affected by both hurricanes Hermine and Matthew, including Nassau County.

On Oct. 17, the federal government approved a limited part of Scott's request for a major disaster declaration for Flagler, St. Johns, Volusia and Putnam counties, allowing the use of Disaster Unemployment Assistance funds for individuals affected by the storm. The declaration has since been expanded to include Brevard, Indian River, Duval, Nassau and Seminole counties.

Federal Disaster Unemployment Assistance, administered by the Florida Department of Economic Opportunity, assists individuals who become unemployed as a direct result of a federally declared disaster and who do not qualify for regular re-employment assistance benefits. The program also covers self-employed individuals, owners of farms and ranches, farm and ranch workers, as well as fishers and others who are not normally covered by state re-employment assistance benefits.

The deadline for Disaster Unemployment applications varies by county:

- Nov. 18: Flagler, St. John, Volusia and Putnam
- Nov. 21: Indian River and Brevard
- Nov. 23: Duval
- Nov. 28: Nassau and Seminole

Applicants must be legal U.S. residents and must have been working in or residing in the counties listed above. The individual must:

- Have become unemployed as a direct result of the disaster;
- Be unable to reach the place of employment as a direct result of the disaster;
- Have been scheduled to begin work and does not have a job or is unable to reach the job as a direct result of the disaster;
- Have become the major support for a household because the head of the household has died as a direct result of the disaster; or
- Be unable to work because of an injury caused directly by the disaster.

To file a Disaster Unemployment claim, call (800) 681-8102 or go to https://connect.myflorida.com/Claimant/Core/Login.ASPX.

Legal assistance

Free legal assistance is available to eligible low-income survivors in the 17 counties affected by hurricanes Hermine and Matthew, including Nassau County, according to a FEMA news release.

This service is a partnership among The Florida Bar, The Florida Bar Young Lawyers Division and FEMA. Examples of the legal assistance available include:

- Assistance with securing FEMA and other benefits available to disaster survivors;
- Assistance with life, medical and property insurance claims;
- Help with home repair contracts and contractors;
- Replacement of wills and other important legal documents destroyed in the disaster;
- Assistance with consumer protection matters, remedies and procedures;
- Counseling on mortgage-foreclosure problems;
- Counseling on landlord/tenant problems.

Survivors may call the legal assistance hotline at (866) 550-2929, 24 hours a day, seven days a week.

Those who qualify for assistance will be matched with Florida lawyers who have volunteered to provide free, limited legal help. Although consultations with attorneys are confidential, survivors should be aware that there are some limitations on disaster legal services.

For example, assistance is not available for cases that will produce a fee (i.e., those cases where fees are paid as part of the settlement by the court). Such cases are passed to a lawyer referral service.

Other entities providing free legal aid are:

- National Disaster Legal Aid Online (DisasterLegalAid.org);
- Community Legal Services of Mid-Florida Inc. (800-405-1417);
- Three Rivers Legal Services Inc. (1-866-256-8091).

For more information on Florida's disaster recovery visit fema.gov/disaster/4280, fema.gov/disaster/4283, twitter.com/femaregion4, facebook.com/FEMA, and fema.gov/blog, floridadisaster.org or #FLRecovers. For imagery, video, graphics and releases, see fema.gov/Hurricane-Matthew.

Free Legal Help Available For Low-Income Survivors Of Hurricanes Matthew, Hermine

By Jessica Palombo

WJCT-FM Jacksonville (FL), November 1, 2016

Free legal assistance is available to eligible low-income survivors affected by hurricanes Hermine and Matthew, provided by the Florida Bar and FEMA.

In Northeast Florida, the counties where it's offered are Duval, Flagler, Nassau, Putnam, St. Johns and Volusia.

People affected by the hurricanes can get free:

Assistance with FEMA benefits;

Assistance with life-, medical- and property-insurance claims;

Help with home-repair contracts;

Replacement of wills and other important legal documents destroyed in the disaster;

Counseling on mortgage-foreclosure problems or landlord/tenant problems.

Hurricane survivors may call the Florida Bar's legal assistance hotline at 866-550-2929 24 hours a day, seven days a week. Those who qualify will be matched with Florida lawyers who have volunteered to provide free, limited legal help.

SBA Representatives In Vass Through Thursday

By Laura Douglass

Southern Pines (NC) Pilot, November 1, 2016

Representatives with the U.S. Small Business Administration are working in Moore County this week – alongside FEMA's efforts – to provide information about low interest federal disaster assistance loans to businesses and homeowners impacted by Hurricane Matthew.

FEMA has established a Disaster Recovery Center at the Crain's Creek Volunteer Fire Department at 4525 Lobelia Road. Hours of operation will be Monday – Saturday, Nov. 5, from 10 a.m. to 7 p.m. SBA representatives are at the same location, Tuesday – Thursday only.

Small businesses, nonprofit organizations, and homeowners or renters may apply for low interest SBA Economic Injury Disaster Loans. Businesses can apply for loans to repair or replace real estate, machinery, equipment, inventory, and other business assets. Homeowners can apply for up to $200,00 to repair or replace disaster damaged real estate; and homeowners and renters can apply for up to $40,000 to repair or replace damaged personal property, including automobiles.

Interest rates are as low as 4 percent for businesses, 2.6 percent for private nonprofit organizations, and 1.5 percent for homeowners and renters, with terms up to 30 years. The SBA customizes loan amounts and terms based on each applicant's circumstances.

"Some homeowners and renters may receive a SBA application when they seek aid from FEMA. These are low interest loans but there is no obligation to accept them. But, depending on circumstances, completing the paperwork may be essential to continuing the federal disaster process," said Tamara Jackson, a SBA public affairs specialist. "We want to let people know we are here and can answer any questions they may have."

Visit the Disaster Recovery Center for more information. Online loan applications are available through SBA's secure website at https://disasterloan.sba.gov/ela, or call SBA Customer Service Center at (800) 659-2955.

City Of Charleston: 46,000 Cubic Yards Of Debris Removed Since Hurricane Matthew

WCSC-TV Charleston (SC), November 1, 2016

CHARLESTON, SC (WCSC) –

In an update Tuesday, the city of Charleston reported that 46,645 cubic yards of FEMA-measurable debris were collected in the city over the last three weeks in the aftermath of Hurricane Matthew.

"Though there's still much to do, we're proud that our hard-working city employees and staff have so far been able to match the standard of excellence set by the city of Charleston in previous hurricane recoveries," Mayor John Tecklenburg said. "And our task moving forward is clear – it's to keep moving faster, to keep bringing more resources to bear, until this job is done and our streets and neighborhoods are even cleaner and clearer than they were before the storm."

The city also announced that \ it is working with the FEMA-certified contractor to add more local debris-removal subcontractors.

"With almost fifty percent more debris than we saw after Hurricane Floyd in 1999, this a big job, and we need to have all hands on deck," Tecklenburg said. "We are grateful for the tremendous efforts of everyone who's worked so hard up to this point, and we appreciate the willingness of our local small businesses to add their resources to the effort. Even more, we're grateful to our citizens, who've done so much over the past few weeks to assist with the cleanup, and whose patience and understanding throughout this process has been so remarkable."

FEMA Disaster Recovery Center To Open In Georgetown Tuesday

WCSC-TV Charleston (SC), November 1, 2016

GEORGETOWN, SC (WCSC) –

FEMA will open a disaster recovery center in Georgetown County Tuesday.

According to a statement from Georgetown County, the center is slated to open at 1 p.m. at the Beck Recreation Center, 2030 Church St. in Georgetown.

Going forward, the center will be open from 9 a.m. to 7 p.m. on weekdays and 10 a.m. to 6 p.m. on Saturdays, according to a county official.

There, residents affected by Hurricane Matthew and related flooding can meet with FEMA representatives and get information on how to apply for aid.

Georgetown Gets A FEMA Disaster Recovery Center

By Gabrielle Ware

WBTW-TV Florence-Myrtle Beach (SC), November 1, 2016

GEORGETOWN, SC (WBTW) – A FEMA disaster center is now open in Georgetown County. The center is a one stop shop for victims of Hurricane Matthew.

Tuesday officials cleared up some confusion about FEMA assistance.

Many people are referred to the Small Business Administration after registering for FEMA automatically, even if they don't want a loan. But FEMA officials say that's all part of the process.

When that happens you must go through the process or you won't receive assistance.

Renee Bafalis is a FEMA representative and said, "that is just a process you must go through. You may not think you want a loan through SBA but it's very possible that if you go through the process you may not be eligible for the loan."

If you aren't eligible for SBA then you get bounced back to FEMA to see if you qualify for grant assistance. But if you don't go through SBA that stops the whole process.

FEMA is also encouraging renters to stop by. Home and business owners are not the only people who can get help.

"Renters also have the same eligibility as a home owner, Bafalis said. "But it's not for their domicile it's actually for their personal property damages that they may have."

And you don't have to do anything differently to apply.

"Same process… same process, anyone that may be out of their home because of the storm has the same rights, homeowner or renter.

SBA also offers loans to both home and renters at lower than average interest rates.

So far 1,052 people have registered for FEMA assistance in Georgetown County.

FEMA Disaster Recovery Center To Open In Whiteville

WECT-TV Wilmington (NC), November 1, 2016

COLUMBUS COUNTY, NC (WECT) –

Columbus County residents who suffered losses and damage as a result of Hurricane Matthew will be able to get information about available state and federal assistance at a Disaster Recovery Center opening Wednesday in Whiteville.

According to officials, the center will be located at 913 Jefferson Street, and will be open Monday through Saturday from 10 a.m. to 7 p.m.

DRCs are staffed with representatives from the Federal Emergency Management Agency, North Carolina Emergency Management and the U.S. Small Business Administration. You can receive help applying for federal disaster assistance, learn about the types of assistance available, learn about the appeals process and obtain updates regarding your application.

If you have phone and/or internet access, you may register in one of the following ways:

Online at DisasterAssistance.gov.

Call the FEMA Helpline at 800-621-3362 for voice, 711 and Video Relay Service (VRS). If you are deaf, hard of hearing or have a speech disability and use a TTY, call 800-462-7585.

Download the FEMA Mobile App and apply.

Recovery centers are open throughout the disaster-affected counties in the state. To locate the center nearest to you, call the FEMA Helpline at 800-621-3362.

LIRR: Sandy Repairs Progressing, But Much Work Still Ahead

By Alfonso Castillo

Newsday (NY), November 1, 2016

The Long Island Rail Road is making progress on repairing, rebuilding and hardening its system devastated four years ago by superstorm Sandy, officials said.

However, they say some projects are still years from completion, including several along the LIRR's vulnerable Long Beach branch.

The railroad's post-Sandy improvement efforts have been focused on the four areas hit hardest by the October 2012 storm — rail yards in Long Island City and on Manhattan's West Side, the East River Tunnels leading into and out of Penn Station, and the Long Beach branch, which residents and officials say may never fully be out of harm's way. StorySome upset with post-Sandy buyout programStorySandy victims wait for payment 4 years laterStoryRunners mark Sandy anniversary with 5k race

"When Superstorm Sandy roared across the New York/Long Island region . . . the effects were devastating, but preparation paid off," said LIRR spokesman Salvatore Arena, adding that the railroad's pre-emptive shutdown before the worst of the storm allowed it to move trains to higher ground to protect them. "However, although LIRR personnel planned carefully for Superstorm Sandy, there was substantial damage to the infrastructure due to greater-than-expected storm surge."

Some efforts have already made considerable progress.

New electrical substations — elevated to protect them from flooding — have already been installed in Long Island City, near the East Rockaway station and in the Oil City section of Oceanside. A contractor has finished 13 of 15 new elevated platforms, which will protect new signal and communication huts from flooding.

Improvements to the Wreck Lead Bridge, which carries the LIRR over Reynolds Channel, are well underway and expected to be finished by April. The bridge has already gotten a new emergency generator, walkway lighting, high-tension poles and other electrical equipment.

Other improvements, however, are far from being finished.

The Metropolitan Transportation Authority Board on Friday awarded a $2.4 million contract for new signal equipment for the Long Beach line — part of a broader effort to replace signal, switch, communications and third rail equipment along the line that isn't expected to be completed before September 2019.

"There's still a lot of work that needs to be done. But then again, a lot of work has been done," said John Molloy, the Nassau County representative on the MTA Board. "I think the MTA has done nice work moving this thing along . . . You just can't do it overnight. It's a lot of work, and a lot of pieces that have to be put together. "

Nowhere did the LIRR's system get hit harder by Sandy than on the Long Beach line, where tracks and delicate electrical components were submerged under 4 feet of corrosive saltwater and sewage, three electrical substations were damaged, and nearly two dozen boats and personal watercraft washed up on tracks.

It took nearly a month for the LIRR to restore full service on the line, used by more than 20,000 riders each weekday.

"It was very difficult. We were the last [LIRR line to be restored.] It's highly insulting, but what can you do about that?" said Island Park Mayor Michael McGinty, who commended the LIRR for its work modernizing electrical substations on the line, but said the agency hasn't done enough to seek input from local government on the problems facing local commuters, including over drainage. "The line is very important to the residents of Island Park, as well as Long Beach, Lido Beach, Point Lookout and, believe it or not, some from Oceanside."

Fran Kravitz, who commutes from Island Park for acting classes and jobs in Manhattan, recalls her husband having to move into Manhattan for weeks after Sandy because of the service problems on the Long Beach line.

Four years later, Kravitz, 56, said the branch remains particularly susceptible to flooding.

"If we get a storm on a full moon in high tide, those train tracks are under water . . . The tracks are still on the ground, so it's still going to flood, just like the rest of Island Park."

William Henderson, executive director of the MTA's Permanent Citizens Advisory Committee, which includes the LIRR Commuter Council, said although the MTA has done substantial work to repair and fortify its system over the last four years, the work may never be fully done, in part because it will have to keep up with rising sea levels and other major weather events.

"I think they're going to be doing hardening for years — probably for our lifetime," said Henderson, who singled out the Long Beach line as a particular challenge. "At the end of the day, you've got tracks that are going over and basically next to water. If there's a storm that comes up and across the water, there's going to be impacts."

Other flood-prone parts of the LIRR's territory are also in line for improvements. The LIRR is putting $100 million in Federal Transportation Administration grant funding toward several planned projects to fortify its West Side Yard, the Queens portals of the East River Tunnels, and the tunnels themselves. Those efforts are in their early stages, with the MTA currently working out cost estimates, officials said.

The LIRR has also begun flood-protection work on its Atlantic Avenue tunnels along its Brooklyn line and at the Long Island City yard.

The Federal Transportation Administration also in June awarded the MTA $432 million to make critical repairs inside the East River Tunnels, which were badly damaged by corrosive saltwater from Sandy flooding. Amtrak, which owns the tunnels and is responsible for the repairs, has said the work won't begin until the end of this decade, and take several years to complete.

Superstorm Sandy Walk-in Legal Clinic Wednesday In Lindenhurst

By Emily Dooley

Newsday (NY), November 1, 2016

The Touro Law Center Disaster Relief Clinic and Adopt-a-House are hosting a superstorm Sandy walk-in legal clinic Wednesday in Lindenhurst.

The free clinic will be open from 4 to 7 p.m. in the board room at Babylon Town Hall, at 200 Sunrise Hwy.

Staff of the clinic will provide free one-on-one legal consultations for any residents of Nassau or Suffolk county who were affected by the 2012 storm. Experts can help people with many legal issues, such as flood insurance claims, Federal Emergency Management Agency recoupments, problems with New York Rising and contractor disputes. Story'Sandy not over' as LIers struggle to make lives whole

People seeking legal advice should organize their paperwork — such as flood insurance declaration pages, denial letters, photographs, award letters, contracts — in advance for review and consultation.

The Touro Law Clinic also has a hotline at 631-761-7198.

Carnival Brings Fantasy Ship To Mobile For Mexico Cruises

By Anita Lee

Biloxi (MS) Sun Herald, November 1, 2016

Carnival Cruise Line is returning to Mobile, dredging up memories of another ship's service as an emergency shelter after Hurricane Katrina and the voyage from hell when passengers were stranded on the "poop cruise" before being towed into Mobile.

Carnival has committed to service for 13 months from Mobile to Mexico beginning Nov. 9. The company says it will offer a four-day cruise to Cozumel and five-day cruises to Cozumel and Progreso.

The Carnival Fantasy can carry 2,056 passengers. The maiden cruise is sold out, Carnival says. A number of restaurants and bars are housed on the ship, including Guy's Burger Joint, developed with the Food Network's Guy Fieri.

It also offers a spa, water park and Egyptian-themed piano bar, the Carnival website says.

Mississippi Coast residents will remember that Carnival's Holiday cruise ship temporarily served as a Federal Emergency Management Agency shelter, housing more than 6,000 Katrina refugees in Mobile.

And then there was the infamous "poop cruise" in 2013, when the Carnival Triumph drifted in the Gulf of Mexico for four days after an engine fire. The cruise got its ignominious moniker because toilets on the ship overflowed. The ship, which had sailed out of Galveston, Texas, was eventually towed into Mobile.

The Associated Press reported that Carnival is returning to Mobile after a five-year absence and $4 million in improvements to the Alabama Cruise Terminal located downtown.

Carnival service also runs to the Caribbean out of New Orleans, which doesn't see the Mobile service as competition.

"We see our market as a different market," said Don Allee, director of cruise and tourism and the Port of New Orleans. "We're selling two different features, so to to speak. When we sell and market New Orleans, we're selling two vacations in one. New Orleans is one of the most popular destinations in the world."

" . . . When you put a cruise on top of that, it enhances the New Orleans experience."

Allee was previously director at the state port in Gulfport, which over the years has flirted on and off with cruise services.

Allee was in Gulfport when the Carnival Conquest docked temporarily in Gulfport for 18 weeks because of navigation problems in the Mississippi River. Back then, Allee had hoped to steer cruise lines to Gulfport.

FLOODS

Edwards, Congressmen Press Obama On Flood Aid For N. La.

Alexandria (LA) Town Talk, November 1, 2016

Local governments in Bossier, Caddo and Ouachita parishes alone would save at least $1.5 million if Gov. John Bel Edwards and the state's congressional delegation can convince FEMA to increase its share of flood recovery costs to 90 percent.

Edwards, through his Governor's Office of Homeland Security Secretary Jim Waskom, sent a letter to President Barack Obama this week appealing FEMA's ruling to keep the federal share for the spring flooding in northern Louisiana at 75 percent. FEMA has already agreed to take on a 90 percent share for the southern Louisiana flooding in August.

"The inequity of the cost share adjustment will saddle millions of dollars of burden on these parishes simply because their disaster happened first," Waskom wrote in the letter to Obama.

Edwards and the delegation have argued that the two flood events should be counted as one disaster because they occurred during the same year. That would allow the March flood damage to meet the threshold for the 90 percent federal cost share.

Fifth District U.S. Rep. Ralph Abraham, R-Alto, coordinated a delegation letter sent to Obama Tuesday in support of Edwards' appeal.

"It's certainly a good step that FEMA has rightfully granted a cost-share adjustment for the victims of the August flood, but March victims cannot be forgotten during this recovery process," Abraham said. "We're still assessing damage, and people are still hurting. They need the support of their federal government. They're still suffering."

Abraham said he believes "we stand better than a 50-50 chance" of ultimately convincing FEMA to raise the federal cost share to 90 percent.

Governor Asks To Lessen Louisiana's Cost For Share Of March Flooding

By Juan Sanchez

WDSU-TV New Orleans, November 1, 2016

BATON ROUGE, La. —

Gov. John Bel Edwards is asking President Barack Obama's administration to reconsider its refusal to lessen Louisiana's share of disaster response costs after March flooding that inundated north and central Louisiana.

The governor's office released the appeal letter Monday.

Louisiana's share of the federal disaster response to the August flooding that ravaged south Louisiana is 10 percent. The Federal Emergency Management Agency denied a request to lessen the state's costs for the earlier March flooding from 25 percent to 10 percent.

Edwards' Homeland Security secretary, James Waskom, wrote to the White House that the two floods should be considered together because they have caused "significant economic hardship" to state and local government.

Waskom wrote that lessening the match rate for the March flooding could save the state an estimated $28 million.

Disaster Assistance Briefings Scheduled For This Week

Jackson County (WI) Chronicle, November 1, 2016

Local governments and private nonprofit agencies that sustained damage during the Sept. 21-22 flooding in Western Wisconsin are encouraged to attend briefings this week to learn about applying for federal disaster assistance.

Gov. Scott Walker recently announced that 10 Wisconsin counties were approved by the Federal Emergency Management Agency for disaster assistance to help with costs associated with debris removal, emergency protective measures and damage to public infrastructure such as roads and bridges. The counties in the declaration are Adams, Chippewa, Clark, Crawford, Jackson, Juneau, La Crosse, Monroe, Richland and Vernon.

Two teams of specialists from Wisconsin Emergency Management and the Federal Emergency Management Agency will explain how state and local agencies and certain private non-profit groups can apply for federal Public Assistance to help recover from flooding. Under the cost-share program, FEMA funds 75 percent of the cost for eligible work and 25 percent is shared equally between state and local applicants.

The program is not for businesses or homeowners as the level of damage in these areas does not currently meet requirements for FEMA assistance.

Applicant briefings will be held at the Jackson County Courthouse in Black River Falls in the county board room this Thursday from 8-9:30 a.m. Monroe County's is scheduled for Thursday from 12:30-2 p.m. at room 500 of the Justice Center in Sparta.If a local government or private nonprofit organization cannot attend the briefings, they should contact their county emergency management director.

WILDFIRES

More Georgia Burn Bans As Rocky Face Mountain Fire Continues

Atlanta Journal-Constitution, November 2, 2016

Two more metro Atlanta counties came under outdoor burn bans Tuesday, and a North Georgia wildfire burned on as the state's fire situation continued.

The fire on Rocky Face Mountain in Whitfield County could continue into next week, the Dalton Daily Citizen reported. Georgia Forestry Commission crews said more than 200 acres have been "blackened or are actively on fire" since the fire began Thursday.

Crews have been hampered by the rugged nature of the terrain.

"It is a very labor-intensive fire," GFC ranger Pat Stockett told the Daily Citizen. "Our hand crews at times are having to hike an hour or an hour and a half in just to get to the fire. The terrain is posing a very unique obstacle, and bulldozers don't like rocks. Our operators are doing exceptional work. This is a very technical operation."

There have been seven new fires since midnight, GFC spokeswoman Wendy Burnett said. Fire crews are active from Cherokee County north to the state line.

The ongoing drought conditions are a factor everywhere.

The GFC has included Gwinnett County in a temporary suspension of all outdoor burning, according to the Gwinnett County Fire Marshal website.

"Outdoor burning will resume once conditions are within an acceptable range and the suspension has been lifted by the Georgia Forestry Commission," the website said.

On Tuesday, Henry County joined the list of metro Atlanta counties with self-imposed burn bans, along with Paulding County, Cobb County and Douglas County.

Significant rain is not in the near-term forecast for North Georgia.

"Mother Nature is not looking too good as a helper," Stockett said. "She got tired from Hurricane Matthew."

ZIKA VIRUS

In The Wake Of Hurricane Matthew — To Spray Or Not To Spray?

By Shahir Masri

The Hill, November 1, 2016

Confronted by devastating Hurricane Matthew, Florida residents and city officials have even more to deal with than the obvious destruction and loss at hand.

When floods and rain subside, stagnant puddles and newly formed ponds persist — a perfect breeding ground for mosquitoes. What this has meant previously is aerial spraying of highly toxic organophosphate pesticides (OPs).

Just recall Hurricane Isabel in 2003, or Charley, Jeanne, Frances, and Katrina in 2004 and 2005. Don't forget Hurricane Irene in 2011. In all instances, flooding resulted in real or anticipated increases in mosquito abundance, and aerial spraying of toxic OPs ensued.

Out went the hurricanes and in came the pesticides. Will this be the story again following hurricane Matthew? It's only been weeks since Miami Beach experienced repeated aerial spraying of the insecticide Naled in spite of much protest by locals. Yet history would suggest Florida may be in for another spray.

Naled is a potent neurotoxin being used to kill mosquitoes in order to combat the spread of Zika virus. It is also a chemical the European Union banned in 2012. Meanwhile in the U.S. Naled remains the weapon of choice come virus or natural disaster, with nearly 6 million acres of land sprayed in Florida in 2014 alone. As a public health scientist specialized in chemical exposure assessment, I provide a word of caution against this frequent aerial OP spraying.

OPs affect cholinesterase inhibition in the body, and is toxic to the nervous system. While they have been widely used since WWII, their use has not been without consequence.

Rather, a number of scientific studies have shown an association between OP exposure and neurological outcomes such as attention-deficit/hyperactivity disorder, or ADHD, and neuro-developmental impacts to the unborn fetus. Studies have also shown pre-natal OP exposure linked to premature birth, reduced birth weight, and cardiovascular abnormalities. One study showed childhood exposure linked with reduced lung function. OPs can cause toxicity through all routes — inhalation, consumption, and physical skin contact.

According to the Centers for Disease Control and Prevention (CDC), aerial spraying of Naled is inconsequential to human health because the quantities used are very low. This assertion, however, neglects that low dose exposure, particularly repeated exposure, can be problematic if you're someone prone to chemical intolerance.

As we say, "dose plus host" determines toxicity. This is because people's ability to detoxify OPs and other chemicals varies greatly from person to person. For some, exposure may go unnoticed. For others, the consequence can be severe and long lasting. Unfortunately, there is no easy way to know which child or adult is genetically susceptible—until it's too late. That is, until they've been exposed.

Chemical intolerance afflicts many people and can be triggered by repeated low level OP exposure. Dr. Claudia Miller, a physician and research scientist with three decades of experience studying the health effects of OPs and other chemicals, has investigated numerous exposed populations and established a strong link between OP and other low level exposures and chronic health problems. She coined the term Toxicant Induced Loss of Tolerance, or TILT, to describe the two-stage physiological process of an initial chemical exposure followed by subsequent intolerances to many other chemicals.

People who get "TILTed" lose their capacity to tolerate common, chemically unrelated substances such as fragrances, cleaning products, nail polish, and vehicle exhaust. Once TILTed by an initial chemical exposure, these substances can trigger serious health problems such as fatigue, headache, weakness, mood changes, difficulties with memory and concentration, as well as respiratory and skin problems. Symptoms from even a single exposure leave some people debilitated for life.

In the last decade TILT has become increasingly well documented and studied worldwide by doctors and medical researchers. A validated questionnaire called the Quick Environmental Exposure and Sensitivity Inventory (QEESI) has been developed to help patients and doctors identify this elusive disease process. The QEESI is now being used in more than a dozen countries.

Of great concern in Florida and elsewhere are the repeated OP exposures among susceptible individuals in the spray zones. They and their doctors must be aware of the two stages of TILT, which can develop in the days and weeks following a salient exposure event, such as the recent sprayings in Florida and potentially another in the wake of Hurricane Matthew. Early diagnosis and avoidance of symptom triggers is essential to getting well — similar to when someone develops an allergy to a food or drug.

However, TILT differs from usual allergies in that the specific antibodies that characterize allergic sensitization are largely absent. Consequently most diagnoses are missed by doctors and allergists. Nor are there accepted lab tests for TILT. The QEESI questionnaire is currently the most reliable tool for screening.

Disaster relief efforts are undoubtedly of utmost importance following devastating hurricanes. The routine accompaniment of aerial OP spraying to such efforts, however, must be questioned and suggests the impacts of low level OP exposure are underappreciated. Naled, like many OPs, affects more than just mosquitoes—with every man, woman, and child in the spray zone at risk of developing TILT. And let's not forget the prenatal impacts during pregnancy.

Without question, Zika represents a public health threat that necessitates urgent action. Indeed this will complicate the post-Matthew response efforts. We can be sure, however, that resorting again to aerial spraying of highly toxic OPs is simply opting for one of two evils — replacing mosquitoes with yet another problem. Given our current inability to identify OP-susceptible individuals, spraying cannot be carried out with necessary prudence.

As a precautionary measure, residents should therefore be made aware of the risks and be encouraged to remain inside with closed windows during aerial spraying; something the CDC currently deems "not necessary" on its website. Meanwhile, alternative vector control strategies by CDC and other agencies should be thoroughly investigated and funded accordingly by Congress. Aerial OP spraying should be an infrequent resort, if ever a resort at all.

Shahir Masri is an assistant specialist in air pollution exposure assessment and epidemiology. He has his Doctor of Science degree from the Department of Environmental Health at the Harvard T.H. Chan School of Public Health.

NATIONAL NEWS

ABC: Millennium Tower Lawsuit.

ABC World News Tonight (11/3, story 8, 1:25, Muir, 14.63M) reported, "Back here at home tonight, and to new concern at this hour over a skyscraper, a high rise, now teetering. The city's attorney in San Francisco taking legal action, and tonight, families who live there showing us the video that they say proves that their building is, in fact, leaning. ABC's Kayna Whitworth is there." ABC (**Whitworth**) added, "The Millennium Tower soars over the San Francisco skyline, 645 feet high. The problem is, it's getting shorter. Sinking 16 inches already, and now it's tilting two inches. Tonight, the city is suing, claiming the problem was never disclosed to potential buyers and now these cracks in the sidewalk, rattling homeowners." **Unidentified speaker**: "We really don't feel safe in this building." **Whitworth**: "Frank Jernigan says this marble rolling and even changing direction across the floor of his high rise apartment shows the tilt in the building. Your life's hard work is now leaning this way and someone could have told you that before you bought it." **Unidentified speaker**: "Before we bought. Absolutely." **Whitworth**: "The building's developer, Millennium Partners, says the city's lawsuit has no merit." **PJ Johnston**, Millennium Partners spokesman: "The building is safe, it's seismically sound, its structural integrity has not been compromised." **Whitworth**: "David, not only is this tower sinking and leaning, but it's in a major earthquake zone. So, when residents walk out their front door and see this, they're fearing for more than just their investment, but their safety, as well. David?" **Muir**: "Kayna Whitworth from San Francisco. Kayna, thanks."

President Obama Signs Disaster Declaration For Hampton Roads

Associated Press, November 3, 2016

VIRGINIA BEACH, Va. (AP) — President Barack Obama has signed a Virginia disaster declaration that will provide federal aid to Hampton Roads cities affected by Hurricane Matthew.

Local news organizations report that the order was signed Wednesday and will provide funding for Chesapeake, Newport News, Norfolk and Virginia Beach. The funds will be used for programs including temporary housing, home repairs and low-cost loans to cover uninsured property losses.

Residents and businesses that were affected by the storm can apply for assistance by registering online at www.DisasterAssistance.gov or by calling 1-800-621-3362.

The Federal Emergency Management Agency will establish a local disaster recovery center to help people register and get answers about available resources. Federal, state and local agencies will staff the center.

McCrory: Mobile Homes On Way For Some Homeless After Matthew

Associated Press, November 3, 2016

RALEIGH, N.C. (AP) – Families in four North Carolina counties forced from their homes after flooding from Hurricane Matthew could be moving into mobile homes soon.

Gov. Pat McCrory said Thursday the Federal Emergency Management Agency approved the help for people displaced from their homes in Columbus, Edgecombe, Robeson and Wayne counties. The help could be extended to more counties.

The state signed contracts last month to start providing mobile homes in areas where hotels and rental homes were flooded, or didn't exist before the storm.

About 240 people are living in four shelters and more than 1,700 families are living in temporary housing after Matthew, which drenched the state a month ago.

The McCrory administration also revised the storm's death toll back up to 28 with the death of a Pitt County man.

Governor Says Pitt County Man Dies Cleaning Up Storm Debris

By Jason Boyd

WCTI-TV Greenville (NC), November 3, 2016

RALEIGH – Governor Pat McCrory said a Pitt County man has died following Hurricane Matthew and the flooding that followed.

In a press conference Thursday morning to update the storm recovery process, McCrory said the additional fatality had been attributed to the storm, bringing the total to 28. A Pitt County man passed away as a result of injuries sustained while cleaning up storm debris.

No further information has been released at this time. NewsChannel 12 is working to confirm the incident.

While the state continues to work with FEMA, the governor is seeking approval of additional assistance for Carteret, Perquimans, Scotland, Richmond, Anson, Chatham and Northampton counties. McCrory's request for federal direct temporary housing assistance has been approved to help people displaced from their homes in Columbus, Edgecombe, Robeson and Wayne counties following his meeting with FEMA Administrator Craig Fugate. The governor said the state hopes to add additional counties to the declaration in the coming days.

"Moving people out of shelters and into temporary and permanent housing continues to be one of our immediate priorities," McCrory said. "I want to thank our federal partners and my team for their incredible work, but we still have a lot of work to do. As our weather continues to be pretty, sunny and hot, many people are still facing dire circumstances in our state and we will continue to do all we can to help them recover."

Temporary housing has proven challenging because many hotels and rental homes in the impacted communities were also flooded. Currently, 240 people remain in four shelters across the state and more than 1,700 families are living in temporary housing.

Last week, the governor requested direct temporary housing authorization from the federal government to help provide manufactured homes as a temporary housing solution. The state signed contracts last month to ensure that once the request was approved work could start immediately.

According to FEMA officials, manufactured homes are just one of many options available for temporary housing. Other options include rental homes, apartments and hotels. Based on the FEMA contract, more than 165 manufactured homes are now available in North Carolina with others on the way. Officials are continuing to assess the need for these homes in impacted areas.

Governor McCrory noted that his team continues to monitor water system issues in Robeson and Brunswick counties. The good news is that the water system in Lumberton should be repaired this week. Additionally, a bypass line should be completed and operational this week in Brunswick County.

The governor has encouraged individuals and groups to help in the relief efforts by making a financial or other contribution. Monetary contributions to the North Carolina Disaster Relief Fund for Hurricane Matthew can be made by texting NCRECOVERS to 30306 or by visiting NCDisasterRelief.org. This is one of the best ways to help fund long-term recovery efforts.

Gov. McCrory's press office contributed to this story.

1,400 Added To Georgia's Voter Rolls During Extension

Associated Press, November 3, 2016

ATLANTA (AP) — More than 1,400 Chatham County residents have been added to Georgia's voter rolls after they took advantage of an extended registration deadline last month due to Hurricane Matthew.

The Atlanta Journal-Constitution (http://on-ajc.com/2f5yAFN) reports a federal judge had ordered the county to reopen registration after voting rights advocates argued that the storm had prevented would-be voters from signing up. Local government offices were closed in Chatham for what would have been the last six days of the voter registration period that ended Oct. 11.

U.S. District Judge William Moore extended the period for county residents until Oct. 18 even though Secretary of State Brian Kemp had encouraged residents in the storm's path to take advantage of the state's online and mobile voter registration access points.

Flood Debris Costs Top $13 Million In Livingston Parish

Associated Press, November 3, 2016

LIVINGSTON, La. (AP) — Livingston Parish officials say the removal of August flood debris has topped the $13 million mark, with the final pickup set to begin.

Mark Harrell, the parish's emergency preparedness director, says the parish's contractors had picked up about 660,000 cubic yards of debris, 17,000 white goods and about 15,000 pounds of putrid food.

The Advocate reports (http://bit.ly/2e57n9r) Finance Director Jennifer Meyers said the parish recently received about $4.2 million in reimbursement from the Federal Emergency Management Agency for the parish's first round of debris removal. That figure represents the federal 90 percent cost share of the $4.7 million in invoices submitted for the work up to that point.

Harrell says Ceres Environmental Services' final pass through the parish could begin this week.

Oklahoma Regulators Close Wells, Reduce Volumes After Quake

Associated Press, November 3, 2016

PAWNEE, Okla. (AP) — Oil and natural gas regulators in Oklahoma are ordering the operators of 70 disposal wells to either shut them down or reduce disposal volumes after a 4.5 magnitude earthquake shook northern Oklahoma.

The Oklahoma Corporation Commission said Thursday the new guidelines affect 38 disposal wells within 15 miles of the quake's epicenter that are under its jurisdiction and another 32 wells under the sole jurisdiction of the Environmental Protection Agency.

The earthquake was recorded Tuesday night in the Pawnee area, where a record-setting 5.8 magnitude quake struck two months ago. The commission says 15 wells included in its latest directive were ordered closed following the Sept. 3 quake.

Scientists have linked Oklahoma's increase in earthquakes to the underground disposal of wastewater from oil and gas production.

Friday's Forecast: Soggy Southwest, Texas

By Doyle Rice

USA Today, November 3, 2016

The Southwest is in for a wet Friday while a few light showers dampen the Northwest and Florida.

West: Widespread showers and thunderstorms are forecast across the Southwest and west Texas on Friday. The heaviest rain is likely in New Mexico. Some flooding is possible. Light afternoon showers are expected along the Pacific Northwest coast.

East: Most of the eastern third of the country will see a dry and cool Friday thanks to Thursday's cold front that's pushed off the coast. A few showers are forecast in southern Florida.

Central U.S.: A mild to warm day is expected Friday for most of the central U.S. as highs soar into the 70s as far north as the Dakotas.

Weather history for Nov. 4: In 1927, heavy rain led to terrible flooding in New England, in which 200 people died. In 1956, Phoenix had its earliest freezing temperature on record.

13 Urgent Science And Health Issues The Candidates Have Not Been Talking About

Scientific American, November 3, 2016

In this election season science and health have taken a backseat. Worse, presidential candidate Donald Trump dismissed climate change as a Chinese hoax. His opponent, Hillary Clinton, vowed to dig up what the government knows about UFOs. Science is hardly getting its due.

Meanwhile in labs and institutions around the country, scientists are hard at work: inventing technologies to make guns safer, developing antibiotics to quell treatment-resistant infections and searching for more efficient forms of renewable, clean energy. This research addresses complex scientific and social issues that require thoughtful policy-making and debate. The country's next Congress and president will have much to consider.

To that end, Scientific American corralled some of the key scientific issues that U.S. politicians should be paying attention to, but aren't—from the threat of nuclear Armageddon to the ethics of medically assisted suicide. We spoke with top thinkers in each field—policy experts at universities, members of foundations and nonprofits, and the scientists themselves. What, our reporters asked, should government be doing to keep Americans healthy, safe and productive?

To learn the answers, read on. We hope those who would be our leaders will do the same.—Emily Laber-Warren The End of Antibiotics

Tuberculosis. Gonorrhea. Pneumonia. All these infections were once readily cured but overuse of antibiotics has created "superbugs"—bacteria that are resistant to even last-resort medicines.

Twenty-three thousand people die in the U.S. each year from antibiotic-resistant infections, and by 2050, experts estimate that rogue bacteria will kill more people than cancer. The United Nations recently held an unprecedented conference on how to combat superbugs. Here in the U.S. experts endorse a three-pronged approach: Congress should invest in drug development, ban the wanton feeding of antibiotics to cows and pigs, and attempt to reduce the number of patient infections. Hopefully, says Kathy Talkington, director of the Antibiotic Resistance Project at The Pew Charitable Trusts, "we can move something in the near future through Congress while the iron is hot."

Unlike medicines for heart disease or diabetes, a good antibiotic is usually used by patients for just a single occurrence of an illness, which makes pharmaceutical companies reluctant to pour money into developing new ones. Congress could help by funding some of the research as well as by enacting legislation that eases the economic burden of testing new antibiotics.

Meanwhile 80 percent of all antibiotics sold in the U.S. are given to cattle and other food animals, so legislators like Rep. Louise Slaughter (D–N.Y.) are turning their attention to the farmyard. Antibiotics make animals grow faster, and poultry, beef and pork farmers include regular doses in their animals' feed. Slaughter has proposed legislation that would prohibit the use of antibiotics in healthy animals.

Experts say we should also try to prevent the spread of infections in the first place—by encouraging hand washing and safe cooking practices.—Elyssa Bernfeld Clean Drinking Water

In Flint, Mich., thousands of children live with brain damage because lead from aging pipes leached into their drinking water. More than 360,000 underground water reserves have been polluted by waste from industrial processes. Severe droughts in the western states threaten water supplies for some 43 million people.

Of all the services Americans depend on, clean drinking water is the most precious. But crumbling infrastructure, contamination from fracking and farming, and climate change–related drought are depriving many Americans of this essential resource. Experts say Congress must take a range of actions—from helping cities identify toxins in their water systems to setting stricter limits for the dumping of industrial waste. "Drinking water is a basic human need," says Erin Derrington, a Pacific Northwest–based environmental consultant who specializes in wetlands. "Without wise management—a goal that does not seem to be at the top of either the Republican or Democratic nominees' agenda—we face real risks of degraded drinking water quality."

Experts say Congress should close a loophole in the Safe Drinking Water Act that allows energy companies to inject wastewater into the ground, where it contaminates underground water supplies that could be useful in the future. In addition, they say, the federal government needs to invest more than the $5.4 billion it spent in 2014 to help states replace old water mains and pipes—an investment that will pay off by preventing costly public health crises like the recent one in Flint.—Nicole Lewis Making Guns Safer

When the automobile was introduced, it was a death trap. But in the 1950s universities began crash testing—research that ultimately led to safer cars, better driver education and speed limits—and that slashed vehicular fatalities by 90 percent.

Now public health experts—including the American Medical Association, which put out a statement in June—want the government to take a similar approach to gun violence, which is responsible for more than 30,000 deaths a year.

The question of whether to regulate guns has become polarized, quelling progress on reducing deaths. But scientific research could liberate the issue from politics. Instead of debating whether people should have guns, science can suggest ways to make people safer: For example, how to prevent accidents and suicides in the 22 percent of U.S. homes where there are guns—by understanding how to best keep loaded guns out of the hands of children and distraught people who might act impulsively. Everytown.org, a leading gun violence prevention organization, wants Congress to fund research into technology such as biometric gun locks and safeties that would make it impossible for anyone but a gun's owner to fire it. "The truth is, whether you want gun rights or you support gun control, you should want these kinds of detailed academic, scientifically rigorous studies," says Adam Winkler, a constitutional law expert at the University of California, Los Angeles. "That is what a public health approach takes."—Stephanie Daniel Keeping Our Technological Edge

U.S. scientists and engineers produced the defining technologies of the modern era: the car, the airplane, the atom bomb, the iPhone. But the nation is quickly losing its edge. Foreign-born scientists and engineers are filling key slots at universities and in private labs, in part because of a dearth of qualified Americans.

Most experts trace the problem to the U.S. educational system. Our students rank far below other industrialized countries in math and science. The average American 15-year-old has difficulty solving an equation using pi. But there is a huge variation in how students fare depending on the state they live in; some Bible belt states shirk teaching evolution science or present it as a competing theory with religious creationism whereas states like New Hampshire offer excellent math and science instruction.

The solution, policy experts say, is for the federal government to create uniform, up-to-date requirements for the science and math concepts students should know at each grade level, as is done in other countries. But recent attempts at implementing national curricular conformity such as the Common Core have met resistance.

For now, experts say, the best approach is to suggest, not require. The Next Generation Science Standards, led by educators from nonprofits, philanthropies and state governments, are an attempt to codify a national baseline of math and science achievement. But so far only 18 states and the District of Columbia have signed on. The standards are optional but their authors hope that more state legislatures will sign them into law.—W. Harry Fortuna Protecting National Parks

America's national parks and forests are facing many challenges. In recent years legislators have stymied attempts to increase park funding and pushed for privatization of publicly owned lands. The National Park Service is some $11 billion behind on repairs and maintenance. Meanwhile, Arizona's congressional representatives support new uranium mines on public land near the Grand Canyon—and legislators from other states have similar projects such as oil and gas development in the lands around Arches National Park in Utah. "There's constant pressure to develop the land surrounding parks," says Kristen Brengel, vice president of government affairs at the National Parks Conservation Association.

But Pres. Barack Obama has taken steps to protect public lands. Earlier this year the U.S. Bureau of Land Management created a plan to protect Utah's public landscapes from energy developers. The Department of the Interior also recently canceled an oil-and-gas lease that threatened wildlife-rich regions around Montana's Glacier National Park.

Meanwhile private groups are taking their own steps to protect the nation's public lands. The nonprofit Trust for Public Land recently worked with a philanthropist to add 282 acres to Arizona's Saguaro National Park.

But whether the money comes from Congress or private pocketbooks, some advocates say it would be better spent readying parks for the impacts of climate change or fixing trails and roads at heavily-visited sites like Yellowstone. "We shouldn't be expanding our parks. We should be maintaining them," says Bonner Cohen, senior fellow at The National Center for Public Policy Research.—Samantha Lee Meeting Our Climate Change Promises

Last year in Paris the U.S. was one of 191 countries to sign a global agreement to slash the emissions that fuel climate change. It was an historic moment, but the hard work is yet to come: figuring out how to reduce the country's greenhouse gases to at least 26 percent below 2005 levels within the next nine years.

Climate change has gotten little attention during this presidential election season. Although Democrat Hillary Clinton has called climate change an "urgent threat" and pledged to carry on Obama's climate initiatives, GOP candidate Donald Trump has openly denied climate change and said he would withdraw the U.S. from the Paris agreement.

Part of the Obama administration's solution—dubbed the Clean Power Plan—would require power plants to limit their emissions, but it has been blocked both by the Republican-controlled Congress and the Supreme Court. Most policy experts agree that Obama's power plan is the best tool to meet the nation's emissions reduction target.

If Democrats win the presidency and control of both houses of Congress, the Clean Power Plan might get new legs. Other solutions include taxing carbon or allowing companies to profit when they reduce emissions more than required, says Daniel Fiorino, director of the Center for Environmental Policy at American University.

If Republicans remain in control, experts say, Congress might do better to focus on investing in renewable energy sources such as wind and solar power, an approach that might appeal to the GOP because it could stimulate the economy by adding new jobs.—Suzanna Masih Genetically Enhanced Humans

Scientists are inching closer to the holy grail of genetic engineering—the ability to add or remove DNA from an organism to change specific traits.

Genetic engineering, also known as gene editing, has been used for years to enhance agriculture and treat disease. But a new technology that harnesses the CRISPR–Cas9 gene–protein complex makes it possible to add and remove genes with unprecedented speed and precision, bringing designer babies and other sci-fi capabilities closer to reality.

Scientists are testing whether gene editing can help treat diseases such as HIV and hemophilia. But CRISPR opens the door to editing for human enhancement—such as adding genes for bigger muscles or whiter teeth—possibilities that are "soon to be on the horizon," says Fyodor Urnov, a geneticist at the University of California, Berkeley.

There are as yet no laws regulating gene editing for enhancement. Bioethicist Jonathan Moreno of the University of Pennsylvania says that's proper, because the technology is not yet developed, and "once you legislate, it's very hard to unlegislate [sic]."

For now experts are wrestling with the ethical implications of gene editing and making recommendations: In December a committee of the National Academies of Sciences, Engineering and Medicine, comprising specialists in health, science and bioethics, will publish their recommendations on how to legislate as the technology develops.—Michael R. Murphy Nuclear Safeguards

Nuclear war is no longer a two-player game, as it largely was during the cold war, with the U.S. and NATO facing off against the Soviet Union and Warsaw Pact. The geopolitical nuclear landscape has grown more fraught and complex than ever. China, India, Pakistan and Israel all have nuclear weapons. North Korea's dictator is conducting missile tests with great fanfare. These new configurations multiply exponentially the rivalries and passions, global and regional, that could ignite a regional or global nuclear conflict.

Experts are divided over how the U.S. should act to minimize the threat. Some say we should publicly embrace a "no first use" policy, solidifying our implicit vow never to be first to push the button. But Obama's advisers maintain that any change of policy could upset the status quo—and hence the safest action is no action at all.

Another issue is how to respond to a perceived nuclear attack. The current policy is "launch on warning," meaning that we will fire as soon as we learn that another country has attacked us. This policy has led several times to near-catastrophe, when our warning systems were mistakenly tripped by a satellite, a faulty computer chip and even the moon.

A safer doctrine, say experts including former Secretary of Defense William J. Perry, is to avoid mistakes by retaliating only after being struck. Once nukes have been launched against us, there's nothing we can do to stop them. But we can strike back—even after being hit—using our fleet of nuclear subs and bombers. "We're not going to change," Perry says, "until people understand what those dangers are."—Michael O'Brien The Right to Die

Two years ago, a 29-year-old woman named Brittany Maynard who was dying of brain cancer decided to end her life. But she did not want to swallow a bunch of pills. She wanted to die safely and without pain, under a doctor's supervision. That meant Maynard had to move from California to Oregon, one of the few states where medically assisted suicide was legal at the time.

Maynard's story made the cover of People magazine. Suddenly the "right to die" had become a national issue—a far cry from the 1990s, when physician Jack Kevorkian was nicknamed "Dr. Death" and convicted of murder for helping his dying patients end their lives.

The U.S. Supreme Court ruled in 1997 that the right to medically assisted death is not constitutionally protected, leaving legislation up to the states. Assisted suicide is now legal in Montana, Vermont, Washington State and California as well as Oregon—and 20 other states and the District of Columbia are considering the move. But as right-to-die legislation gains traction, it is becoming as polarizing as the abortion debate, raising similar religious and ethical questions about an individual's rights and who should have authority in matters of life and death.—Alyssa Pagano The Threat of Microplastics

In 2013 the U.S. threw away more than 32.5 million tons of plastic waste, up from around 390,000 tons in 1960. Much of this plastic litter reaches rivers and makes its way to the sea. Plastic bags, balloons and six-pack rings pose known dangers to birds, sea turtles and other wildlife. But recent research suggests that once in the ocean, plastics degrade into microscopic particles that can be hazardous not only to animals and the environment but to humans as well. These so-called microplastics—particles smaller than one fifth of an inch—are ingested by fish, then by people if they eat the affected seafood. A new study by researchers at Plymouth University in England found that a single washing machine cycle can release hundreds of thousands of microplastic particles from fleece and other synthetic fabrics. The U.N. has singled out microplastics for their potential to cause infertility and other health issues.

One approach to the problem has been to institute bans or taxes on plastic shopping bags, but only three of 77 such proposals have passed in recent years, according to the National Conference of State Legislatures. Similar efforts are being made to ban so-called microbeads—tiny plastics manufactured for use in soaps and cosmetics. Conservation groups also organize beach and road cleanups, to prevent plastics from lingering in the environment.—Michael H. Wilson Tackling Obesity

Obesity now affects more than a third of American adults. It's associated with myriad diseases—the treatment of which costs over $147 billion a year. And almost one in five children are now obese, detracting from their self-esteem, emotional well-being and health. "If we continue on this course, this generation of children could be the first in U.S. history to live shorter, less healthy lives than their parents," Donald Schwarz, vice president, Program, of the Robert Wood Johnson Foundation, the nation's largest public health philanthropy, said during a telephone press conference.

Experts say there is no single way to reduce obesity, because so many factors can impact weight—income, education, access to healthful food, physical activity. This is confounded by the fact that weight is not necessarily an indicator of overall health.

States and even city governments have introduced policies aimed at changing people's exercise and eating habits and fighting the hold fast food has on the U.S. diet. For example, the cities of Philadelphia and Berkeley, Calif., recently instituted a tax on sugary sodas—something that New York City tried and failed to do several years ago. Critics reject such programs as government overreach, calling them behavior taxes, but a similar program in Mexico has curbed soda consumption substantially. "We know it works," says spokesperson David Goldberg of Healthy Food America, a science-based nonprofit.—Kazi Awal Abandoning the Coasts

Hurricane Matthew, which devastated Haiti and deluged huge swaths of North Carolina earlier this month, was the latest in a barrage of catastrophic storms to hit U.S. coastlines in recent years. With storms and flooding along the coasts intensifying due to climate change, experts say it is time for a paradigm shift in how we think about our coasts, home to nearly 40 percent of the U.S. population. "I wouldn't put my money in investing in real estate at the coast, certainly not in the long term," says Jeff Williams, a coastal marine geologist and scientist emeritus at the U.S. Geological Survey.

The most sensible strategy, however difficult to stomach, is for the government to buy damaged property so that it never gets built on again, and people need to move inland. "Basically coastal communities in this country are staring down the loaded gun of climate change," says Shiva Polefka, an ocean policy analyst with the liberal-leaning think tank, the Center for American Progress. "Due to sea level rise, we're going to have to pull back from the coast."

Instead, the approach that towns and cities have been taking, with financial support from the federal government, has been to build walls around their shorelines or dump tons of sand on eroding beaches.

Experts say Congress should reallocate money into large-scale programs to buy property from coastal homeowners. Buyout programs do exist, but they are tiny. After Hurricane Sandy in 2012, for example, New York City helped rebuild more than 10,000 houses, but bought fewer than a thousand.—Meaghan Lee Callaghan Cleaner Energy

The next president will inherit a national patchwork of renewable energy policies. Only 30 states mandate renewable energy. Top on the list are Maine and Idaho, which derive 100 percent of their energy from renewable sources such as biomass and hydropower. But Pennsylvania produces a paltry 4 percent of its energy from renewables. And the states that have set no requirements lag even further behind. Wyoming, for instance, generates less than 1 percent of its energy from renewables.

The U.S. has around 4 percent of the world's population but emits some 25 percent of global CO2, the main driver of climate change. Yet only about 13 percent of the nation's electricity comes from renewable sources like wind, solar, hydropower and biomass.

Many believe it is high time for Congress to create a national standard. The Union of Concerned Scientists, a nonprofit advocacy group, points out that half of U.S. wind production between 2001 and 2006 was the result of state energy standards. Others contend that, given the huge differences in natural resources around the country, it makes sense for states to retain flexibility on how to meet their energy needs. A Great Plains state like Iowa, for example, may be well situated to harness energy from windmills whereas sunny Arizona would do better to rely on solar. Most attempts at national renewable energy policy take this geographic variability into account, allowing states to develop individualized portfolios while adhering to strict standards that increase over time.

Standards aside, experts say the federal government needs to modernize the energy grid. Renewable energy is not evenly distributed across the country. For example, lots of wind is collected in the western plains, and most solar energy is generated in the Southwest, but the areas with highest energy demand are on the coasts. Territorial battles among the states hold up necessary permits, leading to delays in connecting the isolated segments of the energy grid, according to policy expert Jules Kortenhorst, CEO of the Rocky Mountain Institute, a nonprofit research center in Colorado.

Kortenhorst suggests that a future president could institute a "federal override" that would allow the government to step in and force the integration of various regional grids, as it currently does with pipelines.—Roshan Abraham

FEMA HOUSING

Obama Declares Newport News Eligible For FEMA Disaster Grants And Loans

By Reema Amin

Newport News (VA) Daily Press, November 4, 2016

President Barack Obama declared Wednesday that residents of Newport News and three South Hampton Roads cities are eligible for disaster grants and loans related to damage from Hurricane Matthew.

The declaration makes residents of Newport News, Virginia Beach, Norfolk and Chesapeake eligible to apply for federal assistance, which could come in several forms based on damage, according to an statement from the Federal Emergency Management Agency.

Kim Lee, Newport News spokeswoman, said that the city was aware of at least eight properties that were damaged by the hurricane. City Line Apartments had about 100 damaged units, causing some kind of displacement for those families, Lee said. She did not know the status of the repairs, and a representative for City Line could not be reached for comment.

The assistance, administered through FEMA, can include rental payments for temporary housing; grants for home repairs and replacements of essential items that aren't covered by insurance; grants to replace personal property and pay for medical or transportation bills; and unemployment payments for up to 26 weeks for those who temporarily lost their jobs because of the hurricane and don't qualify for benefits.

They can also apply for low-interest loans to pay for losses in a home that aren't covered by insurance. Loans up to $200,00 for residences and $40,000 for personal property. Loans up to $2 million are available for business property damage.

Loans up to $500,000 are available for farmers, ranchers and aquaculture operators.

Those wanting to apply can go to www.disasterassistance.gov or call 1-800-621-FEMA. Those who have a speech disability or hearing loss should call 1-800-462-7585.

Lee said there will be a FEMA disaster assistance center set up in Newport News soon, but she didn't know the exact date on Thursday.

Planning commission OKs laser tag business

TagTime Laser Tag, a Yorktown-based business hoping to open a location in Denbigh, got the OK for a conditional-use permit on Wednesday from the Newport News Planning Commission.

The family-owned business had requested a permit to operate as an amusement establishment at DW Center, formerly known as Denbigh Village Shopping Center. It would be one of at least three entertainment businesses opening at the new plaza.

The laser tag business would be located at 14346 Warwick Blvd., Suite 420. Brad Drummond, one of the owners, said they also set up laser tag events for birthday parties, many of those in Newport News.

"We have a huge customer base in Newport News," he said. "Every weekend we find ourselves in someone's backyard."

FEMA Trailers Coming To Robeson, Columbus, 2 Other N.C. Counties

By Bill Kirby

Fayetteville (NC) Observer, November 3, 2016

Hurricane-displaced residents in four North Carolina counties will be moving into manufactured homes, Gov. Pat McCrory announced Thursday.

He said the Federal Emergency Management Agency has approved the state's request to set up mobile homes in the four worst-hit counties by Hurricane Matthew: Robeson, Columbus, Edgecombe and Wayne.

More counties could be added in the coming days for FEMA mobile homes, McCrory said, in an effort to provide direct temporary housing assistance to those who can't yet go back to their homes.

Some of the worst flooding from the Oct. 8 storm, McCrory said, occurred in communities with few hotels, and in the case of Kinston in Lenoir County, several of the hotels were also flooded.

"Moving people out of shelters and into temporary and permanent housing continues to be one of our immediate priorities," McCrory said at a news conference in Raleigh.

The governor said there are 240 people remaining in four shelters across the state, and more than 1,700 families are living in temporary housing, mostly hotels and motels.

McCrory: Mobile Homes On Way For Some Homeless After Matthew

WITN-TV Greenville (NC), November 3, 2016

Families in four North Carolina counties forced from their homes after flooding from Hurricane Matthew could be moving into mobile homes soon.

Gov. Pat McCrory said Thursday the Federal Emergency Management Agency approved the help for people displaced from their homes in Columbus, Edgecombe, Robeson and Wayne counties. The help could be extended to more counties.

The state signed contracts last month to start providing mobile homes in areas where hotels and rental homes were flooded, or didn't exist before the storm.

About 240 people are living in four shelters and more than 1,700 families are living in temporary housing after Matthew, which drenched the state a month ago.

FEMA Offering Temporary Jobs, Has Approved $1.6M For Bladen County

Elizabethtown (NC) Bladen Journal, November 3, 2016

RALEIGH –- North Carolinians looking for temporary work now have an opportunity to be part of the team to help their state recover from Hurricane Matthew and to learn first-hand about the recovery process. North Carolina Works, in conjunction with the Federal Emergency Management Agency, is advertising open temporary positions.

Individuals interested in working with FEMA can visit the NC Works workforce office serving their area, visit www.ncworks.gov to find available job opportunities, or call 919-560-6880. Positions are posted as the need arises.

Applicants seeking a job with FEMA must be a U.S. citizen 18 years of age or older and have a valid government identification card, such as a driver's license or military ID. Before hiring, candidates will be subject to a complete background investigation and fingerprinting. FEMA is an Equal Opportunity Employer.

Thursday, FEMA released the following numbers reflecting the number of applications received and money approved for Bladen County and neighboring counties:

— Bladen: 2,519 applications, $1,584,343.49

— Columbus: 4,324 applications, $4,317,191.38

— Cumberland: 12,021 applications, $11,358,473.30

— Pender: 668 applications, $1,432,039.08

— Robeson: 15,918 applications, $17,368,158.77

— Sampson: 1,716 applications, $1,353,116.32

To date, 38 North Carolina counties have been approved for federal disaster assistance. On Oct. 28, FEMA opened a Disaster Recovery Center in Elizabethtown, stationed at the agricultural center on Smith Circle, where staff are accepting applications and offering assistance in person.

"We continue to encourage people to go ahead and register," said FEMA Media Relations Specialist Rita Egan. "Don't delay; register today — that's my mantra."

FEMA Individual Assistance is designed to help survivors get back on their feet and covers essential needs not covered by insurance, including assistance with essential home repairs and temporary rental assistance.

The state and FEMA work closely with state, federal, private sector, faith-based and voluntary agency partners to help match survivors who have remaining needs with other sources of assistance.

Egan encouraged residents who receive notices beginning with "Your application has been denied" to continue reading, as additional action on the part of the applicant may resolve the issue. She noted that rejection letters are often sent for issues like a phone number being inactivated or an adult not being on site when the inspector showed up. Such issues can be quickly and easily corrected, and will result in the application process moving again. Additionally, application decisions can be appealed if done so within 60 days of receiving the letter.

For more information on the North Carolina's recovery, visit the disaster webpage at fema.gov/disaster/4285 or visit the North Carolina Emergency Management website at ncdps.gov/.

FEMA Assistance Expanded To Wakulla, Taylor

Tallahassee (FL) Democrat, November 3, 2016

FEMA now is offering individual assistance to Hurricane Hermine victims in Taylor and Wakulla counties.

The grants can help with temporary housing, home repair and low-cost loans to cover uninsured property losses.

Previously, Leon County was the only county in the Big Bend to be offered individual assistance. U.S. Rep. Gwen Graham had asked relief be extended to Taylor, Wakulla and Franklin counties after the Sept. 1 storm devastated the Big Bend.

"Now all those affected by Hurricane Hermine will be able to receive the assistance they deserve," Graham said.

Did Hurricane Hermine Damage Your Property? The Government May Be Able To Help.

By Mark Young

Bradenton (FL) Herald, November 3, 2016

The Federal Emergency Management Agency has designated residents of Manatee County as eligible for individual assistance under its disaster relief program in the aftermath of Hurricane Hermine.

The storm hit well north of Manatee County on Sept. 2, but its outer bands brought drenching rains to the county for two days, dropping up to 13 inches in some areas and causing flooding in some areas.

The federal disaster assistance designation applies for uninsured or under-insured homeowners, renters and business owners. FEMA funding does not replace existing insurance claims.

In addition to Manatee County, 22 Florida counties received the designation prior to Thursday's announcement. Two other Florida counties, Taylor and Wakulla, were also added to the list this week.

To be eligible, storm damage and losses must have occurred as a direct result of Hurricane Hermine. Those eligible are encouraged to register with FEMA as soon as possible. If you have already applied to the Individual Assistance Program, you do not have to do so again.

Those seeking assistance can apply online at DisasterAssistance.gov or by calling 800-621-3362. For those who have hearing or speech disabilities may call 800-462-7585.

According to a FEMA press release, "Assistance for eligible survivors can include grants for temporary housing and home repairs, and for other serious disaster-related needs, such as medical and dental expenses or funeral and burial costs."

Long-term, low-interest disaster loans from the U.S. Small Business Administration also may be available to cover losses not fully compensated by insurance.

Federal Aid Now Possible For Hermine Damage In Taylor, Wakulla Counties

By Brittany Bedi

WCTV-TV Tallahassee (FL), November 3, 2016

WAKULLA COUNTY, Fla. (WCTV) – It's been nearly two months since Hurricane Hermine slammed the Big Bend of Florida.

Coastal communities in Taylor and Wakulla counties had to deal with storm surge, flooding, and debris.

The Federal Emergency Management Agency has now designated Taylor and Wakulla county for individual assistance. This means that residents and small businesses that were damaged by Hermine are eligible for federal aid.

Assistance may include grants for temporary housing, home repairs, medical needs, or funeral or burial costs.

Residents from both counties were left out of the first round of financial aid eligibility back in September, so residents are now breathing a sigh of relief.

Cypress Rudloe is the director of the Gulf Specimen Marine Lab in Panacea. He says that the marine lab suffered flooding and damage to their "Living Dock."

"Well I'm really happy FEMA decided to include Wakulla County.," says Rudloe. "We did get hurt down here, and as a community, if one of us get hurt, all of us hurt."

Residents in counties designated for federal aid must register with FEMA .

Registration can be completed online here, on the FEMA mobile app, or by calling 800-621-3362 between 7 a.m. and 10 p.m.

What's Next For Homes Affected By Pender Flooding

By Ashley Morris

Wilmington (NC) Star News, November 3, 2016

PENDER COUNTY – Street corners in Currie and Canetuck this week were lined with heaps of home interiors tossed out after historic flooding condemned dozens of homes and damaged dozens of others.

Sofas, chairs, tables, rugs, carpets, books and draperies were lumped into mountains until county officials collect the treasured items that are now garbage.

Steven Woodcock and Kristee Spearman lost everything in their home after just living there for one year. Monday they were still waiting for their FEMA application to be approved. Two weeks ago Woodcock said he entered in his information and started a ticket with FEMA in hopes to recover some of what they lost.

Family photos of Christmas, his kid's school photos and antique family portraits hanging on the wall – those were among the only items salvageable from their house right off N.C. 210 that filled with two feet of water.

"It was pretty heartbreaking the first time going back in the house and seeing all the damage," Woodcock said. His two children's toys were scattered everywhere and covered in the silt the rising Black River left behind.

So far Pender County officials have counted 18 homes around the Black River Basin that are considered total losses and have been condemned, said Emergency Management director Tom Collins. More than 650 Pender homes experienced damage to their homes and property. As of Wednesday, FEMA had spent $1.3 million in funds on Pender residents for rental costs and food.

Collins expects the FEMA numbers to go up as people are approved for disaster assistance loans. He also expects the number of homes condemned to rise.

For several weeks Woodcock and his family have stayed in Ivanhoe with friends, about 30 minutes away.

"It's tough not having a home of your own to sleep in," he said. "When you get off work, you know you aren't getting to go home."

Residents from Ivanhoe, Atkinson and down through Currie were told if the water came up to two feet in their home, they have to take out everything below four feet, Collins said.

"If they had flooding pretty soon they will have a mold problem and their home won't be safe to live in," Collins said, explaining why not only sheetrock and insulation have to be thrown out, but even items like coffee tables.

Anything the water touched was ruined.

Once the county is able to clear debris and ruined interiors, Collins said the biggest struggle remains finding temporary housing for those displaced and waiting to get back into their homes. The next issue is disseminating information to those affected about where they can seek help and what programs they are eligible for.

For residents rebuilding like Ervin Ezzell, each day he can work on his home he says he has more hope. The inside of his ranch house was filled with three feet of water. Monday he had fully gutted the interior walls, his brand-new cabinets and all the furniture. Only the exposed brick walls and brick fireplace with two deer trophies remained as he used fans to dry out the crawlspace and floorboards.

"The worst part was waiting for the water to stop rising, because we didn't know how high it would get," Ezzell said. "Waiting to come back and see the damage in your house and waiting for FEMA – the suspense is what is so bad."

FEMA Registration Deadline Is Nov. 14

Eunice (LA) Today, November 3, 2016

Baton Rouge, La. –

Louisiana disaster survivors affected by August flooding have two weeks left to register for disaster assistance with the Federal Emergency Management Agency.

The deadline to register is Nov. 14.

Survivors may register with FEMA by going online with any computer, smartphone or tablet to DisasterAssistance.gov, calling the FEMA helpline at 800-621-3362, or downloading the FEMA mobile app. Survivors who use a TTY may call 800-462-7585 to register.

Survivors can also register for assistance at any FEMA disaster recovery center. To find a disaster recovery center near you, call the FEMA helpline or text DRC and your zip code to 43362. You can also find a center near you by downloading the FEMA mobile app or going online to fema.gov/drc.

FEMA assistance for homeowners and renters may include grants for rent, temporary housing and home repair to their primary residence, as well as other serious disaster-related needs, such as medical and dental expenses or funeral and burial costs.

Survivors should also be sure to submit their disaster loan application to the U.S. Small Business Administration by Nov. 14. Submitting a loan application does not imply acceptance of a loan, but it is a necessary step to being considered for other forms of disaster assistance.

For more information, applicants may contact SBA's Disaster Assistance Customer Service Center by calling 800-659-2955, emailing disastercustomerservice@sba.gov, or visiting SBA's website at SBA.gov/disaster. Deaf and hard-of-hearing individuals may call 800-877-8339. SBA representatives are also available at any disaster recovery center, disaster loan outreach center, or business recovery center.

Flood Victims Reminded About Approaching Deadline

WVUE-TV New Orleans, November 3, 2016

AMITE, LA (WVUE) –

Tangipahoa Parish President Robby Miller reminds survivors of the August flood event that Monday, Nov. 14 is the deadline to register for disaster assistance with the Federal Emergency Management Agency (FEMA).

Miller said residents may register with FEMA by going online with any computer, smartphone or tablet to DisasterAssistance.gov, calling the FEMA helpline at 800-621-3362, or downloading the FEMA mobile app. Survivors who use a TTY may call 800-462-7585 to register. Survivors can also register for assistance at any FEMA disaster recovery center.

FEMA assistance for homeowners and renters may include grants for rent, temporary housing and home repair to their primary residence, as well as other serious disaster-related needs, such as medical and dental expenses or funeral and burial costs.

Survivors should also be sure to submit their disaster loan application to the U.S. Small Business Administration by Nov.14. Submitting a loan application does not imply acceptance of a loan, but it is a necessary step to being considered for other forms of disaster assistance.

For more information, applicants may contact SBA's Disaster Assistance Customer Service Center by calling 800-659-2955.

MITIGATION

Workshop On Area Disaster Planning Set For Nov. 14

Charlottesville (VA) Daily Progress, November 3, 2016

The Thomas Jefferson Planning District Commission will hold a public workshop to discuss updating the Regional Hazard Mitigation Plan.

The workshop will be held from 3:30 to 5 p.m. Nov. 14 at the commission's Water Street Center at 407 E. Water St. Participants will be able to generate ideas to enhance the region's ability to be prepared for emergency responses and to bounce back after a natural disaster.

The prior plan was adopted by all jurisdictions in the planning district — Charlottesville and the counties of Albemarle, Fluvanna, Greene, Louisa and Nelson — and was approved by the Federal Emergency Management Agency in 2012. The plan is required to be updated every five years for localities to be eligible for FEMA's Hazard Mitigation Grant Program.

FIRE GRANTS

Frederick County Fire & Rescue Are Asking For A $4 Million Grant

WHAG-TV Hagerstown (MD), November 3, 2016

FREDERICK COUNTY, Va.

The Frederick County Fire and Rescue Department and its 11 volunteer fire and rescue companies are asking for a $4 million dollar grant to replace over 330 self-contained breathing apparatuses.

Right now, none of the department's breathing apparatus units meet the current national Fire Protection Association's standards due to new changes.

The department applied for an assistance to firefighters grant through the Federal Emergency Management Agency and it was approved by the Board of Supervisors to replace all units within the Frederick County Fire and Rescue system.

The life span of the units is typically between 15 and 20 years.

Dan Sova, Assistant Fire Chief Gainesboro Volunteer Fire & Rescue explained why getting new appartuses are so important.

"We use the self contained breathing apparatuses. It's kind of like a backpack that you see kids wearing to school, when you see firefighters on the fire ground, we're wearing our S-C-B-A's as call them and what they have is air in a tank that allows us to breathe air as we're inside of a fire."

The Frederick County Fire and Rescue Department will know if they got the grant between the spring and fall of next year.

NEWS AROUND THE COUNTRY

HURRICANE RECOVERY

1,400 Added To Georgia's Voter Rolls During Registration Extension

By Kristina Torres

Atlanta Journal-Constitution, November 3, 2016

Advocates are celebrating the addition of more than 1,410 Chatham County residents to Georgia's voter rolls after they took advantage of an extended voter registration deadline last month due to Hurricane Matthew.

A federal judge had ordered the county to reopen registration after voting rights advocates argued that the storm —including a mandatory evacuation and related power outages —had prevented would-be voters from signing up. Local government offices were closed in Chatham for what would have been the last six days of the voter registration period that ended Oct. 11.

Georgia Secretary of State Brian Kemp, who has embraced technology including a pilot program this year allowing voter registration via text message, had encouraged residents in the storm's path to take advantage of the state's online and mobile voter registration access points. U.S. District Judge William Moore, however, still extended the period for county residents until Oct. 18.

Kristen Clarke, president and executive director of the national Lawyers' Committee for Civil Rights Under Law, noted that the number of those submitting applications during the extension would have represented more than 10 percent of all voters who registered in 2012 before that year's presidential election. Advocates were also encouraged nearly half of the group were black or Latino —groups traditionally underrepresented on the rolls.

The Lawyers' Committee brought the suit along with Atlanta law firm Bryan Cave on behalf of the Georgia NAACP, the Georgia Coalition for the Peoples' Agenda and the New Georgia Project.

FEMA To Pay For Private Roads Debris Removal In Beaufort County, But Tells Chatham County "No"

By Lou Phelps

Savannah (GA) Business Journal, November 4, 2016

Last week, Federal Emergency Management Agency (FEMA) approved Beaufort County's request for reimbursement for the cost of removing private property debris from both roads and rights-of-way under FEMA's 'Public Assistance Program.'

The news added confusion for those in Chatham County living in large private communities such as The Landings at Skidaway Island after property owners of the almost 4,000 homes there learned this week that Chatham County will not be reimbursed by FEMA to remove their enormous levels of debris. But, Chatham County officials announced Wednesday that the County will assist in debris removal.

Contractors being used around the County, funded by FEMA, were sent to The Landings on Wednesday to remove some of the debris, as several elected officials held a press conference to explain their intention to appeal FEMA's decision.

Residents there maintain that they pay County property taxes, and should receive supportive services, despite the fact that all roads at The Landings are 'private,' and are maintained by The Landings Association's capital fund year-around.

Paul Kurilla serves as Director of Public Works for The Landings Association. At Wednesday's press conference, and through emails to residents, he stated that workers have removed 80,000 cubic yards of tree and branch debris from the area, but have at least 280,000 cubic yards left to be picked up.

FEMA informed County Manager Lee Smith this week that The Landings and 20 other private residential neighborhoods are not eligible for debris removal reimbursement.

And, Smith said that the Thunderbolt municipality also received notice this week that FEMA had also denied reimbursement for cleanup of its streets that are 'private.'

The County intends to file an immediate appeal of FEMA's decision within six days. Congressman Buddy Carter's office stated today that he is "working with Chatham County officials to form that appeal."

At this Friday's County Commission meeting, Smith will update County Commissioners on the appeal, progress in cleaning up the County to date, and projected costs and funding sources to deal with non-FEMA reimbursed expenses.

FEMA denied pickup based on their analysis of the volume of debris to be removed, which differs widely from the estimates of local officials.

According to State Rep. Jesse Petrea, Sen. David Perdue, Sen. Johnny Isakson, as well as Congressman Carter, are all pressuring FEMA to re-evaluate their decision. Petrea adds that The Landings is not looking for assistance with debris on golf courses, etc, but debris on public rights of way, debris that poses a fire danger and issues related to mosquito control.

FEMA Denies Request For Reimbursements On Private Roads In Chatham County

WJCL-TV Savannah (GA), November 3, 2016

Chatham County, GA —

FEMA sent a notice to Chatham County on Monday, informing them that FEMA would not reimburse the county for costs associated with debris removal in private communities.

A decision that left local leaders stunned.

"We're disappointed," said County Commissioner Pat Farrell.

Farrell, Commissioner Helen Stone, County Manager Lee Smith, and State Representative Jesse Petrea held a press conference Tuesday in the Landings, a private community in unincorporated Chatham County.

Among a pile of debris as big as a mobile home, they discussed frustration with FEMA.

County Manager Smith said FEMA's reasoning for not paying for pickup was due to the volume of debris in the 20-plus gated communities.

"But we believe their estimates are severely, severely minimized," said Smith.

Commissioner Farrell said FEMA also failed to understand the legal and financial responsibilities the county has to the private neighborhoods.

"There's a long precedent in this county for treating all those communities equally," he said.

Commissioner Helen Stone said residents in the gated neighborhoods pay local taxes to Chatham County, and should get the same amount of assistance from FEMA.

"And I believe that they should be treated accordingly and treated differently because of the fact that they live behind a gate," said Stone.

The county, along with the state are appealing the FEMA decision. Smith said another pressing issue is the amount of mosquitos brought on by the piles of debris in the gated areas. Making removal a public health necessity.

Smith said the county is working on getting the debris picked up in all of unincorporated Chatham County, despite the denial from FEMA.

He cautioned that residents need to be patient while crews move throughout the county.

FEMA Disaster Recovery Center Open On Hilton Head Island

By Georgiaree Godfrey

WTOC-TV Savannah (GA), November 3, 2016

HILTON HEAD ISLAND, SC (WTOC) –

FEMA representatives are present throughout the Coastal Empire helping in the aftermath of Hurricane Matthew.

We saw how they've been responding here in Georgia, but this week they're also very active in the Lowcountry.

The centers are a way for residents and small business owners alike to get face to face interaction with FEMA representatives. Earlier this week, they were in the northern part of the county, and now they've made their way south.

A center is set up at Hilton Head Town Hall, and it will be open through Saturday evening. Consider it a one-stop shop for everything you need to know to recover from the storm.

This is the second step to the assistance process. Residents should have already created a profile with FEMA and applied online for assistance. From there, you're given an applicant number which is used throughout the process to keep track of your needs and assistance you have received. With more than 35,000 people statewide already signed up, these recovery centers are essential in making sure all needs are met.

"The collaboration of that face to face is immense to be able to sit down and have someone discuss your individual needs. It's immense as far as expediting your recovery. However, you don't have to come in here once you register. You don't have to come to a DRC, but if you have a need, or if there is a breakdown in communication, this is why we're here," said William Lindsey, FEMA.

Representatives will be there until 7 p.m. Thursday night and until 6 p.m. on Saturday. So far, they've seen more than 50 people with needs related to Hurricane Matthew.

FEMA Disaster Recovery Center Opens In Burgaw

WECT-TV Wilmington (NC), November 3, 2016

PENDER COUNTY, NC (WECT) –

Pender County residents who suffered losses and damage as a result of Hurricane Matthew will be able to get information about available state and federal assistance at a Disaster Recovery Center opening Thursday in Burgaw.

According to officials, the center will be located at Malpass Corner Elementary School, 4992 Malpass Corner Road, and will be open Monday through Saturday from 10 a.m. to 7 p.m.

DRCs are staffed with representatives from the Federal Emergency Management Agency, North Carolina Emergency Management and the U.S. Small Business Administration. You can receive help applying for federal disaster assistance, learn about the types of assistance available, learn about the appeals process and obtain updates regarding your application.

If you have phone and/or internet access, you may register in one of the following ways:

Online at DisasterAssistance.gov.

Call the FEMA Helpline at 800-621-3362 for voice, 711 and Video Relay Service (VRS). If you are deaf, hard of hearing or have a speech disability and use a TTY, call 800-462-7585.

Download the FEMA Mobile App and apply.

Recovery centers are open throughout the disaster-affected counties in the state. To locate the center nearest to you, call the FEMA Helpline at 800-621-3362.

Federal Aid Now Available To 7 More NC Counties Impacted By Matthew

WAVY-TV Norfolk (VA), November 3, 2016

NORTH CAROLINA (WAVY) — Disaster assistance has been approved to help individual residents in an additional seven North Carolina counties as they clean up from Hurricane Matthew.

Carteret and Perquimans counties had already been approved for federal public assistance to help local governments and non-profits. Thursday's approval means individuals are now also eligible to apply for aid.

With the addition of these counties, 45 counties have now been approved for federal individual and public assistance. Two counties have been approved for public assistance only. Nearly $64 million has already been approved for individuals who have been affected by the storm.

The 45 counties currently eligible to apply for individual assistance are: Anson, Beaufort, Bertie, Bladen, Brunswick, Camden, Carteret, Chatham, Chowan, Columbus, Craven, Cumberland, Currituck, Dare, Duplin, Edgecombe, Gates, Greene, Halifax, Harnett, Hertford, Hoke, Hyde, Johnston, Jones, Lee, Lenoir, Martin, Moore, Nash, Northampton, Onslow, Pasquotank, Pender, Perquimans, Pitt, Richmond, Robeson, Sampson, Scotland, Tyrrell, Wake, Washington, Wayne and Wilson.

To apply for federal aid, go to DisasterAssistance.gov, call the FEMA Helpline at 800-621-3362 or download the FEMA Mobile App.

FEMA has set up a disaster recovery center which will move throughout Dare County to help give all residents affected by Matthew a chance to get help.

The center will be set up in Kill Devil Hills from Tuesday, Nov. 8, through Thursday, Nov. 10, in the north parking lot of the Kill Devil Hills Fire Station, located at 1634 N. Croatan Highway.

The center will then move to Manteo and will be open on Saturday, Nov. 12, Monday, Nov. 14 and Tuesday, Nov. 15. It will be closed Sunday. The Manteo location will be located at the Dare County officer, 954 Marshall C. Collins Drive.

The recovery center's regular hours are from 9 a.m. to 6 p.m.

Looking for a recovery center near you? They are set up all over the disaster-affected counties of North Carolina. To find one close by, call the FEMA Helpline at 800-621-3362 or go online.

If you'd like to donate to the North Carolina Disaster Relief Fund for Hurricane Matthew, text NCRECOVERS to 30306 or visit NCDisasterRelief.org.

FEMA: Disaster Assistance Does Not Affect Government Benefits

By Matt Corpening

WMBF-TV Myrtle Beach (SC), November 3, 2016

COLUMBIA, SC (WMBF) – The Federal Emergency Management Agency announced Thursday disaster assistance does not count as income, and therefore will not affect recipients' Social Security checks or other government benefits.

According to a FEMA news release, Medicare benefits and eligibility for food stamps or Medicaid are also unaffected by disaster relief funds. Eligibility for FEMA assistance is not dependent on outcome, but is based on the amount of damages incurred as a direct result of Hurricane Matthew.

The number of registrants for individual assistance in designated counties totals 35,690. The total amount of individual and household assistance disbursed is $23,324,413. FEMA has completed 22,613 of 24,308 inspections issued. The Small Business Administration has approved 159 applications totaling $5,642,400 of 1,062 applications received.

Survivors of Hurricane Matthew have until December 13 to register with FEMA for disaster assistance by one of the following methods:

Call 800-621-3362 (voice, 711 or video services) or 800-462-7585. Lines are open daily from 7 a.m. to 10 p.m. and multilingual operators are available.

Apply online here.

Visit a Disaster Recovery Center. To find the one nearest you, click here and check "Quick Links." DRCs are accessible to people with disabilities. The centers have tools to amplify sound, magnifiers and materials in alternative formats along with video remote interpretation. Sign language interpreters are available upon request at the center.

ZIKA VIRUS

Zika Causes A Unique Syndrome Of Devastating Birth Defects

By Lena Sun

Washington Post, November 3, 2016

The birth defects caused by Zika have been described in heartbreaking detail as the virus has spread to more than 45 countries, infecting hundreds of thousands of people, including tens of thousands of pregnant women. Now researchers have concluded that a Zika infection during pregnancy is linked to a distinct pattern of birth defects that they are officially calling congenital Zika syndrome.

In a report released Thursday in JAMA Pediatrics, researchers from the Centers for Disease Control and Prevention describe five types of birth defects that are either unique to Zika or occur rarely with other infections during pregnancy:

Severe microcephaly (abnormally small head size) with partly collapsed skull.

Decreased brain tissue with a specific pattern of calcium deposits indicating brain damage.

Damage to the back of the eye with a specific pattern of scarring and increased pigment.

Joints with limited range of motion, such as clubfoot.

Too much muscle tone, restricting movement soon after birth.

Researchers at the CDC, along with colleagues elsewhere in the United States and Brazil, analyzed publicly available reports about defects among infants and fetuses whose mothers had either confirmed or presumed infection with Zika virus during pregnancy. Most of the clinical descriptions of Zika-affected infants are from Brazil, the heart of the epidemic.

The most common timing of infection that led to birth defects is late first and early second trimester, although third-trimester infections were also reported among infants with birth defects.

The five features described in the report are an initial list of clinical findings. It's becoming increasingly clear, however, that the full spectrum of health problems caused by a Zika infection won't be known for months and even years after birth.

At a conference in September on Zika's effect on children, sponsored by the National Institute of Child Health and Human Development, researchers described an array of problems associated with Zika exposure beyond microcephaly, mostly stemming from the virus's harm to the nervous system.

Children born to Zika-infected mothers will need to be regularly monitored because some problems don't show up until months later, said Catherine Spong, an obstetrician-gynecologist and the institute's acting director.

"Although the severe cases are teaching us a lot, the impact is likely much more broad, and these impacts, although less striking, may be much more widespread and may need more monitoring and interventions," she said.

Researchers say the purpose of the latest report is to describe what is known about the congenital syndrome. The description is intended to help health-care providers "better recognize the pattern of birth defects associated with congenital Zika virus infection," said Cynthia Moore, a clinical geneticist and birth-defects expert for the CDC and lead author of the report.

Doing that will help providers evaluate and coordinate care for affected babies and their families, she said.

At least 1,005 pregnant women have Zika infections in the 50 states and the District of Columbia; 25 U.S. infants have been born with Zika-related birth defects and an additional five pregnancies are known to have resulted in miscarriage, stillbirths or terminations with evidence of birth defects.

Zika-related Symptoms In Infants Get A Name

By Margarita Cambest

York (PA) Dispatch, November 3, 2016

Researchers from the Centers for Disease Control and Prevention have put a name to a distinct pattern of birth defects associated with the Zika virus.

Eight states, including Pennsylvania, have reported more than 100 cases of travel-related Zika as of Oct. 26. The mosquito-borne virus is especially problematic for pregnant women because of the possibility of birth defects in unborn children.

According to a report in the Journal of American Medicine Pediatrics, the five types of birth defects that most commonly occur from contracting the virus during pregnancy — severe microcephaly, thin cerebral cortices, scarring of the eye, congenital contractures and a reduced ability of muscles to stretch — are now officially called congenital Zika syndrome.

Researchers said the recognition of the defects as a syndrome in infants and children will help providers evaluate, investigate and define affected patients and determine ongoing care.

The Zika outbreak began in Brazil in May 2015, according to the Pennsylvania Department of Health, and has spread rapidly. In response, the CDC has issued travel notices to regions where the Zika virus is being transmitted locally, including parts of Florida and Puerto Rico.

Pregnant women are advised to postpone travel to parts of Miami-Dade County, including Miami Beach and another 1-square-mile area of the county, as no vaccine or treatment is currently available.

The DOH updates confirmed cases on its website each Monday. As of Oct. 31, there were 127 confirmed Zika infections and 38 probable cases in Pennsylvania. While all of the cases are travel-related, the CDC has cautioned the species of mosquito responsible for the infection could travel as far north as southeastern Pennsylvania.

Most people infected with Zika do not have symptoms, but fever, rash, joint pain, red eyes, muscle pain or headache could last for several days to a week after infection.

Anyone who develops these symptoms and has visited an area with Zika is encouraged to see a doctor or health care provider, especially if pregnant.

CDC Defines Congenital Zika Syndrome

By Laurie Barclay

Medscape, November 3, 2016

Recognizing the congenital Zika syndrome (CZS) phenotype defined by the Centers for Disease Control and Prevention (CDC) allows clinicians to provide comprehensive workup and management for infants and children, according to a literature review published online November 3 in JAMA Pediatrics.

"[Zika virus (ZIKV)] infection in pregnancy appears to be the cause of a recognizable pattern of congenital anomalies that is consistent and unique," write Cynthia A. Moore, MD, PhD, from the Division of Congenital and Developmental Disorders, National Center on Birth Defects and Developmental Disabilities, Centers for Disease Control and Prevention, Atlanta, Georgia, and colleagues. "Although many of the components of this syndrome, such as cognitive, sensory, and motor disabilities, are shared by other congenital infections, 5 features differentiate CZS from other congenital infections."

Distinctive features reported in CZS are:

severe microcephaly (>3 SD below the mean), with findings consistent with fetal brain disruption sequence, including partially collapsed skull, overlapping cranial sutures, prominent occipital bone, redundant scalp skin, and neurologic impairment;

brain anomalies, including cerebral cortex thinning, abnormal gyral patterns, increased fluid spaces, subcortical calcifications, corpus callosum anomalies, reduced white matter, and cerebellar vermis hypoplasia;

ocular findings, such as macular scarring, focal pigmentary retinal mottling, structural anomalies (microphthalmia, coloboma, cataracts, and posterior anomalies), chorioretinal atrophy, and optic nerve hypoplasia/atrophy;

congenital contractures, including unilateral or bilateral clubfoot and arthrogryposis multiplex congenita; and

neurological impairments, such as pronounced early hypertonia/spasticity with extrapyramidal symptoms, motor disabilities, cognitive disabilities, hypotonia, irritability/excessive crying, tremors, swallowing dysfunction, vision impairment, hearing impairment, and epilepsy.

Diagnostic Workup Needed

Many of these features can also occur in other congenital infections, such as congenital cytomegalovirus, rubella, varicella, and coxsackie B, mandating thorough workup. Brain anomalies may also occur in genetic syndromes, such as Aicardi-Goutières syndrome, pseudo-TORCH syndrome, and gene mutations in JAM3, NDE1, and ANKLE.

Congenital infections with HIV, varicella-zoster, and rubella virus may cause microcephaly, but distinctive findings such as hepatomegaly and rash help differentiate these from ZIKV infection. To date, hematologic, hepatic, or renal laboratory abnormalities have not been reported in infants with congenital ZIKV infections.

Clinical, epidemiologic, and laboratory evidence thus far is sufficient to determine that ZIKV infection can be transmitted from a pregnant woman to the fetus, resulting in microcephaly and serious brain anomalies. As with other newly recognized teratogens, these characteristics most likely reflect only the tip of the iceberg, and underlying pathogenetic mechanisms are incompletely determined. This is the first review characterizing the full spectrum of congenital abnormalities related to prenatal ZIKV infection.

"In particular, more data are needed on infants with congenital ZIKV infection who do not have microcephaly at birth and the brain findings in these infants," the reviewers conclude. "In addition, knowledge about the frequency in which the various components co-occur in an infant, as well as whether any component(s) are mandatory features, is lacking at this time."

The authors note that most congenital anomalies associated with Zika infection appear to be related to the neurotropic nature of the virus. However, other sporadic reports of anomalies, such as congenital heart defects, will need further investigation in epidemiologic studies to exclude coincidental associations and define a more complete CZS phenotype.

The authors developed the current definition of CZS based on a comprehensive English literature search using Medline and EMBASE from inception through September 30, 2016. They identified 34 published reports of congenital anomalies occurring in fetuses or infants with presumed or laboratory-confirmed intrauterine ZIKV infection.

After considering these in light of presumed, underlying pathogenesis related to the neurotropic characteristics of ZIKV, the reviewers conclude that CZS is a distinctive pattern of structural anomalies and functional disabilities caused by damage to the central and possibly peripheral nervous system.

On the basis of maternal symptoms, the most common timing of infection is late first and early second trimester, but third trimester infection can also cause CZS.

ZIKV infection has been reported in at least 45 countries in the Americas, three US territories, and Florida, with spread to other US states possible based on the estimated range of the Aedes mosquito vectors. Sexual transmission has also been reported.

Limitations of this review include the lack of testing for ZIKV infection and incomplete description of the full range of anomalies in most reported infants.

The authors have disclosed no relevant financial relationships.

Battling Zika...and Armchair Critics With Wacky Suggestions

By Alan Gomez

USA Today, November 3, 2016

MIAMI — Soon after the USA's top disease prevention official said the Zika virus could not be contained using "existing technologies," the Internet disagreed.

Some people argued the technology did exist, but the feds – stuck in the Middle Ages – failed to grasp it. Others suggested the government unleash genetically-modified mosquitoes to wipe out the Zika-transmitting mosquitoes. Still more contended the U.S. was ignoring groundbreaking vaccines and mosquito sprays used with success in other mosquito-infested countries. Even a veterinarian weighed in, saying a good shot of Vitamin C would do the trick.

The surge of suggestions came after Centers for Disease Control and Prevention Director Tom Frieden gave a grim assessment of the virus' trajectory, explaining during a conference in Miami last month that it would eventually become endemic throughout the continental U.S.

While armchair critics had some pretty wacky ideas, infectious disease experts say Frieden was, unfortunately, right.

"What he's talking about is the fact that Aedes aegypti have been a plague on the human race for centuries," Amesh Adalja of the Infectious Diseases Society of America said of the mosquito species that carries Zika. "These mosquitoes are very hard to stop, they're evolutionarily adaptive and they're hard to eradicate."

Infectious disease experts also agreed that they all get a constant stream of unsolicited, and usually unproven, advice.

"All the time," said Daniel Olson, an assistant professor of pediatric infectious diseases at the University of Colorado. "You hear about treatments they read about on the Web. Or they'll say, 'I heard this thing works. Can we try it?'"

Despite the depressing conclusion of Frieden and others, infectious disease experts say some of the proposed solutions could develop into realistic answers down the road.

Vitamin C may not cure Zika. As Olson explained: "There's not a lot of evidence behind a lot of these claims."

But Adalja points to genetically-modified mosquitoes as one mosquito-control technique that has been widely tested and could be ready for deployment in the U.S.

Oxitec, a British company, has tested a procedure to alter the genetic code of male mosquitoes. When those modified mosquitoes mate with females, the offspring die before reaching adulthood, reducing the number of mosquitoes in the area.

Oxitec has tested such mosquitoes in Brazil, Panama and the Cayman Islands, and reported dramatic drops in the mosquito populations there. The U.S. Food and Drug Administration approved a controlled test of the mosquitoes in the Florida Keys, but that is on hold after residents there protested.

Adalja said people need to accept that kind of technology, which he said has been carried out "elegantly" and could become a common mosquito eradication technique in the very near future.

"Absolutely, that should be pursued," said Adalja, a senior associate at the Center for Health Security at the University of Pittsburgh Medical Center.

Olson said the U.S. also needs to invest more in improving surveillance technology so that local medical officials can better track where Zika, and future mosquito-borne viruses, spread. He said the initial response to Zika from public health officials was slow because they rely mostly on doctors and hospitals to report patients they see, a process that is voluntary and does not include penalties for failing to participate.

"If you can't see it, you can't study it," he said.

Allowing citizens to self-report their symptoms – known as "participatory syndromic surveillance" in the scientific world – helped Olson and a team of researchers closely track the spread of dengue in Guatemala last year. Citizens used a smartphone app to report their symptoms, which Olson said allowed researchers to more closely monitor where dengue flourished.

The infectious disease experts said there are other technologies in development that could help, from vaccines that can be produced more quickly, to mosquito sprays that can help eradicate the virus-carrying mosquitoes.

Hagai Levine, a communicable disease expert at the Hebrew University-Hadassah Medical Center School of Public Health in Jerusalem, said the U.S. has simply lacked the will to pursue those possible solutions.

Levine said the proliferation of mosquito-borne diseases in recent decades is obvious to anybody paying attention. But since those viruses did not tear through developed nations, Levine said those governments didn't spend much time finding solutions. Zika, for example, first appeared in Brazil in 2015, several months before it surfaced in South Florida.

"Then we wake up," he said. "Any country focuses on issues that are relevant to its own population. But we live today in a world of global health."

That requires collaboration among scientists in countries around the world, he said.

"Once we put our effort to such problems, I'm sure we will come up with more solutions," he said.

Miami-Dade To Consider Deploying GMO Mosquitoes In Fight Against Zika

By Daniel Chang

Miami Herald, November 3, 2016

Entering their fourth month of fighting a local outbreak of Zika, Miami-Dade officials are considering releasing thousands of genetically engineered mosquitoes in Miami Beach and Miami's Little River neighborhood to reduce the numbers of insects and help stop the virus's spread, county officials said this week.

Miami Beach commissioners were the first to propose using genetically engineered mosquitoes in September, when they were faced with throngs of protesters opposed to the county's aerial spraying of the pesticide naled over sections of the city to reduce the number of insects that carry the virus.

Since then, Miami-Dade officials, who oversee mosquito control in Miami Beach and Miami, also have taken an interest in the genetically engineered insects bred and sold by the biotechnology company Oxitec, which has been collaborating with the Florida Keys Mosquito Control District for a potential trial release in Monroe County. The proposed trial release became so controversial in the Florida Keys that the question was placed on the Nov. 8 ballot for a non-binding county vote.

Oxitec representatives are scheduled to meet with county mosquito control and Miami Beach officials on Nov. 17, said Mike Hernandez, a spokesman for Miami-Dade Mayor Carlos Gimenez, who is running for re-election on Tuesday.

"We need to listen to any potential solution or vehicle that could mean fewer mosquitoes in Miami-Dade County, which means we would have a lower risk of disease transmission again next season," Hernandez said, adding that county officials want to understand the regulatory requirements, costs and public opinion on the possible use of Oxitec's mosquitoes.

If Miami-Dade and Oxitec decide they want to collaborate, the company will submit an application, including an environmental assessment, to the Food and Drug Administration for a trial release.

"We are eager to discuss our solution with any Florida county that is seeking alternate solutions," Derric Nimmo, Oxitec's project coordinator in the Keys, said in a written statement.

Oxitec researchers say their genetically engineered mosquitoes have helped reduce mosquito populations by as much as 90 percent during trial releases in regions of Brazil, Panama and the Cayman Islands. Any release of genetically engineered mosquitoes would be integrated with more traditional methods of mosquito control, including spraying and reducing breeding sites, Nimmo said.

For the proposed trial in Monroe, Oxitec would breed mosquitoes from eggs in the company's laboratory in Marathon and then release the non-biting males in the designated area about three times a week, Nimmo said. Once released, the genetically engineered mosquitoes mate with females, producing offspring that die before reaching adulthood.

Before moving ahead with a release, however, Monroe County residents will vote Tuesday in a straw poll to determine the level of support for a trial in Key Haven, an affluent island east of Key West. Key Haven residents also will vote in their own local poll.

Three of the five members of the local mosquito control district board have pledged to act in accordance with the results, which aren't binding, Nimmo said.

Miami-Dade mosquito control has been spraying pesticides — by air, truck, and handheld foggers — reducing breeding sites and raising public awareness about the local spread of Zika since August, after state officials identified a one-square-mile area of Miami's Wynwood neighborhood as the first place in the continental United States with mosquito-borne transmission of the virus.

Since then, local cases have also been reported in Broward, Palm Beach and Pinellas counties, but Miami-Dade remains the only county with sustained outbreaks of the disease, including in most of South Beach and Middle Beach, and in the newest Zika zone, a one-square-mile section of Miami's Little River neighborhood identified in October.

Miami Beach Commissioner Kristen Rosen Gonzalez first proposed using Oxitec's genetically engineered mosquitoes in September, sponsoring a resolution authorizing the city manager to begin exploring the possibility.

Gonzalez also has proposed releasing bats, a natural predator of mosquitoes, and said she wants to exhaust all options for ridding Miami Beach of Zika.

Aerial spraying of naled hasn't done the job, she said.

"People would like a solution and they would like a non-toxic solution," Gonzalez said. "I wouldn't like to use naled anymore given the fact that even after we sprayed we still continue to have locally transmitted cases. I would prefer to find another option."

The county has said it expects spend up to $12 million combating Zika by the end of mosquito season in December.

In September, Miami Beach City Manager Jimmy Morales sent a letter to the U.S. Department of Health and Human Services requesting that the FDA approve the "emergency use" of Oxitec's genetically engineered mosquitoes.

Aedes aegypti mosquitoes are a non-native species in the United States that spread diseases such as Zika, dengue fever and chikungunya, according to the Centers for Disease Control and Prevention.

FDA Commissioner Robert Califf responded that any local governments in Florida interested in a trial release of Oxitec's mosquitoes should contact the company so it could submit the required information.

The FDA in August cleared the way for Oxitec and the Florida Keys Mosquito Control District to release genetically engineered mosquitoes in Monroe County after finding that a field trial would not significantly harm the region's environment. But the plan has met significant resistance from Florida Keys residents and others opposed to the release, including Mila de Mier, a realtor and mother of three who lives in Key West.

De Mier led a petition drive that she said has gathered about 170,000 signatures opposing the release. She said she doesn't trust Oxitec's data and that the FDA should require the consent of residents before allowing a trial release.

De Mier said she also worries that genetically engineered mosquitoes could open the door to unforeseen consequences, like antibiotic resistant bacteria

"It could really be opening a huge problem that's not even talked about," she said.

Miami-Dade officials said they will be watching results of the Monroe County referendum to inform their decision about whether to use Oxitec's mosquitoes in Miami Beach and Miami.

"The county is not taking a position for or against," Hernandez said. "We're listening."

Hernandez said mosquito counts have remained relatively low in the sections of Miami-Dade where health officials have confirmed local spread of Zika, with per trap averages of 4.8 in Wynwood; 1.6 in Little River; 0.47 in South Beach; and 1.25 in Middle Beach — all as of Wednesday.

Still, Zika continues to spread in other areas of Miami-Dade. On Thursday, the Florida Department of Health reported two more mosquito-borne Zika infections outside of the transmission zones in Miami Beach and Miami, requiring an epidemiological investigation to determine the source of exposure.

A total of 1,120 Zika infections have been confirmed in Florida this year, with 207 mosquito-borne cases and 907 travel-related cases, including 131 pregnant women. An additional six cases have been ruled "undetermined" after state investigators failed to identify the source of exposure.

Zika cases confirmed in Florida as of Nov. 3

* Counties of pregnant women not disclosed

** Does not include local cases

Crews Repairing Storm Damage In Michigan's Upper Peninsula

Associated Press, July 19, 2016

IRONWOOD, Mich. (AP) — Crews are working to repair millions of dollars in damage in Michigan's western Upper Peninsula after a tornado and flooding hit the area.

Gov. Rick Snyder took an aerial tour Monday of part of Gogebic County and said afterward that the National Guard is working with the county on the recovery effort. Snyder says costs will be sorted out later, but for now "the job is getting done."

Gogebic County Road Commission Manager Darren Pionk tells the Daily Globe of Ironwood (http://bit.ly/29RL17n) it could cost around $6 million to repair some roadways.

Snyder declared a state of disaster Friday for Gogebic County, accompanied by an order activating the Michigan National Guard to assist response and recovery efforts. The moves stem from severe storms that moved through the region July 11-12.

Storms Bring Golf Ball-sized Hail, Tornado Warnings

Associated Press, July 18, 2016

A line of thunderstorms moving across northern New England has left thousands of people in the dark.

The line of thunderstorms had strong wind gusts on Monday. There also were reports of hail and even a pair of tornado warnings.

Tom Hawley from the National Weather Service said golf ball-sized hail was reported in northern New Hampshire.

In Maine, about 10,000 homes and businesses lost power. About 2,000 customers were in the dark in new Hampshire.

Tornado warnings are rare New England, and at least three were issued in Maine and New Hampshire on Monday. There were no reports of a twister touching down.

Weekend Storms Wreak Havoc In Northeastern South Dakota

Associated Press, July 18, 2016

SIOUX FALLS, S.D. (AP) – Weekend storms in northeastern South Dakota damaged buildings, caused power outages and led to at least a couple of injuries.

National Weather Service reports show wind gusts on Saturday in the region in the range of 75 mph. The American News reports the wind downed power poles and trees, damaged a machine shed near Bath and a hangar at Aberdeen's airport. Heavy rain also led to street flooding in Aberdeen.

The Daily Republic reports that winds estimated at up to 80 mph knocked over a camper at Lake Poinsett. JL Dye of Sioux Falls was knocked unconscious and suffered a cut on his nose. His wife, Chrissy, was taken to a Sioux Falls hospital with a back injury.

Dye says the camper and several others were heavily damaged.

Woman Dies After Driving Around Road Barricades In Wisconsin

Associated Press, July 18, 2016

GRAND VIEW, Wis. (AP) — Authorities say a woman has died after driving her car around barricades on a washed-out highway in flooded northwestern Wisconsin.

A Wisconsin Department of Transportation official called 911 around 9:30 a.m. Monday to report the crash on U.S. Highway 63 just north of Grand View.

The official said the car drove around two sets of "road closed" signs and into the washed-out part of the highway, which goes down about 50 feet. The car came to rest at the bottom of the washout.

Bayfield County sheriff's authorities say the woman had to be extricated from her car and brought to the surface using ropes. WDIO-TV (http://bit.ly/29QAGX9) reports she was airlifted to a hospital in Duluth, Minnesota, where she died.

The name of the woman was not immediately released.

Tornado Touchdown Confirmed In Kankakee County On Sunday

Associated Press, July 18, 2016

DWIGHT, Ill. — The National Weather Service has confirmed one tornado touched down Sunday night as storm moved across northern Illinois.

Forecasters at the weather service office in Romeoville on Monday said the tornado ranked an EF-1 with estimated peak wind speeds of 100 mph. It touched down near Cabery in Kankakee County at 200 yards wide and traveled for about 2.2 miles. Survey crews on Monday also were surveying a possible tornado touchdown in northern Livingston County.

Strong storms moved across the region Sunday evening bringing lightning, high winds, pea-sized hail and heavy rain.

The weather service reported two destroyed grain bins and a shed near Herscher in Ford County along with downed power lines.

Garland County To Buyout Home That Repeatedly Floods

Associated Press, July 18, 2016

HOT SPRINGS, Ark. (AP) — The Garland County Quorum Court has adopted a voluntary buyout policy that would allow the county to use Federal Emergency Management Agency funds to purchase of private property prone to repeated flooding.

The Hot Springs Sentinel-Record (http://bit.ly/29PSYK) reports that the policy was adopted last week. It'll be used to purchase a home near Lake Catherine that regularly floods when water is released from Carpenter Dam.

Garland County Department of Emergency Management Director Bo Robertson told the quorum court that it's more cost effective for FEMA to buy the property than pay repeated claims made on the owner's federal flood insurance.

The property will be transferred to the county, but no new structures can be built on it. According to FEMA policy, it will be maintained for uses consistent with open space, recreation or wetlands management practices.

According to Robertson, the funds will be used to demolish the structure and remove a septic tank.

Robertson said the county used a FEMA template to formulate the policy. Under the policy, property owners are allowed 45 days to accept the county's offer, which will be based on the state-established pre-flood fair market value of the residential structure, underlying real property and outbuildings.

Sandoval To Attend Memorial For Firefighters Killed In Crash

Associated Press, July 19, 2016

WINNEMUCCA, Nev. (AP) — Gov. Brian Sandoval is attending a memorial service for two federal firefighters killed when their fire truck crashed on the way home from wildfire spotting patrol.

The service remembering 27-year-old Jacob O'Malley and 22-year-old Will Hawkins will be held Tuesday at the Winnemucca Events Complex Exhibit Hall.

A statement from the Bureau of Land Management says the O'Malley family in Zephyr Cove and Hawkins family in Reno are planning private funerals in their towns.

A 23-year-old firefighting colleague, Zachery McElroy of Reno, is recovering after he was hospitalized for injuries he received in the July 10 crash about 40 miles north of Winnemucca.

The Nevada Highway Patrol says a tire blow-out apparently caused their fire truck to roll over several times.

Conference On Church Preparedness Planned In Bettendorf

Houston Chronicle, July 18, 2016

BETTENDORF, Iowa (AP) — A conference on church preparedness for various events such as tornadoes, fires, floods and mass shootings is to be held in Bettendorf.

The Quad-City Times (http://bit.ly/29JcxkT) reports that the first-ever Faithful Readiness: An Emergency Preparedness Workshop for Faith Communities is planned for July 26 at John Vianney Catholic Church.

The conference was initiated by Scott County emergency management coordinator Dave Donovan after he attended a Federal Emergency Management Agency conference. Donovan reached out to FEMA representatives to help with the event.

The conference aims to give participants an "Emergency Management 101" course that'll focus on personal, family and congregational preparedness. It'll also cover disaster mission decisions, such as being a shelter, feeding site or center for bulk distribution of emergency supplies.

The conference will have a panel discussion on the various issues, and the Bettendorf Police Department will lead an active shooter presentation.

Police Capt. Keith Kimball said there will be information option about what to do if active shooter situation were to arise during a church service or event.

Marcus Coleman with the Center for Faith-based and Neighborhood Partnerships at the White House will be the keynote speaker. Coleman will provide an overview on emergency operation planning.

Organizers say they hope 100 or more representatives of churches, synagogues, mosques and temples in the region will attend.

Jordan Schneider, emergency coordinator at the Muslim Community of Quad-Cities, said that houses of worship would ideally network in response to a disaster.

"One church can provide food, one clothes, maybe another one has shelter for others. We want to find the strengths of the congregations and help them to be more prepared," she said.

Series Of Earthquakes Hits California's Central Coast Area

By Shelby Grad

Los Angeles Times, July 18, 2016

A series of small earthquakes have been recorded in the last day along California Central Coast.

The quakes hit roughly between Hollister and Cambria. The largest, which measured magnitude 3.8, was centered near the town of Ridgemark. A 3.7 magnitude quake occurred in Hollister early Monday morning.

There were five quakes greater than 3.0 and more than a dozen smaller quakes in the area.

The temblors were felt over a relatively small area, according to the U.S. Geological Survey, and no damage was reported.

The "Earthquake" Off Florida's Coast Was Likely Navy Testing

Associated Press, July 19, 2016

DAYTONA BEACH, Fla. — An apparent 3.7 magnitude earthquake off the coast of Florida was likely triggered by a man-made explosion to test the seaworthiness of a new U.S. Navy vessel.

Seismographs detected the earthquake Saturday afternoon about 168 nautical miles northeast of Daytona Beach Shores.

The Daytona Beach News-Journal (http://bit.ly/2a7apZl) reports a similar 3.7 magnitude "earthquake" on June 10 off of Ormond-by-the-Sea happened about the same time the Navy reported conducting a shock trial on the USS Jackson for testing. The Navy notified the National Oceanic and Atmospheric Administration's National Marine Fisheries Service that another shock trial would be conducted between July 16 and July 20.

The Navy's Sea System Command spokesman Dale Eng tells the newspaper the Navy is working on a statement to release this week.

How TIDES Can Trigger The San Andreas Fault: Researchers Find Earthquakes Can Be Caused By The Gravitational Tug Of The Sun And Moon

By Cheyenne Macdonald

Daily Mail, July 18, 2016

The gravitational pull of the sun and moon is tugging on Earth's crust, causing it to stretch and compress.

And in certain phases of the cycle, this can even trigger earthquakes deep underground.

In a new study, researchers analysed thousands of these 'low-frequency earthquakes' along California's San Andreas Fault, and found that they are more likely to occur when the tide is waxing.

As the surface of the Earth rises and falls with the tides, it influences activity at the faults, either promoting or inhibiting fault slip deep at the roots.

When the moon is pulling in the same direction of the slip, the effect is far more dramatic, Nicolas van der Elst, a U.S Geological Survey geophysicist and lead author of the study, explained to the L.A. Times.

In the study, published recently to Proceedings of the National Academy of Sciences, the researchers investigated roughly 81,000 low-frequency earthquakes from 2008 to 2015 along the Parkfield section of the San Andreas Fault.

These are small in magnitude, often less than 1.0, and occur between nine and 19 miles below the surface.

The researchers compared the earthquake data to the 'fortnightly tides,' the two-week cycle that occurs as the sun and moon change their positions in the sky in relation to each other.

This revealed that the low-frequency earthquakes were more likely to occur when the tides were waxing.

And, more of these quakes will happen if the tidal amplitude is greater than the day before.

In the paper, the researchers explain that 'deep, small earthquakes on the San Andreas Fault are most likely to occur during the waxing fortnightly tide – not when the tidal amplitude is highest, as might be expected, but when the tidal amplitude most exceeds its previous value.

'The response of faults to the tidal cycle opens a window into the workings of plate tectonics.'

The tides are strongest when the sun and moon are in line with each other, the L.A. Times explains, similar to the ocean tides.

When they are 90 degrees apart, they've reached their weakest point.

These findings provide new insight on the behaviour of the fault's deeper regions.

'They tell us that the fault continues down below where the regular or typical earthquakes stop on the San Andreas, about 10 or 12 km [about six to seven miles],' David Shelly, one of the authors on the study, told the L.A. Times.

'And they tell us a lot of things about that deep part of the fault that before, we had no idea existed at all.'

And, the researchers say the data indicates that the Parkfield region of the San Andreas Fault is creeping constantly.

The study provides a way for researchers to measure the fault's recharge time in some areas – but, they still don't know if this will help provide warnings when an earthquake is set to hit.

CALIFORNIA IS 'NOT READY' FOR THE BIG ONE

Beyond the sunshine, the palm trees and Hollywood, if there is one certainty in California, it's that a massive earthquake will strike at some point.

But when the Big One hits, a recent report says, the western state is ill-prepared and local officials as well as major businesses need to face that reality to 'prevent the inevitable disaster from becoming a catastrophe.'

Drafted by a group of business and policy leaders, the report identifies several key areas that need to be addressed before a quake as strong as a magnitude 8 happens, notably aging infrastructure, water supplies and the risk of catastrophic fires.

One of the biggest vulnerabilities, the report states, relates to the Cajon Pass, a narrow mountain pass where the mighty San Andreas Fault intersects with key lifelines, including freeways, railway lines, gas and petroleum pipelines as well as electric lines.

A major earthquake on the San Andreas, one of California's most dangerous faults, would cut most lifelines in and out of southern California, preventing critical aid from reaching some 20 million people and hampering recovery efforts, experts say.

It is commonly referred to as the 'Big One' a hypothetical earthquake of magnitude 8 or greater that is expected to happen along the San Andreas fault.

Such a quake is expected to produce devastation to human civilization within about 50-100 miles of the quake zone, especially in urban areas like Palm Springs, Los Angeles and San Francisco.

Connecticut Park Damaged By Superstorm Sandy Reopens

Associated Press, July 19, 2016

STAMFORD, Conn. (AP) — A portion of a Connecticut park severely damaged by Superstorm Sandy nearly four years ago has finally reopened.

The southern point of the seven-acre Kosciuszko Park in Stamford was reopened Monday by Mayor Kevin Martin after a more than $286,000 renovation project. The city got a $120,000 relief award from the Federal Emergency Management Agency.

The project included restoration and re-pavement of about 700 feet of the walking path and reinforcement of the embankment at the waterfront park.

A portion of the path used by walkers and cyclists collapsed into the harbor after strong waves caused erosion during the 2012 storm.

City engineer Lou Casolo tells the Stamford Advocate (http://bit.ly/2a5H12P) the park is now better able to withstand extreme weather.

CHRISTIE Praises Trump's Imaginary Sandy Giving – MANAFORT Disputes "Livid" Comment – PRO-FULOP Super PAC Donor Disclosure Cheered

Politico, July 19, 2016

Good Tuesday morning in Cleveland! It's day 2 – and the night of Gov. Christie's big speech.

QUOTE OF THE DAY: ""From a young age, my parents impressed on me the values that you work hard for what you want in life, that your word is your bond and you do what you say and keep your promise, that you treat people with respect. They taught and showed me values and morals in their daily lives. That is a lesson that I continue to pass along to our son. And we need to pass those lessons on to the many generations to follow. Because we want our children in this nation to know that the only limit to your achievements is the strength of your dreams and your willingness to work for them" — Melania Trump last night and, basically, Michelle Obama in 2008 http://politi.co/29ISEP3

HAPPY BIRTHDAY – Fox Rothschild's Brian McGinnis

WHERE'S CHRISTIE: Cleveland

NEWS

GENEROSITY — "Christie spokesman: Governor 'misspoke' about Donald Trump's gift for Hurricane Sandy relief," by The Washington Post's David A. Fahrenthold: "On Monday morning, New Jersey Gov. Chris Christie told a group of Republican convention delegates a story about Donald Trump's generosity. After the devastation of Hurricane Sandy, Christie said, his wife Mary Pat Christie had asked Trump for a donation to a New Jersey disaster-relief fund. 'He said, 'How much does the check need to be? Just tell me and I'll send it,' ' Christie told the crowd ... But then, Monday afternoon, a spokesman said Christie 'misspoke.' The spokesman, Brian Murray, appeared to be indicating that Trump had not donated anything to the Hurricane Sandy New Jersey Relief Fund, which was run by Mary Pat Christie. 'Mr. Trump has given to other New Jersey charities, including the Drumthwacket Foundation,' Murray said. He was responding to questions from The Washington Post, which noted that the New Jersey disaster-relief fund did not list Trump among its major donors. The Drumthwacket Foundation, which cares for New Jersey's historic governor's mansion, has received at least $40,000 since 2010 from the Donald J. Trump Foundation — a charity which Trump controls, but which is stocked with other people's money." http://wapo.st/29UjHqf

—"Christie praises Pence pick over 'big mouth from Congress'" http://politi.co/29R7dMG

'I DON'T BELIEVE THE LIBERAL MEDIA' — "RNC 2016: Trump campaign manager dismisses report Christie was 'livid' over VP snub," by NJ Advance Media's Matt Arco: "A top aide to presumptive Republican presidential nominee Donald Trump on Monday denied a report that claimed he said Gov. Chris Christie was 'livid' about being passed over as running mate. 'I never said that,' Paul Manafort, Trump's campaign manager, told NJ Advance Media just hours before the start of the Republican National Convention in Cleveland. 'That's totally misrepresented.' 'And I don't think he was livid,' Manafort added about Christie. According to The Weekly Standard, a conservative magazine, Manafort was overheard telling someone in Cleveland that Christie was 'livid' that Trump tapped Indiana Gov. Mike Pence as his vice presidential pick instead of him." http://bit.ly/2a30t1w

CODEY DID IT FIRST —"Chris Christie now officially a bobblehead" http://bit.ly/2a2ZzlG

** A message from the Fair Share Hospitals Collaborative: New Jersey's Charity Care funding formula is unfair to patients and to a majority of the hospitals that provide the care. People who are uninsured live in ALL of the cities and towns in ALL of New Jersey's 21 counties — not just in a few of the State's urban centers. Get the facts: Health Care Cuts Hurt All NJ Hospitals **

BIPARTISAN CONSENSUS IS WHITE HOUSE SUBS ARE DELICIOUS — "This year, Atlantic County playing a role in the presidential race," by POLITICO's Matt Friedman: "At every GOP convention since 1984, Atlantic County Republicans have brought trays of submarine sandwiches from the White House Sub Shop in Atlantic City to the New Jersey delegation's hotel. Usually, that's been about the extent of Atlantic County's involvement in the presidential race. This year is different. The subs were there at the hotel outside Cleveland — Italian, turkey or cheese. But Atlantic County — and in particular struggling Atlantic City — finds itself with a real role in the race." http://politico.pro/29R6zi1

VEEPSTAKES — "Could Christie prevent Booker from being Clinton's choice for vice president?" by NJ Advance Media's Jonathan D. Salant: "if Booker (D-N.J.) is nominated for vice president and wins, Christie will get to appoint his temporary replacement. That would cost the Democrats a Senate seat, making it even harder for a President Hillary Clinton to move her agenda through Congress. 'It's a very important consideration,' said Jim Manley, a former top aide to Senate Democratic Leader Harry Reid of Nevada. 'Every vote will help the next president to move their agenda.'" http://bit.ly/29QLyEt

LONEGAN HOME AGAIN — "Lonegan says failed effort on roll call vote 'shows the power of the gavel'" by The Record's Herb Jackson: "Steve Lonegan began working to stop the Republican Party from nominating Donald Trump almost from the time his preferred presidential candidate, Sen. Ted Cruz of Texas, dropped out of the race in May. But the firebrand former mayor of Bogota and 2013 Republican nominee for U.S. Senate was not there Monday as the effort came to a final end in a chaotic scene on the floor of the Republican National Convention in Cleveland. He'd gone home on Monday, he said, expecting the worst." http://bit.ly/29UmTSM

IF HE STILL FLEW PRIVATE PLANES NO ONE WOULD'VE SEEN THIS — "Chris Christie would rather watch sports than Donald Trump," by The New York Post's Carlos Greer: "While on a flight to Cleveland to attend the Republican National Convention, Christie flew first class, a spy told us, and was 'watching sports or some game show. Half of the TVs were tuned to the interview, but he wasn't interested.'" http://pge.sx/29R5bfq

THEY CAN IMAGINE THE CAMPAIGN LIT — "Few N.J. Republican lawmakers show up to Trump's convention," by POLITICO's Matt Friedman: "According to the Republican State Committee, there are more than 250 Republicans from New Jersey in Cleveland for the party's national convention. They have prime seats for the proceedings, in the front row of the Quicken Loans Arena. But while Gov. Chris Christie may be one of Donald Trump's biggest surrogates, few other New Jersey GOP lawmakers are taking advantage of the view. " http://politi.co/29RU59V

—"Bramnick, in Cleveland, isn't ready to endorse Trump" http://politico.pro/29R70Jv

—"Hamilton Mayor Kelly Yaede attends Donald Trump's RNC nomination party in Cleveland" http://bit.ly/29RLTsO

—"Which GOP Convention speaker said it? Chris Christie or Scott Baio?" http://bit.ly/29RUwRw

JOB CHANGE — "Wirths leaving office for new post," by The AP: "A longtime member of Gov. Chris Christie's cabinet is leaving for another state post. The Republican governor announced Monday night that Labor and Workforce Development Commissioner

Harold Wirths will step down next month. Christie says he will nominate Wirths to serve on the state parole board. Wirths, a Republican who lives in Hardyston Township, has served in Christie's cabinet since 2010." http://on.app.com/29RTm8Q

GARRETT EFFECT — "Gottheimer boasts GOP support with new website, endorsements," by POLITICO's Ryan Hutchins: "Democrat Josh Gottheimer, a Microsoft executive and former speech writer for former president Bill Clinton, won the endorsement Monday of 12 local Republicans who support him in his race to unseat GOP Rep. Scott Garrett in New Jersey's Fifth District. Along with the endorsements, Gottheimer launched a new website to promote support from the other side of the aisle: RepublicansForJosh.com. His campaign boasts in a press release that it has 'the backing of more than 100 Republicans nationwide over his Tea Party extremist opponent.'" http://politico.pro/29R7miU

TRANSPARENCY — "Watchdogs cheer disclosure of $1M donor to super PAC linked to Fulop," by The Jersey Journal's Terrence T. McDonald: "A nonpartisan ethics watchdog is taking credit for Friday's revelation that a $1 million donation to a super PAC linked to Jersey City Mayor Steve Fulop came from a co-founder and co-owner of local hospital system CarePoint Health. Citizens for Responsibility and Ethics in Washington, which filed a complaint with the Federal Election Commission in February after super PAC Coalition for Progress initially declined to identify the person behind the $1 million donation, said in a statement today that it's important for voters to know the origin of big-money political contributions. 'We're glad that this super PAC finally disclosed the true source of the million dollars, but it shouldn't have taken legal action from us to get them to do it,' said CREW Executive Director Noah Bookbinder. 'A million dollars goes a long way — New Jersey residents should know who is trying to influence their elections.'" http://bit.ly/2a2ZuOP

—"CarePoint Health's Garipalli has given $40k to Hudson Dems since 2010" http://bit.ly/29UHqH2

#TELLINGITLIKEITIS — "Christie, a onetime rising star, now just part of Trump's supporting cast," by The Record's Charles Stile: "When Christie was on the rise in 2012 — and considered by nominee Mitt Romney as a possible running mate — Christie struck some themes and phrases that would be out of sync with Trump's vision and tone, and would be probably unwelcome. Four years ago, it was Christie who was offering up himself to the nation as a battle-tested leader, who guided New Jersey through a catastrophic storm and landmark reforms through a hostile, Democratic-controlled Legislature. He was selling experience — an attribute that has held little sway with angry anti-establishment voters. 'It takes leadership that you don't get from reading a poll,' Christie said in his keynote speech in Tampa. "You see … real leaders don't follow polls. Real leaders change polls." Now, Christie is taking marching orders from Trump, who constantly cites polls as a validation of his success. In Tampa, Christie asserted that it was time to consider cuts to Social Security, the so-called third rail of politics. His new boss says he won't tinker with Social Security benefits if elected." http://bit.ly/29UGZfG

YOU CAN TAKE THE REPORTERS OUT OF NEW JERSEY — I caught a ride back to the NJ GOP delegation's hotel in Cleveland with a few New Jersey reporters. On the way we stopped for gas. It didn't go well. http://bit.ly/29UcHd9

AAAAAAWKWARD — "Bramnick, in Cleveland, isn't ready to endorse Trump" http://politico.pro/29R70Jv

YOU CAN SAIL THE SEVEN SEAS — "Critics cast doubt on N.J. mayor's military service. Here's the truth," by Steve Novak for LeHighValleyLive.com: "An embattled mayor in Warren County raised eyebrows earlier this year when he said he could not remember details of his time in the U.S. Navy, and refused to show proof that he had been in the service, as he had claimed during his election bid. The mayor, Tom McKay of Lopatcong, was already facing a recall effort. And now, his evasiveness fueled speculation among critics that he might be lying. But records obtained by lehighvalleylive.com solve the mystery. After numerous inquiries and federal Freedom of Information Act requests, the National Archives on Thursday produced a document showing McKay served in the Navy as an enlisted reservist from 1968 to 1970 in the New York City area." http://bit.ly/2a1YBpA

MASTRO CARD — "Murphy: Christie should pick up tab for Bridgegate investigation," by PolitickerNJ's J.T. Aregood: "The first official candidate in New Jersey's 2017 gubernatorial race called on Governor Chris Christie to foot the bill for the investigation into the Bridgegate scandal instead of drawing on tax coffers. The investigation into whether Christie knew about two appointees' plot to close down lanes on the George Washington Bridge in retaliation against the mayor of Fort Lee has cost the state over $10 million." http://bit.ly/2a2ZCxQ

FREEDOM OF THE PRESS — "Proposed N.J. law would ban prior restraint of student newspapers," by NJ Advance Media's Sallie Graziano: "State legislators have re-introduced a bill that would prohibit school districts and public universities from authorizing prior restraint of school-sponsored media. The legislation is backed by Tom McHale, an English teacher at Hunterdon Central Regional High School. ... McHale resigned as adviser of the award-winning school newspaper The Lamp in 2013 after trying, but failing, to get the board to amend its policy that requires the administration's review of The Lamp's content prior to publication. He had held the post for a decade. McHale, who is also a Garden State Scholastic Press Association executive board member, said he is aware of journalism students … self-censoring out of fear of administration backlash." http://bit.ly/29KCa4M

THE HORROR — "Trenton is one of only 4 U.S. capital cities without a Starbucks," by The Trentonian's David Foster: "No venti, non-fat, Caramel Macchiatos are served in the capital city. And it's become a bit of a joke on social media throughout the years that Trenton has not landed a single Starbucks within its city limits. 'I had to do today's argument without my morning Starbucks...risky,' one attorney wrote on Facebook in 2011. 'Apparently, there are no Starbucks in Trenton, NJ.' 'Can Trenton get it together so I don't have to travel so far for a Starbucks?" another man tweeted in 2012.'" http://bit.ly/29TSa8F

IT WILL TAKE BRRRRRAAAINS TO FIX THIS PROBLEM — "'Zombie' houses in foreclosure can sit vacant, haunt neighbors for years," by the Record's Kathleen Lynn: "On Cumberland Avenue in Teaneck, weeds grow through the patio behind a vacant brick ranch; inside, paint is peeling off the walls in sheets. Neighbors call these homes eyesores. Real estate experts have another name: "Zombie" houses — homes in foreclosure that stay empty and neglected for years. A decade after the housing market began its slide into the worst downturn in generations, New Jersey still has about 4,000 homes left empty because of foreclosures, according to RealtyTrac, which follows the foreclosure market nationwide. That's about 6.2 percent of the total number in foreclosure in the state, higher than the national rate of 4.7 percent. … Under New Jersey law, the properties have to be maintained by the mortgage lender while they're in the foreclosure process, but neighbors say the maintenance usually doesn't go beyond mowing the lawn and making sure the doors are locked." http://bit.ly/29R2Rrh

DO IN AC — "Fitch: As states consider casino expansion, Atlantic City most at risk," by POLITICO's Ryan Hutchins: "Even with the casino gambling market beyond the point of saturation in the Northeast, with some resorts struggling to keep the lights on, a number of states have moved forward with efforts to expand their offerings. Fitch Ratings service says none stands to lose more than New Jersey, where voters will decide in a November ballot referendum whether casinos should be opened outside of Atlantic City for the first time in the state's history. As many as four of the eight remaining casinos there could close, Fitch says." http://politico.pro/29R6pXX

TTF — "Christie balks at Sweeney gas tax compromise, calls offer 'ridiculous'" by POLITICO's Ryan Hutchins and Katherine Landergan: "Gov. Chris Christie rejected Senate President Stephen Sweeney's latest attempt at a compromise on gas tax legislation and says he doesn't know how the crisis over the nearly broke Transportation Trust Fund will end. In his first public remarks on the topic since meeting privately with Sweeney last Tuesday, Christie told reporters in Ohio on Sunday night that he already had ruled out the proposal. That's despite repeated statements from both sides that the concept remained under review. 'It was ridiculous and I rejected it,' Christie said, according to audio of the exchange. 'Myself and the [Assembly] speaker have passed a bipartisan plan to fund the Transportation Trust Fund and to cut the sales tax significantly for the people of New Jersey. And the Senate president needs to come along with a plan. And what he proposed to me the other day was unacceptable. He knows it.' … In a statement, Sweeney spokesman Richard McGrath said it was the first the Senate president had heard that the governor was not willing to support the offer." http://politi.co/2abIwiD

—"Is Sweeney playing coy about his gubernatorial ambitions?" http://bit.ly/29UGQJj

FAIRNESS CODE — "In New Jersey, ZIP code is a cruel indicator of life expectancy," by NJ Spotlight's Lilo H. Stainton: "A new analysis reveals that the difference between living in Trenton and nearby Princeton Junction isn't just quality of life, it's 14 years. When it comes to living a long and healthy life, it turns out that few miles or a few digits in a ZIP code can mean a decade or more. Or 14 years, when it comes to the life-expectancy difference between those who reside in Princeton Junction and those who call Trenton home, according to a new analysis released today." http://bit.ly/29UH4QE

THE NEXT DRUMTHWACKET — "Thumbelina's secret architect, creating fairy houses on a New Jersey trail," by The New York Times' Tara George: "Intricate little fairy houses started appearing in the woods of South Mountain Reservation here about five years ago. They were delicate creations made largely of the natural materials one might find in the woods: a chair seat made of an acorn, a ladder of twigs, a seat back fashioned from a fungus fan, a sofa cushioned with moss. And they mainly dotted a part of the Rahway Trail in Locust Grove, a short walk from downtown Millburn that draws dog walkers and runners from the surrounding towns. There were 20 to 30 of them, new ones replacing old ones over the years, discreetly tucked in a tree hollow or artfully incorporated into a root. They all had a similar enchanting style and looked like the work of one person, but nobody seemed to know exactly who." http://nyti.ms/2a2YPNd

NAUGHTY BY NATURE. LUXURIOUS BY DESIGN. — "Is $12M real estate sale sign that East Orange could become millennial hot spot?" by NJ Advance Media's Jessica Mazzola: "When millennials searching for walkable, transit-oriented communities are priced out of high rises in Hoboken and Jersey City, will they head to East Orange? A recent $12 million land sale seems to suggest it might be." http://bit.ly/2a2YBWG

COP SHOT — "Questions mount in shooting death of retired cop," by The Asbury Park Press: "Details remain scant in a police shooting that left a retired police lieutenant dead in the woods near his Sycamore Drive home Saturday. What authorities have said so far is that 57-year-old Patrick Fennell, known in his neighborhood for hosting street parties for children and helping neighbors, fled with a handgun into the woods near his home on Saturday evening. He was shot to death by a SWAT officer around 10:30 p.m." http://on.app.com/2a2YPwI

HE MUST ALSO LISTEN TO ME SING 'TOTAL ECLIPSE OF THE HEART' FOR 24 HOURS STRAIGHT — "A once prominent figure in North Jersey's Korean-American community was spared a prison term Monday when a judge sentenced him to home confinement and a $50,000 fine for soliciting a bribe for a Palisades Park official in exchange for approvals to open a karaoke business." http://bit.ly/29Uk2Jx

PULITZER ALERT — "Plainfield man pooped his pants to avoid arrest, police say," by NJ Advance Media's Jessica Remo: "Arriving officers found Kyle Chambliss talking loudly on his cell phone while sitting in a car, Sarnicki said. The officers smelled alcohol on Chambliss and asked him to step out of the car, the captain said. Sarnicki said that after being told to end his call, Chambliss became aggressive towards the officers. When told he was being placed under arrest, Chambliss responded that he had to defecate and proceeded to do so to keep the officers at bay, Sarnicki said." http://bit.ly/29RTIvX

** A message from the Fair Share Hospitals Collaborative: 59 hospitals in New Jersey receive only 17 percent of Charity Care funding, even though these 59 hospitals care for roughly HALF of all Charity Care patients in the state.

During Trenton's annual budgeting process, the Governor tossed out the proposed plan for Charity Care funding and decided to redirect 82 percent of the Charity Care funding to only 12 New Jersey hospitals.

The Governor's budget cuts resulted in many hospitals being reimbursed LESS THAN ONE CENT for each dollar spent on health care for the uninsured, compared with the 12 hospitals in the state that are being reimbursed 96 cents on the dollar. All of New Jersey's hospitals – not just 12 of them – are part of the state's safety net and provide care to those in need.

Our state's leaders shouldn't be playing games with New Jersey's health care system. Get the facts: Health Care Cuts Hurt All NJ Hospitals **

NOW AVAILABLE: HARD TO ACCESS CAMPAIGN DETAILS – POLITICO Pro, POLITICO's premium solution for policy professionals offers Campaign Pro. Get breaking news and analysis about this season's unconventional presidential race, as well as developments about this year's most competitive House, Senate and gubernatorial races. You'll also have access to the Campaign Pro Race Dashboard, giving you all of the facts about specific races in one, convenient place. The dashboard provides campaign details such as: current consultant rosters, the latest polling numbers and race summaries written by Pro's Campaign Pro reporters. Beyond the 2016 cycle, you'll continue to receive coverage that provides you with a behind-the-curtain look at potential races, including insight about candidate/consulting firm partnerships forming behind the scenes, and about all fundraising efforts. Request your Campaign Pro demo today.

The Daily 202: Seven Things To Watch At The Republican Convention In Cleveland

Washington Post, July 18, 2016

THE BIG IDEA:

CLEVELAND—Hurricane Gustav in 2008 and Hurricane Isaac in 2012 upended the first nights of the Republican National Convention. In 2016, a man-made tempest is making landfall here on the shores of Lake Erie: Hurricane Donald.

In what might be interpreted as a metaphor, a bad storm swept through town overnight – briefly knocking out power at some hotels.

The coming days will undoubtedly be awkward. Exactly one year ago today, Donald Trump declared in Iowa that John McCain was not a war hero because he got captured by the North Vietnamese. As recently as last week, Trump reiterated his refusal to apologize for saying that and even attacked the 2008 GOP nominee for not doing enough to help veterans. (Ironically, Trump being at the top of the ticket has imperiled the Arizona senator's reelection hopes.)

We know McCain is one of many luminaries – including Mitt Romney and the Bush clan – who will skip the festivities to celebrate Trump officially completing his hostile takeover of the Republican Party.

Partly because Trump values and thrives on unpredictability, there's a lot we still don't know. Organizers said at a briefing last night that there will be "plenty of surprises."

Here are seven questions we will know the answers to by the end of the week:

1. How many speakers don't say his name?

Chris Christie was widely lampooned in Tampa for delivering a self-aggrandizing convention keynote that did not mention Romney until 16 minutes in and, even then, made him seem lukewarm about the then nominee.

That could happen again in several of this week's highest-profile speeches.

Respecting the adage that "if you don't have anything nice to say, don't say anything at all," many leading Republicans are not going to take the stage – including home-state Gov. John Kasich and Sen. Rob Portman.

One of the drollest neologisms this cycle comes from GOP members of Congress who say they "support the nominee" but steadfastly refuse to say Trump's name and insist that "supporting" him is not the same as "endorsing" him – a distinction without a difference, as far as the dictionary is concerned.

Senate Majority Leader Mitch McConnell, Speaker Paul Ryan and House Majority Leader Kevin McCarthy are speaking Tuesday night. All have been lukewarm about Trump; will they do the same awkward dance that their members do in the corridors of the Capitol?

Sen. Ron Johnson (R-Wis.) – one of the most vulnerable congressional incumbents up for reelection this year – is also speaking Tuesday in prime-time. It's hard to imagine a full-throated endorsement, unless he's looking to commit political suicide…

It's also difficult to envision Ted Cruz heaping too much praise on Trump, whom he has still not endorsed, when he talks Wednesday night. (See the full schedule here.)

2. Do the protesters make bigger headlines than the speakers?

The city is jittery, and security is tight. Homeland Security Secretary Jeh Johnson testified last week that he's "concerned about the possibility of violence in Cleveland."

A major skirmish could occur as early as today when pro-Trump demonstrators hold a midday rally. Local hospitals have opened up extra bed space in case of mass casualties, and battalions of police officers on bikes are prepared to swarm protest areas, Joel Achenbach reports. The chief says the city has brought in "thousands" of officers from "hundreds" of other police departments across the country.

While there are widespread fears that Cleveland in 2016 could become like Chicago in 1968, but there's also a very good chance that the planned protests are being over-hyped and will stay relatively peaceful. It's impossible to know at this hour. Importantly, unlike Mayor Richard J. Daley in the Windy City, local leaders here seem eager to do everything possible to diffuse tensions.

Ohio has an open-carry law that permits people to walk around with loaded handguns or long guns. A man with a long rifle slung over his shoulder attracted a cluster of cameras and curious onlookers yesterday, Achenbach reports. And some members of the New Black Panther Party, a black militant group, have said they plan to carry weapons around the streets of Cleveland.

After the horrifying murder of three Baton Rouge police officers yesterday, the president of the local police union publicly called upon Kasich to temporarily suspend open carry in Cuyahoga County for the week. The governor quickly rejected the request.

"He could very easily do some kind of executive order or something," Stephen Loomis, president of Cleveland Police Patrolmen's Association, said Sunday. "I don't care if it's constitutional or not at this point. They can fight about it after the RNC, or they can lift it after the RNC, but I want him to absolutely outlaw open-carry in Cuyahoga County until this RNC is over."

A spokeswoman for the governor said he does not have "the power to arbitrarily suspend federal and state constitutional rights or state laws as suggested."

3. How thin is the veneer of party unity?

"The Never Trump agitators have been defeated, but they say they're not going away," Ed O'Keefe reports. "Republicans who failed to change party rules (last week) are threatening to cause chaos on the floor … to draw at least some political blood … The options are limited, and attempts to cause trouble at political conventions are usually quickly thwarted. But anti-Trump activists who spent weeks trying to play within the party structure now say they will do what Trump hates the most — find a way to embarrass him."

How could they do that? Upset delegates might attempt to officially register their opposition to Trump on the floor or to force an hours-long roll call of the states, which would upend a schedule aimed at prime-time television coverage, O'Keefe explains. They could also stay away: "Some senior RNC officials worry that delegates might start leaving Cleveland before Trump is scheduled to formally accept the nomination on Thursday night, possibly forcing the campaign to scramble to fill seats inside Quicken Loans Arena. The lack of prominent speakers on most nights of the convention might also compel delegates to reconsider their plans."

RNC Chairman Reince Priebus yesterday called on anti-Trump Republicans to "give up." "If they want to delay the proceedings, all they're doing is delaying the evening and helping Hillary Clinton," he said on ABC's "This Week." "There is no [alternative] candidate. … What is your goal other than to distract and cause problems?"

Mike Pence's speech on Wednesday night could excite some rank-and-file delegates, especially religious conservatives who view the thrice-married Trump warily because of his brash lifestyle and apostasy on abortion. "One of the big reasons that I chose Mike … is party unity, I have to be honest," Trump said Saturday. "So many people have said, 'party unity.' Because I'm an outsider. I don't want to be an outsider."

4. Can Trump's family members sandpaper his rough edges?

A fresh Washington Post/ABC News poll finds Clinton leading Trump by 4 points among registered voters, 47 percent to 43 percent. That's down from 12 points last month, a reminder that he has some momentum coming into the convention. But there is a notable gender gap: Trump leads among men by 8 points (49-41), while Clinton leads among women by 14 points (52-38).

Trump's campaign wants to make inroads with women by softening his image, and they're leaning on his family to do that.

"I think people actually want to like him," Priebus told Karen Tumulty and Philip Rucker. "They're intrigued by him. They're interested in him. And him becoming likable will make him unstoppable."

Trump's wife Melania, who very rarely speaks in public and usually says little when she does, is tonight's headline speaker. Tomorrow his children Donald Jr. and Tiffany speak. His son Eric speaks Wednesday. And then Trump's daughter, Ivanka, will introduce him Thursday night.

It will be amusing to listen to what Melania and all the children say about Trump as a dad in the context of his past comments about parenting. The business mogul has boasted about never changing diapers and bragged about refusing to take his kids out for walks in Central Park. "I won't do anything to take care of them," he told Howard Stern in 2005. "I'll supply funds and she'll take care of the kids." Ivana Trump said earlier this year that she deserves the credit for raising Don Jr., Ivanka and Eric because they were very little when Donald divorced her.

5. What does Donald do?

Trump originally wanted to speak every night, which is at odds with decades of precedent in both parties. He's only officially on the schedule for Thursday, but campaign chairman Paul Manafort said last night that there is a good chance he will appear more than once. "Donald Trump will be Donald Trump. Scripted is the wrong word," Manafort said. "He will probably be making a couple of appearances."

How exactly he appears is unknown. Does Trump do some TV interviews? Provocative tweets? Appearances on the Jumbotron by satellite?

Trump's unpredictability could be great for ratings. Real people hate stage-managed conventions, and they love reality TV. "Overall, viewership for the national political conventions dropped 26% after 1968," USA Today reports, citing Nielsen ratings. "The drop became even more pronounced after the 1980 conventions. The average ratings for the 1984 to 2004 conventions were 30% lower than the previous 20-year period. There was a dramatic jump in viewers for the 2008 GOP convention, driven largely by interest in … Sarah Palin. … (Pence) isn't likely to generate the same level of interest as Palin did in 2008, but many people will be tuning in to get their first look at the Indiana governor. The real draw, of course, will be Trump himself. He brought record numbers of viewers to the GOP primary debates, and it's likely he'll have a similar effect on interest in the convention."

6. Does Trump seem plausible as a president?

Though he's only trailing Clinton by 4 points in our new poll, 64 percent of Americans view Trump unfavorably as he enters the convention – more than twice as many as view him positively. "The Post-ABC poll found that nearly six in 10 registered voters say he is not qualified to serve as president — with 49 percent saying they strongly believe that," Scott Clement and Dan Balz note. "Meanwhile, Clinton is seen as qualified to serve as president by 56 percent of voters."

The attempted coup in Turkey and the Bastille Day attack in France are reminders that the world is a tinderbox and unexpected challenges confront a president.

Today's theme is "Make America Safe Again" and will focus on foreign policy. Among the speakers are Rudy Giuliani, who has criticized the Black Lives Matter movement, retired Lt. Gen. Michael Flynn and Iowa Sen. Joni Ernst (a combat veteran). Two Americans who were present during the attacks on the U.S. diplomatic mission in Benghazi will also appear.

"Because of events, Republicans this week and Democrats a week from now will be judged on far more than whether their conventions are well run and well produced, on whose video biography of the nominee is more compelling or whether the balloon drop works smoothly," Balz writes in his column. "Both Trump and Clinton will be measured by more exacting standards than usual. Can either speak in language strong enough to break through the wall of polarizing rhetoric with which both political parties seem most comfortable? … The rewards for success could be significant. Which candidate will be seen as more suited for the demands of the Oval Office in an uncertain time? Which candidate can voters imagine responding effectively to terrorist attacks? Who will be judged as equipped to bridge racial divisions and ease racial tensions? There will be nothing abstract about all these questions. The videos from around the world will be a constant reminder of the stakes of this election."

As CNN puts it, "Trump enters the convention under pressure to show more discipline, gravitas, and sobriety."

7. How big is Trump's post-convention bounce?

If Trump does not blow it and violence does not overshadow it, the next four days could be a made-for-TV infomercial about how great he would be as president —with 15,000 credentialed journalists on hand to chronicle it all.

"Presidential candidates historically have seen a median increase of five percentage points in their support in preference polls among registered voters after their party's nominating convention," Gallup found in a 2012 study. (Check out a cool breakdown going back to 1964 here.)

It will be political malpractice if Trump's image and standing do not improve. But, but, but: Clinton gets her own coronation next week in Philadelphia. And she is expected to announce her running-mate this Friday, partly to blunt any momentum Trump might get coming out of Thursday night.

THE LONG, HOT SUMMER OF DISCORD AND DISCONTENT:

– A lone gunman killed three police officers and injured three others in Baton Rogue. From Mark Berman, Matt Zapotosky and Peter Holley: "The shootings occurred when police responded to a 911 call that a man dressed in black and armed with what appeared to be an assault-style rifle was walking near a shopping plaza about a mile from police headquarters. Alton Sterling was fatally shot by officers outside a convenience store in the city two weeks ago.

– The gunman, who was shot and killed, was Gavin Long, an African American resident of Kansas City, Mo. "He turned 29 on Sunday and was in Baton Rouge celebrating his birthday. ... In the spring of 2012, Long was named to the dean's list at the University of Alabama, which he attended for one semester. ... (He was) a Marine who achieved the rank of sergeant and had been deployed to Iraq before leaving the service in 2010." Under a pseudonym, Long had posted videos on YouTube advocating for violence instead of protests. (Matt Zapotosky has more.)

– The victims:

Montrell Jackson, 32, an African American, was married and had a baby. "It's coming to the point where no lives matter," his sister said last night, "whether you're black or white or Hispanic or whatever." (Theresa Vargas)

Matthew Gerald, 41, a white officer with two daughters, had served in the Marines and the Army before joining the Baton Rouge police force last year. (Jessica Contrera)

Brad Garafola, 45, who served with the East Baton Rouge Parish Sheriff's Office, was working extra duty at the B-Quik convenience store on Airline Highway and was headed home to begin vacation when he was gunned down. (Jessica Contrera)

– Thirty officers have now been shot and killed in the line of duty since 2016 began, nearly double the toll at this time last year. (William Wan and Kimberly Kindy)

– President Obama condemned the assault as "cowardly and reprehensible": "These are attacks on public servants, on the rule of law, and on civilized society, and they have to stop." He also pleaded with the presidential candidates not to politicize the shootings: Describing the upcoming conventions in Cleveland and Philadelphia as "a time when our political rhetoric tends to be more overheated," Obama broadly urged public officials to temper divisive words. "We don't need careless accusations thrown around to score political points or to advance an agenda," he said. (Greg Jaffe)

Here's how Trump responded to the plea:

– "We must all stand together to reject violence and strengthen our communities," Clinton said in her statement.

– Leaders of the Black Lives Matter movement strongly condemned any form of violence against the police: "We don't value any life more than any other life," said Ada Goodly, an attorney and activist with the National Lawyers Guild in Baton Rouge. "This is a huge loss for a community that is already grieving." "Shooting police is not a civil rights tactic," said longtime civil rights leader Jesse Jackson. "The shooting in Dallas had nothing to do with the civil rights struggle, and neither does the shooting in Baton Rouge." (Wesley Lowery)

GET SMART FAST:

French authorities detained three more suspects in connection with the Bastille Day truck attack, including

two Albanians who they believe supplied the weapons and a third man who the attacker texted with. Seven others had been detained earlier. ISIS declared on Saturday that Mohamed Lahouaiej Bouhlel, 31, was "a soldier of the Islamic State." (Sudarsan Raghavan)

U.C. Berkley confirmed that one of its students was among the 84 who died in Nice. The 20-year-old was participating in a summer entrepreneurship program. (LA Times)

Leaders of Nice's Muslim community fear an anti-immigrant backlash will make people such as the attacker even more disconnected from French society, sharpening the risk of more attacks. (Michael Birnbaum)

Anti-doping officials from more than 10 nations will request that the entire Russian delegation be banned from participating in the Rio Olympics, highlighting revelations of a state-sponsored doping program. The request comes just three weeks before the summer games are set to begin. (New York Times)

Obama calls on Republicans to confirm Merrick Garland in a Wall Street Journal op-ed, calling the gridlock “much more serious than [a] typical case of Washington dysfunction.” “If we allow it to continue, the consequences of congressional inaction could weaken our most important institutions, erode public trust and undermine our democracy,” he writes.

Venezuela temporarily opened its border with Colombia this weekend, allowing more than 100,000 people across the border to shop for food and medicine amid nationwide shortages. (AP)

A 20-year-old survivor of gang rape in India was sexually assaulted again by the same five men who had previously attacked her. The men were out on bail and allegedly wanted to punish the girl and her family for refusing to withdraw charges against them. (Max Bearak)

The brother of a slain Pakistani model admitted to strangling his sister for “family honor” after she posted photos on social media that he found embarrassing. “I was determined either to kill myself or kill her,” he told reporters. (AP)

The FBI has found “no evidence” that Orlando gunman Omar Mateen chose to target the Pulse nightclub because of its gay clientele. (Adam Goldman)

Mick Jagger, 72, announced that he is expecting his eighth child. The legendary rocker, who has children ranging in age from 45 to 17, is expecting a baby with his 29-year-old girlfriend. (Ellen McCarthy)

A 26-year-old Pennsylvania man faces criminal charges after police found a stolen human brain under his porch, which he and his friends were using to get high. (Peter Holley)

PENCE’S ROCKY ROLLOUT:

– Trump and Pence appeared on CBS’s “60 Minutes” last night. It quickly turned awkward when Donald was confronted with Pence’s vote to authorize the use force of Iraq in 2002: “I don’t care,” he told host Lesley Stahl, effectively giving his running-mate a pass for the exact same thing he has long slammed Clinton for doing. “It’s a long time ago. And he voted that way and they were also misled.”

Trump said Pence is “entitled to make a mistake every once in a while.” Lesley Stahl asked if that meant Clinton, who voted for the war as a New York senator, is too. “No,” Trump said. “She’s not.” (Sean Sullivan has more.)

– Trump totally domineered the interview. During the 21-minute segment, Trump uttered 2,160 words to Pence’s 900. “When Pence did get the chance to speak, Trump would often cut him off with a correction or answer of his own,” Jenna Johnson notes. In one example, “as Pence tried to explain why he was at first opposed to Trump’s ban on foreign Muslims, he began by pointing out that Trump ‘clearly...is not a politician’ and ‘doesn’t speak like a politician.’ ‘He speaks from his heart,” Pence said earnestly. Trump cut in: ‘Is that a good thing? I think that’s a good thing. Well, I speak from my heart and my brain. Just so we understand.’”

In another awkward moment, Stahl asked Pence about Trump saying McCain is “not a war hero.” “I have a great deal of respect for John McCain,’ Pence said carefully. ‘And...’ Stahl pressed: ‘Do you think he went too far?’” Trump jumped in: “You could say yes... That’s okay. That one, you could say, ‘yes.’” (Watch the full interview here.)

– It came after a terrible event Saturday to unveil Pence. The lighting and sound were bad. Trump came on stage to “You can’t always get you want.” He rambled for 28 minutes alone on stage before calling Pence up. “You’re amazing,” Pence whispered to him. Then Trump left the stage. The interaction lasted six seconds. (Jenna Johnson and Robert Costa)

– What was he thinking? In 1999, Pence attacked the family film “Mulan” as the work of a “mischievous liberal” and said it was obviously designed to “influence the debate over women in the military”: “Despite her delicate features and voice, Disney expects us to believe that Mulan’s ingenuity and courage were enough to carry her to military success on an equal basis with her cloddish cohorts,” Pence wrote in an op-ed. “Obviously, this is Walt Disney’s attempt to add childhood expectation to the cultural debate over the role of women in the military … I suspect that some mischievous liberal at Disney assumes that Mulan’s story will cause a quiet change in the next generation’s attitude about women in combat and they just might be right.” (Read more from Buzzfeed)

– “Pence used campaign funds to pay his mortgage — and it cost him an election,” by Rosalind S. Helderman, Tom Hamburger and Alice Crites: “Campaign finance records from the 1990 effort showed that Pence, then 31, had been using political donations to pay the mortgage on his house, his personal credit card bill, groceries, golf tournament fees and car payments for his wife. The spending had not been illegal at the time.”

– Manafort confirmed that Christie was “livid” he wasn’t picked. From the Weekly Standard’s John Mccormack: “While minding my own business at the Starbucks inside the Westin hotel this morning, I saw a man engage (Trump’s chairman) in conversation about the VP selection process. The man … suggested that Pence was a smart pick and Gingrich would’ve been a disaster. ‘Christie was livid, right?’ the man said at one point. ‘Yeah,’ Manafort replied.”

– New York Magazine, "Trump May Have Fired Corey Lewandowski, But He's Still Taking His Advice," by Gabriel Sherman: "Advisers and allies of Trump are increasingly concerned that ousted campaign-manager-turned-CNN-pundit Corey Lewandowski could play a wild-card role in Cleveland. Their principal worry: Lewandowski will give Trump hard-edged advice that goes against the campaign's stated plan to soften and humanize the candidate. Although Trump fired Lewandowski last month, the power struggle between Lewandowski and … Manafort continues … Lewandowski is said to have lobbied hard for Trump to pick Christie for vice-president. Lewandowski's enduring presence in Trump's orbit is frustrating to allies like [Roger] Stone, who believe that Lewandowski doesn't have the political experience to warrant his access to the candidate."

THE DAILY DONALD: On the eve of any convention, media outlets tend to publish deep dives on the presumptive nominee. Here's a sampling of the best stories in this vein that have popped in the past 24 hours:

– "Trump doesn't read much. Being president probably wouldn't change that," by Marc Fisher: "Presidents have different ways of preparing to make decisions. Some read deeply, some prefer to review short memos. … But Trump, poised to become the first major-party presidential nominee since Dwight Eisenhower who had not previously held elected office, appears to have an unusually light appetite for reading. He said in a series of interviews that he does not need to read extensively because he reaches the right decisions 'with very little knowledge other than the knowledge I [already] had, plus the words 'common sense.' ... Trump said he is skeptical of experts because 'they can't see the forest for the trees.' He believes that when he makes decisions, people see that he instinctively knows the right thing to do: 'A lot of people said, 'Man, he was more accurate than guys who have studied it all the time.'"

– The New Yorker, "Trump's Ghostwriter Tells All," by Jane Mayer: Tony Schwartz ghostwrote Trump's 1987 book "The Art of the Deal." "The book expanded Trump's renown far beyond New York City, making him an emblem of the successful tycoon. … [A]s Trump defied predictions by establishing himself as the front-runner for the Republican nomination, Schwartz's desire to set the record straight grew. It wasn't because of Trump's ideology—Schwartz doubted that he had one. The problem was Trump's personality, which he considered pathologically impulsive and self-centered. 'I put lipstick on a pig," he said. "I feel a deep sense of remorse that I contributed to presenting Trump in a way that brought him wider attention and made him more appealing than he is.' He went on, "I genuinely believe that if Trump wins and gets the nuclear codes there is an excellent possibility it will lead to the end of civilization."

"If he were writing 'The Art of the Deal' today, Schwartz said, it would be a very different book with a very different title. Asked what he would call it, he answered, 'The Sociopath.'"

– Boston Globe, "Trump's drive to surpass his father's success," by Matt Viser: "Fred Trump couldn't understand it. His son Donald was building a new Manhattan skyscraper, and in the process blowing huge sums on exotic materials. … Donald's glitzy vision for what would become Trump Tower was a dramatic departure in sensibility for the senior Trump, who built tens of thousands of middle-class apartments in Queens and Brooklyn using boring, solid brick. Fred Trump would tour the building site … finding fault and declaring, 'You guys don't know what you're doing.' Donald Trump ultimately prevailed. And the midtown Trump Tower stands as tribute to the son's obsessions with glitz and showmanship, which can seem like a direct repudiation of his father's determinedly practical approach to life."

– Politico, "The Executive Mr. Trump," by Michael Kruse: "Based on [many conversations] … the reality of Trump as an executive—his methods and his manner—bears little resemblance to the man viewers saw on ("The Apprentice"). Rather than magisterial and decisive, Trump the actual boss swings wildly between micromanaging meddler and can't-be-bothered, broad-brush, big-picture thinker. He is both impulsive and intuitive, for better and for worse. He hires on gut instinct rather than qualifications; he listens to others, but not as much or as often as he listens to himself. He's loyal—'like, this great loyalty freak,' as he once put it—except when he's not. "He went from one kind of person to another," says Barbara Res, who was his project manager on Trump Tower and later played an important role in the refurbishment of the Plaza Hotel under Trump. And what might surprise people most about Trump, Res said, is this: 'He didn't like firing people.'"

– BuzzFeed, "Confessions Of A Dishonest Slob: How The Haters Got Trump This Close To The White House," by McKay Coppins: "Trump stood on a debate stage in downtown Detroit, surrounded by haters he was determined to dispatch: Liddle Marco to his right, Lyin' Ted to his left … About 30 minutes into the debate, Kelly asked Trump to respond to a recent

BuzzFeed News report about his position on immigration. 'First of all, BuzzFeed?' Trump said … 'They were the ones that said under no circumstances will I run for president — and were they wrong.' Trump was referring to a profile I'd written two years earlier in which I chronicled a couple of days spent inside the billionaire's bubble and confidently concluded that his long-stated presidential aspirations were a sham. What had most struck me during my two days with Trump was his sad struggle to extract even an ounce of respect from a political establishment that plainly viewed him as a sideshow … But what I didn't realize at the time was that he'd felt this way for virtually his entire life — face pressed up against the window, longing for an invitation, burning with resentment, plotting his revenge."

– David Maraniss has written a hilarious piece about Trump's affinity for one-syllable words – entirely in one-syllable words. (Read it here.)

CONVENTION COVERAGE:

– Only one of Virginia's eight Republican House members is coming to Cleveland: Rep. Rob Wittman, a 2017 gubernatorial candidate who got behind Trump only when his last rival dropped out, will attend to hob knob with activists. (Laura Vozzella)

– Trump punished Ohio delegates in their own state (because he lost the March 15 primary and Kasich is a holdout) by reassigning the delegation to a conspicuous spot in the back of the arena. It's a breathtaking act of pique against a state that he needs to win the presidency. (Front Row at the Circus)

– It took an intervention by Priebus to stop Don King from speaking at the RNC. "Trump was told, no, it was not sensible to have ... the flamboyant boxing promoter, address the Republican convention. But Mr. Trump, who has repeatedly boasted of having Mr. King's support, kept pressing the matter. Finally, officials [including Priebus], firmly explained to Mr. Trump why Mr. King should not be invited: He once stomped a man to death and was convicted of manslaughter," Jonathan Martin and Jeremy W. Peters report. "The party could not associate itself with someone convicted of a felony. Mr. Trump eventually relented. Mr. King, a Cleveland native, will not take the stage. But the exchange, relayed by three Republican strategists familiar with the conversations, highlights the difficulties that planners have had building a program for a presidential candidate who is as much an entertainer as a politician."

– "She's a lifelong Democrat who's voting for Trump. And she's Dennis Kucinich's sister," by Karen Tumulty in Cleveland: "For nearly her entire life, Teresa Sikorski has been active in Democratic politics, starting as a 12-year-old who overcame her shyness to knock on doors for her big brother's Cleveland City Council race in 1966. He lost that time. But her brother Dennis Kucinich went on to become Cleveland's mayor and congressman, a two-time presidential candidate and one of the most passionate liberal voices in the his party. This year, Sikorski and her husband, Marty, quietly changed their party registration to Republican so they could vote in Ohio's GOP primary. Their choice: Donald Trump. Sikorski, 63 … remains a staunch supporter of her brother and the underdog causes for which he has fought. But the couple no longer sees the Democratic Party — or Washington, under the influence of monied interests — looking out for ordinary people. The whole system, they believe, should be kicked over. 'I listened to everything he had to say. I understood it. I got it,' Teresa Sikorski added. 'Everybody else — they're liars.'"

– Great essay: "One street in Cleveland tells the immigrants' story," by Mary Jordan: "In the 1970s, when I was growing up in Cleveland, the city had twice the national average of foreign-born people. Many worked in the steel mills along the river or in the giant Ford plant. … After Soviet tanks smashed the 1956 uprising in Hungary and refugees streamed out, it was often said that there were more Hungarians in Cleveland than anywhere outside Budapest. In fact, welcoming immigrants was how a politician got elected in those days. Ralph Perk was elected mayor of Cleveland in the 1970s three times, casting himself as the 'ethnic candidate,' the one to represent all the blue-collar workers from so many different faraway places. That was a winning slogan for the Republican. Now instead of from Europe, those coming are from Asia, Africa, Latin America and the Middle East. The jobs are more biomedical than blue-collar."

– Priebus said Trump has "pivoted" away from his Muslim ban: "If you have seen the last few weeks, his position that he's put on the table in his position papers that are on his website and what he's been talking about is a temporary ban of immigration from countries that harbor and train terrorists," Priebus said on CNN's "State of the Union." "There is no religious test on the table."

– The RNC chair also announced a special Hispanic "engagement tour" aimed at shoring up support among Latinos – after the convention: "I know [Trump] is going to be doing a Hispanic engagement tour coming up soon," he said on "Fox News Sunday." "He is going to be talking about those issues. He understands we need to grow the party." (Elise Viebeck)

MORE NEW POLLING:

– From our Post/ABC poll: 58 percent of Americans are dissatisfied with their choices in the election.

Three-quarters of voters say Clinton is "too willing to bend the rules," while 56 percent called Trump biased against women and minorities.

Independents lean toward Trump 47-41, while Clinton leads among moderates 52-36. Meanwhile, white voters with college degrees are evenly divided, with 43 percent for Trump and 42 percent for Clinton.

– Clinton topped Trump by 7 points (49-42) in a head-to-head CNN/ORC matchup. She leads him on likeability (43 percent to 39 percent) and experience (64 percent to 32 percent), while Trump has the advantage on the economy and terrorism.

– Clinton holds a 5-point national lead (46-41) in the new NBC/WSJ poll. (Janet Hook's analysis)

– A new NBC/WSJ/Telemundo poll shows Clinton leads Trump 76 percent to 14 percent among Latinos. She is viewed positively by 64 percent of Latino voters, compared to 11 percent for Trump.

– Large majorities of Americans and Mexicans on BOTH sides of the border oppose building a wall dividing the two countries, according to a survey from Cronkite News/Univision/Dallas Morning News. 72 percent of Americans living near the southwestern border said they are against a border wall, while 86 percent in Mexico's northernmost cities said the same. Both parties believe the tone of the presidential campaign is hurting U.S.-Mexican relations, with 59 percent of Americans and 69 percent of Mexicans agreeing.

– Nearly HALF of Republicans say their party has gone astray, according to a Morning Consult poll: 46 percent of Republicans said they think their party has "pretty seriously gotten off on the wrong track." (40 percent said they believe it's on the right track, and 14 percent don't know or are undecided.)

Only 27 percent of voters 55-64 said they believe the party is on the right track. Meanwhile, that number doubles among voters between the ages of 30 and 44 (54 percent) who view the party in a more positive light.

Two-thirds of Republicans believe the party is "stale."

One in five Republican voters believe the Republican Party does not accurately represent their views.

HILLARY'S VEEPSTAKES:

– "A liberal firebrand who could stoke the passions of the Democratic base. A Hispanic who could fire up one of the country's fastest-growing population — and make history. Someone with governing experience who might also help with a key group where Demo-crats lag: white men." From John Wagner, Abby Phillip and Ed O'Keefe: "With less than a week to go before Clinton is expected to select a running mate, these are among her choices. She has focused intensely on the task in recent days … And she is looking for the best partner in the White House more than the best campaign asset, they said. So while her highly anticipated announcement could telegraph crucial electoral calculations, it may signal even more how she plans to run the presidency." Clinton's pick could also reveal something about how she wants to be viewed. Others say relationship is key: "For her, it may literally be a matter of who she wants to work with," said veteran Democratic operative Joe Trippi.

– V.P. contender Tom Vilsack compared Trump to Bernie Madoff: "He is selling something that people don't fully understand and appreciate what it actually means." (NBC)

– A West Virginia lawmaker says he regrets tweeting that Clinton should be "hung on the mall in Washington, D.C." as punishment for her private email server. "But Michael Folk, a member of West Virginia's House of Delegates, said he still believes Clinton should be tried for treason after an FBI investigation determined she handled classified information on the server," CNN reports.

TURKEY

– Turkish authorities fired 8,000 police officers today, raising fears of an "all out purge" of President Recep Erdogan's dissenters as he continues to concentrate power. Arrest warrants have also been issued for at least 2,745 judges and prosecutors across the country. (Hugh Naylor and Erin Cunningham)

As many as 3,000 Turkish members of the military have also been detained: "Among those arrested was the commander at Incirlik Air Base, which is used by U.S. forces to launch raids against Islamic State militants in Iraq and Syria … The base is a major NATO installation hosting U.S. forces that control a stockpile of nuclear weapons."

– John Kerry this morning urged the Turks to uphold democratic principles as it goes after the alleged plotters.

SOCIAL MEDIA SPEED READ:

— ZIGNAL VISUAL: Over the weekend, our analytics partners at Zignal Labs tracked more than 200,000 mentions of the Republican convention online.

Here were the most discussed topics among those writing and tweeting about the convention:

Mentions spiked when it was announced that Scott Baio – who played Chachi on "Happy Days" – will speak in Cleveland. "I actually was at a fundraiser for Mr. Trump the other night with my wife, and he invited me to speak at the convention, which was completely unexpected and out of left field," Baio explained on Fox News.

The most popular RNC-related Tweet of the weekend came from Wall Street Journal reporter Byron Tau, who highlighted this awkward sign in the convention hall:

These Truckers Are With Trump For The Long Haul

By Nina Burleigh

Newsweek, July 18, 2016

Truckers Jim and Lorraine Morrison started out from Southern California last week, hauling a load of tires to drop off at different points across the West and Midwest. They got a picture taken in front of the Trump casino in Las Vegas before heading off to Utah, Colorado and Nebraska and then up into Minnesota, where they did their last drop. They then turned south and east, planning to reach Cleveland in time for Monday's Citizens for Trump rally.

The Morrisons are founders of Truckers for Trump, which has 18,000 Facebook likes and a Go Fund Me site that states: "We campaign for Trump in all 48 States as we truck drive across this Great nation of ours. We would like to have 1 million truckers with Truckers for Trump bumper stickers T shirts and signage to Unite all Truckers to support Trump for President. Please help us to go to all the possible rallies to show the protesters we will stand strong for America."

They had hoped to organize a convoy of truckers to the Republican National Convention this week, and at one point were talking about a thousand truckers converging at Cleveland. But they say the city put a kibosh on that idea, banning an influx of large rigs. So they set off themselves, stopping in towns and at truck stops along the way, handing out red and white Truckers for Trump bumper stickers and hats and campaigning for their candidate.

Lorraine Morrison, 47, a mother of six (five with a previous husband who died), was born in Mexico. Her mother brought her up into the El Norte of Southern California on a visa when she was 3. She isn't bothered by Trump's call for a Mexico wall.

"I know about people coming over and leaving their families behind. But I do feel we need to close our borders. There has to be a stopping point, in order to make America great again.... You used to work and be able to get a car and a house and go on vacation. Now you can bust your ass and not get anywhere."

The former executive assistant forgives Trump's impolite comments about Mexican criminality, too. "I grew up Hispanic, I understand their heritage and struggles and I understand their concerns,' she says. "I speak to people differently. But I know that he's not hateful and not racist. He's just like all other Americans—he's fed up."

Jim Morrison, 48, was born in El Paso, Texas, and spent the last three decades driving a truck. "Why do I support Donald Trump?" he says. "It's real simple: You gotta look at a man, look in his eyes, eyes are windows to the soul. I was a sheriff once and I've got some experience in looking into eyes. The guy is not gaining anything from this. He already has power and money and you can see the care in his eyes."

Lorraine and Jim have an 8-year-old daughter together, and for the last few years they have been home-schooling the child on the road, in the truck. Lorraine says she made the decision to take her child out of school and move into the truck after hearing a theory that President Obama could institute martial law and send people like her or her husband to Federal Emergency Management Agency (FEMA) camps. What would happen, she thought, if her husband was across the country and her child in school when they came for her or them? "I don't want to sound like a conspiracy theorist," she said, "But then again, I don't want to be stupid when it happens either."

Jim shares Lorraine's expectation that Obama still has time to install martial law: "You look at Barack Hussein Obama, look at what he's done what he stands for and what he protects. First, let me say not all Muslims are terrorists, but isn't it funny that all terrorists are Muslims? Every time there's a mass shooting he comes on tv and scolds us and doesn't even say the words 'radical islam.'"

Morrison also says he's heard Obama talk about a third term, although a fact-check doesn't come up with any source for the claim. "Add that to the things he's defended and I believe if he could impose martial law, he would. All he needs is two of his generals to sign off, and some kind of big problem to happen," he says.

Whatever Obama does and whatever comes down the pike in these uncertain times, Lorraine Morrison reckons Trump will take care of them. "I've admired him since I was 23," she says. "I believe in him and the words he's saying and he does love America, he does want to save America. And I am going to feel safe with him. I look at the way he takes care of his household and takes care of his children. He will run us like that. He will keep us safe and self-sufficient and prosperous. I want that, the way he takes care of his family."

10 Things To Know About Florida's Harmful Algae Blooms

By Pam Wright

Weather Channel, July 18, 2016

The enormous harmful algae bloom that has blanketed Florida's Treasure Coast waterways with a "guacamole-like" blue-green sludge is a man-made affliction and one that periodically plagues the Sunshine State to the chagrin of residents, tourists and officials alike.

Earlier this month, Gov. Rick Scott declared a state of emergency in four Florida counties after a bloom reached Florida's beaches this spring. On Friday, the Obama administration denied his request for a federal emergency declaration, according to TCPalm.

In the letter to Scott, FEMA Administrator Craig Fugate wrote the request was denied because "supplemental federal assistance under the Stafford Act is not appropriate for this event."

Scott's press secretary said Saturday that he would appeal FEMA's decision.

As the county officials and the governor wait to hear the decision on the appeal, here are 10 things you should know about the crisis:

1. What It Is and Where It Came From

The algae is a cyanobacteria found in Lake Okeechobee, which comes from the runoff containing human waste and fertilizers from nearby farms and ordinary neighborhoods, according to the Florida Fish and Wildlife Conservation Commission. Nitrogen and phosphorus, as well as other nutrients in the polluted runoff, can act like fertilizer for the algae, creating large and extensive blooms.

2. Eager Developers Changed Florida's Waterways

In an attempt to spur the economy years ago, Florida land developers and government officials broke up the natural flow of the state's rivers, Lake Okeechobee and the Everglades to redirect water south from central Florida, according to the Associated Press. The economy did grow as the land was reclaimed from the Everglades for development, but now the unnatural water flow has periodically left rivers and lagoons so toxic with HAB that fish die off, residents become ill and tourists are turned off.

3. The Risks to Humans

If ingested, water contaminated with toxic cyanobacteria can cause nausea, vomiting and, in severe cases, acute liver failure, according to Florida's FWCC. While there have been no documented cases of anyone becoming ill from drinking water containing these toxins, it remains a concern. The Centers for Disease Control says coming in direct contact with the algae can cause a rash and some research indicates a link between long-term inhalation of toxic algae fumes and neurological disorders like Parkinson's and Lou Gehrig's diseases.

4. The Risks to Wildlife and Pets

Florida's wildlife and pets are exposed to the same risks as humans if the toxic water is ingested or contacted, according to the CDC. Pets are particularly vulnerable and owners should be cautious about letting pets near algae-ridden waters. In addition, HABs can deplete the oxygen and block the sunlight that other organisms need to live.

5. Why It Has Reached the Beaches

In January, record rains prompted the U.S. Army Corps of Engineers to start releasing the polluted water into rivers and estuaries in an attempt to keep Lake Okeechobee from overflowing. The algae bloom became so extensive that it reached area beaches.

6. The Economic Impact

The impact is great. Health care costs from hospital and doctor visits, beach clean-up activities following fish kills, and losses in tourism revenues are some of the costs associated with these harmful algae blooms, according to the Florida Department of Health. While the total loss associated with Florida's most recent outbreak in unknown at this point, on average, $22 million dollars are lost annually in health care costs alone during HAB events.

7. The Short-Term Solutions

The U.S. Army Corps of Engineers and the South Florida Water Management District, which control much of the flow through levees and gates, stopped releasing water into the rivers in an attempt to curb the outbreak, according to AP. That alleviated the immediate outbreak, at least in the river, but it will take much more to alleviate the problem entirely.

8. The Long-Term Solutions

According to AP, Scott wants to "spend unspecified millions to get homeowners off septic tanks and onto sewer lines, reducing nutrient runoff." He also wants to hurry along an $880 million project to strengthen a dike which surrounds Lake Okeechobee, which controls its water flow. The 18-year project is scheduled for completion in 2025, but Scott is calling on federal authorities to help get the job completed faster. The political debate between Democrats and Republicans over who should allocate the extra funds is heeding the progress.

9. What the Florida Environment Protection Agency Says

Dee Ann Miller, spokeswoman for the state Department of Environmental Protection, said that predicting future algae blooms and preventing them are daunting and complicated tasks.

"The nature of most freshwater algal bloom events makes it difficult to predict where and when a bloom will occur or how long it will last," Miller told the Miami Herald. "However, lessening the negative effects of algal blooms is possible through restoration work to improve water quality by reducing nutrients. By reducing nitrogen and phosphorous levels, we can help decrease the intensity and duration of algal bloom events."

10. Precautions Should You Take

According to the CDC, people should avoid exposure to cyanobacterial HABs. The center recommends that people refrain from swimming, water skiing or boating in areas where the water is discolored or where foam, scum, or mats of algae are visible on the water.

If you do swim in water that might have algae, rinse off with fresh water as soon as possible. The same goes for pets and livestock.

The CDC also says to avoid irrigating lawns or golf courses with pond water that looks scummy or smells bad and recommends that any "musty" smell or taste in your drinking water be reported to your local water utility.

Florida Can Pay For Algae Recovery On Its Own, FEMA Says

By Isadora Rangel

TC Palm (FL), July 18, 2016

Florida has enough money to handle the Treasure Coast algae crisis on its own and without federal help, a Federal Emergency Management Agency spokesman said Monday.

Gov. Rick Scott failed to prove the state isn't able to handle the "severity and magnitude" of the blooms in his request for a federal emergency declaration, which the Obama administration denied Friday.

"The state of Florida is the (fourth) largest state in the nation with a population of almost 20 million people," FEMA spokesman Rafael Lemaitre said. "The state has robust capability to respond to emergencies and disasters."

Scott himself has boasted the state's economy has grown 2.3 percent and revenue was up by $1.3 billion this year, Lamaitre pointed out.

Scott will appeal the denial but his office on Monday didn't say when. He has 30 days from July 15 to do so.

Florida's Department of Environmental Protection and Martin County have been testing the algae for toxicity, but neither have spent any money to clean it up. Both are monitoring the work of Stuart-based Ecosphere Technologies, which conducted a free demonstration of its method to clean algae from the water earlier this month.

BASIS OF DENIAL

States that request a federal state of emergency must meet the following requirements, Lemaitre said:

Is an effective response to the event beyond the capability of the state and the affected local governments?

Does it require supplementary federal emergency assistance to save lives and to protect property, public health and safety, or to lessen or avert the threat of a disaster?

FEMA's denial letter said the federal government already is helping the state, FEMA Administrator W. Craig Fugate wrote. The Environmental Protection Agency is testing St. Lucie River water. Also, the Small Business Administration is offering loans to businesses affected by the algae and opened a Stuart application office last week.

It's unclear what kind of federal funding would become available with a declaration and whether it would make a difference, said Julie Hill-Gabriel, Audubon Florida's deputy policy director. She said she hoped Friday's denial for assistance doesn't hamper coordination between the state and federal governments to address the algae. U.S. Sen. Marco Rubio said he believes those federal dollars could pay companies to remove algae from the water.

FEMA has approved about 85 percent of almost 400 disaster declaration requests since 2011, Politifact reported in June. Disaster standards are unclear and often ignored, and decisions seem arbitrary and politically motivated, according to a Pew Charitable Trusts 2013 report. President Barack Obama, for example, denied a 2013 request from Arizona's Republican governor after a wildfire killed 19 firefighters and destroyed 109 homes at an estimated cost of $6.8 million.

George W. Bush denied a 2002 request from his brother, Gov. Jeb Bush, to help 2,400 Apalachicola Bay workers who lost their jobs because of red tide, a toxic microscopic algae. FEMA said the situation was not severe enough for such a declaration. Jeb Bush's appeal was denied too.

A STATE ISSUE

Scott repeatedly has blamed Obama for the algae crisis, saying the federal government has failed to fund restoration projects and a Herbert Hoover Dike improvement project around Lake Okeechobee.

Scott is expected to challenge Democratic U.S. Sen. Bill Nelson in 2018.

Scott is wrong to blame the federal government, said Audubon Florida Executive Director Eric Draper. The algae blooms are flowing into the St. Lucie River, Indian River Lagoon and Atlantic Ocean beaches with water discharged from Lake Okeechobee. Pollution entering the lake from the north is causing the blooms in the lake.

"Water quality is 100 percent a state issue," Draper said.

TCPalm Trending: Why Did FEMA Reject Emergency Declaration?

By Gil Smart

TC Palm (FL), July 18, 2016

So maybe someone else should have asked?

On Friday, the Obama administration denied Gov. Rick Scott's request for a federal emergency declaration in the wake of the Treasure Coast's blue-green algae crisis.

In typical cryptic bureaucratic style, Federal Emergency Management Agency Administrator Craig Fugate wrote that the request was denied because "supplemental federal assistance under the Stafford Act" — which gives the president authority to determine where and when to declare an emergency — "is not appropriate for this event."

What, exactly, does that mean? Fugate didn't say and FEMA officials weren't available for comment.

But for the record, this was the 11th time Scott has asked for federal money from FEMA since he took office in 2011. FEMA has rejected seven of those requests.

That rejection rate, PolitiFact Florida reported last month, is far higher than the national average.

So what gives? Are Florida disasters somehow less worthy of federal assistance than disasters elsewhere? Does it have more to do with politics than it does the disaster itself?

Or are we just doing it wrong?

As PolitiFact reported last month, there are two types of declarations a governor can request: emergency declarations, like the ones Scott made for the algae crisis and the Orlando nightclub shooting, and major disaster declarations.

Emergency declarations are designed to save lives and property immediately before or after a disaster occurs by providing up to $5 million for generators, national guard evacuations or other specific forms of aid.

FEMA records show Scott has made one other emergency declaration since 2011, following severe storms that slammed Panhandle counties earlier this year. That request also was denied, meaning all three of Scott's requests for an emergency declaration have been nixed.

Nationwide, PolitiFact reported, FEMA grants the vast majority of emergency declaration requests, signing off on 61 of 67 since 2011.

Scott's press secretary, Lauren Schenone, said the Obama administration's decision to nix the request was "frustrating."

"He's clearly not making this a priority," she said, adding that Scott likely would appeal the decision, but Schenone wasn't sure when.

But U.S. Rep. Patrick Murphy blamed Scott for the denial, saying the governor's initial request "only sought to point fingers at the federal government and away from the state's responsibilities."

And Murphy kind of has a point.

In Scott's request to Obama, the governor blamed "the federal government's lack of appropriate maintenance" of the Herbert Hoover Dike around Lake Okeechobee as the reason for the discharges that have fouled our waterways. "Consequently," Scott wrote, "any damage caused by the unnecessary water releases ... is the federal government's responsibility."

In other words: It's your fault. Now give us money.

So maybe there's a reason this didn't fly.

Unless pleas from area legislators and Scott's appeal can change FEMA's mind, it looks like we're on our own. The calvary is not on the way.

But while we can't know whether wording the request in a more conciliatory way would have produced a different outcome, we also can't help but think it might have been better to say "please" — rather than, "You OWE us."

NFIP AND FLOOD MAPS

Flood Maps May Change For Some, Not All, Areas

By Pamela Pritt

Beckley (WV) Register-Herald, July 19, 2016

A significant number of state residents who were flooded last month didn't have flood insurance, mainly because they were not in the flood zone, according to maps produced by the Federal Emergency Management Agency.

But that doesn't mean the FEMA maps were wrong, said Kevin Sneed, West Virginia's floodplain management assistant coordinator.

The maps encompass areas likely to be flooded in 100-year flood events. June's devastating flash flooding is said to be in the 1,000-year flood range.

A 100-year flood has a 1 percent chance of occurring in any given year; the probability decreases for a 500-year event to 0.2 percent and a 0.1 percent annual chance for a 1,000-year flood.

It's highly unlikely that the larger maps will change, Sneed said, although certain map panels may be revised. "It's hard to get a study redone, but it might be necessary in Rainelle."

In western Greenbrier County, nearly all of Rainelle's businesses were flooded, as were hundreds of residents, who live between Sewell Creek and Little Sewell Creek.

"There will be community meetings in Rainelle about mitigation and how to rebuild Rainelle the right way," Sneed said.

Sneed said his agency is out collecting high water marks, and new map panels could come out of the data collected.

FEMA requires that homes and businesses be elevated above the 100-year mark, but most communities in the state have enacted ordinances that require a 2-foot elevation above that mark.

Sneed said homeowners with a mortgage who live in the "Special Flood Hazard Area" have a 26 percent chance of flooding during the life of a 30-year mortgage.

"The chances of flooding in a Special Flood Hazard Area are far greater than your house catching fire," he said.

Open House Being Held To Introduce New Chatham County FEMA Flood

WTOC-TV Savannah (GA), July 18, 2016

SAVANNAH, GA (WTOC) –

An open house concerning new flood maps will be held Tuesday for residents and business owners of Chatham County.

The event will offer the community a chance to learn how and why the local risk of flooding has changed, how the proposed new flood maps will be used, and steps they can take to protect themselves from the extensive damage that flooding often causes.

The open house will be Tuesday, July 19 from 5 to 7:30 p.m. at Savannah Technical College (Savannah Campus).

MITIGATION

FEMA Assessing Storm Damage In Northern Wisconsin

By Bill Novak

Wisconsin State Journal, July 18, 2016

The Federal Emergency Management Agency will begin assessing storm damage in northern Wisconsin next week to help officials determine if the state should apply for federal relief.

Gov. Scott Walker asked for FEMA's damage assessment after storms ripped through eight counties and a reservation, washing out highways and bridges, with some roads expected to take weeks to repair.

The Wisconsin Emergency Operations Center said more than $30 million in damage has been reported, with over $28.8 million in damage to public infrastructure and almost $1.8 million to private property.

"Communities throughout northern Wisconsin were hit hard by flooding last week," Walker said Monday. "We are doing everything we can to help them."

The governor declared a state of emergency for Ashland, Bayfield, Burnett, Douglas, Iron, Price, Sawyer and Washburn counties.

FEMA will look at public infrastructure damage in those counties, as well as on reservations for the Bad River Band and the Red Cliff Band of Lake Superior Chippewa.

FEMA is expected to begin assessing damage on July 25. The assessment will be forwarded to Walker to help determine if the state will request a federal disaster declaration, the first step to requesting federal disaster assistance.

FEMA To Begin Northwoods Flood Inspections Next Week

WHBL-AM Sheboygan (WI), July 19, 2016

UNDATED (Wisconsin Radio Network) – The Federal Emergency Management Agency will look at northern Wisconsin's storm damage next week to see if it's enough to qualify for possible disaster aid.

Governor Scott Walker has asked FEMA to assess the damage to government and tribal facilities — including roads and bridges. Many roads remain closed one week after as much as eleven inches of rain fell in the region – which includes Ashland, Bayfield, Burnett, Douglas, Iron, Price, Sawyer, and Washburn counties. Walker already declared a state of emergency in the area last week.

Preliminary estimates put the damage to public facilities and infrastructure at almost $29 million. That figure could grow as crews continue to inspect areas impacted by flooding.

The FEMA assessment begins next Monday. Walker's office says it will take several days to complete.

Walker Seeks Fed Assessment

WTAQ-AM Green Bay (WI), July 18, 2016

MADISON, WI (WTAQ) – Governor Scott Walker is seeking a federal assessment to conduct a damage estimate in the wake of storm damage to roads and bridges in northern Wisconsin.

"Communities throughout northern Wisconsin were hit hard by flooding last week. We are doing everything we can to help them," Governor Walker said in a statement. "I saw the damage firsthand and have worked with Wisconsin's federal delegation and my cabinet to provide immediate assistance to the effected communities."

The storm and flooding caused more than $28 million in damage to those roads, bridges and trails. Walker has declared a state of emergency for Ashland, Bayfield, Burnett, Douglas, Iron, Price, Sawyer, and Washburn counties.

According to a release by state emergency management officials, the storms caused nearly $1.8 million to homes and businesses in the affected counties.

Teams from the Federal Emergency Management Agency (FEMA) will begin assessing damage the week of July 25. The assessment is expected to take a few days to complete.

Information gathered will be provided to Governor Walker to help determine if the state will request a federal disaster declaration. It is the first step to request federal disaster assistance.

– Jeff Flynt

Walker Seeks Fed Assessment

WHBL-AM Sheboygan (WI), July 18, 2016

MADISON, WI (WTAQ) – Governor Scott Walker is seeking a federal assessment to conduct a damage estimate in the wake of storm damage to roads and bridges in northern Wisconsin.

"Communities throughout northern Wisconsin were hit hard by flooding last week. We are doing everything we can to help them," Governor Walker said in a statement. "I saw the damage firsthand and have worked with Wisconsin's federal delegation and my cabinet to provide immediate assistance to the effected communities."

The storm and flooding caused more than $28 million in damage to those roads, bridges and trails. Walker has declared a state of emergency for Ashland, Bayfield, Burnett, Douglas, Iron, Price, Sawyer, and Washburn counties.

According to a release by state emergency management officials, the storms caused nearly $1.8 million to homes and businesses in the affected counties.

Teams from the Federal Emergency Management Agency (FEMA) will begin assessing damage the week of July 25. The assessment is expected to take a few days to complete.

Information gathered will be provided to Governor Walker to help determine if the state will request a federal disaster declaration. It is the first step to request federal disaster assistance.

Flood Victims And Volunteers Invited To Town Hall Meeting In Fayette

By Sarah Plummer

Beckley (WV) Register-Herald, July 19, 2016

Fayette County flood victims, volunteers and residents are invited to a Town Hall meeting at 6:30 p.m. today at Midland Trail High School.

FEMA and county code enforcement will be on hand to answer questions as residents begin to rebuild after the June floods.

Items to be discussed range from individual assistance, hazard mitigation, flood plain management, building permits and grant programs.

Time will be set aside for questions and discussion.

St. Albans Directs Flood Damage Reports To FEMA

By Emily Rice

Charleston (WV) Gazette-Mail, July 18, 2016

St. Albans City Council opened session with a public hearing regarding a code ordinance regarding floodplains and protocol for reporting flood damages.

The city requested that all damage reports be made to the Federal Emergency Management Agency and not the city itself. Council also made a resolution authorizing participation in the hazard mitigation grant program, which was passed by unanimous voice vote.

Council also approved second readings of four ordinances all by unanimous voice vote and read by Charles Riffee, city attorney.

A second reading of the ordinance to vacate and abandon a portion of a 20-foot right of way between Second and Third Streets to make way for the CVS project was passed by unanimous voice vote.

Councilman-at-large Jerry Cogar asked that questionnaires regarding street lights be returned and asked his fellow council members to report any non-burning lights in their wards.

Ward 3 Councilman Jason Philabaun presented the Finance committee report and council approved payment of current invoices in the amount of $20,891.81 and purchase of a zero-turn mower for the Parks department from Pile Hardware in the amount of $4,249.

"This thing is phenomenal," Kevin Pennington, Parks and Recreation Superintendent, said in regard to the new lawnmower. "It will cut our grass cutting time in half and we are really looking forward to it."

Ward 4 Councilwoman Cheryl Thomas announced St. Albans Night Out Against Crime from 5:30 p.m. to 8:30 p.m. on August 2, in Mayberry's parking lot. The event is free to the public. Thomas also mentioned that there will be about 50 different exhibitors including Batman from Heroes for Hire.

Kevin Pennington, superintendent of Parks and Recreation, made multiple reports of events from his department including a Family Pool Party on July 29 with Marco's pizza provided at the city pool and movie night at dusk July 30 at Roadside Park where the movie "Zootopia" will be shown. Other events include Super Hero day at the City Park on August 13. The time will be announced at a later council meeting.

Pennington commented on the damage the city's dock sustained during the recent flooding.

"We are trying to get some funding to repair that," Pennington said. "We are going to fix it the best we can right now, to try to get us through this summer and should be completed by next week so our boaters will be able to use the ramp."

Council then opened the floor to a public forum.

A group of residents from Edgehill Drive in Ward 2 attended the meeting and addressed council regarding a condemned house in their neighborhood that allegedly had been raided for methamphetamine production and has attracted vermin.

They requested assistance from the council to have the house demolished or remediated. The group addressed council one by one, each pleading or demanding help from council.

Riffee told the group that there were some hold-ups in the Building Department about the city's interest for remediation because of funding or demolition because of toxins that may be present in the structure.

The group asserted that it would continue to attend city council meetings requesting assistance in this matter until it was resolved.

All members of council attended Monday's meeting.

Council's next meeting will be at 7:30 p.m. Aug. 1 on the second floor of the Municipal Building at 51 Sixth Avenue.

Santa Clara Wins FEMA Grant For Blue Clay Slide

By Julie Applegate

St. George (UT) News, July 18, 2016

SANTA CLARA – Santa Clara City has finally been awarded a federal grant which will allow the city to stabilize a landslide which has been plaguing residents for decades.

City officials received word Monday that a $1.17 million grant from the Federal Emergency Management Agency had been granted, Mayor Rick Rosenberg said.

"It's good news, good news," Rosenberg said. "We're excited about it."

The hillside near Truman Drive on the edge of Santa Clara Heights has been sliding for decades; the first instability was noticed by the Utah Geological Survey in 1981 and the first major landslide happened in 1992.

This is the second year in a row the city has applied for a FEMA hazard mitigation grant.

Read more: City seeks grant to stabilize blue clay slide area, purchase homes for demolition

At least 26 homes have been impacted by the slide, Rosenberg said. Movement is believed to be caused by a combination of blue clay and underground water. Attempts to pinpoint the source of the water have been unsuccessful, and repeated efforts have been made to stabilize the hillside. A slow-moving landslide in Santa Clara destroyed homes and forced the closure of Truman Drive, Santa Clara, Utah, Dec. 23, 2015 | Photo by Julie Applegate, St.

In 1993 large cement shafts were installed above the slide area behind affected homes on Cinnamon Circle, in an effort to stabilize the slope.

The shafts extended between 20 and 40 feet into the shale bedrock under the hill, but in 2002, the hill moved again, forcing residents to vacate two homes and displacing most of the cement shafts.

The FEMA grant will be combined with a $351,000 loan from the Community Impact Board and $40,000 in cash and in-kind contributions from the city, Rosenberg said. The FEMA pre-disaster mitigation grant requires Santa Clara to fund 25 percent of the project.

The total of $1.56 million will allow Santa Clara to purchase five properties including three homes that are affected by the slide but still occupied, Rosenberg said. Two vacant lots will also be purchased.

The homes will be torn down and the top of the hillside will be graded to remove weight from the top of the slide area. In addition, ground water drains will be installed in the unstable hillside and a buttress will be built at the base of the hill.

The work is expected to reduce the risk to adjacent homes, Rosenberg said.

Affected homeowners will be contacted by city officials with more detailed information, and meetings with homeowners and appraisers will be set up within the next few weeks, Rosenberg said.

The homes being considered for purchase are those considered to be at highest risk. If purchased, the homes would be demolished and the area would become open space.

"No one would be able to buy it, purchase or build on those lots," City Manager Ed Dickie said in an earlier interview. "Ever."

Hopefully, the hillside mitigation efforts will stop the slide, make property in the area safer and prevent future problems, Dicke said.

"So that's what we hope to do, is stop this so it doesn't affect any other property owners."

Production Schedule Delays Saltillo Storm Shelter

By William Moore

Northeast Mississippi Daily Journal, July 19, 2016

SALTILLO – Local officials hoped the large, community storm shelter beside Saltillo City Hall would be completed and in place by mid-April.

But it now looks like it will be some time in August before the $47,000 shelter that will house up to 96 people will be ready.

"We are waiting for the manufacturer," said Saltillo zoning administrator Brian Grissom. "We did a purchase order. It will be prefabricated in Decatur, Alabama.

"It hasn't really been delayed, it's just the company had several other projects ahead of ours."

Officials accepted the bid from Supercell Shelter late February. The 10-foot wide arched building will be

48 feet long and have benches along both sides and the center. It's designed to house 96 people.

"There are a lot of residences and businesses in the immediate downtown area," Grissom said. "They tried to look at people who could make it there within five minutes."

The bulk of the funding for the project will come from federal funds through a Federal Emergency Management Agency Hazard Mitigation Grant. The grant will pay 75 percent, just more than $35,000. The city's matching funds will be $11,695. That can include in-kind services such as preparing the site.

The city will handle the dirt work for the site. The manufacturer will come in and pour the concrete slab and let it cure. The bulk of the shelter will be prefabricated and shipped to Saltillo. An 80-ton crane will then hoist it into place – at the south end of the city hall parking lot, between the fire department and the railroad tracks.

Saltillo already has two small, prefabricated concrete and steel tornado shelters at City Park that are available to the public. The desire for a large safe room to serve the community grew out of the April 2014 tornado that hit Tupelo.

U.S. FIRE ADMINISTRATION

FEMA Releases New Guide On Radio Communications For Fire Service

Radio Resource Magazine, July 18, 2016

The Federal Emergency Management Agency (FEMA) U.S. Fire Administration (USFA) released a new guide on radio communications for the fire service. The 97-page guide offers 10 sections covering from why the fire service is different from other first responders to the First Responder Network Authority (FirstNet).

The USFA worked with labor union International Association of Fire Fighters (IAFF) to develop the second edition of the "Voice Radio Communications Guide for the Fire Service." The U.S. Department of Homeland Security (DHS), Science and Technology Directorate (S&T), First Responders Group, Office for Interoperability and Compatibility (OIC) supported the partnership.

"The USFA is committed to using all means possible for reducing the incidence of injuries and deaths to firefighters," the guide's acknowledgements said. "As a labor union, the IAFF has been deeply committed to improving the safety of its members and all firefighters."

Sections also cover basic radio technology, digital and analog technology, conventional and trunked radio systems, portable radios, system design and implementation, interoperability and spectrum licensing.

The guide is available here.

FIRE GRANTS

Great Barrington Fire Department Snags Grant For New Oxygen Tanks

Pittsfield (MA) Berkshire Eagle, July 18, 2016

GREAT BARRINGTON — U.S. Rep. Richard Neal, D-Springfield, congratulated members of the Great Barrington Fire Department on Monday for winning what he termed a "handsome" $160,477 award from the Federal Emergency Management Agency.

Neal was in town to announce the grant, which will be used to purchase 28 new self-contained breathing apparatus (SCBA) units — commonly known as air packs, according to Fire Chief Charles Burger.

"The units we have now are 11 years old, and some are in poor condition," Burger said. In fact, he said, the manufacturer who used to make the Great Barrington units has gone out of business, making it impossible to get replacements.

Neal said FEMA grants of this nature are extremely hard to get.

"These applications are scrutinized very carefully," he said. "A $160,000 grant is a handsome award to a small community like Great Barrington. I'm assuming that like any small community, you have expenses."

Burger confirmed that his department "has a number of capital projects we're looking at. This grant will help tremendously."

He said the new air bottles that are the principal part of the air packs will be 45-minute bottles, as opposed to 30-minute bottles.

In addition, he said, the new air bottles will sound an alarm when they are two-thirds depleted. Formerly, he said, the new bottles would sound an alarm when they are three-quarters depleted.

"That's a help for us," he said. "Earlier warning is always a help."

The new air packs will also be easier to maintain and have face plates that will not fog up. Visibility, he said, is especially essential in fighting fires.

The new air packs also have better communication equipment, Burger said.

The packs are used an average of 20 to 25 times a year, the chief said.

He expects to get the new equipment in about three months. Firefighters also will need a few weeks to train with it, he said.

Rep. Neal Highlights FEMA Grant For Great Barrington Firefighters

WAMC-AM Albany (NY), July 18, 2016

Congressman Richard Neal was in Great Barrington today to celebrate a federal grant upgrading the town's firefighting equipment.

The Democrat met with Great Barrington Fire Chief Charles Burger at the fire station to highlight the $160,000 FEMA award.

"This grant is going towards replacing our self-contained breathing apparatus or what most people know of as air packs," Burger said. "It's the cylinders we wear on our backs in order to breathe clean air in a hazardous environment."

Neal says part of the determination to bring about this type of funding stemmed from a 1999 warehouse fire in Worcester that killed six firefighters.

"In Worcester in particular the building was old and the firefighters ran out of oxygen," Neal said. "They were lost in the building. They were trapped."

Chief Burger expects to have 28 new air packs in the next three months, followed by a month of training before they are put in use.

"You have to be able to operate them flawlessly with your eyes closed at 3 o'clock in the morning," said Burger.

Burger says the new air packs are made by a company called Scott which has 60 percent of the market share. They contain 50 percent more oxygen than the current "30-minute packs," which provide about 12 minutes of working time. He says firefighting packs have universal air connections among the manufacturers.

"There are operating improvements with regards to communications," Burger said. "Obviously speaking through a mask is very difficult particularly when speaking through a mask over a radio. These new units transmit sound through them almost as clean as speaking without a face piece on."

Burger says the existing 32 packs are 11 years old — made a manufacturer that is out of business.

"The plastic is becoming more and more brittle and stuff is breaking," he said. "Every time we use them we take multiple packs out of service that then need to be repaired."

He adds that the new masks don't have to be completely taken apart to clean them, unlike the current set.

"Despite the fact that's just water that dried on there that creates such a strong seal, you physically cannot exhale," Burger said. "You have to then take the thing apart – you hope the building's not burning down at that point – break the seal, stick it back together and go to work."

Burger says the town's 35 active volunteer firefighters train with the equipment all the time, using it 20 to 30 times a year for fires, carbon monoxide and hazardous materials calls. He says the new equipment holds up better to modern firefighting because today's building products release heat energy at three times the rate as materials used in the 1970s. Burger says when the current masks are scratched they can absorb heat energy and potentially fail.

"It looks like it glazes over and your first instinct is 'Well, what's wrong?'" Burger explained. "So you go to touch it and you just wipe your face piece right off your face. So the way we have to train people to do it is as soon as you think that something might be wrong you have to get out."

NEWS AROUND THE COUNTRY

HURRICANE RECOVERY

Councilman Eric Ulrich Blasts Mayor De Blasio Over "Inefficient" Sandy Relief, Build It Back Program: "It's A Bureaucratic Nightmare"

By Erin Durkin

New York Daily News, July 18, 2016

City Councilman Eric Ulrich blasted Mayor de Blasio for his handling of the Build It Back program, saying hundreds of families have been left hanging years after Hurricane Sandy.

The Queens Republican, who is considering running against de Blasio for mayor next year, said the program's director Amy Peterson should resign or be fired.

"It's broken. It's not working. It's inefficient. It's a bureaucratic nightmare. It's a boondoggle," Ulrich said.

Speaking outside a Rockaway Park home that is still waiting for construction, Ulrich cast doubt on de Blasio's promise that all work on homes in the program will be done by the end of 2016.

"There's just no way that's going to happen," he said.

De Blasio appointed Peterson in March 2014 and pledged to turn around the program after it launched under former Mayor Bloomberg but did not fix up a single home.

"Amy Peterson has very good intentions. I'm sure that she gives 100% to her job, but she is simply in over her head and she is not able to effectively turn around the program," Ulrich said. "She's just not able to get the job done."

The Queens lawmaker has created an exploratory committee to look at a run against de Blasio.

"This is not a griping session. It's not an opportunity to do political grandstanding. It's not a chance just for me to take potshots at the mayor — although I'm happy to do that," he said Monday.

He said the city also is counting homes as under construction when a fence has been erected but no actual work has been done, and counting them as completed when families are still not allowed to move back in.

Ellen Nichtern, 59, said the city asked her to move out of the Beach 117th St. home she shares with her elderly mother in February to make way for Build It Back construction — but still hasn't started work.

Her mother, also named Ellen Nichtern, 86, bought the home in 1968.

"She's very depressed and she just wants to get home. This is killing her," Nichtern said.

Officials have told her issues with permits are holding up the construction, as the house sits empty waiting for elevation and repairs to a damaged bedroom and her family rents an apartment nearby.

"I've done everything," she said. "I talked to everybody and I'm just getting nowhere."

Nearly 20,000 homeowners applied for help from the program, though thousands have withdrawn in part because of long delays.

Out of 8,729 active applicants, construction has started on 3,000 homes and finished on 2,000 homes, while other families have received reimbursement checks for work they paid for themselves, the mayor's office said.

"When Mayor de Blasio took office and appointed Amy Peterson to run the program, not one homeowner had received a check or seen construction. That is why this administration immediately overhauled the program and took over direct management — resulting in 80% of homeowners served to date. Further, $120 million in reimbursement checks have been issued to residents," said de Blasio spokesman Raul Contreras. "We are continuing to elevate and rebuild homes across the City and Staten Island to complete the program — as the Mayor committed — by the end of this year."

FLOODS

NW Wisconsin Flood Damage Estimate Tops $30 Million

By Andrew Krueger

Duluth (MN) News Tribune, July 18, 2016

Damage from last week's major flooding in parts of Northwestern Wisconsin is now estimated at more than $30 million, and the state is considering whether to request a federal disaster declaration.

Assessments of flood damage also are continuing in parts of east-central and Northeastern Minnesota, which also were hit by rainfall in excess of 8-10 inches a week ago. The rain sent creeks and rivers out of their banks, and caused damage to highways, local roads and some homes.

Wisconsin emergency management officials reported Monday receiving preliminary estimates of nearly $29 million in public infrastructure damage from eight counties, as well as the Bad River Band of Lake Superior Chippewa and the Wisconsin Department of Natural Resources.

That total includes more than $11.5 million in Iron County — where the campground and marina at Saxon Harbor were devastated by floodwaters — as well as more than $5.8 million in Ashland County, more than $5.4 million in Bayfield County and more than $3.4 million on the Bad River Reservation.

Damage to homes and businesses across those jurisdictions is estimated at nearly $1.8 million so far. The Bad River band reported the most serious damage, with 10 homes destroyed by floodwaters and two others sustaining major damage.

Bayfield County reported 10 homes with major damage and 20 others with some effects from flooding; Ashland County reported two with major damage and 140 others at least affected; and Sawyer County reported 112 with minor damage or affected by the storms.

Wisconsin Gov. Scott Walker has requested that the Federal Emergency Management Agency conduct a preliminary damage assessment, starting next week, to determine if the state should request a federal disaster declaration; state officials said that's the first step toward requesting federal disaster assistance.

The Wisconsin Department of Transportation is being assisted by eight teams of Wisconsin Army National Guard engineers in assessing flood-damaged roads.

“Local authorities requested the Guard and DOT to assess damaged town roads in rural and isolated areas where local resources are limited,” state officials reported Monday.

Work continued Monday to fully reopen U.S. Highway 2 between Ashland and Hurley. The road is open to car and light truck traffic using a detour around a washout near Odanah, but semi traffic still is being directed to use a lengthy detour. Repair work on Highway 2 is slated to be finished Friday.

Meanwhile, U.S. Highway 63 remains closed near Grand View, and State Highway 13 is closed near Highbridge; detours are in place for what officials have said will be long-term closures because of major washouts.

In Iron County, state officials reported, “based on new sonar information from the U.S. Coast Guard, a dive team will arrive in Saxon Harbor (Tuesday) in an attempt to locate and recover two boats and two vehicles still unaccounted for.”

Chequamegon-Nicolet National Forest crews are making progress on reopening roads and trails damaged by flooding. Crews are working to clear or repair nearly 100 separate obstructions — such as damaged bridges and culverts, and washouts. A large-area closure has been lifted, and a new closure order is in place affecting individual areas.

Closures include the Beaver Lake, Lake Three, Mineral Lake and Namekagon campgrounds and the St. Peter’s Dome/Morgan Falls area. Find the full list at fs.usda.gov/CNNF; click on the “Flash Flooding Affects Forest” link.

In other news:

The Bad River band will open a multi-agency resource center Tuesday and Wednesday to help connect residents with available resources. The center at 72772 Elm St. in Odanah will be open from 2-8 p.m. Tuesday and 9 a.m. to 1 p.m. Wednesday.

Douglas County is collecting flood damage reports from residents; call (715) 395-1636 during business hours.

Sawyer County ((715) 638-3355) and Washburn County ((715) 468-4601) also are collecting flood damage reports.

The American Red Cross has set up a dedicated phone line — (715) 563-6188 — for people whose homes have suffered damage from flooding.

Ashland County has established a disaster relief fund to cover long-term recovery efforts not covered by other funding sources. Donations can be made at Northern State Bank branches in Ashland, Mellen, Glidden or Butternut. For more information, call (715) 682-2772.

MINNESOTA

In Minnesota, where parts of Aitkin, Carlton and Pine counties saw flooding from last week’s heavy rain, state officials still are working to determine if the damage qualifies for state disaster assistance.

All three counties have issued emergency declarations and completed initial damage assessments, which now are under state review.

Carlton County emergency management director Brian Belich said Monday that initial estimates are $480,000 in public infrastructure damage in the county — but that’s not counting some jurisdictions where officials still have not been able to reach damaged areas because of high water.

At least eight homes in the county suffered measurable damage from flooding, with assessments still underway.

Carlton County is seeking state aid for infrastructure damage, Belich said, but so far has not qualified for state aid for homeowners. Residents with flood damage should contact Volunteer Services of Carlton County, (888) 419-1235.

The Pine County Sheriff’s Office reported Monday that many county roads have reopened, but County Highway 61 near the dam in Willow River remained closed, along with Government Road between Sandstone and Hinckley.

Pine County officials asked that residents who suffered damage report it to (320) 591-1634 so the damage can be assessed.

Iron County Seeks Federal Help For Storm Recovery

KBJR-TV Duluth (MN), July 18, 2016

Hurley, WI (NNCNOW.com) – Much of Northwestern Wisconsin is still reeling from last week’s storms. Iron County was one of the hardest hit areas and the community is just starting to rebuild.

Like many people who have been through northwestern Wisconsin recently, Stacy Ofstad, Iron County Emergency Management Director, said that flooding and damage in the area is worse than anything he’s ever seen and it’s especially bad in the place he calls home.

“That’s where I live,” he said. “I live in Saxon I grew up in Gurney the harbor’s been a part of my life for many years.”

The destruction of Saxon Harbor has been one of the most striking images to come out of the storms and the recovering has only just begun.

Ofstad listed the damages and said it will take at least two or three years before the harbor will be like it once was.

"The creek being not in its channel anymore and the damages to the harbor and the extent of the repairs and the environmental work that's going to be done there," he said.

Representatives from the state are currently assessing Saxon Harbor to get some hard numbers they can use to apply for a federal disaster declaration. If that happens FEMA would be on site for three months.

For Ofstad though, it's all about making sure Iron County works as a community to rebuild.

"As far as I'm concerned, we're all in this together," he said. "We're one big family throughout the county."

And they're a family that's recovering from more than just physical damage. In Hurley, a memorial has been set up for Montreal firefighter and former county board member Mitch Koski, who died in the flooding in Saxon Harbor.

"We lost a very important individual," Joe Pinardi Chairman of the Iron County Board said. "We can't recoup that one. The harbor I guess we can rebuild."

Governor Scott Walker ordered all flags in Wisconsin to be flown at half staff today in memory of Mitch Koski.

Bayfield Co. Authorities: Woman Dies After Driving Around Barricades

WDIO-TV Duluth (MN), July 18, 2016

The Bayfield County Sheriff's Office says a woman died after driving around a barricade on a washed-out highway.

A Wisconsin Department of Transportation official called 911 at about 9:30 a.m. Monday to report the incident on U.S. Highway 63 north of Grand View. The official reported that a car drove around two sets of "road closed" signs and into the washed-out portion of the highway, which goes down about 50 feet. The vehicle came to rest in the bottom of the washout.

The driver was airlifted to a Duluth hospital, where she died from her injuries.

The woman's name is not being released because family members are still being notified.

Besides the sheriff's office, the U.S. Border Patrol, Mason EMS, and fire departments from Grand View, Mason, Drummond, and Ashland responded to the scene.

The woman is the fourth person to die in northern Wisconsin in relation to the July 11 storm. One person was killed during the storm, and two others died after their vehicles became stuck in floodwaters.

$2.5 Million Going To Repair Road Damage

WSAU-AM Wausau (WI), July 18, 2016

UNDATED (WSAU) – The Wisconsin Department of Transportation announced that $2.5 million in emergency federal funding is being released to assist in the repair of roadways damaged during heavy rains and flooding last week in northern Wisconsin.

Emergency assessments, operations and repairs have been ongoing since the storms that brought more than eleven inches of rain to some areas overnight between July 11th and 12th, causing a state of emergency as declared by Governor Scott Walker.

Multiple roadways were overtaken by water and some sections were completely washed away. Several highways in Bayfield, Iron, Sawyer, and Washburn Counties have been already been reopened thanks to repairs and detours.

"After a week of working around the clock to help restore Northern Wisconsin's vital transportation links, this funding will enable us to accelerate efforts to make emergency repairs and reopen roadways as soon as possible," said WisDOT Secretary Mark Gottlieb. "We recognize the important role these highways play in tourism, freight movement and daily life for thousands of people, and we are doing everything we can to help restore normalcy."

The funding announcement came upon receipt of a letter from Secretary Gottlieb to the Federal Highway Administration. WisDOT so far has identified nearly $10 million in repair needs for state and federal highways.

– Zach Hagenbucher

Emergency Response To Northern Wisconsin Flooding Continues

By Haleema Shah

Wisconsin Public Radio, July 18, 2016

FEMA announced today that it will be doing a preliminary assessment in northern Wisconsin where Governor Scott Walker declared a state of emergency after severe flooding last week. The torrential rain has caused damage in eight northern Wisconsin counties as well as tribal lands of the Bad River and Red Cliff bands of the Lake Superior Chippewa Tribe. We talk to the secretary of the Department of Administration about the ongoing emergency response in the region.

County Awaiting Federal Assessment Of Storm Damage

Durham (NC) Herald Sun, July 18, 2016

DURHAM – County and state officials are evaluating the damage caused by severe weekend storms and flash flooding to see how residents and business owners were impacted by the storms.

Right now the numbers aren't clear, but Durham County Fire Marshal and Emergency Management Director Jim Groves said more than 50 people were directly impacted by flooding and storm damage – including 30 one-person units at the Econo Plaza at 3115 Fayetteville Street and 24 more at the Eagle Point apartments at 412 Pilot Street.

Groves said on Sunday afternoon county officials conducted a tour of the properties prior to having state officials come in on Monday to validate the damage reports.

"It sounds like they've already reached out to FEMA region four," Groves added, saying federal officials will be in town Wednesday morning. Officials hope by that night the county will know whether it will be able to set up a disaster recovery center where residents and businesses can apply for low-interest loans or grant opportunities to help with the clean up.

He said several homes also had damage from trees, including some on Fayetteville Street and Duke Street. One house on Schrewsbury Street had a load-bearing wall wash away, which was "pretty significant damage because of the moving water."

Over the weekend the Durham Fire Department responded to 28 water rescue calls, most of which were for people trapped in their vehicles by high water. More than 20 streets flooded and were impassable during the storm.

On Saturday about 5 to 6 inches fell in a short time period – just over an hour – and that contributed to the flash flooding.

Flooding has caused the city of Durham's Parks and Recreation Department to close Long Meadow Park and White Oak Park until further notice.

Michael Webb, with the county's Fire Marshal and Emergency Management Department, on Monday was assisting the the assessment teams throughout the affected areas to see how much damage was done.

So far no monetary estimate of the damage is available.

Webb said damage wasn't confined to the apartment complexes, which are just a few blocks from each other, but rather spread throughout the city.

"We've had some where the ceilings are falling in," Webb said. "A lot of It was just the creeks not being able to keep up, just minor flooding that comes through crawl spaces."

However, even with all of the flooding there is a silver lining – so far no injuries have been reported from the flooding and no fatalities.

Webb, a 16-year veteran of the department, said he hasn't seen anything like this since Hurricane Fran which hit the area in September 1996.

Over the weekend a shelter was set up at Hillside High School to help those displaced by the flooding. But by Sunday afternoon only 10 people had used the shelter. The Red Cross is helping out those people as well.

Groves said Monday the shelter is still open for people if they need a place to stay at night.

While storms have calmed down, Durham isn't in the clear. Tuesday has a 50 percent chance of having thunderstorms roll through. While the National Weather Service is reporting less than a tenth of an inch of new rain could fall, it also has a caveat, adding higher amounts of rainfall could be seen if thunderstorms appear.

FEMA Disaster Recovery Center Opens In Tyler

By Paul Rivera

KLTV-TV Tyler (TX), July 18, 2016

TYLER, TX (KLTV) –

FEMA officials say a disaster recovery center was opened Monday to help those affected by flooding.

The center is located at Wise Elementary School at 10659 TX-64 in Tyler and will help those in Smith County affected by any flooding, wind, or water damage from the April 17-30 storms. The center is open Monday through Friday from 9:30 a.m. to 5:30 p.m. Officials say they will be at that location accepting applications until July 29, but may close early if the need is not there.

They say two other centers have also been opened in Cherokee and Anderson Counties. The Cherokee County Location is at the A. Frank Smith Methodist

Church at 131 Cooper St. in Alto and the Anderson County location is at the Palestine Mall.

Those who were affected in these areas can apply at any of the centers that are open. Those applying will need a photo ID, proof of residential ownership, Social Security Card and proof of citizenship.

Those not able to make it to the centers can also apply online.

They can also call 202-368-7966.

County, City Gets Ready For FEMA Reimbursement

KSWO-TV Lawton (OK), July 18, 2016

COMANCHE COUNTY, OK (KSWO) – Now that FEMA has approved counties and cities disaster assistance, Comanche County and Lawton city officials are getting their damage estimates ready. The county could be reimbursed for part of the cost it took to repair this once washed out road in the eastern part of the county on 120th Street.

FEMA could reimburse the city for almost the entire cost it took to repair this road just off Cache in west Lawton. The city had to remove the road to replace the damaged pipes below. City officials say they can receive money for the debris clearing, and removing blockage from sewage pipes.

The city has an estimate of one-point-five million dollars in damages, and the county has nearly 2 million.

OTHER NATURAL DISASTERS

Rubio Returns To Algae Front Lines After FEMA Funding Fails

WPEC-TV West Palm Beach (FL), July 18, 2016

STUART (CBS12) — U.S. Senator Marco Rubio (R-Florida) is trying to rebound from the Federal government's failure to come to the aid of the toxic Treasure Coast with any real relief from the algae.

Now, the toxic algae covers 30 miles of waterways and beaches.

The question now, as the layoffs continue, is what can be done to save the river and the way of life.

This time for Rubio's return to the Treasure Coast, there is no grand entry on a million dollar yacht at Central Marine, a marina still coated in a foot of manure-like algae.

There is also no talk of hope that this environmental financial disaster will end.

"If businesses do need to close for a day or week or two until this subsides, that they are going to give us reimbursement, that would be wonderful but until then we are stuck and subjected to this," manager Mary Radabough said during his first visit.

Today she tells CBS 12, no one private or public has offered them funding nor help.

So yes, the protesters will again line up to shout at the Senator for taking money from major political donors like the Sugar Industry--who often back pump dirty water into the already-polluted Lake Okeechobee.

But, we now know FEMA is not coming to the rescue.

The Army Corps of Engineers confirms discharges will continue

And scientists confirm the toxic algae isn't going away, even when it dies and sinks to the bottom of the waterway and Lake. It will then be waiting for the next perfect heat wave to rebound and bloom again, taking an entire ecosystem and economy down with it.

Democratic Congressman Patrick Murphy is now urging Governor Rick Scott to "immediately submit an appeal to the President providing the necessary information to justify an emergency declaration" without the insults. In the initial request for FEMA relief for the toxic region, Governor Scott blamed the President for creating this disaster due to a lack of federal funding for the Herbert Hoover Dike.

Rubio is expected to arrive and meet with local leaders on what options remain for the region before addressing the media shortly after at 4:45 pm.

ZIKA VIRUS

Family Member Of Utah Zika-patient Infected With Zika Virus, Puzzling Health Officials

By Adam Shrier

New York Daily News, July 18, 2016

Authorities are scratching their heads over how a family member who helped care for the elderly Utah man who died of a Zika-related death in late June was infected with the virus, state and federal officials announced Monday.

The infected family member helped care for the deceased patient — the first Zika-related death in the continental U.S. — but had not traveled to a Zika-affected region or had sexual relations with the deceased, presenting the alarming possibility that the infection spread through a new route, health officials said.

“This is a unique situation,” CDC Director Tom Frieden told the Washington Post. “This is the first time where there is a suspected spread of one person to another” outside of sexual transmission.

The infected person, who recovered quickly according to officials with the Centers for Disease Control and Prevention, was in close contact while providing care for the deceased patient. During that time, he “could have been exposed to that individual’s sweat or tears or bodily fluids,” Frieden said.

But Frieden described the transmission of the virus as “unusual.” There are currently 1,306 travel-related Zika cases in the continental U.S. If this unexplained transmission was occurring regularly, “it’s likely we would have seen it before,” he said.

“There is uncertainty about how this new case contracted Zika,” said Gary Edwards, a health official with the Salt Lake County Health Department. “But we do not believe that there is risk of Zika transmission among the general population in Utah based on what we know so far.”

The Aedes aegypti and Aedes albopictus mosquito species capable of carrying Zika virus are not present in Utah, Edwards said. CDC scientists are investigating the possibility that the virus mutated or that an infected mosquito may have returned to Utah from a Zika-affected region in the deceased Zika patient’s clothing or luggage.

Health officials are also investigating the elevated levels of the virus present in the deceased patient’s blood. The deceased, who traveled to a Zika-affected region, had concentrations of the virus 100,000 times higher than samples of other infected people, the CDC said.

The newly infected person showed symptoms of Zika but did not exhibit the same high concentrations of the virus, officials said.

Health officials are currently interviewing and collecting samples from family members and health-care workers who were in contact with the deceased patient.

The Utah person’s infection is the fifth case of Zika virus reported in Utah, according to CDC data.

As of July 13, the CDC has documented 1,306 cases of Zika virus related to travel in the continental U.S, including 285 cases in New York State and 14 instances of sexual transmission.

There are 2,916 documented cases of Zika virus in U.S. territories, the vast majority of which were acquired locally. Send a Letter to the Editor Join the Conversation: facebook Tweet

Georgia, Augusta Preparing For Zika

By Tom Corwin

Augusta (GA) Chronicle, July 18, 2016

A “unique” case of Zika infection in Utah that might have spread to a family contact is being investigated by the Centers for Disease Control and Prevention, the agency reported Monday. Meanwhile, Augusta and Geor-gia are preparing for the mosquito-borne virus.

CDC officials say they are looking into the case of a man who died in late June and was found to be infected with Zika, with levels of the virus in his body that were 100,000 times what would normally be expected.

A family contact who cared for the patient was later found to have contracted Zika without the primary ways it is normally transmitted, said Satish Pillai, the CDC’s deputy incident manager for Zika response.

That person had not traveled recently to an area where Zika is actively spreading and had not had sex with a returning traveler. Also, Utah does not appear to have the two mosquito species known to transmit the virus, he said.

“This is a very unique situation with these elevated viral loads (in the deceased patient) that we haven’t previously seen,” Pillai said. “There’s a lot we don’t know about Zika virus, and we are still doing a lot of investigation to understand whether Zika can be spread from person to person through contact with a sick person."

He stressed that there is no evidence Zika can be spread by casual contact with an infected person and that the primary way of spreading is through a mosquito bite or sex with an infected person.

Of the 1,306 cases of Zika in the U.S., "none of these have been the result of local spread by mosquitoes," Pillai said.

How the deceased patient got such a large amount of virus in his body is a "chicken-or-the-egg question," said Michael Bell, a medical epidemiologist for the CDC.

"Someone who is extremely ill and debilitated from another disease process could have a diminished immune system that doesn't fight the virus as well. That might allow more virus to have proliferated in the bloodstream."

Or it could be the primary infection, he said. For now, the CDC has not changed its recommendations, and health care workers should use standard precautions to prevent infection, Bell said.

The virus has not made it to Georgia, but officials in the state are getting ready, said Fred Koehle, the special projects manager for Richmond County Mosquito Control. The state Department of Public Health holds a weekly conference call on Mondays devoted solely to Zika, he said.

"We have pediatricians and mosquito control people and health people (on the call)," Koehle said. "It covers any new scientific information that comes up during the week and also covers the numbers and what's going on in the state as far as programs, what we're doing in different areas to get ready, just in case."

There are only two major mosquito control programs in the state, in Augusta and Savannah, he said. The counties in the Atlan-ta area put out larvicides but are not part of the health departments, Koehle said.

"Whatever they have is small and tied to public works or roads and bridges or something like that," he said.

Savannah has a much lar-ger program, with a budget of $3.5 million and aircraft, compared with Augusta's budget of $225,000, he said.

For now, Augusta is continuing its normal program of treating storm drains, putting out larvicides, and investigating and responding to complaints, he said.

"We're as prepared as we can be (for Zika)," Koehle said.

Manatee County Reacts To First Travel-related Confirmed Case Of Zika Virus

Bradenton (FL) Herald, July 18, 2016

With the first confirmed case of Zika in Manatee County, officials are taking extra precautions to keep residents safe.

"It is important to note the case of Zika in Manatee County is travel-related, meaning the person acquired the virus overseas," Mara Gambineri, the communications director for the Florida Department of Health, said in an email. "All cases of Zika in Florida are travel related. There has been no local transmission."

Manatee County has now been added to the "declaration of public health emergency," which prompts more action and cooperation from local officials, including mosquito control.

Mosquito control has been working closely with the Department of Health to make sure the area around the first confirmed case gets some extra attention, said Mark Latham, director of Manatee County Mosquito Control.

"We'd already been out to where the confirmed case was, but we went back out and did a little bit of extra, just to be extra sure," Latham said.

Prior to the confirmed case, there were some suspect or possible cases that mosquito control responded to, and the affected area with the confirmed case had been sprayed before it was confirmed. Mosquito control was back out early Friday afternoon, after the case was confirmed.

Typically, mosquito control covers a 300 to 500 foot area near the contaminated area. There are only two types of mosquitos in Manatee County that can carry the disease, and Latham said they aren't strong fliers. The particular mosquito loves dark, shady areas, Latham said, so mosquito control makes sure to pay close attention.

They also knock on doors and talk to residents, trying to get into backyards and make sure there's no standing water or other breeding grounds for mosquitoes.

Latham said people should continue to take precautionary measures, making sure they are not leaving standing water and protecting themselves from mosquitoes by using repellants.

The CDC recommends testing for any person with two of the four most common symptoms — fever, joint pain, rash and red eyes — and a travel history to a Zika-infected area. The federal agency also recommends testing for all pregnant women with a travel history, or a partner with travel history, to any area where Zika is transmitted by mosquito bites.

The Council of State and Territorial Epidemiologists and CDC released a new case definition for Zika that now includes reporting asymptomatic and symptomatic cases of Zika. Prior to this change, states reported only symptomatic non-pregnant cases and pregnant cases regardless of symptoms. This change comes as a result of increased availability for testing in commercial laboratories, according to the Florida Department of Health website.

According to CDC, symptoms associated with the Zika virus last between seven to 10 days. The Florida Department of Health issues a Zika virus update each at 2 p.m. each weekday.

On Saturday, after the case in Manatee was confirmed, U.S. Rep. Vern Buchanan, R-Sarasota, called Washington's failure to approve Zika funding a "national disgrace."

"Communities in Manatee County and elsewhere in Florida needed federal resources weeks ago to stop this deadly virus," he said in a statement. "The health of thousands of lives are now at stake because Congress and the president could not overcome their political differences."

In June, Buchanan hosted a forum on the Zika virus at University of South Florida Sarasota-Manatee with other community partners.

We All Can Use Congress' Vacation

Tyler (TX) Morning Telegraph, July 18, 2016

Once again, we must come to the defense of the do-nothing Congress. Or to be more precise, the do-nothing part, not necessarily the Congress bit.

Congress has adjourned for a lengthy vacation, to allow each member to avoid his or her party convention. And predictably, some critics are stepping forward to chide Congress on work left unfinished.

"Last week, Congress recessed for a 7-week summer vacation with little to show for it," Environment Texas wrote on Monday. "There are important issues still on the table that have not been addressed, including the Zika virus and gun reform. In addition, there's one other thing that Congress still needs to get done this year and that's dealing with the crisis surrounding our drinking water infrastructure."

That group is focusing its harshest criticisms on water quality.

"The devastating lead contamination that has been discovered in Flint, Mich. has highlighted how bad our water quality infrastructure really is, with 18 million Americans living in communities where the water systems are in violation of the law," Environment Texas wrote. "We have major problems with water contamination here in Texas. In fact, over 5 million Texans have been drinking water with reported lead violations."

Now, let's look more closely at those claims. First, the problem in Flint wasn't a lack of federal government involvement – federal government involvement was at the root of the problem.

"Local public officials have called on the federal government to intervene," the Huffington Post reported. "In her successful mayoral bid this past fall, Karen Weaver campaigned in part on that demand. In fact, the federal government was already deeply involved. It took the efforts of private citizens to expose the threat to public health, as it had in Washington, D.C., when that city suffered a major water lead crisis a decade ago."

The problem was that Flint started buying Flint River water, rather than purchasing treated water from Detroit's extensive system. When confronted with increasing reports of health problems, the EPA investigated – and then quashed its own report.

The issue was quickly remedied, once government officials stopped working so hard on the cover-up, by switching back to Detroit water. It will take some time for lead levels in Flint residents go down, but that's not something that Congress can fix.

Nor is it a budgetary issue. The state of Michigan is spending millions of dollars on Flint's water system (including $165 million to replace lead pipes). And President Obama has declared Flint a federal emergency, which frees up federal funds. The real point here is that Congress isn't here to fix Flint. It's a state matter, and the state is handling it. The EPA has a role, of course, as does FEMA. But not Congress. Congress would mostly just get in the way and politicize matters.

The truth is that when the former swampland that makes up D.C. is drained of politicians, we're really better off. Gridlock, in fact, is good.

Let's not begrudge members of Congress their vacations. They can do less harm when they're at the beach.

EMERGENCY PREPAREDNESS

Open-carry AK-47 In Cleveland Plaza

By Kyle Rowland

Toledo (OH) Blade, July 19, 2016

CLEVELAND — Jesse Gonzales didn't come downtown to disturb the peace. But his appearance in Cleveland's Public Square caused a circus-like atmosphere.

The 26-year-old from nearby Lakewood, donning a camouflage Make America Great Again hat and a Nintendo Duck Hunt T-shirt, had an American-made AK-47 slung over his shoulder. Mr. Gonzales said he brought the firearm "because I can."

"In my lifetime, there's been a gradual, social push for more gun control, specifically for firearms like the one I'm carrying," he added. "All you have to do is listen to the rhetoric on TV every day. There's a lot of emotional language, and it doesn't accomplish anything. No one talks about the actual statistics about homicides with firearms. Specific instances of crime are maintained to fit an agenda."

RELATED: Convention speakers line up to support Trump | Toledoans join protests | Ohio delegates committed to Kasich | Australian enjoy: 'America is great' | Ohio Hometowns Left Behind: Marietta | Clinton speaks to NAACP | ToledoBlade.com/RNC2016

The weapon was unloaded and the safety was on, though Mr. Gonzales did have 30 rounds in his pocket. Mr. Gonzales, who supports Donald Trump because of his Second Amendment beliefs and views on the economy and immigration, does not agree with the notion that there is rising gun violence in the United States, even after several high-profile gun deaths in recent weeks.

Instead, he says it's a media creation and that gun deaths have actually declined dating to the 1990s.

More than 50,000 people are expected to descend on Cleveland this week and none of them can bring a tennis ball or metal-tipped umbrella into the 1.7-square-mile area near Quicken Loans Arena. They can, however, carry an assault rifle under Ohio's open-carry laws.

The Cleveland Police Patrolmen's Association asked Ohio Gov. John Kasich to temporarily ban open-carry weapons in the wake of gun violence in Baton Rouge and Dallas, which included the shooting deaths of eight police officers.

In response, Mr. Kasich said he did not have the authority to arbitrarily suspend constitutional rights or state laws.

"An AR-15, a shotgun, multiple handguns. It's irresponsible of those folks, especially right now, to be coming downtown with open-carry ARs or anything else," Stephen Loomis, the head of the police union, said Sunday. "I couldn't care less if it's legal or not. We are constitutional law enforcement, we love the constitution, support it, and defend it, but you can't go into a crowded theater and scream fire. And that's exactly what they're doing by bringing those guns down there."

Security is the topic du jour of the moment after a spate of police shootings across the country. Cleveland Mayor Frank Jackson said there is no credible threat on the city. But it is still overrun with law enforcement as violent encounters remain a possibility — the city has a $50 million protest insurance policy.

There's $48.9 million in federal money being spent on security, 4,000 federal personnel from the Bureau of Alcohol, Tobacco, Firearms and Explosives, FBI, Federal Emergency Management Agency, Secret Service, and other agencies, and 3,000 police officers, with many coming from out-of-state.

Mr. Gonzales said he understands the concerns for public safety. He also countered with questions of why it's OK for police to carry weapons, but it's menacing if he does so.

He owns five guns and said protection is his primary reasoning.

"You can't coerce an armed man," Mr. Gonzales said. "The biggest, strongest man can try and do you harm. But it doesn't matter how big or how strong he is if you have a firearm. It's an equalizer. If you don't have them anymore, it reduces us back to the medieval age where the strongest, fastest men get to do whatever they want."

Information from The Blade's news services was used in this report.

CTX Delegates Notice Heightened Security At RNC

KXXV-TV Waco (TX), July 18, 2016

CENTRAL TEXAS (KXXV) –

The heightened security at the Republican National Convention has not gone unnoticed by delegates from our area.

According to Toby Marie Walker, a Texas alternate delegate at large from China Spring, said it was noticeable even when her group arrived to Cleveland on Saturday night.

"Normally that's a 20-30 minute ride, it's only 13 miles. But it took us an hour and a half with all of the security and the checkpoints and everything to get to our hotel. It was a little interesting because they closed streets and later on those streets may be open but a different is closed," Walker said.

She added it was difficult navigating the streets when going in a vehicle.

In terms of security when going to the convention, she said buses are checked before they go to the convention center. At the location, they go through Secret Service security and security similar to the one at airports.

Walker has noticed a heavy police presence throughout the convention.

"There is Capitol Hill Police all the way down to local. They're everywhere and so it's a little different than being in Waco. There is a police officer every five feet. You see them everywhere," Walker said.

District 17 Alternate Delegate from Lorena Christine Turpin said on their way to an RNC welcome party on Sunday night, they ended up on the route for a parade, where people had a permit to protest.

"It wasn't a very large group of protestors but there was a huge police presence. It looked like there were 10 law enforcement police officers per protester that was there," Turpin said. "It went smoothly, there were no problems. No issues. They were doing their first amendment rights and they were marching down the street as they are welcome to do," Turpin said.

On Monday, Turpin reported seeing people protesting against GOP presumptive nominee Donald Trump.

According to CNN, 3,000 police officers were tasked with guarding the RNC. In addition, 4,000 federal personnel, including 3,000 agents from Secret Service, Transportation Security Administration were expected to be present. Agents from Bureau of Alcohol, Tobacco, Firearms and Explosives (ATF), Federal Bureau of Investigation, FEMA and elsewhere planned to be there.

Republican National Convention kicked off on Monday in Cleveland, Ohio with approximately 2,470 delegates and 2,302 alternate delegates from all 50 states.

The Texas Republican Party of Texas listed 108 delegates, alternates and 47 delegates and alternates at large from Texas.

Three of the delegates and alternates from District 17 are from McLennan County, two are from Travis County, one is from Brazos County and one is from Freestone County.

This is the first time both Walker and Turpin have been at a national convention.

Walker who supported Sen. Ted Cruz in the primary said her vote had been assigned to Trump, as a delegate at large.

Turpin who is proud to represent Central Texas even as an alternate was paired with a delegate throughout the convention. She anticipates being on the floor throughout the convention but doesn't anticipate voting.

Turpin said the party is not yet unified for the presumptive nominee.

"Is there complete unity? Absolutely not. Was that expected? Absolutely not. [The delegates] are trying to have voices hear. I don't know what the percentage is. We'll find that out on Thursday when the actual vote is for the nominee," Turpin said.

Teachers Receive New Active-shooter Protocol

By Caitlin Conrad

KSBW-TV Monterey (CA), July 18, 2016

Administrators and staff with Monterey Peninsula Unified School District are going through an intensive active-shooter training this week.

Teachers spent Monday morning in the classroom and ran simulations in the afternoon. Several active-shooter scenarios were simulated using a pellet gun as the weapon and an air horn to simulate gunshots.

The training program is called ALICE, which stands for Alert Lockdown Inform Counter Escape.

"ALICE is providing a different variety of issues, and at the same time, empowering the teachers and the students inside the classroom to take action," school resource officer Patricia Perez said.

Perez has taken the ALICE training and said it goes beyond the shelter-in-place training of the past.

"It is very important. Not just giving you the option of lockdown, it's giving you several options of counter, as well as evacuation," she said.

ALICE trainers got teachers mentally prepared for an active-shooter situation so they know what to do and when to do it. Instructors told them if they have the option to escape and get their students out, it's often the best option. But in the event they come face to face with the shooter, they need to counter.

Counter does not mean fight, it means distract and, if possible, disarm.

Teachers had to think about how to distract a shooter and practiced yelling and throwing things at the person.

Staff members also practiced taking shooters on in groups and disarming them.

"We are training them on ALICE protocol to make sure that students and staff are safe in the event we have an unforeseen violent intruder on campus," Assistant Superintendent Tony Shah said.

Shah said this is the first time district staff members have gone through ALICE.

"So we have had violent intruder drills. We haven't been as consistent as we should be. This is the first that I know of that the district is receiving uniform training," Shah said.

The educator said that while a shooting is unlikely, in this day and age he wants teachers to have the best training possible.

ALICE is validated by research. It is supported by 2,300 law enforcement agencies and complies with the new standard of care developed by the U.S. Department of Education, the FBI, the Department of Homeland Security and the Federal Emergency Management Agency.

FEMA, FCC Look To Second EAS Test For Clues To Progress.

Inside Radio, July 19, 2016

A second-ever national test of the Emergency Alert System will be held Sept. 28. The Federal Emergency Management Agency (FEMA) and Federal Communications Commission have made the previously announced tentative test date official. They've also scheduled Oct. 5 as the date for a secondary test if one is required.

All stations will be required to take part in the test; it comes five years after the first national test and will provide FEMA and the FCC with real-world data on whether changes it has implemented will fix some of the glitches discovered during the first national activation.

The agencies say they're especially interested in determining if the next-generation common alerting protocol-based or "CAP-based" alerts are properly disseminated to stations, as they were designed to be. Since it is one potential solution to the problem of how to send alerts in multiple languages, the national EAS test will be transmitted in both English and Spanish and will include both audio and the text of the test message. "These improvements will help ensure that all members of the public, including non-English speakers and individuals with disabilities, will receive emergency information," the FCC says in a statement.

The other area of special interest for EAS managers is how the test alert is distributed to cellphones and other wireless devices.

As it prepares for the national test, the FCC's Public Safety and Homeland Security Bureau has been deploying an improved feedback portal known as the EAS Test Reporting System, or ETRS, during the past several months. That system is now ready to begin receiving reports from stations. As a result, each station must create an account and submit identifying information to the FCC by Aug. 26. Stations will then have until Sept. 26 to correct any errors in the ETRS system.

Then on Sept. 28 when the next national EAS test is conducted, broadcasters will have 24 hours to log into ETRS to file an initial report about whether they were able to receive and send the alert. Stations will then have 45 days to file a more detailed set of post-test data notes regarding the national test.

You can see the ETRS webpage HERE.

Louisiana Gov. Requests $2 Billion In Federal Funding For Flood Recovery

By Gretel Kauffman

Christian Science Monitor, September 12, 2016

Louisiana Gov. John Bel Edwards appealed to Congress on Friday to approve $2 billion in federal funding for flood recovery efforts, telling lawmakers that the state "cannot recover without it."

Speaking at a House subcommittee hearing on the federal response to the August flooding that displaced thousands and caused $8.7 billion in damage, Governor Edwards said the money was needed for housing, economic development, and public works. He also urged the Federal Emergency Management Agency (FEMA) to speed up the delivery of manufactured housing units, part of efforts to shelter people who were living in the more than 55,000 homes now destroyed.

"While the response with manufactured housing units has been quicker than any other Louisiana disaster, it has not been fast enough for the families in Louisiana who have lost their homes and have no place to go," Edwards said.

But while the governor praised the federal response to the flooding thus far, a number of local mayors who spoke said that it was not enough, and lamented a lack of communication between local and federal officials.

One mayor, Jr. Shelton of Central, La., said that he did not directly speak with FEMA for three weeks after the flooding.

"That debris that's out there? That's not debris, it's people's lives," Mr. Shelton said. "We have suicides, we have mental breakdowns, we have families being torn apart."

Some have argued that the slow federal response could be due, in part, to a lack of national media coverage of the disaster.

"It's not just water that's rising," Mike Scott, of the New Orleans Times-Picayune, wrote on August 16. "So is the frustration level of many observers who can't help but notice a key absence amid the tragedy: the national media." And such complaints "aren't trivial," he said.

"As Louisiana well knows, the loosening of the recovery purse strings is directly commensurate to the number of people who are made aware of the scope of the devastation," Mr. Scott wrote. "In this case, where national news coverage has been scarce, locals have every reason to worry that recovery funds will be just as scarce."

While displaced residents wait for FEMA housing units to arrive, a number of local Airbnb hosts have offered to let flood victims stay in their homes for free, as Winston Ross reported for The Christian Science Monitor last month.

"The generosity, compassion and caring, to take from their own income and welcome strangers into their property. There are just no words for that," Kim Stewart, a Baton Rouge resident staying in an Airbnb property while her home is repaired, told the Monitor. "There are no words. I truly believe it's a Southern thing."

WH Challenges Republicans On Aid For Louisiana, Flint

By Devin Henry

The Hill, September 12, 2016

The White House on Monday challenged congressional Republicans to provide new funding for the Flint, Mich., water crisis, as well as recovery efforts following severe flooding in Louisiana.

White House press secretary Josh Earnest defended the Obama administration's response to Flint and Louisiana when asked whether funding for the crises will come up during budget meetings with Republicans.

He noted, for example, that 63,000 Louisiana families have received federal assistance and that there's been $260 million in insurance payments there since last month's flooding in and around Baton Rouge.

Gov. John Bel Edwards (D) last week asked federal officials for more than $2 billion to help further recovery efforts. Earnest said Congress would have to address that request.

"Theres a lot of moralizing about how the president should do his job," he said during a press briefing Monday.

"Well he's done it. The question now is, are Republicans in Congress going to do their job? ... Are they going to do their job for the people of Louisiana? I think we're going to find out."

Earnest said the White House "would support congressional action to offer additional assistance" to Flint, which is suffering from elevated levels of lead in its drinking water.

Lawmakers have long tried to cut a deal on aid for Flint. Senators agreed over the summer to include $220 million in funding for Flint and cities with other drinking water problems in a water infrastructure bill, legislation that is set to receive a vote this week.

"It's clear that the problems in Flint are deeply entrenched and the administration would certainly be supportive of an effort in Congress to offer additional assistance," he said. "We'll just add it to the long list of things that Republicans in congress have failed to make progress in."

President Obama and congressional leaders will meet on Monday afternoon to discuss funding the government after the fiscal year ends on Sept 30.

Overnight Energy: Senate Advances Water Bill With Flint Aid

By Timothy Cama And Devin Henry

The Hill, September 12, 2016

WATER BILL, FLINT AID MOVE FORWARD: The Senate inched closer on Monday to wrapping up work on $9.4 billion waterways bill that that provides emergency funding for lead-contaminated communities like Flint, Mich.

The Senate voted 90-1 to end debate on a substitute amendment to the Water Resources Development Act (WRDA), which authorizes dozens of waterways projects around the country.

Bill sponsors are putting together a package of bipartisan amendments for the bill, but they're likely to steer clear of any controversial provisions in an effort to swiftly advance the legislation this week.

Sen. Jim Inhofe (R-Okla.), chairman of the Environment and Public Works Committee, said they considered around 35 provisions for the package and "hope to get consensus to adopt [the package] shortly after the cloture vote tonight."

The measure provides $220 million in emergency assistance to address drinking water crises in communities such as Flint, where water from the Flint River corroded the city's pipes, contaminating the water supply with lead.

"We are pleased that after months of working with Republicans and Democrats, our bipartisan agreement to help Flint and other communities is now before the Senate as part of the Water Resources Development Act," Sens. Debbie Stabenow (D-Mich.) and Gary Peters (D-Mich.) said in a statement.

"In the coming days, we will continue our effort in the Senate to finally pass this urgently-needed help for Flint families."

Read more here.

WHITE HOUSE PRESSURES CONGRESS ON AID: Hours before the Senate's waterways vote, the White House challenged congressional Republicans to do more for Flint and victims of last month's flooding in Louisiana.

White House press secretary Josh Earnest defended the Obama administration's response to Flint and Louisiana when asked whether funding for the crises will come up during budget meetings with Republicans.

In fact, he said, it was time for Republicans to do something the victims – whether it's the WRDA aid package for Flint or the $2 billion Louisiana Gov. John Bel Edwards (D) wants to help recover from the flooding near Baton Rouge.

"There's a lot of moralizing about how the president should do his job," he said during a press briefing Monday.

"Well he's done it. The question now is, are Republicans in Congress going to do their job? ... Are they going to do their job for the people of Louisiana? I think we're going to find out."

He also knocked Congress for moving slowly on Flint.

"We'll just add it to the long list of things that Republicans in Congress have failed to make progress in," Earnest said.

Read more here.

WH: PIPELINE DECISION CAME FROM OTHERS: The White House on Monday downplayed its influence on an administration decision Friday to block construction on a pipeline project in North Dakota.

The Department of Interior and the Army Corps of Engineers decided Friday to halt construction on a crucial stretch of the Dakota Access Pipeline while it decides whether the project needs a new, tougher environmental review. The decision came moments after a federal court ruled Army Corps officials conducted a proper assessment of the pipeline project's impact on Native American cultural lands in North Dakota.

"I think they're trying to do the right thing here in terms of making sure that everybody's interests are

taken into consideration," Earnest said at his briefing. But he declined to say what role, if any, President Obama had on the decision from Interior and the Army Corps.

"This was a decision that they made." Earnest said.

"I can't speak to the discussions they may have had with the White House. This was ultimately their decision, and they made this decision to ensure that the interests and concerns of everybody who is affected by the construction of this project were properly taken into account."

FIGUERES DROPS OUT OF UN RACE: Christiana Figueres, who led the United Nations' efforts toward last year's Paris climate agreement, is ending her campaign to lead the UN.

Figueres sent a letter Monday to the UN's general assembly and Security Council notifying them, and tweeted it out.

"Out of loyalty to the United Nations and in order to facilitate the advance [sic] of the selection process I hereby inform you that today I withdraw my candidacy to the position of secretary-general," the Costa Rican diplomat wrote.

A poll of UN diplomats last week had Figueres in ninth place out of 10 candidates, according to the Associated Press.

Join The Hill on Wednesday, September 14 for "Preparing for the Next Disaster: A Policy Discussion on Community Resilience," featuring Sen. Joe Manchin (D-W.Va.), Rep. Blaine Luetkemeyer (R-Mo.), and Timothy W. Manning, Deputy Administrator for Protection and National Preparedness at FEMA. Topics of discussion include preparedness efforts to increase community resilience and the role of federal, state & local government in pre-disaster mitigation. RSVP here.

ON TAP TUESDAY I: Sen. Bernie Sanders and others hold a rally outside the White House, protesting the Dakota Access Pipeline. Sanders had asked the Obama administration to block the pipeline, and introduced an amendment in the Senate last week to slow down its construction. The protest is one of dozens around the country.

ON TAP TUESDAY II: A House Oversight Committee panel will host a hearing on conservation efforts.

Rest of Tuesday's agenda ...

The Senate Agriculture Committee will meet to discuss a forestry bill.

AROUND THE WEB:

A mining firm is suing the federal government over its decision to review its lease renewal request for precious metal mining in Minnesota, the Duluth News Tribune reports.

The Alaska Railroad will soon become the first railroad in North America to haul liquefied natural gas, the Alaska Dispatch News reports.

Enbridge, which last week delayed its planned Sandpiper pipeline, is still moving forward with a replacement for it's 1,097-mile Line 3 pipeline running from Alberta to Wisconsin, Forum News Service reports.

Overnight Finance: Obama, Leaders Huddle On Budget | McConnell Tees Up Short-term Spending Bill | Trump Says Yellen Trying To Help Obama

By Sylvan Lane

The Hill, September 12, 2016

Budget powwow at the White House: President Obama on Monday urged congressional leaders to avert a government shutdown ahead of the Oct. 1 deadline, with election politics looming large over the discussion.

Obama encouraged leaders to move forward on an emerging compromise to keep the government open through mid-December and provide more money to fight the Zika virus.

Senate Majority Leader Mitch McConnell (R-Ky.), Senate Minority Leader Harry Reid (D-Nev.), Speaker Paul Ryan (R-Wis.) and House Minority Leader Nancy Pelosi (D-Calif.) attended the White House meeting in what has become a familiar ritual before a funding deadline.

But the dynamic of the meeting was different than in the past, when leaders often engaged in combative negotiations. The Hill's Jordan Fabian has the details: http://bit.ly/2cjOz19

McConnell tees up short-term spending bill: Senate Majority Leader Mitch McConnell (R-Ky.) is turning the Senate toward a short-term spending bill as lawmakers face an Oct. 1 deadline to avoid a government shutdown.

"I expect to move forward this week on a continuing resolution through Dec. 9 ... that includes funds for Zika control and for our veterans," the Senate Republican leader announced Monday on the Senate floor.

McConnell filed cloture on proceeding to a House legislative appropriations bill, which is expected to be the vehicle for the short-term continuing resolution (CR). The move sets up the Senate to take an initial procedural vote this week, once it wraps up work on a water infrastructure bill.

Wrapping up the CR ahead of the Oct. 1 deadline could allow McConnell to get his conference out of Washington and back on the campaign trail. The Hill's Jordain Carney has the latest: http://bit.ly/2cm7j1j.

Cruz throws cyber curveball: Sen. Ted Cruz (R-Texas) is meeting with conservative lawmakers in both chambers to build support for a showdown with the White House over funding the government and power over the internet.

Cruz wants a stopgap measure to fund the government to include a rider that would block the administration from relinquishing the special oversight role the United States has had over the internet since its inception.

The prospect of Cruz leading rank-and-file House Republicans – including members of the House Freedom Caucus – into a last-minute fight with President Obama over a government funding resolution would be a rerun for the Texas senator, who was blamed by his colleagues for causing a 2013 government shutdown over an ObamaCare fight.

It's also a headache for Speaker Paul Ryan (R-Wis.) and Senate Majority Leader Mitch McConnell (R-Ky.), who both want to avoid even the slightest chance of another government shutdown. The Hill's Alex Bolton tells us more: http://bit.ly/2cSjDGi.

Bill would extend foreign investor visa program: Sen. John Cornyn (R-Texas) said Monday that a short-term spending bill will include an extension of a visa program set to expire at the end of the month, even as negotiations remain deadlocked.

Asked if the EB-5 investor visa program would be a part of the government funding bill, the Senate's No. 2 Republican told reporters "I think that will be part of the [continuing resolution], yeah."

Cornyn's comments come as talks about how to reauthorize the program have stalled in Congress, with senators split on how to determine where money under the program is sent. Jordain Carney surveys the battlefield: http://bit.ly/2cEjXsQ.

Trump: Yellen's doing Obama's bidding: Donald Trump accused Federal Reserve Chairwoman Janet Yellen on Monday of doing President Obama's bidding by keeping interest rates low.

In an interview with CNBC, the Republican presidential nominee charged that the Fed was no longer politically independent and instead was pursuing policies to boost Obama in his final months in office.

"She's obviously political, and she's doing what Obama wants her to do," he said in a phone interview. "As soon as [rates] go up, your stock market is going to go way down, most likely. Or possibly."

While Yellen was Obama's pick to lead the Fed, the central bank prizes itself as a politically independent institution and strongly rebuts any claims that outside politicians weigh on its efforts to steer the U.S. economy. Here's more on the madness from The Hill's Peter Schroeder: http://bit.ly/2czbmJP.

Fed official urges caution in raising rates: Lael Brainard, a member of the Federal Reserve Board of Governors, made the case Monday for the Fed holding off on rate increases, arguing that inflation remains lower than normal and there remain economic risks looming abroad. That combination of factors "counsels prudence in the removal of policy accommodation," she said.

Brainard's speech had been closely monitored by financial markets for any indications that the central bank could be preparing to raise interest rates again at its September meeting. The Fed has only raised rates once since the financial crisis, back in December, but Fed watchers are expecting another hike could be coming soon.

But Brainard's speech appeared to suggest such a hike could still be a ways off, as she contended that there was still more the Fed could do to boost the labor market while keeping rates low to protect the U.S.

economy from potential disruptions from foreign economies: http://bit.ly/2cqzQRx.

Happy Monday and welcome to Overnight Finance, where we're also feeling a bit better after this weekend, thank you for asking. I'm Sylvan Lane, and here's your nightly guide to everything affecting your bills, bank account and bottom line.

Tonight's highlights include more anger over the Iran settlement, congressional heat on Wells Fargo, more Fed rate hike delays and a vision for a new financial regulatory system.

Chamber calls for overhaul of financial regulatory system: While Congress mulls how to replace Dodd-Frank financial regulation, the United States' largest business advocate is looking to reshape the system around it.

The U.S. Chamber of Commerce on Monday called for a complete reboot of how the United States regulates financial institutions and banks, insisting that the current framework is outdated and cumbersome for businesses of all sizes.

Top Chamber officials panned the country's "1930s regulatory system," arguing it stifles economic growth and capital access with redundant, overbearing regulations.

The Chamber's Center for Capital Markets Competitiveness (CCMC) outlined potential fixes in a report released Monday that it said was meant to start an "honest debate" about the country's regulatory future.

The release comes a day before the House Financial Services Committee marks up the panel's sweeping overhaul of Dodd-Frank. I'll take you inside the Chamber's proposal here: http://bit.ly/2cHWw0v.

Senate Dems call for investigation into Wells Fargo's fake accounts: Five Senate Democrats are calling for hearings to investigate the actions of Wells Fargo employees who created millions of fake bank and credit card accounts to boost their sales.

Led by Sen. Robert Menendez (N.J.), the Democrats sent a letter on Monday to Senate Banking Committee Chairman Richard Shelby (R-Ala.) urging him to hold immediate hearings to delve into what happened at one of the nation's largest banks and to determine whether more consumer protections are needed.

"The magnitude of this situation warrants thorough and comprehensive review," the senators wrote in the letter. The Hill's Vicki Needham explains: http://bit.ly/2cRJS3F.

Coalition urges SEC to require disclosure of more tax info: The Securities and Exchange Commission (SEC) should update its rules to require U.S. multinational corporations to disclose more tax information, a financial-transparency coalition argued in a report released Monday.

"As multinational corporations have increasingly relied upon complex, international tax strategies to affect their bottom lines, the SEC's disclosure framework has not kept pace," the Financial Accountability & Corporate Transparency Coalition wrote in the report. "It's time for the SEC's disclosure rules to catch up."

The report was issued shortly after the European Commission ruled last month that Apple owes Ireland $14.5 billion in back taxes because Irish authorities gave the company an unfair advantage over other businesses. The Hill's Naomi Jagoda breaks it down: http://bit.ly/2c6mL44.

Top Dem urges Labor Dept. to investigate Chipotle for wage theft: Rep. Rosa DeLauro (D-Conn.) is calling on the Labor Department to investigate allegations that Chipotle Mexican Grill is failing to pay employees overtime.

According to media reports, nearly 10,000 workers from the fast casual Mexican restaurant chain have joined a class action lawsuit against the company for allegedly forcing employees to work "off the clock" hours without compensation.

The workers claim in the suit that Chipotle uses timekeeping technology that automatically punches workers off the clock, even if they are required to continue to work

In a letter Monday to the David Weil, the director of the Labor Department's Wage and Hour Division, DeLauro demanded an investigation into the corporation's labor practices and policies. The Hill's Lydia Wheeler has it all here: http://bit.ly/2cmb7Q5.

GOP lawmaker wants answers on Iran payment: A Republican congressman is asking the Treasury Department whether a recent cash payment to Iran could be used to fund terrorism, and how the department plans to keep that from happening.

Rep. Joe Wilson (R-S.C.) said he's "gravely concerned with the nefarious possibilities" of what Iran could do with $1.7 billion in cash from the United States. He sent a letter sent Tuesday to the Treasury under secretary for terrorism and financial intelligence, outlining his fears.

At issue is a payment made to Iran by the U.S. earlier this year to settle part of a 1970s lawsuit between the countries. The payment, converted into European cash and airlifted to Iran, preceded a prisoner swap between Iran and the United States.

Republicans have since accused the Obama administration of paying ransom for American prisoners and funding Iran's terror sponsorship with untraceable money.

"By providing this regime with billions [sic] of dollars in untraceable foreign currency, the Administration is aiding the regime and criminals across the world in their perpetuation of financial crimes," wrote Wilson: http://bit.ly/2cjFsxn.

India challenges US renewable energy programs at WTO: India has filed a new dispute against the United States at the World Trade Organization (WTO) challenging domestic content requirements and subsidies in renewable energy programs across eight states.

The complaint, highlighted by the WTO on Monday, argues that renewable energy programs in Washington, California, Montana, Massachusetts, Connecticut, Michigan, Delaware and Minnesota are getting favorable treatment compared with imported products to the United States.

India's case charges that the energy program measures are inconsistent with WTO's rules "because they provide less favorable treatment to imported products than to like domestic products, and because the subsidies are contingent on the use of domestic over imported goods," the trade group said.

The new case comes a few days ahead of an expected WTO Appellate Body decision on a U.S. challenge to India's domestic content requirements for solar cells and solar modules under the Jawaharlal Nehru National Solar Mission. Here's more from Vicki Needham: http://bit.ly/2cqBqDf.

Flood risk: SmarterSafer, A coalition of dozens of environmental, business and fiscal groups are urging Congress to act on flood insurance. The Hill has an exclusive excerpt of a letter to be sent to lawmakers tomorrow:

"Congress should invest in proven mitigation strategies--both at a community and property level--for those areas most at risk to future disasters. Mitigation should include multiple options including strengthening natural features that help buffer storms, buyouts and preservation of green space, and elevation and other property-level interventions. In addition to shifting to additional pre-disaster spending, Congress should make changes to disaster assistance including strengthening requirements for communities and states--those states and communities that plan for and mitigate risks would be 'rewarded' with the full share of federal disaster assistance, while those that do not plan for known risks, would get less in federal assistance. In addition, federal disaster assistance funds should only be spent on resilient projects--on building smarter and safer-- and not spent on construction that is not resilient and not safe. This will protect people, communities, and scarce federal resources.

Congress must also strengthen the National Flood Insurance Program (NFIP) and reduce regulatory burdens to private sector competition. Too few people purchase flood insurance, even those at risk. While there are numerous reasons for this, many people do not trust NFIP, and many people mistakenly believe the federal government will step in and disaster assistance will make them whole. Given the average award of disaster assistance ($8,016 for Superstorm Sandy), without flood insurance, many families are unable to rebuild."

Join The Hill on Wednesday, September 14 for "Preparing for the Next Disaster: A Policy Discussion on Community Resilience," featuring Sen. Joe Manchin (D-W.Va.), Rep. Blaine Luetkemeyer (R-Mo.), and Timothy W. Manning, Deputy Administrator for Protection and National Preparedness at FEMA. Topics of discussion include preparedness efforts to increase community resilience and the role of federal, state & local government in pre-disaster mitigation. RSVP here.

Weathering The Storm

By Scott Burns

U.S. News & World Report, September 12, 2016

Anna Johnson didn't have to go to church on Sunday, Aug. 14 to hear prophetic stories about the dead being raised from their graves. That morning, the Denham Springs, Louisiana native awoke to an eerie sight: a procession of coffins uprooted from a nearby cemetery by the rushing floodwaters steadily floating down her street. Her community was buried beneath six feet of floodwater. "We've never seen anything like it," she said.

What's most extraordinary about this story isn't the haunting imagery of the floating dead casually drifting through the streets or the enormous magnitude of the damage that resulted from what the Red Cross called "the worst natural disaster since Hurricane Sandy." It's what people like Johnson and her husband did next. Undeterred by the floating coffins and raging current, Johnson's husband immediately set out on his boat to help the local sheriff's department rescue those in jeopardy.

He was just one of thousands of Good Samaritans who risked their lives to save their neighbors. Louisianans affectionately refer to this armada of hunters, fisherman and ordinary citizens from all across the south who deployed their own motorized boats to rescue thousands of people and pets stranded by the flood as the "Cajun Navy."

Not everyone has been so supportive. Some state senators have tried to propose legislation that would require members of the Cajun Navy to receive formal training and certification from the government.

This precautionary impulse is not uncommon. Even in dire circumstances, many lawmakers are very hesitant to cede any authority over to private citizens. Their first instinct is to rely on the top-down efforts of formal authorities.

This proposal was immediately met a flood of backlash from members of the Cajun Navy. As Dustin Clouatre, a Cajun Navy member from St. Amant, Louisiana, said: "How can you regulate helping people?"

The heroic actions of these community members doesn't just capture the spirit and tenacity of the people of Louisiana, it also provides a vivid illustration of how the bottom-up efforts are at the heart of a community's revival after a disaster. The ordinary men and women who formed the Cajun Navy didn't wait for the National Guard or ask for permission from any top-down authority. Instead, they took the response into their own hands. Clouatre said it best: "These people are not going to wait for assistance. They're doers."

Many Louisianans learned this lesson the hard way over a decade ago during Hurricane Katrina when authorities tried to prevent private citizens from conducting rescue missions for safety reasons. More than 1,800 people lost their lives.

The death toll could've been much higher had it not been for the thousands of original Cajun Navy members who defied government edicts and launched their boats to rescue neighbors. Their courage provided a stark example of the how the power of civil society shined through despite rampant government failures.

As Mercatus Center scholars documented in their book "Community Revival in the Wake of Disaster," in many cases it was these private citizens and businesses that helped spur the post-Katrina recovery. Many local entrepreneurs, charitable and religious organizations also banded together to donate goods and keep their doors open through the recovery. Even large corporations like Wal-Mart and UPS were among the first on the scene delivering much-needed supplies.

Louisianans didn't wait for the government's permission this time around either. They jumped into action. As one member told ABC News, "We are a people that stick together. [We] take care of our own." As a result, thousands of lives were saved, and an entire community was able to unite around their courage and resilience.

This inspiring story provides an important lesson for policymakers. The first responsibility of federal and state authorities after a disaster should be to "do no harm" – removing barriers to recovery and allowing for, and even encouraging, private relief efforts in response to disaster. These bottom-up relief efforts are superior precisely because they empower local citizens to use their intimate knowledge of their area and its unique needs rather than top-down authorities whose actions are all-too-often bogged down by politics and red tape.

Some lawmakers might not fully appreciate the efforts of the thousands of volunteers who risked their lives to rescue their neighbors. But the people of Louisiana most certainly do. These local efforts, not the

action of governmental authorities, provide the bedrock of society that make communities like Louisiana so resilient in the wake of disaster.

Scott Burns is a Mercatus Center PhD fellow in economics at George Mason University, a graduate of the E.J. Ourso College of Business at LSU and a Baton Rouge native.

Woman In Viral Flood Rescue Video Meets Her Rescuer

By Michael Kunzelman

Associated Press, September 13, 2016

(DENHAM SPRINGS, La.) — Millions of people have seen and shared the video of a good Samaritan jumping off a boat to rescue Hailey Brouillette and her dog from a car sinking into south Louisiana floodwaters

last month. Brouillette isn't one of them, but she finally got to meet the man who saved her life.

Although she heard David Phung's voice during the rescue, Brouillette never saw her rescuer's face before their reunion Monday at a Denham Springs home where she is temporarily staying.

"I know I don't know you, but I love you," Brouillette, 53, said as she hugged and thanked the man she called her "angel" and "savior."

"It was nothing," Phung, 27, replied before Brouillete introduced him to Sassy, the poodle mix he also saved.

A Red Cross volunteer who befriended Brouillette at a shelter arranged Monday's meeting. Brouillette lost her trailer home and all of her belongings in the flooding

. Phung brought her a load of supplies, including dog food.

"It's just who we are in Louisiana. We help people in times of need," he said. "I was put in that place to help her out."

The Aug. 13 rescue video shot by WAFB-TV has millions of YouTube views. It shows floodwaters

swallowing Brouillette's red convertible as David Phung and two of his relatives arrive in a boat and urge her to get out of the car.

"I'm trying! I can't!" she replied. "Oh my God! I'm drowning!"

Phung tried to smash a car window from the boat, then jumped into the water and used his hands to rip open a hole on the top of the car. Phung grabbed Brouillette by her arms as the car disappeared in the murky waters. She remained submerged for several seconds before Phung finally pulled her out of the water.

"Get my dog!" she immediately shouted.

The poodle appeared to be underwater for at least 20 seconds before Phung took a deep breath, dipped below the surface and emerged with the dog cradled in his arms.

"I got your dog!" he yelled. "Swim to the boat."

Phung said he lost count of how many people that he helped save from the floodwaters, but none was more dramatic than Brouillette's.

"I didn't actually see the tape until two days later because I was working from sun up late into the night, just helping people," he said. "I was actually amazed at how calm and collected I was. I guess it was just the adrenaline took over."

Before getting caught in the floodwaters, Brouillette said she had been released from a hospital that morning after being treated for a kidney ailment. She was on her way to a pharmacy to get prescriptions filled when the car she borrowed from a friend was overcome by the water.

"It still seems like a dream," she said.

She believes "divine intervention" also played a part in her survival.

"He saved my life," she said. "I don't even know if I'm worth saving. I guess God said, 'Yeah.'"

Carolyn Perry, a Red Cross volunteer, said she watched the rescue video several times from her home in Kern County, California, before she was deployed to Louisiana.

"I was drawn to it," she said. "I just had this strange feeling I'm going to meet this woman."

Within three days of seeing the video, Perry recognized Brouillette at a Baton Rouge shelter that provided refuge to hundreds of flood victims. Perry said she hugged Brouillette and explained how the rescue had struck a chord with her.

"She was very, very humble, and we just struck up a friendship," Perry said. "For the next three days, we had a lot of heart-to-heart talks about life."

Before Perry returned home to California, Brouillette asked her new friend for help in connecting with the man who had saved her. Perry contacted an Associated Press reporter, who provided her with a telephone number for Phung. Perry called Phung and arranged for him to meet Brouilette and her dog.

At the end of their meeting, Brouillette gave Phung her phone number and embraced him one more time.

"And if I can ever do anything for you, let me know," she said.

Senate Boosts Bill For Water Projects, $220M For Flint

By Matthew Daly

Associated Press, September 12, 2016

WASHINGTON — The Senate voted to move forward Monday on a $10 billion water projects bill that includes $220 million in emergency funding for Flint, Michigan, and other communities beset by lead-contaminated water.

Senators advanced the bill 90-1 on a procedural vote, with approval expected later this week.

The bipartisan measure would authorize 29 projects in 18 states for dredging, flood control and other projects overseen by the U.S. Army Corps of Engineers.

The measure includes $100 million in grants and loans to replace lead-contaminated pipes in Flint and other cities with lead emergencies, as well as $70 million toward loans to improve water infrastructure across the country. It also includes $50 million to bolster lead-prevention programs and test water for lead in schools.

Sen. Gary Peters, D-Mich., said lawmakers finally "have a pathway to success" on Flint after months of effort. Senators have twice reached a bipartisan deal to help Flint but were blocked after Republican Sen. Mike Lee of Utah objected.

Flint's drinking water became tainted when the city switched from the Detroit water system and began drawing from the Flint River in April 2014 to save money. The impoverished city was under state control at the time.

Regulators failed to ensure the water was treated properly and lead from aging pipes leached into the water supply. Elevated lead levels have been found in at least 325 people, including 221 children. Lead contamination has been linked to learning disabilities and other problems.

Peters urged his colleagues to support the bill "to show the American people that we can continue to work together to address urgent needs across the country" and "deliver much-needed support to Flint families."

A spokesman said Lee remains opposed to the bill, which he said increases spending without offsetting budget cuts.

Several proposed amendments to the bill are still being negotiated, including one to resolve a dispute over dredging in Long Island Sound that pits Democrats in Connecticut and Rhode Island against Sen. Kirsten Gillibrand, D-N.Y.

The issue involves dredging near a submarine base outside New London, Connecticut, to make room for the U.S. Navy's newest Virginia-class submarines. Gillibrand and other New York officials fear the project could violate the state's stringent water quality standards.

Gillibrand secured language in the water-projects bill aimed at blocking any disposal that violates water quality standards. Sen. Richard Blumenthal, D-Conn., and other lawmakers are trying to block the provision or amend it to apply only to standards in the state where the disposal occurs.

Sen. Debbie Stabenow, D-Mich., welcomed the Flint measure, but said it comes months too late.

"For the people of Flint, this has taken way too long," Stabenow said in an interview. City residents are still using bottled water nearly a year after officials declared a public health emergency.

Sen. James Inhofe, R-Okla., chairman of the Senate Environment and Public Works Committee, called the water-projects bill crucial, not just for Flint but for the rest of the nation.

The bill includes about $1.9 billion for projects to restore Florida's Everglades and combat algae blooms that have fouled the state's beaches and rivers. Inhofe said in a newspaper column last week that fellow Republican Sen. Marco Rubio of Florida had convinced him to back the project after years of opposition.

Rubio's Democratic opponent, Rep. Patrick Murphy, has accused Rubio and Republican Gov. Rick Scott of not doing enough to find a long-term solution for algae blooms caused by polluted water flowing from Lake Okeechobee.

If approved by the Senate, the bill would go to the House.

WVU Alumnus Challenge Hits $1M In Flood Relief Donations

Associated Press, September 12, 2016

MORGANTOWN, W.Va. (AP) — West Virginia University says more than $1 million in donations will help West Virginia flood victims through a challenge

match from Arizona Diamondbacks owner Ken Kendrick.

Kendrick is a WVU alumnus. He had said after devastating floods in late June that he would match contributions to the WVU Foundation dollar-for-dollar up to $500,000.

The university says in a news release that more than 1,600 donors have given more than $502,000.

The floods killed 23 people in the state.

Gulfport, USO To Help Those Affected By La. Flooding

Associated Press, September 13, 2016

GULFPORT, Miss. (AP) — The city of Gulfport is partnering with the United Services Organization, Gulfport businesses, military and the fire department to send donations to the areas of Louisiana affected worst by flooding.

The Sun Herald reports (http://bit.ly/2c7GQY5) it's the second trip for the city in less than a month.

On Aug. 17, the city sent two truckloads of supplies immediately after the flood waters started to recede.

Gulfport Chief Administrative Officer John Kelly said Monday the National Guard Armory in Hammond, Louisiana, set up a store specifically for military families.

The USO is a nonprofit that operates two locations in Gulfport and annually provides programs and services to more than 60,000 service members and their families in Mississippi, Alabama and Louisiana.

$250K Grant To Help With Wilkinson County Flood Recovery

Associated Press, September 12, 2016

JACKSON, Miss. (AP) – State and federal officials say a $250,000 grant will help people in southwestern Mississippi repair homes damaged by flooding in mid-August.

Three homes were destroyed, 23 had major damage and 58 others had minor damage in Wilkinson County. Most were in the town of Crosby.

The damage fell short of the threshold for disaster assistance from the Federal Emergency Management Agency.

U.S. Rep. Gregg Harper says in a news release Monday that the Mississippi Emergency Management Agency is providing the grant to the new nonprofit Community Based Recovery Committee in Wilkinson County with money remaining from the Alternative Housing Pilot Program that FEMA awarded to Mississippi after Hurricane Katrina.

Wilkinson County borders Louisiana, and its floods were caused by the same storm system that deluged parts of that state.

Cayce Officials To Rebuild Flood-damaged Landing

Associated Press, September 12, 2016

CAYCE, S.C. (AP) – Officials in Lexington County are preparing to rebuild a boat landing on the Congaree River that was destroyed in the flooding rains last October.

Officials in Cayce think it will cost about $180,000 to repair the landing, with most of the cost paid by the federal government, The State newspaper (http://bit.ly/2cR0R69) reported.

The 23-year-old landing was closed after its dock was damaged in floods that followed record rain last fall. It's unclear how long the project will take.

Fishing and floating trip guides are happy about the decision.

"It's way overdue," said Kevin Geddings, owner of Adventure Carolina in Cayce.

The most recent renovations to the landing were in 1993 by state natural resources officials to encourage outdoor recreation in the Midlands. It's the only landing on the riverfront in the city of nearly 13,000 residents.

One guide, Jason Bennett of Irmo, says the loss of the dock created congestion on the Richland County side of the river.

"That makes things a little more inconvenient," Bennett said.

The closing shortened float trips by nearly a mile and required longer treks to return boats and equipment to his shop, Geddings said.

"Not having it has been huge for us," he said.

The landing also benefits recreation on land, officials say. The parking lot is a gathering spot for bicyclists and hikers headed for nearby trails.

Small Earthquake Widely Felt Across San Francisco Bay Area

Associated Press, September 13, 2016

OAKLAND, Calif. (AP) — A small earthquake rumbled beneath the San Francisco Bay area early Tuesday and was widely felt across the region.

The U.S. Geological Survey says the magnitude 3.5 temblor struck at 12:40 a.m. PDT and was centered just to the east of central Oakland.

Oakland police said they had no reports of problems associated with the quake, which was fairly shallow at around three miles in depth.

The USGS website recorded responses from people reporting they felt it in many Bay Area cities, including San Francisco, Oakland, and Berkeley.

Little Change In Strength For Tropical Storm Ian

Associated Press, September 12, 2016

MIAMI (AP) — Tropical Storm Ian has seen little change in strength as it moves over the central Atlantic.

The storm's maximum sustained winds early Tuesday are near 45 mph (75 kph) with slight strengthening forecast over the next two days. Ian is centered about 980 miles (1,580 kilometers) east-southeast of Bermuda and is moving north-northwest near 9 mph (15 kph).

Meanwhile far out over the Pacific, Hurricane Orlene is expected to slow down. The Category 2 storm's maximum sustained winds are near 105 mph (165 kph). The U.S. National Hurricane Center says gradual weakening is expected during the next few days.

Orlene is centered about 635 miles (1,020 kilometers) west-southwest of the southern tip of Mexico's Baja California peninsula and is moving north near 5 mph (7 kph).

Neither storm currently poses a threat to land.

Tuesday's Forecast: Rainy Southeast, Plains

By Doyle Rice

USA Today, September 12, 2016

The national weather forecast for Tuesday, September 13th calls for showers to hit from Chicago to Oklahoma City, along the Southeast and Gulf Coast and in the Rockies.

Showers and thunderstorms will make for a soggy day as a front stalls in the Plains while a tropical wave soaks Florida and the Southeast.

Central U.S.: Showers and thundershowers will drench the southern and central Plains as a front stalls across the region, contributing to the potential for heavy rainfall all the way from Texas to the Great Lakes.

Florida, Southeast: A tropical wave will cross Florida Tuesday, enhancing the chances of possibly heavy showers and thunderstorms.

West: The West Coast will be clear and dry. Rain and a few snow showers are possible in the Rockies.

Weather history for Sept. 13: In 2008, Hurricane Ike hit the Texas coast with 110 mph winds.

How To Prepare Your Home Before The Next Big Storm Hits

By Tom Hurd

Washington Post, September 12, 2016

We are just about at the halfway point of the hurricane season, which most forecasters have projected to be above average in intensity.

But aside from official start and end dates for a particular type of natural disaster, extreme weather is the new reality — and in all parts of the country, not just coastal regions. Now consider this frightening thought: It wasn't a "named" hurricane or tropical storm that resulted in an estimated 150,000 damaged properties in the Baton Rouge area and flooded nearly one-third of the state of Louisiana.

Prolonged rainfall was the culprit, and that ended up being the worst disaster in the United States since the devastation caused by Superstorm Sandy. The torrential downfall that very recently washed out a sizable portion of historic Ellicott City, Md., is another example of the uncompromising damage that storms not classified as hurricanes can do to communities.

Essentially, what used to be considered "100-year storms" are now happening approximately every five years. Another eye-opener is that only 65 percent of the U.S. population is covered by model building codes. And when disaster does strike, often times in the rush to rebuild, homes and buildings are not completed up to

local minimum building codes, and that in and of itself is a recipe for disaster.

The good news is that in recent years the design and construction industry has recognized that responding to these sets of natural challenges is a national imperative. In addition to advocating for effective land-use policies, modern building-code adoption and smarter infrastructure investment, we research materials and design techniques and construction procedures to make homes and buildings more resilient to these threats.

But what can you do as you consider the possibility of encountering a dangerous storm or disaster? Here are some tips to help prepare your home for the next one:

Document your home before disaster strikes: Take photos of the inside and outside of your property and share them with your insurance company to have in its files; list rare and special items separately. Put extremely valuable items in a fireproof and waterproof safe or box.

Familiarize yourself with your home's construction: Know the age of your home and what kind of framing it has. Know how recently the roof has been repaired or replaced. All this will help guide you on what design changes or updates should be made to reinforce your home.

Prioritize repair projects: Make easy and inexpensive fixes, and phase repairs, maintenance and retrofits so they are manageable. Use wind-resistant nailing patterns to secure roof sheathing. Consider what flying debris and storm water might do before reworking areas to minimize damage.

Communicate your building performance goals: Make your desire for storm-resistant and resilient design elements known to your architect or contractor from the outset of a project, and include site selection, program and building life cycle in your conversations. Make sure that you are comfortable with their expertise in this area before proceeding with work.

Designate a safe room in your home: This space can be used for certain hazards, including hurricanes, tornadoes and strong storms. Spaces that can be used for this purpose include a mud room, laundry room or even a powder room, and each can be strengthened. If you have a shelter in a low area, make sure you can get out in case of flooding. Consider multi-hazard possibilities, and ask your architect what you'd need to do to reinforce those spaces.

Upgrade your safety standards in your renovation plans: Building codes are a life safety standard that afford only the bare minimum for the protection of property. Hazardous conditions may not be up to date in local maps and regulations to reflect current realities and risk. Any reworked areas or additions can be built to higher-strength standards — often for just a little more money than your planned budget, giving you a better alternative in a storm.

If you are making any big-picture construction or renovation plans, the best advice I can offer is to work only with a licensed architect, engineer or contractor. These professionals should be well-versed in the best practices to prevent destruction with cost-effective mitigation features and advanced planning.

Hurricane Katrina winds caused $8 billion in damage, and stronger building codes would have reduced this by 80 percent. The expression that an ounce of preparation is worth a pound of cure is especially true when it comes to natural disasters. According to the Federal Emergency Management Agency, every dollar spent on disaster mitigation saves $4 in rebuilding costs.

Design and building material fortifications are your best line of defense to protect your home, but you would also be well served to have a conversation with your insurance carrier — particularly if you can participate in the National Flood Insurance Program. So far this year, thunderstorms and hailstorms have caused the greatest insured property losses — up to $7 billion in damages.

Finally, proper preparation may help change a disaster into just a short-term uncomfortable event. Now is a great time to see where your homeowner's insurance policy stands and to have your home evaluated with an overall risk assessment that an architect can provide, before the next time Mother Nature's unpredictable fury strikes.

Tom Hurd is the chair of the American Institute of Architects Disaster Assistance Committee.

PM Update: Beautiful This Evening, And Warming Up A Little Tuesday

By Ian Livingston

Washington Post, September 12, 2016

Today was classic September. The bluest skies, and low humidity, mixed with warm sunshine. I could go for this kind of weather every day. This bout is relatively short-lived as temperatures are on the way up tomorrow. Heat and humidity continue to build into Wednesday, but thankfully it won't last long. The remnants of summer are certainly on borrowed time.

Through Tonight: We should see a fairly quick fall in temperatures this evening, especially outside the city, thanks to low humidity. Through the night, dew

points rise toward and past 60, which means humidity becomes more noticeable and it helps slow those temperature falls later at night. Lows are mainly in a 60-68 degree range, coolest suburbs to downtown.

View the current weather conditions at The Washington Post.

Tomorrow (Tuesday): It's another day of abundant sunshine. Warmer than Monday, but not hot like last week. We'll save that for Wednesday. Highs are mostly in the mid-80s. It's still relatively comfortable, but warmer than it should be, and humidity is increasingly apparent. Winds are from the south around 5 to 10 mph.

See Jason Samenow's forecast through the weekend. And if you haven't already, join us on Facebook and follow us on Twitter and Instagram. For related traffic news, check out Dr. Gridlock.

Pollen update: Mold spores, weed and grass pollens are MODERATE/HIGH. Tree pollen is LOW/MODERATE.

Want our 5 a.m. forecast delivered to your email in-box? Subscribe here.

Ian: For some of us (maybe only me), this has been a day we've been waiting on for years (literally, years). Tropical Storm Ian was named this morning. It's seemingly going to pose no real threat to anyone other than fish, and perhaps an errant ship. In fact, this might be about all you hear of Ian given it's not even currently anticipated to become a hurricane as it spins across the Atlantic. I'd be remiss not to at least mention it once here, though! Certainly no Meranti, which became a Category 5 in the Western Pacific today.

Until 2022 (when the name will be reused) …

August Was The Hottest Month Ever Recorded. Again.

By Dominique Mosbergen

Huffington Post, September 13, 2016

Surprise, surprise: Last month was the hottest August ever recorded, marking the 11th straight month that global heat records have been shattered, according to NASA data.

The agency broke the bad, though perhaps not entirely unexpected, news on Monday. August had a global average surface temperature of about 1.76 degrees Fahrenheit above average, NASA said. It also tied with July as the warmest month ever recorded since record-keeping began in 1880.

"We are well on our way to the warmest year recorded," the Union of Concerned Scientists wrote in an email to The Huffington Post this week.

If deemed the hottest year ever, 2016 will be the third year in a row to boast this unfortunate title.

But though every month — and each year — appears to bring the same news about "hottest" this and that, experts are warning against apathy and fatigue regarding record-breaking temperatures.

"While there may be a tendency to be complacent about the recurring record temperatures, with each month come more climate-related consequences that cannot be ignored," wrote UCS climate scientist Astrid Caldas in a blog post.

Climate change is not a future problem, but rather one that we are actively dealing with.

"We are feeling climate change impacts right here, right now," Caldas continued. "From wildfires and droughts to devastating floods, climate change fingerprint is all around us and does play a role in making events more extreme. An example are this summer's floods in Louisiana, caused by intense rains which were "at least 40 percent more likely to happen because of climate change," according to research.

Gavin Schmidt, director of NASA's Goddard Institute for Space Studies, stressed this week that it's long-term trends, rather than monthly readings, that "are the most important for understanding the ongoing changes that are affecting our planet."

NASA data shows a clear upward trend in global temperatures since 1880. The average global temperature has risen about 1.4 degrees F since then.

NFIP AND FLOOD MAPS

FEMA Remapping May Lead To Insurance Hikes

By Jake Abbott

Marysville (CA) Appeal-Democrat, September 12, 2016

Flood insurance is going to increase — probably by quite a bit for some, warn experts who are trying to do something about it.

With federal remapping of floodplains in the works for some counties, professionals working in the field met in Sacramento last week to discuss its effects on insurance rates and the agricultural industry.

Mike Inamine, executive director of the Sutter Butte Flood Control Agency, moderated a panel discussion at the Floodplain Management Association 2016 Conference. The discussion was revolved around the impact of FEMA's remapping — Flood Insurance Rate Maps (FIRMs) — for areas of high-flood risk on insurance rates for structures and businesses operating in floodplains in the Central Valley.

FIRMs are used to administer the National Flood Insurance Program throughout counties.

"The NFIP will result in flood insurance rates going up dramatically, it's quite an increase in flood insurance premiums," Inamine said.

FEMA originally mapped all counties throughout the U.S. in the 1970s and 1980s. In 2001, the agency began to update FIRMs to show if a region's levees met requirements for 100-year certification criteria. If an area cannot be certified, it is classified as a special flood hazard area and subject to development regulations.

Denise Carter, a Colusa County supervisor, was a panelist in the discussion. She said people with federally-backed mortgages living or operating in deep floodplains will be hit the hardest by the hike in insurance rates if an area is designated as high-risk. "As a task force, we worked on the possibility of having private insurance come in to have more affordable insurance options," Carter said.

She said while some residents living in Sutter County have already felt the effects of remapping, FEMA is going through the process in Colusa County.

The panel also discussed FEMA's building regulations for rural areas in a deep floodplain.

Inamine said some of the current regulations have an adverse impact on farmers and the agricultural industry.

"If you are in a floodplain, you are required to floodproof structures so water can pass through it," Inamine said. "There are many examples where a building has to have holes in it. That's fine except that some of those buildings hold food and crops."

In terms of floodplain management, farming is regarded as a wise use of a flood zone because it prevents hazardous development — housing or urban development — from occurring in deep floodplains behind levees.

Carter said panelists discussed the possibility of amending certain requirements for floodproofing that accommodate structures that support an agriculture industry.

Inamine said FEMA has shown interest in supporting rural area economies and that it wants to work with farmers on specific methods of improving regulations on agriculture structures while also mitigating costs.

Carter said the discussion was an opportunity for the task force to hear different perspectives on ways to address the issue.

"It provided the possibility to maybe tweak some things with FEMA's regulations," Carter said. "They have all these technical bulletins, which provide guidance on what you can do, and there is a definition of agriculture structures. The discussion was whether or not we should change that definition of what an agriculture structure is."

Inamine said the five panelists provided different perspectives on the complex issue. The other panelists were Gregor Blackburn, Ceil Strauss, Maria Lorenzo-Lee and James Gallagher.

"It highlighted the issue of how important this is moving forward in the Sacramento Valley," Inamine said. "It was essentially how do we do the right thing in a floodplain, in terms of insurance, and still keep it affordable."

Carter said a task force she works on is taking some of the topics discussed at the panel and writing up a report that will be sent to FEMA with recommendations on how to accommodate agriculture businesses looking to develop or build in deep floodplains.

"It's not going to be easy, but we are trying to find some little things we can do that will have a big impact on being able to continue farming in floodplains," Carter said.

FEMA Town Hall In Youngsville Set For Sept. 14

KATC-TV Lafayette (LA), September 12, 2016

The City of Youngsville will host a town hall/informational meeting on FEMA individual assistance Wednesday, Sept. 14, 2016, at 6 p.m. at Ernest Gallet Elementary School, 2901 E. Milton Ave.

The purpose of the meeting is to provide the needed assistance to residents and businesses that were affected by the August flood event. At this meeting there will be representatives from: FEMA Disaster Survivor Assistance (DSA), National Flood Insurance Program (NFIP), Small Business Administration (SBA), Governor's Office of Homeland Security (GOHSEP) and FEMA Mitigation.

At this meeting, residents will be able to get help with the following:

Sign up for FEMA assistance

Check on your FEMA claim

If denied, get assistance to find out why

Meet with the National Flood Insurance Program

Meet with the Small Business Administration and fill out application

Get information on how to mitigate future damage

Youngsville To Hold Town Hall Meeting, Providing Info On FEMA Assistance.

KLFY-TV Lafayette (LA), September 12, 2016

YOUNGSVILLE, La. (KLFY)— The City of Youngsville to hold town hall meeting to provide information on individual FEMA assistance.

According to a news release, the meeting will take place September 14 at 6 p.m. at the Ernest Gallet Elementary School cafeteria. The school is located at 2901 E. Milton Avenue, Youngsville.

Mayor Ken Ritter said the purpose of the meeting is to provide the needed assistance to residents and businesses that were affected by the flood event of August 12.

At the meeting there will be representatives from the FEMA Disaster Survivor Assistance, the National Flood Insurance Program, Small Business Administration, the Governor's Office of Homeland Security and FEMA Mitigation, according to officials.

The news release also stated that at the meeting, residents will be able to get help with the following:

Sign up for FEMA assistance

Check on your FEMA claim

If denied, get assistance to find out why

Meet with the National Flood Insurance Program

Meet with the Small Business Administration and fill out application

Get information on how to mitigate future damage

The Mayor said he requested this meeting to help residents to get the information they need to continue with their recovery. Everyone that had damage due to the flooding is encouraged to attend.

Duxbury: FEMA Floodplain Map Update

By David Skill

WATD-FM Marshfield (MA), September 12, 2016

Duxbury Town Manager Rene Read says Town Meeting is just a week away, and an article on the warrant about those FEMA floodplain maps needs to pass by a two-thirds majority.

"We've been working very diligently with our consultant, the Woods Hole Group. Leslie Fields will be attending our meeting a week from tonight, and she'll be providing a wealth of information to the voters so they can have a better understanding of what we need to do and why we need to do it," said Read.

But what if it is shot down by voters?

"Without the properly approved flood insurance maps, people will be in a serious financial predicament by not being able to get their mortgages secured," said Read.

We asked Read if the floodplain maps that were recently updated by FEMA are completely accurate, and if he thinks the warrant article will pass at Town Meeting.

"We had some dispute, not acrimonious, but we did have some dispute and we've questioned that with FEMA and we're working to figure out a method for making the correction, but what we'll be doing the following day is filing something called a letter of map amendment, which will allow us amend the map as adopted. So we have to have the maps in place knowing full well that they're not perfect, but knowing also that we're going to achieve perfection somewhere down the road," said Read.

Duxbury selectmen will also get a "litigation tracker" update from the law firm Anderson and Krieger at tonight's meeting.

MITIGATION

FEMA Helps Brandon, Ripton Pay For Irene Damage

Addison County (VT) Independent, September 12, 2016

BRANDON/RIPTON — The Federal Emergency Management Agency in August awarded the state of Vermont's Division of Emergency Management & Homeland Security more than half a million dollars to pay the federal share for projects tied to Tropical Storm Irene, which hit Vermont five years ago.

Among the six towns that won awards through the Hazard Mitigation Grant Program were Brandon and Ripton.

Brandon received $123,750 to supplement $1,196,533 awarded in July for Phase II of a downtown overflow relief culvert project.

Ripton received $14,848 for an emergency generator at their community shelter.

Other awards were:

$329,923 to Charleston for culvert and ditching improvements along Hudson Road; $79,460 to Richmond for a structural elevation; $11,668 to Marshfield for an emergency generator; and $96,750 to Enosburg for a culvert upgrade on the Tyler Branch.

"This was the latest, but will not be the last project to benefit from federal assistance tied to Tropical Storm Irene," a press release announcing the money said.

The federal Hazard Mitigation Grant Program, or HMGP, provides assistance to communities to fix areas of repetitive damage and make trouble spots safer. Making those areas more flood resistant through elevation of a building or road, larger culverts, or stronger riverbanks also helps save towns, the state, and

the federal government money in repair costs over the long run.

Of the $34.5 million available for HMGP after Irene, approximately $20 million was allocated for acquisitions — buy-outs of homes and businesses damaged by Irene that were built in floodplains and vulnerable to flooding again. Of 194 HMGP applications submitted to FEMA, 141 were for buy-outs. To date, 133 of them have been approved by FEMA, and more than 100 are completely "closed-out." In Northfield, for example, a neighborhood of homes that had been flooded and were vulnerable to future flooding have been removed, and the land is now a beautiful town park along Water Street.

Vermont's Congressional delegation was essential in advocating for the State with FEMA. The State successfully negotiated with FEMA for extra time, beyond the usual one-year window for submitting HMGP grants and the "routine" 12-month-extension, for a third year, allowing for applications to be submitted right up until the third anniversary of Irene in 2014.

There is still more than $8-million of HMGP funding from Irene available, and more than $8-million in applications pending, many of them still under environmental and historic preservation review. Applications still pending with FEMA include 7 buy-outs (2 in Ludlow and 5 in Chelsea), and 20 infrastructure projects. Permalink

Calallen ISD Hosts New Dome Grand Opening

By Beatriz Alvarado

Corpus Christi (TX) Caller-Times, September 12, 2016

Calallen ISD officials opened the district's estimated $4.8 million gymnasium and Federal Emergency Management Agency safety shelter Monday.

The 20,289-square-foot dome took about a year to complete and was built on a 56-acre lot along Wildcat Drive.

"Thanks to the vision of past and present school leaders, school board trustees and a dedicated Northwest community, Calallen ISD has expanded its facilities to embrace the ever-evolving rich history of the Calallen Wildcats," said Calallen ISD's Superintendent Artie Almendarez. "The official opening of this FEMA dome and the multi-purpose covered practice facility are first class venues that visibly display a long standing tradition of Wildcat pride."

Calallen and Tuloso-Midway independent school districts, along with Del Mar College and the Corpus Christi International Airport, teamed with city officials in 2012 to seek federal grant funds through the Texas Safe Shelter Initiative for the construction of disaster shelters.

The facilities will be used by first responders for emergency operations during a natural disaster, such as a hurricane.

For daily operations, the school's dome can be used as a gymnasium, auditorium, training facility or instructional space.

Clendenin Library Future, Bridge Repair Timeline Uncertain

By Ryan Quinn

Charleston (WV) Gazette-Mail, September 12, 2016

The Kanawha County Public Library system's director said Monday he's expecting a report this week on the level of flood damage to the Clendenin branch, and he still doesn't know when the bridge to Crossings Mall — where the nearby Elk Valley branch is located — will be repaired.

Alan Engelbert said the system received in the last few days $120,000 of a possible $600,000 in flood insurance coverage money for the contents and building of the Clendenin branch, which got 9 feet of water in the late June flooding. The floods spared the Elk Valley branch but swept away the culvert bridge leading into the shopping center where it and several businesses are located.

On July 26, the library reopened a space it used to occupy at 3636 Pennsylvania Ave., in Big Chimney, to serve both the Clendenin and Elkview areas until the bridge is replaced. The Mobile Library, the 33-foot-long "bookmobile bus" where patrons can check out items, also is stopping in Clendenin.

Kanawha County Deputy Planning Director James Young previously told the Gazette-Mail that the bridge was expected to be constructed off site, starting in early- to mid-August and continuing for six to eight weeks.

Engelbert said a contractor and the insurance company are continuing to assess damage to the Clendenin building and its contents to determine how much flood insurance money the system is owed. The Federal Emergency Management Agency may pitch in funds for whatever the future of the Clendenin branch is, though Engelbert said he is first awaiting the report on how the branch's damages compare to its appraised value.

Such reports have been done on flooded Kanawha schools — one showed the damages to Clendenin Elementary, for instance, equaled about 97 percent of the circa-1930 school's $3.7 million appraised value.

Any time a building is more than 50 percent damaged in such a situation, it has to be brought into compliance with national flood insurance policy, meaning there could be requirements to elevate the flooded structure above the floodplain or other measures.

Under its Public Assistance Program, FEMA can fund 75 percent, and perhaps more, of the cost to fix damage to public facilities, including the cost to build new facilities and establish temporary facilities. Engelbert said the system already expects about $18,000 in reimbursement for the costs to both set up and vacate the temporary branch serving Clendenin and Elkview.

Also at Monday's library system board meeting, Engelbert said the system will add Hoopla to its digital offerings starting Oct. 10. He said patrons will be able to go online and, using their library card information, access up to 10 "units" — such as songs and entire albums, movies and episodes of TV series — per month.

He said patrons will only be able to use such units for a limited amount of time. He said the library system has put $25,000 toward paying the fees Hoopla charges for each unit checked out.

The board also deferred action on a policy change that Engelbert said would pay part-time workers seven and a half hours worth of pay for the four and a half hours worth of work they do on Sundays only in the main Charleston branch of the system.

Engelbert said the change would cost about $5,600 annually in extra pay and benefits for the, on average, six workers who work each Sunday. He said full-time workers have received the benefit of being paid for extra hours each Sunday they work since 1974.

But, after some board members Monday questioned why the system would take the step and a reporter noted the item listed on the meeting agenda to legally allow the board to take the action Monday vaguely only said "Policy #104 Hours of Work," the board deferred action in a voice vote. The only nay heard was from Cheryl Crigger Morgan, the board's former president.

Corps Defends Valley Park Levee Height, Says It's Not Overbuilt

By Bryce Gray

St. Louis Post-Dispatch, September 13, 2016

The U.S. Army Corps of Engineers is defending its construction of the Valley Park levee system, disputing a recent report suggesting that parts of the system exceed height limits by as much as 8 feet.

Critics say an improperly high levee system would have worsened recent flooding in neighboring communities along the Meramec River, such as Eureka, Fenton and Arnold.

But the corps says the system's construction was based on sound analysis.

"It's our belief that we do not have a levee that was built beyond the authorized level," said John Boeckmann, a hydraulic engineer with the corps' St. Louis District.

Gauging the proper height of the levee comes down to defining the elevation of the 100-year flood level for the Meramec. Generally speaking, levees can be 3 feet higher than the 100-year flood stage for a given location.

But the corps and the levee system's critics disagree over which flood-level estimate is relevant in the dispute.

Corps representatives said the agency has congressional approval to rely on internal data, rather than Federal Emergency Management Agency data to determine flood levels. FEMA flood-level data would have called for the levee to reach a maximum elevation of 435 feet above sea level, based on the 100-year flood level.

A number of experts were under the impression that the 435-foot maximum applied to the levee. Some suspected the structure exceeded that level when it was not topped by catastrophic flooding of the Meramec in late December 2015.

"They appear to use the FEMA data, in which case it's improperly high," said David Stokes, the executive director of Great Rivers Habitat Alliance, an organization focused on river management issues. "If they didn't, they need to explain."

Questions about the levee's height ultimately led Great Rivers Habitat Alliance to commission an investigation by an outside group. The resulting report from St. Peters-based engineering firm Pickett, Ray & Silver Inc. was released in August and identified points of the levee reaching as high as 443 feet above sea level.

Though he could not confirm their accuracy, Boeckmann said many of the levee elevations listed in the report are "in the range of what's expected to be out there," based on the corps' design specifications.Differing estimates

The Valley Park levee system was authorized in 1982 and completed in 2005. Engineers for the corps said that the agency's design process used newer, better data than that provided by FEMA, which releases updated flood level data about once a decade.

"There's nothing in our regulations that requires us to take existing FEMA profiles and use them," said Don Duncan, another corps hydraulic engineer. "In this case, we knew there were floods and other events that happened since those profiles were developed."

The corps indicated by email that "this design procedure was not unique to the Valley Park project," stating that the agency always reserves the right to use flood data at its discretion unless specifically told otherwise.

Besides the use of different flood level data, Boeckmann offered a couple additional reasons the levee is higher than many expected.

Boeckmann said the levee was built slightly higher than authorized to account for anticipated settling as gravity takes its toll. Settling can typically alter levee height by 1 to 3 feet, he said.

Boeckmann also said some of the levee heights cited in the recent investigation may have been distorted by unrelated construction projects. For instance, he said that after the levee was completed, a utility crossing was installed at the spot measuring 443 feet in elevation, creating "an isolated high point."

Despite the counterargument, not everyone is convinced that the corps had reason to deviate from using FEMA flood level data. Critics say that the corps has been inconsistent over time, using FEMA data in various reports and now indicating that separate, internal data guided the levee's design.

"They make up some other number on the basis of their own arguments when it's convenient — they've not been consistent," said Bob Criss, a professor in the Department of Earth and Planetary Sciences at Washington University, and one of the first to call the levee's height into question following the recent record-level flooding of the Meramec.Seeking clarity

The levee's design drawings have not been fully disclosed, as Freedom of Information requests filed by those concerned with its height have been denied for national security reasons. Although the drawings were withheld, Boeckmann said the flood data itself went through a public review process in the 1990s and that the levee project was approved by FEMA, St. Louis County, and several cities along the Meramec River.

The corps has offered to meet with a number of interested parties later this week to clarify the design process.

"The gist of (the meeting) is that the Army corps wants to explain whatever process it used in determining the appropriate height of the levee," said Bruce Morrison, general counsel for the Great Rivers Environmental Law Center, one of the organizations that has sought information on the levee.

But critics feel that a different set of flood level data may not fully explain the 8-foot height disparity in the levee's design — a dramatic difference they argue could be hard to justify.

"That number has not changed significantly," said Criss, referring to the 100-year flood level the levee is intended to guard against.

Those pressing the corps for details want to hear an explanation of why FEMA's definition of a 100-year flood was tossed aside.

"If the Army corps deviates, is its modeling defensible? Is it rational?" asks Morrison. "There's a lot of stuff out there to try to lasso."

He says it's entirely possible that the corps felt more conservative flood precautions were necessary. But transparency and consistency, he said, are vital.

"It presents a misleading picture to the public if the Army corps switches to a different standard time and again," said Morrison.

Or, he said, if the corps doesn't have confidence in existing flood data, it may be time for flood maps to be redrawn entirely.

Corps representatives declined to speculate on the extent to which the levee may have influenced nearby flooding in late 2015 and early 2016, saying that "pointing the finger to one cause" would require performing a detailed hydraulic study.

"We can't comment or speculate on specific effects of the levee on neighboring communities," said Boeckmann. "It was really just a historic flood event that reached levels that had not been recorded at Valley Park, for instance."

Combined 'demo & Rebuild' Will Be Mitigation Option In Flood Communities

By Shauna Johnson

West Virginia MetroNews, September 12, 2016

CHARLESTON, W.Va. — For the first time, a combination of both structure demolition and rebuilding will be an option for West Virginia residents washed out of their homes and businesses in the June 23 flood and seeking assistance from the Hazard Mitigation Grant Program to prevent future flooding through reconstruction steps.

What's called "demo and rebuild," in the view of Al Lisko, director of mitigation/recovery for the state

Division of Homeland Security and Emergency Services, is a way to keep flooded communities intact — a concern that's been raised many times in the months since the flood.

With the number of destroyed structures in the Flood Zone, the idea behind "demo and rebuild" is for the Federal Emergency Management Agency to fund demolition of a building.

The Hazard Mitigation Grant Program would then step in with grant funding to build a new foundation and help place a modular home on that foundation in accordance with a community's floodplain ordinance,' according to Lisko.

"What it does is it puts the person into a safer situation, but it does not take it (the property) off the tax rolls. They would still live in the same area. They would still have community taxes and the community does not, in a sense, deteriorate its tax base," Lisko said.

It's only one option, he noted, "One of the things we don't know are how the people are going to feel about their options."

A series of public meetings on all the options, which also include stand-alone elevation of structures, relocation of structures to outside floodplains and full acquisition and demolition of properties, begins Tuesday night.

The first meeting is scheduled for Tuesday night, Sept. 13 at 7 p.m. at Clendenin City Hall in Kanawha County. The public meetings continue Wednesday, Sept. 14 at 6 p.m. at Elkview Middle School in Elkview and Thursday, Sept. 15 at 6 p.m. at Alderson City Hall.

Additional meeting times and locations are as follows:

Sept. 19
Roane County
Geary Elementary-Middle School, 9538 Clay Rd., Left Hand
6 p.m.
Sept. 27
Pocahontas County
Marlinton Town Hall, 709 2nd Ave
6 p.m.
Sept. 28
Richwood and Nicholas County
Alumni Hall, 103 East Main St., Richwood
6 p.m.
Oct. 3
Greenbrier County
Caldwell, White Sulphur Springs, Ronceverte
Location, Time TBD
Oct. 4
Greenbrier County
Charmco, Rupert, Rainelle
Location, Time TBD

Decisions on mitigation methods will be made at the local levels, with applications coming from incorporated areas or county levels for those in unincorporated locations using input from residents.

"The idea is that this is a program where each community has the opportunity to look at their options, to decide what they feel is best and to apply for the funding and then, hopefully, we'll have enough funding to cover everyone's desires and wishes," Lisko said.

"If not, then we have to do a prioritization process here at the state before submitting them to FEMA for final approval."

Lisko could only estimate the potential funding available through the Hazard Mitigation Grant Program, which is aimed at reducing future flooding, would amount to "several millions of dollars." The amount will be a percentage of total federal grants awarded for the June flood, and that number has not been finalized.

"They're going to have to look at their situation," Lisko said of the questions residents trying to rebuild will have to answer.

"For example, if you're a family and you were flooded and you're very frightened to live where you lived, would you accept a demolition and rebuild at the same location? Or would you simply say, 'No, I don't want to live there anymore?'"

FEMA Offers New Flood Relief Opportunities

WSAZ-TV Huntington (WV), September 13, 2016

KANAWHA COUNTY, W.Va. (WSAZ) – Homeowners who are rebuilding following the June flooding can meet with West Virginia and FEMA Hazard Mitigation Grant Program advisers on Tuesday and Wednesday.

The meetings will focus on the HMGP process and the rebuilding efforts as well discussion of elevation and mitigation reconstruction.

Tips and information will be provided to help homeowners prevent future damage and disaster in the event of a flood.

On Tuesday, flood-affected homeowners in Clendenin can meet advisers at the Clendenin City Hall at 7:00 p.m.

Other flood victims in Kanawha County can meet Wednesday at 6:00 p.m. at Elkview Middle School.

FLOODS

Gulfport, USO Team Up To Help Louisiana Flooding Victims

By Justin Vicory

Biloxi (MS) Sun Herald, September 12, 2016

If there's still a need, keep giving. That's the view of the city and the United Services Organization.

Monday, the city partnered with the USO, Gulfport businesses, military and the fire department to send donations to the areas of Louisiana affected worst by flooding.

"I found out there was still a need, and helping military families is what we're all about, so I contacted our national office and they approved us to do this," USO Director Felice Gillum said.

It's the second trip for the city in less than a month.

On Aug. 17, the city sent two truckloads of supplies immediately after the flood waters started to recede.

"We got a lot of help after Katrina," Gulfport Chief Administrative Officer John Kelly said. "And this is a military community. So, we all work together when we can."

Kelly said the National Guard Armory in Hammond set up a store specifically for military families. The supplies will be dropped off there. Military personnel and families from the surrounding area can come to shop.

Mississippi Power, Island View Casino, the National Guard, Keesler Air Force Base, Seabee Base in Gulfport, Gulfport-Biloxi International Airport donated Lowes, Home Depot and Wal-Mart gift cards, cleaning supplies, bedding and comforters, blankets and sheets, food, baby supplies, toiletries and bottled water.

Donations were taken to all five Gulfport fire stations and brought to the Central Station in downtown Gulfport for distribution.

John Fayard of John Fayard Moving donated his truck and an employee to help with the haul.

The USO is a nonprofit that operates two locations in Gulfport and annually provides programs and services to more than 60,000 service members and their families in Mississippi, Alabama and Louisiana.

FEMA To Start Contacting Applicants By Text

WBRZ-TV Baton Rouge (LA), September 12, 2016

BATON ROUGE – FEMA announces that flood victims who applied for federal help may soon get a text from officials to let them know of their application status.

FEMA says it is using texts to connect with applicants in an effort to enhance communications as it allows to communicate quickly and easily with applicants.

The agency says that applicants may still be contacted through email or phone if they chose one of those as a preferred communication method when they first applied.

Applicants may then check their application's status by going online to disasterassistance.gov or downloading and using the FEMA app and then logging into their account. They may also call the FEMA helpline at 800-621-3362.

With the change, FEMA reminds applicants to never provide personal information such as Social Security or bank accounts numbers to anyone. FEMA only requests this information when applicants first apply for federal disaster assistance. FEMA inspectors only require verification or identity.

FEMA Reminds Residents To Check With Officials Before Rebuilding

WBRZ-TV Baton Rouge (LA), September 12, 2016

BATON ROUGE – The Governor's Office of Homeland Security and Emergency Preparedness and FEMA are encouraging residents to check with local officials before starting to rebuild following last month's flood.

As more financial assistance reaches flood victims, more people are beginning to repair the damages they sustained to their homes and businesses.

Officials want to remind residents of the following:

Work that may require permits often includes plumbing, electrical system, foundation and structural repairs.

Local officials may have building code requirements on how and where flood victims can renovate or rebuild. Officials ask flood victims to find out how repairs or reconstruction can meet current standards and compliance.

Flood victims can contact their parish emergency management office to learn more about elevation and

other ways to make their homes or businesses safer and stronger.

For contact information, visit www.gohsep.la.gov/ABOUT/PARISHPA

As Flood Victims Struggle With Emotional Toll, Doctors Say Help

By Sabrina Wilson

WVUE-TV New Orleans, September 12, 2016

NEW ORLEANS, LA (WVUE) –

In Tangipahoa Parish, there is rebuilding from the recent flooding underway. But amid the painstaking recovery, for many flood victims there are inner feelings to be dealt with.

"I have a lot of faith in God but even with my faith there's moments when it gets overwhelming you wonder how long is this going to take?" said flood victim Sonia Landry who moved to Robert after a catastrophic storm 11 years ago. "This is the second time it's happened for me because I was in St. Bernard Parish for Hurricane Katrina."

Arshile Glaze's trailer barely escaped the spring flooding, but his good fortune ran out in August.

"I know my wife gets depressed about it and upset about it," said Glaze, whose home is uninhabitable right now. "[We're] living with my stepdaughter in Covington. There's no way we can live in here."

Glaze tries to keep his wife's spirits from sinking too low.

"We find different things in the trailer that we had forgot we had and it makes her smile," he said.

On Capitol Hill, some local leaders from flood-stricken areas told members of Congress about the emotional toll resulting from the flood.

"We have suicides, we have mental breakdowns, we have families being torn apart because honestly they don't know how they're going to get back on their feet," said Mayor Jr. Shelton, of Central, Louisiana.

"The most common symptoms are depression, also anxiety and post-traumatic stress," said Dr. Howard Osofsky, chairman of the Department of Psychiatry at LSU Health New Orleans.

Mental health professionals from LSU Health New Orleans are involved in the effort to help flood victims, as well as state workers, cope with the aftermath of the flooding.

"We have worked with all of the partnering agencies and groups responding to the flooding disaster to develop the screening both for adults and for children to try and help identify and respond to people having the greatest need at this time," Osofsky said.

A home can provide a sense of security and familiarity that people rely on.

"There are many people who are suffering a great deal. They've lost their homes, they're rebuilding," Osofsky said.

Often, there are telltale signs of being overwhelmed.

"If people are having a more difficult time getting going in the morning, if they're not sleeping well, if they're drinking more, if they're more irritable, If one can see that they are exhibiting signs that they are stressed out, it's important to not only reach out to them and be supportive but to let them know that help is available," Osofsky said.

He said it's important to return to some semblance of normalcy as soon as possible, and he suggested that parents should speak to their children about the flooding.

"As much as possible, normalize what you're doing, the same type of routine. Parents have to be aware that their children need to be able to talk about it, and to know that this is a very unlikely event and that parents are keeping them secure and the community is keeping them secure," Osofsky said.

State leaders have said the majority of the flood victims did not have flood insurance. A lot of people said adding to their stress is the suspense of how much assistance they will qualify for under FEMA.

"It breaks your heart, makes you wonder what's going on, because when Katrina came, everybody was there, you know, jump in, give you a hand. This time it's like you're out here by yourself," Glaze said.

Assessment Of Flood-ravaged Library Branch Continues In Clendenin

WSAZ-TV Huntington (WV), September 12, 2016

KANAWHA COUNTY, W.Va. (WSAZ) – Kanawha County Public Library leaders say 35 to 40 people per day are using the mobile library set-up in Clendenin, following the June 23 flooding.

That location, along with the Elkview location in the Elkview Crossings Plaza, are both still closed because of flood damage.

The Clendenin location has been cleaned out after its contents were destroyed.

They are currently assessing the condition of the branch location to determine whether or not it will reopen.

The Elkview location did not sustain damage. However, it is not accessible because the bridge that

leads to the Elkview Crossings plaza has not yet been rebuilt. Leaders say they've not received an update on the status of the bridge repair.

To date the Kanawha County Public Library has received $120,000 in flood insurance to cover lost content.

Leaders say they will continue to work with FEMA to try and get more money to cover losses and the cost of temporary library locations in Elkview and Clendenin.

Monday night, the members of the library board voted to spend a nearly $11,000 grant from the West Virginia Library Commission to pay for costs of the Elk Valley Express Library Branch.

In other Kanawha County Library news, staff members have conducted an active shooter training at all of its facilities.

There will be a fire drill on Tuesday.

There was also discussion about updating the lighting at the branch location in Dunbar. In addition, board members heard about the possibility of doing a solar energy project at the St. Albans location.

ZIKA VIRUS

Obama Meets With Congressional Leaders To Hash Out Fall Agenda

By Gregory Korte And Erin Kelly

USA Today, September 12, 2016

WASHINGTON — President Obama will huddle with congressional leaders from both parties at the White House Monday in an effort to sketch out a bipartisan agenda for what remains of the election-year session.

On Obama's agenda: A spending bill to avoid a government shutdown in three weeks, more funding to combat the outbreak of the Zika virus, a Pacific trade deal, criminal justice reform and the confirmation of Merrick Garland to serve on the Supreme Court.

"It's hard to rank them in priority order, because so many of them are important. And the failure of Congress to act on some of these priorities would have significant negative consequences for the American people," said White House Press Secretary Josh Earnest. "These are priorities, each of them, where Congress has not fulfilled their responsibility to the American people."

It's the first opportunity the president has had to meet with congressional leaders since they returned from their summer recess last week. Obama returned from a nine-day Asia trip last Friday.

Congress must act soon to pass a stopgap spending bill, called a continuing resolution, funding the government until an annual appropriations bill can be passed later this year. Congressional leaders are anxious to reach a deal to prevent a government shutdown just weeks before the Nov. 8 election.

Senate Majority Leader Mitch McConnell said Monday that he hoped that funding for Zika and the Department of Veterans Affairs could be rolled into that short-term package. "Members on both sides have been working on an agreement to responsibly fund the government. We've made a lot of progress," he said.

But for that to happen, Senate Minority Leader Harry Reid said, "Republicans need to get away from their vendetta on Planned Parenthood."

The nonprofit family planning and abortion provider have been a lightning rod in the Zika debate. The House-passed Zika bill provides funding to state and local health agencies, but omits any funding of Planned Parenthood. Democrats say the agency is a major provider of health services and should get a share of the $1.1 billion in proposed Zika funding.

"They need it more than ever more with this scourge that is sweeping our country — Zika," said Reid, a Nevada Democrat.

Obama has been calling on Congress since February to approve $1.9 billion to help eradicate the mosquitoes that spread the virus and to develop a vaccine, but the House and Senate have not been able to agree on a bill because of a threatened Democratic filibuster in the Senate over Planned Parenthood and other issues.

Also scheduled to attend the meeting in the Oval Office Monday are House Speaker Paul Ryan, R-Wis., and Minority Leader Nancy Pelosi, D-Calif.

Obama is expected to talk to reporters after the meeting.

Obama Meets With Congressional Leaders Ahead Of Federal Funding Deadline

By Adam Edelman

New York Daily News, September 12, 2016

President Obama sat down Monday with congressional leaders to begin talks on a short-term spending bill that would avert a government shutdown on Oct. 1.

Lawmakers have returned to Washington for an abbreviated session in which they must pass a measure to keep the government funded.

More daunting, however, is the fate of a bill that

would provide money for the fight against the Zika virus.

And as recently as Monday afternoon, the talks seemed destined to go poorly.

Ahead of the closed-door meeting, the White House had choice words for Republican lawmakers.

"Unfortunately, they're stuck with Mitch McConnell and Paul Ryan," White House Press Secretary Josh Earnest said during his daily briefing, in a jab at Republican leadership

The talks comes as government scientists have stepped up their warnings about the spread of the Zika virus, which can cause devastating birth defects.

More than 670 pregnant women in the states and Washington, D.C., have the virus, leading to the birth of at least 17 babies with microcephaly so far.

Lawmakers left Washington seven weeks ago without resolving a dispute over money for Zika.

Obama asked Congress in February for $1.9 billion in emergency money, but legislation to partially pay for his proposal collapsed in July amid various fights, including over a Republican provision to deny money to Puerto Rican affiliates of Planned Parenthood.

Funding Planned Parenthood, Or Not, May Be Key To Keeping The Government Open

By Emmarie Huetteman

New York Times, September 12, 2016

WASHINGTON — Republican leaders looking to avoid a government shutdown one month before Election Day will have to jump a familiar hurdle: demands from some of their members to cut off funding for Planned Parenthood.

When Democrats balked once more last week at approving legislation to combat the Zika virus because the measure included limits on Planned Parenthood, some Republicans indicated a willingness to re-evaluate their position.

But the pressing question for Republicans who want to pass a stopgap spending bill to keep the government running after Sept. 30 is whether enough of their ranks are willing to leave Planned Parenthood out of the legislation.

After a meeting on Monday with congressional leaders at the White House, President Obama said he was hopeful of reaching a deal with Republicans to fund the government until after Election Day.

"Even though I know that we're in the midst of a political season and everybody is thinking about elections, there's still business to be done," Mr. Obama said.

Earlier, Senator Mitch McConnell, Republican of Kentucky and the majority leader, began procedural moves to pass a bill that would fund the government through Dec. 9 and include funds for Zika control and veterans programs.

Democrats have accused Republicans of inserting language targeting Planned Parenthood into the Zika funding legislation to bait them into blocking it. The measure would primarily withhold funding from two Planned Parenthood clinics in Puerto Rico that do not offer screening for the virus, but to Democrats, any limitation on Planned Parenthood sets a dangerous precedent that Republicans could exploit.

The measure is so vague that after multiple votes on the legislation, few from either party seem to clearly understand what the provision — which does not mention Planned Parenthood by name but places limitations almost exclusively on those two clinics — would do. Yet, in a demonstration of just how politicized Planned Parenthood has become, both sides have shown they are willing to wage war over it.

Efforts to defund Planned Parenthood, which performs abortions in addition to providing education, contraception and other forms of reproductive health care, have become such a contentious matter that there have been nine votes to cut off funding to the organization in the past two years alone, said Erica Sackin, a spokeswoman for the group.

After videos surfaced last year that critics said proved some Planned Parenthood clinics had been selling fetal tissue for a profit, a charge the organization denied, some outraged Republicans demanded the inclusion of a measure defunding it in last fall's stopgap spending measure. But Republican leaders redirected those calls into a separate measure, ultimately moving forward on the temporary spending bill.

This has been happening for years, said Senator Patty Murray, Democrat of Washington. She recounted receiving a call in 2010 from Senator Harry Reid of Nevada, the Democratic leader, shortly after congressional leaders had come to a consensus on a deal, she said. A group of House Republicans wanted to include restrictions on Planned Parenthood. "Not on my watch," Ms. Murray recalled saying.

"That was my first realization that they were willing to use the funding of Planned Parenthood as a hostage in just about anything," she said.

In the Zika fight, limitations on Planned Parenthood offered Speaker Paul D. Ryan of Wisconsin

what he needed: a way to pass the House version of the bill without Democrats. The bill passed during the late-night session gaveled in as Democrats staged their sit-in for gun restrictions in June, with the votes of some conservatives who are typically averse to increased spending.

In Florida, the only place so far in the continental United States where the disease is circulating, Zika has crept into its Senate race — which could help determine whether Republicans hold onto their majority — as Senator Marco Rubio is fending off attack ads over the proposed restrictions on Planned Parenthood.

Buried in the debate over the intersection between the Zika virus and Planned Parenthood is the murky reality of what the failed Zika bill, which could provide a framework for a temporary spending bill, would have done to the women's health organization.

The bill largely focused on funding for Profamilias, Planned Parenthood's partner in cash-strapped Puerto Rico. Because Puerto Rico has been the hardest hit by the virus, it would receive most of the money and thus be the most affected by the bill's restrictions.

Profamilias provides medical services almost entirely out of its two clinics in San Juan. They do not offer Zika testing, which tends to be done by more specialized facilities, said Marjorie Vázquez, a program director at Profamilias in San Juan, so much of their involvement in combating Zika centers on contraception distribution. Profamilias served about 7,000 patients in 2015, she said — not a particularly large number, given that about 390,000 people live in San Juan.

But because the vast majority of the clinic's clientele is poor and young, rerouting funding away from the group could have an outsize effect, some experts said.

Some House Republicans, particularly those from Florida, have at least hinted that they would be open to taking Planned Parenthood out of the ongoing Zika fight.

And Senator John Cornyn of Texas, the No. 2 Republican, said on Thursday that he was optimistic they could move forward to pass Zika funding.

"We're just going to have to work out our differences on that," he told Morning Consult.

Florence County Hosting CERT Basic Training Course

Florence (SC) Morning News, September 12, 2016

FLORENCE, S.C. – Florence County Emergency Management will host its second Community Emergency Response Team (CERT) basic training course, starting Oct. 21.

The course is open to anyone older than 18 who wants to educate themselves about safety and protection during a man-made or natural disaster. The course is free to anyone interested, and no prior training is required before taking the course.

The course teaches Florence residents about disaster preparedness, search and rescue, medical response, utility controls and fire safety among others. The course will be instructed by members of Florence County Emergency Management, Florence County EMS, and the Howe Springs Fire Department.

According to Andrew Golden of Florence County Emergency Management, the course is a key component for those wishing to become an official CERT member in Florence County.

A CERT is a group of trained volunteers who come together during a disaster or crisis. The volunteers, according to Golden, will take care of their families and themselves while also helping neighbors, suppressing small fires, providing medical aid and conducting small search and rescue operations.

Florence County Emergency Management adopted the National CERT Program after recognizing a need for the Florence community to be better prepared in case of a disaster. The National CERT Program is provided by the Federal Emergency Management Agency (FEMA) through the Department of Homeland Security.

Those interested in attending the CERT basic training course can register at fcemd.org. Space for the class is limited.

POLITICAL COMMENTARY, COLUMNS AND EDITORIALS

Citizens As Rescuers In Building Collapses

By Eric Holdeman

Emergency Management Magazine, September 12, 2016

The Federal Emergency Management Agency has established, in cooperation with local jurisdictions, Urban Search and Rescue Teams

These teams are scattered around the United States as shown in the link above. These are the teams that can help in building collapse situations like the Oklahoma City bombing. They are highly trained with specialized equipment and teams to deal with searching for, finding and attempting the rescue of people trapped in the rubble of a building.

Last week, at an after action review meeting from the June 2016 Cascadia Rising Earthquake Exercise, these figures were shared. I think they come from the Los Angeles Fire Department. It shows what percentages of people trapped and rescued are done at which level:

Search and Rescue

5% entombed, heavy rescue capability

15% void space non-structural, medium rescue capability

30% non-structural entrapment, light rescue capability

50% injured but not trapped, spontaneous program

The above points to the fact that the clear majority of people being rescued are not the results of urban search and rescue teams. The people performing rescues are co-workers; neighbors; passers-by on the street. ... Few if any have any training at all or likely no equipment other than those tools immediately at hand.

Here in the Puget Sound region I recall that light urban search and rescue trainings were offered to companies so that their internal staff would have the ability to extricate people who were trapped within a building. Some buildings have equipped floors with some specialized equipment, like crowbars, hydraulic jacks, blocking material, gloves, etc.

A little bit of forethought could be invaluable in having the tools necessary to provide meaningful help. A few hours of training could be all the difference in keeping people safe and giving them the basic instruction needed to make them much more effective.

Our Views: Big First Step In Federal Aid

Baton Rouge (LA) Advocate, September 12, 2016

While he's not physically bringing a check back home, Gov. John Bel Edwards and the state's delegation in Congress have achieved a significantly higher level of federal support to cover the costs of flood damages to public roads and buildings.

In a letter to Edwards, who was in Washington for two days for meetings on Capitol Hill, President Barack Obama agreed to increase the federal government's share of the costs for "public assistance" projects from 75 percent to 90 percent. State and local government agencies cover the balance for these projects, which includes debris removal and emergency response expenses.

The balance is going to be substantial, but the increase in the percentage that the U.S. government will cover makes a big difference to the state and to local governments — parishes, cities, school boards.

The dimensions of the August flooding made it likely all along that the 90 percent threshold would be reached, but until authorized by the president it was nevertheless at the top of Edwards' wish-list. Costs for mobilizing the National Guard and other responses to flooding would be covered by the higher match, as those bills come in.

The U.S. government has responded to Louisiana's plight: Obama's letter noted that the administration already has spent more than $660 million to help the state respond to the floods, including $200 million in direct assistance to flood victims.

Still, the costs to state government — already strapped because of a financial hangover left over by former Gov. Bobby Jindal's administration — makes a higher federal match rate important to the governor, as well as local leaders who face their own financial challenges. Debris removal alone is a huge task.

The governor and a bipartisan group of state leaders were in Washington to lobby for aid beyond the match rate. That decision was like getting to first base in terms of dealing with the impact of the floods, but with the governor we feel more is needed: Edwards told the president earlier that the state's infrastructure and families had sustained more than $8.7 billion in flood damage.

The governor is pitching a $2 billion package of aid that would be beyond that provided to families and agencies by the Federal Emergency Management Agency and other federal sources.

The legislative calendar in an election year is difficult but we applaud efforts by the state's leaders to unite on behalf of more assistance to the struggling communities hit by this major national disaster.

Tropical Storm Julia Brings Rain To Florida, Georgia

USA Today, September 14, 2016

JACKSONVILLE — Tropical Storm Julia was bringing heavy rain to north Florida and parts of Georgia on Wednesday.

The storm formed just west of Jacksonville around 10 p.m. Tuesday. The storm's formation was unusual in that the center of circulation appeared to be over land when it formed, near St. Augustine, Fla.

As of 5 a.m. Wednesday, the storm, which has maximum sustained winds of 40 mph, was located about 40 miles north of Jacksonville and 25 miles southwest of Brunswick, Ga. It is moving north at 7 mph, according to the National Hurricane Center.

Julia is expected to drop 3 to 6 inches of rain near the Georgia and South Carolina coastlines through Friday, the hurricane center said. Isolated totals of 10 inches are possible, as is an isolated tornado across coastal Georgia and southern South Carolina, the hurricane center said.

Prior to becoming a tropical storm, Julia was a tropical wave which battered Florida's Space Coast on Tuesday, spawning a tornado and bursts of torrential downpours.

Derrick Weitlich, a meteorologist with the National Weather Service in Melbourne, Fla., said a tornado was confirmed by radar Tuesday afternoon in a rural area between Barefoot Bay and Interstate 95. Two spotters also confirmed the tornado.

No injuries were reported as a result of the tornado, but wet highway and roads contributed to numerous traffic incidents across Brevard County, officials said.

Julia's projected path takes it in a slow north-northwest direction over, with the system expected to weaken and eventually dissipate over south Georgia.

A tropical storm warning is in effect for Fernandina Beach, Fla., to Altamaha Sound, Ga.

Tropical Storm Julia is expected to weaken to a tropical depression Wednesday, the hurricane center said.

Wednesday Q + A With John Bel Edwards

By Daniel Newhauser

National Journal, September 14, 2016

Louisi-ana Gov. John Bel Ed-wards traveled to Wash-ing-ton last week to ask Con-gress and the White House for as-sist-ance fol-low-ing the dev-ast-at-ing flood-ing in his state. At the Cap-it-ol, Ed-wards spoke to Zach C. Co-hen about run-ning as a Demo-crat in the Re-pub-lic-an South, as well as his tu-mul-tu-ous first nine months in of-fice.

You're now the only Demo-crat-ic gov-ernor in the Deep South. Do you have any ad-vice for your party for how it can re-build in the re-gion?

Well, I am singly fo-cused on gov-ern-ing the state of Louisi-ana and try-ing very hard not to get en-tangled in polit-ics out-side of my state, wheth-er it's the pres-id-en-tial elec-tion or gov-ernors' elec-tions. But I will tell you just in short that I do be-lieve Demo-crats can win. I think I'm liv-ing proof of that. But you have to have good can-did-ates who are go-ing to work ex-tremely hard, and who rep-res-ent main-stream val-ues in the Deep South—Demo-crats that can win there, then else-where. But the only way you know you can't win is if you don't run.

Does that strategy work in re-pla-cing Dav-id Vit-ter in the Sen-ate?

I hap-pen to be-lieve there's a dif-fer-ence polit-ic-ally between state and loc-al elec-tions and elec-tions for fed-er-al of-fi-cials. And I think the party des-ig-na-tion in the past, at least his-tor-ic-ally, has been more of a de-term-in-ing factor in the out-come in the fed-er-al elec-tion for Con-gress or for Sen-ate. But we have some good Demo-crats run-ning, and one of them will be in the run-off, and we'll just see who. I mean, there's two dozen can-did-ates run-ning in Louisi-ana. It's kind of a wild scene.

One of the first chal-lenges you had to deal with when you came in-to of-fice was the budget ne-go-ti-ations to fix a massive de-fi-cit.

The largest de-fi-cit in our state's his-tory … $2 bil-lion. And so it was an ex-tremely dif-fi-cult prob-lem to deal with, but we had to do it to sta-bil-ize our state and pre-serve in-sti-tu-tions that af-ford op-por-tun-ity, like health care, like high-er edu-ca-tion. But we also have foster chil-dren that are in our cus-tody, and just a whole myri-ad of ser-vices that we provide the people de-pend upon. And ul-ti-mately we were able to work with the le-gis-lature and sta-bil-ize our state to a very large ex-tent and save $200 mil-lion al-most by ex-pand-ing Medi-caid. So we have 300,000 more work-ing poor today with health in-sur-ance than was the case just in June of this year.

Is there any stigma at-tached to Medi-caid ex-pan-sion, be-cause it's re-lated to the Af-ford-able Care Act?

There's some stigma by cer-tain people. That's cer-tainly not a prob-lem that I have. It isn't like by re-fus-ing to ex-pand Medi-caid we de-creased our tax bur-den. So as long we're pay-ing for the pro-gram I think we should get the be-ne-fits from it, es-pe-cially when it saves the state gen-er-al-fund dol-lars. We saved about 2 per-cent of our over-all de-fi-cit by ex-pand-ing the Medi-caid pro-gram. So provid-ing health in-sur-ance to work-ing poor people who to no fault of their own were just caught in a gap is the right thing to do for all reas-ons. And there are some people who were op-posed to it. But in truth, our le-gis-lature did not really stand up and fight against it be-cause I think at the end of the day, most of them were con-vinced as well it was the right thing to do, but they also knew it was sav-ings.

Did the state's fisc-al mis-man-age-ment be-fore you took of-fice make it harder to re-spond to the flood-ing now?

We have not made the de-cision to cur-tail our re-sponse be-cause of any fisc-al lim-it-a-tions. So that has not been a prob-lem at all.

What have Wash-ing-ton and Bat-on Rouge learned from hur-ricanes like Kat-rina? Have all the right tools been es-tab-lished?

You're nev-er go-ing to learn all the right les-sons be-cause every time you go through one of these you're go-ing to make mis-takes. And you're go-ing to real-ize that mis-takes might be policy-driv-en, they might be driv-en by per-son-nel, or they could be stat-utory lim-it-a-tions that only Con-gress can fix. And the truth is, there are go-ing to be prob-lems that arise from all of those. And so con-tinu-ally ana-lyz-ing the situ-ation and in-cor-por-at-ing the les-sons learned in-to fu-ture re-sponses is what's go-ing to be re-quired. And there are ob-vi-ously some things FEMA can do bet-ter, and we need to do that. But there's things that all of us could have done bet-ter in the re-sponse and now in the re-cov-ery as well.

Do you have con-fid-ence in Con-gress to be able to make the right changes to the Stafford Act in or-der to make some of those changes?

Well look, I wish that Con-gress, you know, moved a little faster, and was demon-strat-ing it's a little more cap-able of mak-ing changes than has been the case in the past. But I'm al-ways op-tim-ist-ic that people are go-ing to come to-geth-er and do the right thing when they see a need. And I think that need is evid-ent now.

"I Don't Know You, But I Love You": Woman Meets "Angel" Who Saved Her From Louisiana Floods

By Sarah Larimer

Washington Post, September 13, 2016

The red convertible was caught in the Louisiana floodwaters.

Trapped inside were Hailey Brouillette and her dog, Sassy.

Outside the vehicle, though, was David Phung. The 27-year-old was on a boat with others, desperately trying to help. There was an attempt to break a window. Someone asked around for a knife.

Finally, Phung splashed into the flood and pulled Brouillette from the car, a remarkable effort captured on video in August. He saved her dog, too, plunging down into the water and pulling the pup to safety.

The Associated Press reports that the 53-year-old Brouillette met on Monday with Phung, her rescuer. Brouillette called him her "angel" and "savior," according to the AP. She told him that she loved him.

"I know I don't know you, but I love you," Brouillette said during the reunion in Denham Springs, where she is staying on a temporary basis.

"It was nothing," replied Phung, according to the AP.

Really, though, last month's rescue effort in the south Louisiana floodwaters was pretty dramatic. Video from WAFB-TV, a CBS affiliate, shows murky waters around the red convertible, which is partly submerged. A boat approaches, carrying Phung and a couple of others. (The AP reported that they were Phung's relatives.)

"Oh my God, I'm drowning!" Brouillette can be heard saying, as the rescuers try to break a window and attempt to rip through the convertible's top.

Phung climbs on the car, jumps in the water and pulls Brouillette out, yanking her up as the convertible sinks down.

After she surfaces, though, Brouillette immediately cries out: "Get my dog!"

She repeats this, over and over, and the seconds tick by. Someone tosses a life jacket into the water. Brouillette tries to locate Sassy herself.

"Maybe she's gone," someone says as Phung ducks underwater.

"No, she better not be," Brouillette says.

That's when Phung reemerges, cradling Sassy.

"I got your dog," he says.

Phung told the AP that he didn't see the footage of the rescue until a couple of days later. He said he was "amazed" that he remained calm, adding: "I guess it was just the adrenaline took over."

"We saw Hailey going down the road and we actually tried to stop her, but I don't know if she heard us or not, or if she was trying to turn around," he said. "But by that time, the water — she had gotten into a deep part of the water. That's where you see the car started to sink. She was actually about to be in real trouble."

Brouillette said the water "twirled us around like it was nothing."

The AP reports:

Before getting caught in the floodwaters, Brouillette said, she had been released from a hospital that morning after being treated for a kidney ailment. She was on her way to a pharmacy to get prescriptions filled when the car she said she borrowed from a friend was overcome by the water.

"It still seems like a dream," she said.

She believes "divine intervention" also played a part in her survival.

"He saved my life," she said. "I don't even know if I'm worth saving. I guess God said, 'Yeah.' "

Floodwaters in Louisiana last month forced thousands into shelters and left more than a dozen dead. More than 70,000 people registered for assistance from the Federal Emergency Management Agency and Gov. John Bel Edwards (D) called the historic flooding a "very serious event."

Monday's reunion happened after a volunteer met Brouillette, who lost her trailer, in a shelter. The volunteer had watched the video footage of Brouillette and Phung before she arrived in Louisiana, and spotted Brouillette a few days later.

Phung brought supplies to Monday's reunion. The haul included food for Sassy, the dog, according to the AP.

"It's just who we are in Louisiana. We help people in times of need," he told the news agency. "I was put in that place to help her out."

Donald J. Trump Foundation Is Trump's Money, His Campaign Manager Says. No.

By David Fahrenthold

Washington Post, September 13, 2016

Donald Trump's campaign manager, Kellyanne Conway, was asked on CNN this morning to provide evidence to prove Trump's claim that he has given generously to charity.

She didn't.

In the process, Conway also seemed to be unaware of a key fact about Trump's personal charity, the Donald J. Trump Foundation.

Which is: The Trump Foundation's money doesn't actually come from Trump's own pocket.

"Donald Trump has been incredibly generous over the course of his life," Conway told CNN's Alisyn Camerota.

"With his own money?" Camerota asked.

"With his own money, and his foundation's money — which is his money," Conway replied.

From all available tax records, that is not true.

In fact, tax records show Trump has not given any money to his namesake foundation since 2008. Instead, Trump retooled his foundation to give away other people's money: Since 2008, Trump has taken in millions from donors and given it away under his foundation's name.

The Washington Post described the workings of the Trump Foundation in an article Sunday. Tax experts said they had rarely seen a charity like this, which defied the convention that wealthy people start private foundation to give their wealth away. Instead, the Trump Foundation allowed Trump to retain the appearance of generosity without giving away a dime of his own.

It's possible that Conway knows something that is not yet public, and has seen proof Trump has donated his own money to the Trump Foundation in 2015 or 2016. The foundation has not released information about those years, and its public tax filings only go up to 2014. The Post has asked repeatedly — including again Tuesday morning — for information about any such recent donations.

The Trump campaign has not responded to those questions.

And, on CNN, Conway did not offer any evidence of new donations. Instead, when Camerota challenged her — "No, the foundation's money [is] other people giving to the foundation" — Conway seemed to concede.

"Other people, but he — okay," she said. "But he's been incredibly generous."

Trump did recently give $25,000 to the Trump Foundation, but it wasn't a donation: It was a reimbursement. In 2013, the Trump Foundation made an improper $25,000 gift to a political group aligned with Florida Attorney General Pamela Bondi (R). IRS rules prohibit tax-exempt charities from making such gifts. After The Post reported on that gift, Trump reimbursed the foundation, saying that the money should have come out of his pocket in the first place. He also paid a $2,500 penalty tax.

Conway's appearance on CNN was one of several recent attempts by the Trump campaign — including Trump's running mate, Gov. Mike Pence (Ind.) — to rebut criticism of Trump's past charitable giving. But no one in the Trump campaign has provided any new details about what they believe Trump gave. Or any new proof of a gift from his own pocket.

The Post has made its own effort to verify that Trump did give away millions of his own money, as he has claimed. But after contacting 326 charities, that search has turned up little. Between 2008 and this May, The Post identified just one gift that seemed to be from Trump's own pocket. It was in 2009, for less than $10,000.

This year, after Trump came under media scrutiny, he has made at least two personal gifts to charity: Trump gave $1 million to a veterans group in May, making good on a promise he'd made during a televised fundraiser four months earlier. And Trump gave $100,000 to a Louisiana church to help recovery efforts after Trump toured flood-ravaged areas near Baton Rouge. With those two donations, it appeared that Trump had given more money to charity in four months — under heavy media scrutiny — than he had in the previous 10 years combined.

On Monday, Trump's spokeswoman, Hope Hicks, said that The Post's article on the Trump Foundation was "not at all accurate," but did not cite any specific inaccuracies. Hicks did not respond to follow-up questions asking for those specifics.

In a written statement, Hicks also noted that Trump did not take a salary for his charitable work: "Mr. Trump serves the Foundation without compensation."

In the most recent IRS filings, Trump said he worked a half-hour per week on the Trump Foundation's business. For the nine years before that, Trump had told the IRS he worked "zero hours" per week.

In Tuesday's interview on CNN, Camerota pressed Conway about Trump's income tax returns, which the nominee has declined to release. Since Trump claims that his tax returns are under audit, Camerota asked: Would Trump release a letter from the IRS, proving that was so?

"Are you calling him a liar?" Conway asked.

Overnight Energy: Trump To Visit Flint Water Plant Wednesday

By Timothy Cama And Devin Henry

The Hill, September 13, 2016

TRUMP TO FLINT: Donald Trump is planning Wednesday to visit Flint, Mich., and its water plant, as the city struggles to recover from a devastating drinking water crisis.

Campaign officials told news outlets such as the Detroit News and AP about the planned trip, but did not go into many details about the Republican presidential candidate's schedule.

Trump has been working in recent weeks to reach out more to black communities, including a recent visit to Detroit and to a majority-black church there.

Democrats have been more vocal than Republicans about Flint, a majority-black city whose water has been tainted with lead since a Gov. Rick Snyder (R) appointee switched Flint's water source in April 2014.

Hillary Clinton visited the city twice during the primary season, and participated in a Democratic presidential primary debate there with Sen. Bernie Sanders (I-Vt.).

Trump told the Detroit News earlier this month that the Flint crisis "is a situation that would have never happened if I were president."

Read more here.

PIPELINE DEVELOPER WILL 'TRUST THE PROCESS': The company behind the controversial Dakota Access Pipeline project says it will "obey the rules and trust the process" as the Obama administration considers whether new assessments of the pipeline are necessary.

"I am confident that as long as the government ultimately decides the fate of the project based on science and engineering, the Dakota Access Pipeline will become operational, bringing a safer means of transportation to a much needed supply of oil to communities across the country," Energy Transfer Partners Chairman and CEO Kelcy Warren wrote in a memo to staff.

"So we will continue to obey the rules and trust the process."

The memo is a vote of confidence for the $3.8 billion project. It comes days after the Obama administration said it would halt construction on the 1,200-mile long pipeline while it considers whether new environmental tests for its route are necessary.

Warren's memo, sent Tuesday, reiterated the company's position that it did everything it could to consider objections from North Dakota tribes while routing the pipeline. He also dismissed concerns about the pipeline's threat to drinking water supplies, and noted a judge's Friday decision approving of federal permitting of the project.

Read more here.

The tribe responds: The Standing Rock Sioux Tribe, which is suing over the pipeline project, dismissed Warren's memo on Tuesday.

"It is unfortunate that the corporate world chooses to ignore the millions of people and hundreds of tribal nations who stand in opposition to the destruction of our lands, resources, waters and sacred sites," tribe chairman Dave Archambault II said.

"Energy Transfer Partners has proven time and time again that the bottom line for them is money. The bottom line for the Standing Rock Sioux Tribe is and will always be protecting our lands, people, water and sacred sites from the devastation of this pipeline. Our fight isn't over until there is permanent protection of our people and resources from the pipeline."

HOUSE GOP SOUNDS ALARM ON EPA REG: Republicans in two House committees pressed the Environmental Protection Agency (EPA) Tuesday to justify a proposed regulation on hydrofluorocarbons (HFCs) used in air conditioning and refrigeration.

The leaders of the House Energy and Commerce Committee's energy and power subcommittee and the House Small Business Committee warned in their letter that the April proposal is expensive and potentially illegal.

"We have serious concerns about this rule's impact on American businesses and consumers, and we also believe that it exceeds the agency's statutory authority by establishing a new and expansive global warming program never intended by Congress," they wrote to the EPA.

The EPA is aiming to phase down HFCs, a potent greenhouse gas, and to allow the use of replacement substances.

ON TAP WEDNESDAY I: The Hill hosts an event at the Newseum called "Preparing for the Next Disaster: A Policy Discussion on Community Resilience," featuring Sen. Joe Manchin (D-W.Va.), Rep. Blaine Luetkemeyer (R-Mo.), and Timothy W. Manning, Deputy Administrator for Protection and National Preparedness at FEMA. Topics of discussion include preparedness efforts to increase community resilience and the role of federal, state & local government in pre-disaster mitigation. RSVP and watch live here.

ON TAP WEDNESDAY II: The House Science Committee will hold a hearing on its subpoena power over state attorneys general investigating Exxon Mobil Corp.

The hearing is likely to solidify divisions between Republicans and Democrats over the subpoena process. Chairman Lamar Smith (R-Texas) says his committee has the power to subpoena Eric Schneiderman (N.Y.) and Maura Healey (Mass.), two Democrats investigating allegations that Exxon lied about the extent of its climate science research. Democrats reject Smith's contention and say state attorneys general shouldn't have the federal government interfering in their investigations.

It's one of the many subplots in the fight over Exxon's climate science, and it will take center stage on Wednesday.

Rest of Wednesday's agenda ...

A Senate Appropriations Committee panel will hold a hearing on nuclear energy. Energy Secretary Ernest Moniz will testify.

A federal judge will hear from the Standing Rock Sioux, which is appealing a ruling allowing the construction of the Dakota Access Pipeline.

AROUND THE WEB:

In opening statements Tuesday in the federal trial of the accused occupiers of the Malheur National Wildlife Refuge in Oregon, attorneys presented contrasting views of the protest as an armed, military-style occupation and as a political protest, the Oregonian reports.

Reykjavik, Iceland's capital city, set a goal to be carbon-neutral by 2040, Voice of America reports.

Residents of Fresno, Calif., say a switch in water supplies has caused elevated lead levels in their drinking water, Reuters reports.

After Floods Damaged Court, Greenbrier To Host Tennis Event

Associated Press, September 14, 2016

WHITE SULPHUR SPRINGS, W.Va. (AP) – The Greenbrier is ready to host its annual tennis classic after floods badly damaged its stadium court in June.

The Beckley Register-Herald reports (http://bit.ly/2c8XIxs) that the fifth annual Greenbrier Champions Tennis Classic is taking place this Saturday and Sunday. It features Venus Williams, Madison Keys, John McEnroe and Pete Sampras.

The Greenbrier's 2,500-seat tennis stadium was damaged during the June floods, which killed 23 people statewide. The clay playing surface was ruined, and The Greenbrier replaced it with a hard court.

Terry Deremer, the resort's director of tennis, said flood waters were 20 feet high into the lower level seating the morning after the floods.

Cooler Temperatures Help Reduce Idaho Wildfire Activity

Associated Press, September 13, 2016

LOWMAN, Idaho (AP) – This year's largest wildfire burning in the rugged wilderness in Idaho has been slowed by cooling temperatures, allowing firefighters to hold containment efforts.

The so-called Pioneer Fire has burned about 291 square miles since July 18 and was 56 percent contained by Tuesday. More than 1,100 firefighters are currently working to suppress the flames.

Forest officials say a dry cold front currently moving into central Idaho has increased the chance of precipitation. The boost in moisture is expected to reduce fire activity.

However, homes throughout Lowman are still being encouraged to be ready to evacuate in case conditions change.

FEMA HOUSING

Struggle Remains To Find Housing For Displaced Flood Victims: “We Are Baton Rouge People. They Need To Keep Us Here”

By Terry Jones

Baton Rouge (LA) Advocate, September 13, 2016

When the American Red Cross announced it was closing the shelter at the Baton Rouge River Center on Thursday, Tameka Polk and the more than 400 displaced people taking refuge there panicked.

“We just asked, ‘Are y’all just going to put us out? We weren’t homeless before the flood,’ “ Polk said Tuesday afternoon as she tended to a stroller holding the 2-year-old son of a friend.

Their fears subsided when they learned Tuesday morning the shelter isn’t being shut down, per se; it’s being moved across town to the Stage 5 building at Celtic Studios on Airline Highway. And flood victims like Polk, who are still awaiting assistance to find temporary housing in the wake of last month’s devastating floods, will be bused to the new location.

“We were overjoyed we heard we were going back there,” Polk said.

As of midnight Monday, there were 630 displaced flood victims living in seven shelters across the state, according to the Louisiana Department of Children and Family Services. The River Center in downtown Baton Rouge is serving the largest population, with 411 displaced victims counted on Monday.

The state on Monday had reported there were only 204 people in the downtown shelter. But officials said Tuesday the figure was lower because it didn’t account for those individuals who had left the shelter during the day but returned at night.

Vicki Eichstaedt, a Red Cross spokesperson, said the disaster relief organization is closing the River Center shelter at the request of the city-parish, which is ready to put the facility back to its commercial use.

Baton Rouge Chief Administrative Officer William Daniel said they need the River Center by Thursday in order to prepare for several high-profile events in October, including Elton John’s nine-city concert tour on Oct. 5.

“We’ve already canceled all of the September events. When things were being negotiated with the state to use the facility … we asked if they could tell us what date they could get out the River Center so we’ll be able to do business,” he said. “They came back with that date.”

Because Patrick Mulhearn, Celtic’s executive director, was happy to provide a place for evacuees to live — at least until November, when production begins on an independent feature film — Red Cross now has a little more time to help flood victims figure out their next step.

But the process is not happening quick enough, Metro-Councilwoman Tara Wicker said Tuesday.

“A bulk of these individuals were in rental situations. As I understand it, there are no resources available for property owners renting their properties,” Wicker said. “We need assistance for them so we can put those rental properties back on the market.”

Red Cross has been meeting with its shelter residents to determine their needs and offer solutions, Eichstaedt said.

“FEMA is offering a number of solutions: temporary shelter assistance, which sometimes includes short hotel stays, and the ‘Shelter in Place’ option,” Eichstaedt said. “We’re trying to counsel everyone to make sure they get in touch with caseworkers and explore what options might be available to them.”

However, many flood victims still living in shelters aren’t qualifying for help from FEMA. And those that are say the options being offered aren’t viable solutions.

Polk’s friend, Marie Johnson, said the Federal Emergency Management Agency did offer financial help in booking her a temporary hotel stay in New Orleans for her and her two small children.

But, Johnson said, “I have an 8-year-old in school here. That doesn’t work for me. … They expect us to pull our kids out of school and start over.”

Johnson was living in a Baton Rouge rental property that flooded. So was Mary Berthelot, who said she also hit dead ends with FEMA. Berthelot was also rejected for the limited financial assistance Red Cross is providing for qualified victims.

“They say there are these available hotels in all Houma, LaPlace and wherever else. They’re trying to ship us off and forget about us,” Berthelot said. “We are Baton Rouge people. They need to keep us here.”

That’s easier said than done, said Terri Ricks, deputy secretary for the state's Department of Children and Family Services.

Ricks said it's nearly impossible to accommodate the specific needs of flood victims right now, given the limited availability in the region's housing market after the floods.

"At this stage, everything is happening with a multi-agency approach," she said. "Every parish sees their residents as their responsibility. They don't want them to go. In no way is anybody being forced to go any place they don't want to go."

Ricks said she expects local governments to become more actively involved over the next eight weeks in finding suitable housing for evacuees still depending on shelters. She stressed that keeping shelters open for extended periods of time is not healthy for the flood victims.

"A month ago we had about 11,000 displaced individuals; today it's 600," she said. "No one is going to put these people out on the streets. There will be in-state options for people."

African American Homeowners Struggle To Rebuild After Flood

By Susan Buchanan

Louisiana Weekly, September 13, 2016

Many rural and urban African American homeowners who were flooded in south-central Louisiana last month face a host of worries, especially if they're low-income or seniors. Some of them are dealing with yet another high-water event. Those who received letters from Federal Emergency Management Agency denying them aid have little money for repairs. Others are watching their physical health deteriorate. Homelessness is a risk for people who lost their dwellings. And down the road, some flooded residents could be priced out of housing by the kind of gentrification seen in New Orleans after Katrina.

In one of the worst cases, the African American subdivisions of Pecan Acres and Pleasantview outside of New Roads in Pointe Coupee Parish flooded again last month. They've been in a continuous struggle with water. The Pecan Acres subdivision has officially flooded 16 or 17 times since it was founded 45 years ago, former Pointe Coupee Parish Police Juror Albert Dewey Dukes said last week. He represented the community for two decades before retiring in December. "In August, most of the homes in Pecan Acres were damaged or destroyed as the Portage Canal overflowed again," he said.

Governor John Bel Edwards toured Pecan Acres on August 30 and learned of its problems for the first time then.

"Pecan Acres never should have been developed, at least not for homes," Dukes said. The area was a swamp and a former dumping spot. The community relies on a drainage pump, the canal and a levee to keep water out. "The authorities can't even get in to clean the canal, and it hasn't been dredged in years," he said. The parish police jury is working on a project now to improve drainage and raise the levee, however.

Water has receded in Pecan Acres since mid-August, and Americorps volunteers have helped clean out homes. "Most of the families are doing the rebuilding now themselves," Dukes said. "Many of them are getting FEMA letters denying them assistance. That's because their homes are in a flood zone, and they haven't had the money to pay for the flood insurance that's required."

Those who can rebuild are likely to stay, even with the constant threat of being inundated. "Most of them can't afford to move," Dukes said.

After flooding from Hurricane Gustav in 2008, Pecan Acres residents joined in a class action suit, claiming the parish was derelict in its drainage management. A drainage pump failed in Gustav's rainfall, causing the canal to overflow and flooding homes. In 2012, residents received part of a $2 million insurance settlement.

In July of this year, the parish police jury solicited bids for a Pecan Acres flood-control project, financed by a FEMA hazard mitigation grant to improve drainage and strengthen barriers. The parish hopes to raise the levee along Bayou Pointe and Portage Canal.

Educator Monica Fabre grew up in Pecan Acres after her parents bought a house there in 1971. "They had been sharecroppers until the last cotton gins closed here in 1967," she said. "Then they scrimped and saved, picking pecans to buy their dream house." The community's 16 or 17 floods over 45 years were the recorded ones, she said. In fact, Pecan Acres flooded many more times than that. "Families had cinder blocks or bricks so we could raise our furniture off the floor before it rained," she said. "We would wade off from home in the morning to get to school."

Floodwater from the Portage Canal contains residential and industrial waste water, Fabre said. "People have been dying from cancer and long-term illnesses here younger and at higher rates than they should have," she said. "My mother died at 56."

"The soil and water needs to be tested for toxins," Fabre said. "But the parish may be afraid of what it will find." The state's Department of Environmental Quality hasn't done any recent sampling in Pecan Acres, she said.

Fabre was pleased that Governor Edwards visited Pecan Acres last month. "He put us on his radar screen," she said. "The state should have had us there all along." After his visit, Edwards released a statement saying that his administration is now aware of the area and its residents, and will do all it can to address their needs.

Retired U.S. Army Lieutenant General Russel Honore, who grew up in Pointe Coupee, met with Pecan Acres residents a number of times from late August to early September. He participated in a town hall meeting there last Thursday.

Fabre said residents of Pecan Acres and Pleasantview are the working poor and seniors on fixed incomes. "They can't afford flood insurance because that would mean not paying their electricity or other bills," she said. Since the August flood, many have received rejection letters from FEMA because of not having insurance. And for residents who do qualify for FEMA's up to $33,000 for home repairs, those payments are seldom the maximum amount and are only intended to cover basics, she said.

As for the availability of federal Small Business Administration loans to cover the bulk of a homeowner's repair work, "my guess is that, based on income, only three to five percent of families in Pecan Acres and Pleasantview would qualify," Fabre said.

Meanwhile, many of those residents are taking advantage of the state's Shelter at Home program, which is independent of FEMA. Shelter at Home provides up to $15,000 for repairs that can make a house safe while owners rebuild. "That gets your plumbing and lights running and a hot plate going," Fabre said.

Someday, resident buyouts could be an option for Pecan Acres and Pleasantview. "But it really isn't feasible for seniors in their eighties and nineties to move," Fabre said.

Fabre said members of her family in greater Baton Rouge, about 37 miles southeast of Pecan Acres, also flooded in August. "My cousins and other relatives in Baker, Zachary and North Baton Rouge all had water for the first time ever," she said. Baker is a small, mostly African-American city in East Baton Rouge Parish, and Zachary is a city—about half white and the rest Black, Asian and Hispanic—in East Baton Rouge. North Baton Rouge is a mostly Black neighborhood in the capital.

Fabre worries that urban areas like North Baton Rouge, which is blighted but has affordable housing, might become gentrified as the city recovers. "Eleven years after Katrina, some New Orleaneans living in Pointe Coupee are still trying to move home, but they can't afford Orleans now because of its gentrification," she said.

Isaiah Marshall, managing partner at consultants Sable International in Baton Rouge, has a number of concerns about African Americans who flooded in and near the capital."North Baton Rouge and Monticello were hit pretty hard," he said. Marshall is a former director of the now-dormant Baton Rouge Black Chamber of Commerce. Monticello is a mostly African American community in East Baton Rouge Parish.

"The water's gone, but some of the homes that flooded in these areas still aren't gutted," Marshall said. Flood victims with poor credit histories are frustrated as they search for loans and decent housing, he said. In African-American areas that were inundated, the need for mental health services is expected to grow. Nonprofits and Black-owned small businesses will struggle for assistance as they try to recover.

Following the flood, homelessness will be on the rise, Marshall predicted. He noted that the large shelter at Baton Rouge River Center is scheduled to close in mid-September. Early last Thursday, the shelter housed 419 evacuees, down from 11,000 in mid-August, the Louisiana Department of Children and Family Services said.

Flood Victims Begin To Move Into FEMA Mobile Housing Units

By Robbie Reynold

WAFB-TV Baton Rouge (LA), September 13, 2016

BATON ROUGE, LA (WAFB) –

On a mobile device? Click here to take a look at the mobile housing units.

The manufactured housing units for flood victims are slowly making their way to neighborhoods in south Louisiana.

FEMA said that 16 of the manufactured housing units (MHUs) are currently occupied. That is out of the more than 200 units that have been set up on different sites across the affected parishes. Officials said the remaining units either still need utilities or are in final preparations.

Tonia Kinchen said she is happy to have gotten her unit so early. She has been making the 30 minute drive to her son's home every day since she lost everything in the recent flooding.

She works on her house on Prescott Road and travels back to her son's house on Burbank Drive to sleep. However, that is about to change now that she has a MHU parked in her front yard.

Kinchen and her husband will be moving in within the next few days once it is fully operational.

"They have beds, they have sheets. They have blankets, dishes. The whole nine yards. So it's something to start you off with," Kinchen said.

However, Kinchen said it will still be difficult transition. She signed a year-long contract to use the trailer, but hopes to be back in her repaired home before then, and before it starts to take an emotional toll.

"The hardest part is just not being your home here. Home is home. No matter how you look at it," Kinchen said.

FEMA officials said they are processing applications for trailers as quickly as they can and distributing them from sites like the one on Blount Road. Kinchen said she didn't lose phone or internet service during the flooding, and that's why she got her unit earlier than other people.

"A lot of people didn't have access to a phone, didn't have access to internet, and FEMA said like I was on the top of the list," Kinchen said.

FEMA officials said more than 550 have been ordered for the flooding disaster, but the number will grow as they work with flood victims on their housing needs.

People can apply online at disasterassistance.gov or call 1-800-621-3362. Applicants must have more than $17,000 in property damage to be eligible.

FEMA said people can continue to register through October.

As of Tuesday, Sept. 13, officials reported that 58,800 people had registered with FEMA in East Baton Rouge Parish. Livingston Parish had 28,603 registered with the agency followed by Ascension Parish with 11,446 and Tangipahoa with 9,063.

With Hundreds Still Homeless, FEMA Trailers Remain Unused

By Brett Buffington And Trey Couvillion

WBRZ-TV Baton Rouge (LA), September 13, 2016

BATON ROUGE – FEMA is trying to come up with answers as to why an extensive number of modular homes set aside for flood victims have remained unused. Tonight, more than 100 modular units still sit empty since showing up to the drop site.

At a town hall meeting this evening in Watson, a spokesperson for FEMA said they are slowing transitioning to a recovery effort. The spokesperson also said they are working with local agencies to place the units in a safe location.

"We're slowly turning from response to recovery. This is going to be a long time effort," the spokesman said. "The thing with the manufactured house units, is that we have to work with the state and local officials that we put it in a safe place."

But News 2 was told similar information from a FEMA employee about a month ago. Willie Nunn, who is in charge of the units, said in August that they were looking to inspect the sites for the temporary homes back when they arrived.

"Yes, we're looking to make sure that the house is environmentally sound. We have to go out and inspect the site," Nunn said.

The inspection is supposed to include a check from FEMA to ensure the unit is not placed in a flood plain. But this unit on Fairlane Drive in Denham Springs, marked on FEMA's own map as a designated flood zone. And still a month later, FEMA is having a hard time explaining why these homes have not been put to use.

"It takes a while to install one at a location, we can't just make a home available in 24 hours," said the spokesman.

A month earlier though, Nunn said they were ready.

"We have them here, we have to folks here ready to take them out to the sites where we need to have them."

One thing that FEMA has had a consistent answer with is insisting the modular homes are a last resort for flood victims. FEMA has instructed families to find hotels. After calling 10 hotels in the Baton Rouge area, News 2 found none that could accommodate an extended stay. But tonight, FEMA's final answer as to why the tax payer funded homes still sit parked, is less than informing.

NFIP AND FLOOD MAPS

Charleston County To Review Federal Preliminary Updated Flood Insurance Maps

Charleston (SC) Moultrie News, September 13, 2016

Charleston County's Building Inspection Services Department is receiving and will be reviewing the new preliminary flood maps provided by the Federal

Emergency Management Agency (FEMA). The Flood Insurance Rate Maps are being updated as part of a map modernization program conducted by FEMA.

The updated flood mapping will provide property owners with up-to-date flood hazard information and should prevent unnecessary insurance purchases.

FEMA will host public meetings to provide the public opportunities to review the maps and ask questions. The dates of those meetings have not yet been announced. The public will also have an opportunity to file objections to the mapping of their property. Details about the objection process will be released at the public meetings and on FEMA's website.

"The preliminary maps will start a year or more process to get to a final set of maps for our citizens. The maps will be technically reviewed and presented to the public sometime this fall, according to FEMA and the Department of Natural Resources (DNR). Following the public meetings, a 90-day period will allow anyone who has problems with the maps to file their concern with FEMA," said Charleston County Building Inspections Director Carl Simmons. "The current maps and regulations will remain official and used until the new maps are finalized and approved by local ordinances."

The projected effective date of the maps, following the County's review and comments as well as the public meetings and objection filings, is April of 2018, according to FEMA.

Citizens with properties within the jurisdiction of a municipality who have questions should contact that municipality's floodplain coordinator. Citizens with properties within unincorporated Charleston County who have questions, should call 843-202-6957. You can also reach the FEMA Map Information eXchange at 1-877-FEMA MAP (1-877-336-2627).

Citizens can later view the maps on the FEMA's Map Service Center here: https://msc.fema.gov/portal/

(Please note: FEMA has not yet posted the maps for Charleston County. Check the website for updated information.)

Goose Lake Residents Ask Grundy County To Get FEMA Flood Maps Updated

By Heidi Litchfield

Morris (IL) Herald-News, September 13, 2016

MORRIS – Nicole Blustein, a resident of Goose Lake, asked the Grundy County Board during its Tuesday meeting to update FEMA flood maps.

"We are joined tonight by many of our neighbors as this issue impacts approximately 40 properties and families in the county," she said during public comment. "For years, we have been incorrectly designated by FEMA as being in a high-risk flood zone due to our proximity to Claypool Drainage District."

She said the designation has cost some neighbors between $15,000 and $30,000 in flood insurance that they will never see a return on because they are not in a floodplain.

"This can have a severe negative impact on our property value as well," she said.

In 2014, the county, along with Claypool and Maine drainage districts and the municipalities of Diamond and Coal City, conducted a hydrologic study and found that property along White Tie Road, Tony Cove Lane and Rollin Lane in Goose Lake were not in a flood zone.

Blustein said that regardless of the study's findings, nothing will be changed until FEMA is updated.

The residents have met with the county's Land Use Committee and understand that the work required would cost the county money, but said the change would not only benefit the 40 homeowners but also help for economic development purposes to have accurate flood maps on file.

John Kerr, another Goose Lake resident, also asked the board to move forward.

County Board Chairman Chris Balkema said the first quote for the letter, which includes significant engineering work to complete, that the county received came in higher than expected at $35,000.

County Administrator Doug Pryor said the county has a request for bid posted on the county website for the work.

"We're trying to get it down to a realistic quote," Balkema said.

Denham Springs City Council Member Wants To Gauge Public Input On City's Future With NFIP

By John Dupont

Livingston Parish News (LA), September 13, 2016

DENHAM SPRINGS – A city council member will recommend the City of Denham Springs host a public hearing to gauge response on withdrawl from the National Flood Insurance Program.

Councilman Chris Davis is not seeking a kneejerk response to the proposal, but he believes FEMA and its subsidiary flood insurance program have not adequately served Denham Springs residents.

He will proposal at the City Council meeting tonight at 6.

"We're a month into this flood and there hasn't been a lot of discussion," he said.

Davis says nine of 10 residents have told him they do not want to elevate or raze their homes.

Davis believes the city could possibly emerge stronger without help from FEMA.

"This isn't a decision the five of us on the council can make," he said. "It's up to the residents, whose lives are being affected. They need to speak and they need to be heard."

He said he was pleased with efforts from the state's Congressional delegate, but that the city cannot brush off its problems to Capitol Hill.

Davis agrees with a suggestion from Congressmen Garret Graves and Cedric Richmond that more money for rebuilding would serve the city better than trailers.

He said a $50,000 damage stipend to residents would go much further than FEMA trailers.

The purchase, placement and removal of each trailer costs FEMA $100,000, Davis said.

"I think they should do that instead of having a program that wastes money," he said.

Davis said FEMA has "strong-armed" communities into participating in their program.

"I don't think our Congressional leaders that in mind when they passed the Stafford Act to respond to disaster in an appropriate way."

Even the loss of 1,000 homes would prove disastrous, Davis said.

FEMA cannot address the plight of Denham Springs as it did for New Orleans.

"For New Orleans to absorb a hit like Katrina was one thing, but to treat Denham Springs like New Orleans will be the death of Denham Springs," Davis said.

National Flood Insurance Program Deadline Extended In Louisiana

KATC-TV Lafayette (LA), September 13, 2016

FEMA has granted an extension for Louisiana National Flood Insurance Program (NFIP) policyholders affected by August's severe storms and flooding to file proof-of-loss claims.

You now have 120 days from the date of your loss to file a flood insurance claim if you're a Louisiana NFIP policyholder. The extension doubles the 60-day deadline NFIP usually requires for policyholders to submit a fully documented, signed and sworn proof-of-loss claim.

FEMA determined Louisiana policyholders need more time to file claims given the recent flooding's magnitude.

The proof-of-loss is included in the claims package that documents your flood losses. The claims package should include:

Photos or video of your flood damage.

A comprehensive and itemized list of what was damaged.

Receipts, if possible, for your damaged items along with any other supporting documents that show the value of what you lost.

Contact your insurance company as soon as possible to begin processing your claim.

FEMA has streamlined its process to better service flood insurance claims and answer questions. You may call 800-621-3362 Monday through Friday from 8 a.m. to 6 p.m. and select Option 2. If you use TTY, call 800-462-7585. If you use 711 or Video Relay Service (VRS), call 800-621-3362.

Call-center staff are available to assist you with information regarding your policy, offer technical flood guidance to aid in recovery, and respond to general as well as complicated questions about the NFIP. FEMA can transfer you to your insurance carrier for additional assistance if you have questions specifically about your insurance claim.

FEMA Floodplain Findings

KIDY-TV San Angelo (TX), September 13, 2016

SAN ANGELO, TX – People living south of FM 2105 and north of Cauley Lane got some big news at today's commissioners court meeting.

After about a four-year process, this area is not longer declared a "floodplain."

FEMA approved a study by Chalk Mountain that showed the area was not a floodplain.

Homeowners were having to pay more for insurance because of the designation — now those rates should decrease.

There's also another step to help with those insurance costs.

"If they find that they're still in the floodplain, they can always petition their local land surveyor to create an elevation certificate, and that's going to clarify further whether or not they're in or out of the floodplain," Kenneth Dees, president of Chalk Mountain LLC, said.

To check the location of your home, call your country commissioner. They will have a map of the area.

MITIGATION

Officials Warn Of Long Haul With Hazard Mitigation Program

By Jake Jarvis

Charleston (WV) Gazette-Mail, September 13, 2016

At the first of several meetings to introduce the federal Hazard Mitigation Grant Program to flood-affected communities, officials warned residents that seeing help from the program will take a while.

The grant program seeks to identify and implement measures a community can take to mitigate future disasters, which could mean buying out a homeowner and demolishing the home, elevating the home or rebuilding it to meet higher safety standards.

Speaking Tuesday evening in the gymnasium of the old Clendenin Middle School, Brian Penix, the state's hazard mitigation officer, couldn't tell a crowd of about 200 residents from Clendenin and the surrounding area how long it would take to see any of that grant money. When members of the crowd pressured him, he said it could take months, even years.

"To be honest with you, this is a very, very long process," Penix said. "We tell everyone, even when we were doing the old massive buyouts, we would tell them to go on about their lives as if they're not being helped."

That's in part because of how competitive the grant program it is. Penix said communities first have to submit a lengthy application to the state, highlighting the community's priorities for distributing grant money. The state, in turn, has to submit its own application to the Federal Emergency Management Agency, which oversees the grant program.

Having applied for aid or received aid through FEMA's Individuals and Households Program doesn't have anything to do with participating in the Hazard Mitigation Grant Program. Even if someone was denied for the Individuals and Households Program, they still may participate in hazard mitigation if their community qualifies. Individuals may not apply for hazard mitigation on their own.

Once the community's application has been approved, officials will identify what part of the program homeowners qualify for, using the list of priorities the community laid out in its application.

The town of Clendenin could prioritize helping elderly homeowners first, or helping homeowners who live closest to the Elk River. Regardless of how the town decides to prioritize how the grant money is distributed, each town has to follow the same general guidelines.

The program only allows homes located in the floodway — the area directly adjacent to the river or stream that can reasonably expect to flood regularly — to be bought from the homeowner and torn down.

"If I would do that during this event, I would destroy whole communities," Penix said. "It isn't just a matter of buying the house to get you out of there, that house would be bought with deed restrictions preventing any further developments on that property. They can't develop it, they can't sell it, and they don't get taxes from it."

Kevin Sneed, the state's national flood insurance program coordinator, said homeowners can go to mapwv.gov/floods to see if their home falls in the floodplain or floodway. Once on the website, under the "expert" view, the floodplain is show with thin red cross hatching. Areas in the floodway are outlined with a bold red line.

The two other options, which FEMA officials said it and the state prefers, involves reconstructing the damaged home or elevating the home at no cost to the homeowner. If a structure has been substantially damaged, but a structural engineer doesn't think the home can be safely elevated without collapsing, the house will be entirely rebuilt.

Having a home elevated or rebuilt would require the homeowner to agree to purchase flood insurance for the rest of the home's life. This insurance would be significantly cheaper than the cost of flood insurance would have been normally since the home was just updated, according to Sneed.

At the Tuesday night meeting, residents worried that if the town of Clendenin applied for the grant, their homes would be on the hook to be demolished, whether the homeowner likes it or not.

Cristina Pop, a hazard mitigation specialist, tried to ease put those fears to rest. The program is entirely voluntary, she said, and up until the homeowner signs a contract agreeing to let go of their property and allow it to be demolished, they can back out at any time. Even if the town of Clendenin would qualify for the program, homeowners still wouldn't have to participate in it.

The next public meeting to discuss the Hazard Mitigation Grant Program will be held at 6 p.m. Wednesday at Elkview Middle School. Other meetings will be at Thursday at Alderson City Hall; Sept. 19 at Geary Elementary/Middle School; Sept. 27 at Marlinton Town Hall; and Sept. 28 at Alumni Hall in Richwood. All of those meetings start at 6 p.m.

First Public Meeting Held In Clendenin On Flood Hazard Mitigation Grant

West Virginia MetroNews, September 13, 2016

CLENDENIN, W.Va. — The first of several public meetings planned on FEMA's Hazard Mitigation Grant Program was held Tuesday night in Clendenin as the three-month mark since the June 23 flood approaches.

Residents came to the meeting with all sorts of different questions on their options under the program.

"My changes of rebuilding here are not good," said City Recorder David Ross. "There's heavy damage to my house and limited aid available."

State Homeland Security and Emergency Management Director Jimmy Gianato said there are a number of factors that affect whether residents can rebuild.

"Where they are in the flood plain, can they comply with local flood plain ordinances," he said. "We want to try to maintain the community as a whole so we're working with the county. The county has to put together an application with the state for whatever they decide to do."

Gianato said the grant is very competitive, and not everyone could be considered.

"There's a limited amount of money available for this. All the applicants will go into a pool. This is a statewide grant; it's not just Kanawha or Greenbrier county. Mitigation is statewide so you're competing with applicants from all over the state."

For that reason, Lula Jack, who said her home had sustained minimal damage but her sister's house was destroyed, wasn't holding her breath for any aid.

"I don't feel like there's going to be any help through FEMA. It's just going to be certain ones. The way I understood it, they're not going to help everybody," Jack said.

Heather Gillenwater hadn't been in her home since the flood, and said she had gotten no clear answers since from any organization.

"We feel like we haven't gotten any answers, and that we've been passed around from one place to the next," she said. "We filled every form out that you can fill out and we still feel like we don't know anymore (than we did since) June 23."

Options under the program include stand-alone elevation of structures, relocation of structures to outside floodplains and full acquisition and demolition of properties.

The public meetings continue Wednesday at 6 p.m. at Elkview Middle School and Thursday at 6 p.m. at Alderson City Hall.

Gov. Earl Ray Tomblin estimated Tuesday that West Virginia had incurred roughly $300 million in flood damage, and would call lawmakers into special session next week.

Denham Springs Residents Voice Frustrations Over Regulations That Could Require Them To Elevate Their Homes

By Heidi Kinchen

Baton Rouge (LA) Advocate, September 13, 2016

DENHAM SPRINGS — Residents packed Old City Hall's second-floor courtroom, overflowed to the stairwell and down into the lobby Tuesday night to voice their frustrations to Denham Springs officials about the regulations that could require some of them to elevate their homes before receiving permits to repair or rebuild.

Building Official Rick Foster said the city had received 260 applications for permits so far, and only 10 homes had been declared "substantially damaged" — meaning, the cost of repairing the home will exceed 50 percent of its fair market value.

Related

Homes in flood hazard areas that have been substantially damaged and are below base flood elevation must be elevated before the homeowner can receive a permit for repairs, according to rules the city adopted in order to participate in the National Flood Insurance Program.

Foster said in all 10 cases in which the city declared homes substantially damaged, the homeowners agreed with the determination.

Councilman Chris Davis said the calculation can be skewed significantly by general contractor estimates, which must include overhead expenses that homeowners would not incur when buying their own supplies and doing the work themselves.

He suggested the city Permits Department should be able to accept a homeowner's repair estimate instead.

A licensed contractor is one of five sources for a repair estimate that the city can accept under the NFIP, according to a city-distributed flier on the topic. A local building and permits department also can make a repair estimate "where the unmanageable number of permits must be processed in a major post-disaster situation," the flier states.

Foster said having his limited staff perform repair estimate calculations is not feasible.

"If you think it's hard to get a contractor out there right now, imagine how hard it's going to be for our permit office," Foster said.

Davis said many homeowners either do not participate in the NFIP or would agree to drop their coverage for a private policy if it meant they could avoid having to elevate their homes.

Foster said there are 1,500 active NFIP flood insurance policies in the city — policies that could be put at risk or see significant rate increases if residents disregard the regulations and opt out of the insurance program.

Mayor Gerard Landry said a private insurance company may quote a lower rate today, then drop the policy and decline to renew it in future years. Private companies are not required to offer flood insurance, he said.

Residents concerned about having to elevate their homes should contact their congressional delegation, City Attorney Stephanie Hulett said.

"It will literally take an act of Congress to waive that requirement" for substantially damaged homes, she said.

Landry has been pushing federal officials, including members of Congress, to work on doing just that, Hulett said.

Debra Hebert said three different inspectors from the Federal Emergency Management Agency had visited her home on Kline Street, just a few blocks from the Amite River. The home took on 8 feet of floodwater.

"One of them told me every single home on this street is going to have to be elevated," Hebert said.

Contractors' repair estimates for the home have varied widely, ranging from about $55,000 to $100,000, said Larry Chumney, Hebert's boyfriend.

"It's all over the map," Chumney said. "It's ridiculous."

Hulett stressed that residents should ask contractors for a "barebones" estimate.

"You don't want them to tell you how much it will cost to replace your marble counter tops and all the nice things you had in your home before the flood," Hulett said. "You want them to tell you how much it will cost to make the home livable. That's all."

City Gets $1.3M For Dove Creek

By John Purcell

Amsterdam (NY) Recorder, September 13, 2016

Amsterdam was recently awarded more than $1.3 million to replace damaged retaining walls along Dove Creek and further stabilize the waterway.

The Federal Emergency Management Agency will provide $1,324,744 to the city of Amsterdam for the demolition and removal of damaged retaining walls along a portion of Dove Creek, along with cleaning out the riverbed. The Hazard Mitigation Grant Program funds will also be used to install a new pre-cast stackable concrete retaining walls where sections are failing. Heavy stone fill will be placed along areas of erosion on the banks of Dove Creek to provide erosion protection.

Amsterdam Mayor Michael Villa said stabilization of Dove Creek is another step in the city's recovery process.

"We thank the Governor's Office for helping secure these additional funds as we look to provide protection against flooding, wind and power outages," Villa said in a statement. "The Dove Creek project is a critical component in this process."

Dove Creek runs through the center of the city, under Guy Park Avenue and West Main Street and into the Mohawk River. The creek was damaged during tropical storms Irene and Lee in 2011.

Montgomery County Executive Matthew Ossenfort said completing the stabilization of Dove Creek is a much needed resiliency project, which is "crucial to ensuring the safety of St. Mary's Hospital." He said services the hospital provides are even more critical during disasters.

Scott Bruce, chief operating officer of St. Mary's Healthcare, said severe flooding several years ago resulted in the hospital on Guy Park Avenue being evacuated, which raised awareness about the threat of flooding to patients and emergency services.

"As a community partner concerned about the improvement of our area's quality of life, and as a provider of critical health care and safety net services, we are pleased that this funding recognizes and responds to a serious community need," Bruce said in a statement. "The work that will be done with the Dove Creek stabilization project means that we are much less likely to have to face this type of community-wide crisis."

The tributary had been a growing problem for years with walls eroding, but the historic flooding exacerbated issues.

City Engineer Richard Miller had said erosion and crumbling retaining walls were consuming sections of property and the damage would cause further flooding and infrastructure problems if repairs were not completed.

Miller had said the problem starts with retention ponds and runoff from behind the shopping developments along the Route 30 corridor in the town of Amsterdam. Another issue he had identified was ownership and access to the creek, with the city only owning portions passing through roadways.

The stabilization project of Dove Creek begins near the intersection of West Main Street and Steadwell Avenue and extends approximately 1,300 feet to just north of the Steadwell Avenue near the entrance to St. Mary's Hospital.

Cuomo said the funds will "help harden critical infrastructure" in Amsterdam and ensure residents are protected from flooding following severe storms.

"As this region has experienced first-hand, extreme weather is the new normal and we must do everything we can to help communities become more resilient and prepared to whatever Mother Nature throws their way," Cuomo said in a news release.

FEMA's Hazard Mitigation Grant Program allows New York state to establish priorities aimed at increasing resiliency, mitigating the risks of loss and damage associated with future disasters, and reducing hardship, according to the Governor's Office.

The Amsterdam Common Council accepted lead agency status for the State Environmental Quality Review of the Dove Creek reconstruction project in February. The city council also authorized John M. McDonald Engineering to provide assistance with a coordinated review of the project.

Previously, FEMA authorized $182,500 for phase 1 design and engineering for the project.

Eddy County, FEMA Talk Road Damages

By DeJanay Booth

Carlsbad (NM) Current-Argus, September 13, 2016

EDDY COUNTY — Eddy County Emergency Management met with representatives from the New Mexico Department of Homeland Security and Emergency Management and Federal Emergency Management Agency on Tuesday after the county filed for a disaster declaration.

"We put in a declaration for the local disaster (in the county) due to the damages starting Aug. 21. In our area, alone, we had significant damages," said emergency management director Jennifer Armendariz, who filed the declaration on Aug. 24.

Armendariz said Eddy County, FEMA and the Department of Homeland Security conducted a post disaster assessment meeting Tuesday morning. The two agencies will spend a few days assessing the damages and taking photos of the damaged roads and bridges to determine the cost of damages.

On Tuesday, the two agencies visited Dark Canyon, Long Horn and Dillahunty roads.

Armendariz said Dillahunty was still under repair from a flood in 2014. However, the heavy rainfall in August delayed the construction.

The Department of Homeland Security visited Eddy County Sept. 8 to talk about repairs and materials that might be needed moving forward.

Over the next few days, the two agencies will examine other roads and bridges, including Dogtown road.

Armendariz said the Eddy County worked with the Department of Homeland Security to submit a list of repairs and an estimate of the cost of damages. FEMA will evaluate those submission and create a worksheet of damages to compare. Any disagreements are arbitrated.

"(Compensation) all depends on FEMA and what's reimbursable," Armendariz said, mentioning the county's total expenditures are not guaranteed for reimbursement.

Armendariz said FEMA and the Department of Homeland Security visited the county in 2014 to inspect damage from flood waters. Compared to two years ago, she does not believe the cost of damages now will exceed the cost of damages from the flood in 2014.

However, the amount of time it takes to repair the current damages may take just as long.

"The event's over and it takes time to repair the roads," Armendariz said. "It's a long process."

Bryan City Council Looks At Solving Long Term Flooding Issues Around City

By Clay Falls

KBTX-TV Waco (TX), September 13, 2016

BRYAN – The Bryan City Council is looking at long term plans to fix flooding around the city.

Residents are frustrated with their homes being flooded out.

Debbie Hodges loves her house in the Willow Bend area of Bryan, except when her street gets too much rain.

"We've flooded three times in ten years that's quite a lot. That's enough to scare you to death," said Hodges.

She and multiple homes along Burton Creek have flooded in the past.

The last time was in May.

"Never worried about rain, never was scared of it but now every time it rains it's like it comes up this creek gets to a certain level there's no where for the water to go but into these houses and that's very dirty water it could give people very illnesses. There's a lot of things that go along with the flooding other than this flooding and then you've got mass mess to clean up," said Hodges.

Residents along Burton Creek tell us the city is long overdue fixing this problem. They'd like to see things like more clean outs of the creek as well as looking at engineering options.

"About annually every other year we had projects being funded and improvements being done. Some years are larger projects others smaller," said Paul Kaspar, Bryan City Engineer.

Tuesday afternoon the council got an update on mitigation plans. In the coming years the city hopes to spend $800,000 for concrete replacement of lower Burton Creek.

Debbie Hodges's neighbor Hannah Dodge says she hopes to take a buyout after her home was hit hard. The city will consider that for homes with flood insurance.

"We're continuing to work with FEMA on a buyout program so if you are in that consistently flood on a regular basis FEMA's got some programs so the city will continue to work with those and we're continuing to look at flood mitigation," said Mayor Jason Bienski.

"I would be appreciative of anything that they can do or figure out the engineers or whoever needs to do that," added Hodges.

The Bryan City Council did not take any action on the plan Tuesday.

Mayor Bienski tells us he is open to have more meetings and forums for residents to share their concerns.

City engineers tell us they have been doing maintenance on Burton Creek and clearing brush when they can, but say they have to be careful removing too much vegetation or it can create erosion problems.

DHS/FEMA GRANTS

County Receives $74,139 In Federal Emergency Food, Shelter Funds

Orangeburg (SC) Times And Democrat, September 14, 2016

Orangeburg County has been awarded federal funds under the Emergency Food and Shelter National Board Program in the amount of $74,139.

The funds will be used to supplement emergency food and shelter programs in the county.

The selection was made by a National Board, which is chaired by U.S. Department of Homeland Security's Federal Emergency Management Agency. The board consists for representatives of the American Red Cross, Catholic Charities, USA National Council of Churches, The Jewish Federations of North America, The Salvation Army and United Way Worldwide.

Local Emergency Food and Shelter Boards are tasked with distributing funds appropriated by Congress to help expand the capacity of food and shelter programs in high-need areas around the country.

The Local Board for Orangeburg County determines how the funds awarded to the county are distributed among the emergency food and shelter programs run by local agencies as well as any additional funds available under this phase of the program.

Under the terms of the grant from the National Board, local agencies chosen to receive funds must 1) be private, voluntary non-profits with a 501©3 status, or units of government; 2) be eligible to receive federal funds; 3) have an accounting system; 4) practice nondiscrimination; 5) have demonstrated the capability to deliver emergency food or shelter programs; and 6) if they are a private, voluntary organization, they must have a voluntary board.

Qualifying agencies are urged to apply.

Orangeburg County has distributed Emergency Food and Shelter funds previously to CASA Family Systems, The Salvation Army, Cooperative Church Ministries of Orangeburg, New Hope Ministries of Holly Hill and the Cooperative Ministry of North.

Public or private voluntary agencies that are interested in applying for Emergency Food and Shelter Program funds must contact Janie Anderson at 1823 Scott Lake Road, Summerville, SC 29148 or 843-708-3936.

The deadline for applications to be received is Sept. 23.

FIRE GRANTS

Myrtle Beach Fire Department Gets $1M FEMA Grant To Hire New Firefighters

Myrtle Beach (SC) Online, September 13, 2016

The Myrtle Beach Fire Department has been awarded a $1 million FEMA grant to add nine full-time firefighters to its staff.

The Federal Emergency Management Agency confirmed the department was awarded a grant of $1,053,522 through its Staffing for Adequate Fire and Emergency Response (SAFER) program.

Additional firefighters will afford the department the opportunity to dispatch more people to bigger emergencies and provide extra assistance on EMS and ambulance calls, according to a post on the Myrtle Beach City Government Facebook page.

The SAFER grants program was created to provide funding directly to fire departments and volunteer firefighter interest organizations to help them increase or maintain the number of trained, "front line" firefighters available in their communities, according to the FEMA website. The goal of SAFER is to enhance the local fire departments' abilities to comply with staffing, response and operational standards established by the National Fire Protection Association.

The grant will fund the salaries of the nine firefighters for two years, after which the city will be responsible for the cost, according to the city's post.

FEMA Awards Myrtle Beach Fire Department $1 Million For SAFER Program

WMBF-TV Myrtle Beach (SC), September 13, 2016

MYRTLE BEACH, SC (WMBF) – FEMA awarded the Myrtle Beach Fire Department a grant of $1 million for Staffing for the Adequate Fire and Emergency Response (SAFER) program, according to Myrtle Beach's City Government Facebook post.

"The goal of SAFER is to enhance the local fire departments' abilities to comply with staffing, response and operational standards established by the National Fire Protection Association," the post states.

The department will be able to staff nine additional full-time firefighters with the grant.

The $1 million will also allow the department to dispatch more firefighters to emergencies and provide assistance on EMS and ambulance calls.

Elkin Fire Awarded $485K Grant

Elkin (NC) Tribune, September 13, 2016

The recruitment efforts of Elkin Fire Department just received a $485,726 boost this week, thanks to a Staffing for Adequate Fire and Emergency Response (SAFER) grant awarded to the department by the Federal Emergency Management Agency (FEMA).

Capt. Theresa Knops with EFD made the announcement at Monday's Elkin Board of Commissioners meeting, and asked for the board's blessing to accept the grant and for other action related to the grant. For months, the commissioners and town officials have been wrestling with ways to tackle the town fire department's low volunteer numbers.

Notice of the grant acceptance came Aug. 26 to the fire department. The grant is for four years and requires no match in funds from the town, and there is no requirement to continue funding once the grant period has ended, Knops explained.

The grant period will be Nov. 20 of this year through Nov. 19, 2020, and it includes funding to hire a full-time employee with salary and benefits of $58,091 per year to coordinate the grant and recruitment efforts, as well as recruitment of an additional 20 volunteer firefighters with funding of $4,425 per firefighter per year, including funding for personal protective equipment such as helmets, coats, pants and boots, uniforms, physical exams and more.

Other funding in the grant will allow for implementation of a tuition and mileage reimbursement program for those personnel needing to travel to gain certification and education for the positions in the amount of $10,000 per year, as well as the development of an Explorer program in the final years of the grant period which would be designed to build interest among local youth for fire service, with funding for that program at $2,925 per Explorer for 10 youth and includes gear and uniforms.

The final funding amounts will be used to market the desire for new volunteers through social media advertising, website retargeting, radio advertising, television advertising, printed recruitment materials and improvements to the EFD website.

The department's original request in the grant application was for $570,566, but it was awarded at $485,726, Knops explained.

The commissioners unanimously approved acceptance of the FEMA SAFER grant Monday. In addition, the board unanimously approved adjusting the town budget to accept the funds and authorizing the development of the new full-time position to coordinate the grant and recruitment project.

"With such an extensive level of financial support from FEMA, we feel we can make great headway towards keeping our current firefighters invested in the fire department as well as growing our organization to meet current and future needs," said Chief Mike Morton. He recognized Knops and Assistant Chief Don Mitchell for their work in developing the grant proposal.

Nearly 70 percent of America's firefighters are volunteers, reported Knops in a press release Tuesday morning. Nationally, volunteers save communities an estimated $140.7 billion a year. Communities such as Elkin relay on volunteer firefighters as an effective and cost-efficient means of keeping their citizens and visitors safe, she continued. However, the number of volunteer firefighters has declined by over 18 percent nationwide in the past several decades while the number of incidents to which they respond has increased. At the same time, the average age of the volunteer fire service is increasing.

The SAFER program provides funding to fire departments and volunteer firefighter interest organizations to help them increase or maintain the number of trained, front-line firefighters available in their communities, explained the press release. The goal of SAFER is to enhance the abilities of local fire departments to comply with staffing, response and operational standards so that communities are protected from fire and fire-related hazards.

"When emergencies happen, whether they are fires, accident, injuries, or illness, our most important factors in dealing with those emergencies are time and people," Morton said. "The likelihood that we can make a difference increases dramatically when we have enough trained people present to do all that needs to be done, and when we can complete those tasks in a quick and efficient manner."

In addition to the SAFER grant program, the Elkin Fire Department officials also asked the town board for permission to move forward with pursuing the addition of Elkin to Surry County's automatic aid agreement, which would allow Elkin to assist departments outside the town limits and those outside to assist Elkin automatically without having to verbally request assistance for reported structure fires or fire alarms.

A similar agreement was approved by the town board 10 months ago between Elkin and Arlington fire departments, and Morton reported during that time Arlington, which is located in Jonesville, has responded to assist Elkin in 37 incidents, while Elkin has assisted Arlington on eight occasions.

The Surry County agreement would automatically provide mutual aid in a number of layers, with the most immediate fire departments dispatched first, and others being called as the need expanded during an incident, Morton said.

The Elkin commissioners unanimously agreed to allow Elkin officials to further pursue being added to the county's automatic aid agreement, which will require formal acceptance by county and town officials before it is finalized.

Wendy Byerly Wood may be reached at 336-258-4035 or on Twitter @wendywoodeditor.

Members of the Elkin Fire Department, from right, Chief Mike Morton, Capt. Theresa Knops, Assistant Chief Don Mitchell and firefighter Stephen Kelly, are recognized by Mayor Lestine Hutchens as she reads a proclamation recognizing Oct. 6-15 as Fire Prevention Week during Monday night's Elkin Board of Commissioners meeting.

Meriden Awarded Grant To Purchase New Fire Engine

By Jordan Cuddemi

Valley News (VT), September 14, 2016

Meriden — The third time was the charm for Meriden Fire Capt. Jeff LeBlanc.

For the past three years, LeBlanc has applied to the Department of Homeland Security in hopes of landing a grant to replace the department's aging 1980s fire engine.

In 2014 and 2015, LeBlanc's attempts didn't bear fruit; the application he submitted in January of this year did.

The Meriden Volunteer Fire Department last month was granted $328,000 to purchase a new truck through a Federal Emergency Management Agency program that ensures departments are meeting "firefighting and emergency response needs," according to Homeland Security's website.

"It will increase our level of service to residents as well as allow us to provide better service to surrounding towns," LeBlanc said in a recent telephone interview.

The department's 1987 fire engine isn't up to new standards and has become a repair and maintenance problem, LeBlanc said. In addition, the truck is large and hard to maneuver on rural roads.

The new engine, which will have a smaller wheel base that will allow for easier maneuvering, will remedy those issues and more.

"It was getting to the point where the vehicle needed to be replaced," LeBlanc said.

With an annual operating budget of roughly $40,000, LeBlanc said, the department doesn't have much money left over at the end of each year to put into capital reserves for major purchases.

Homeland Security's Assistance to Firefighters Grant Program aims to enhance the safety of the public and firefighters by providing grants for "critically needed resources to equip and train emergency personnel to recognized standards, enhance operations efficiencies, foster interoperability and support community resilience," according to the department's website.

Hundreds of other fire departments received assistance through the program, including 13 in New Hampshire.

Each department must provide a local match to the federal dollars. In Meriden's case, the department must provide 5 percent, or roughly $17,000, LeBlanc said.

The Meriden Fire Department has put together a committee to design a truck suitable for the department. The truck will be special ordered in segments, and LeBlanc said he hopes to have it in the firehouse by next summer.

“Building it takes some time,” he said.

The new truck will join Meriden’s fleet of a ladder truck, an engine and a utility vehicle.Jordan Cuddemi can be reached at jcuddemi@vnews.com or 603-727-3248.

Bucksport Fire Department Receives FEMA Grant For Smoke Detectors

By David Roza

Ellsworth (ME) American, September 13, 2016

BUCKSPORT — September has been a lucrative month for the Bucksport Fire Department.

Last week, the department was awarded one grant from the Federal Emergency Management Agency (FEMA) worth $25,000, and another FEMA grant worth $240,595. That’s a huge sum for the department, which has an annual budget of about $366,000.

Though the smaller grant will pay for new pagers and equipment, the large grant won’t go toward shiny new trucks or turnout gear.

Instead it will pay for a much smaller tool that Fire Chief Craig Bowden thinks is indispensable toward keeping people safe from fire: the humble smoke detector.

“It can help warn people to get out when they need to,” said Bowden, who in 2012 responded to a house fire in Orrington that killed three children and their father. According to the state fire marshal, there were no working smoke detectors in the home.

“When injuries or death may have been preventable with working smoke detectors, it cuts pretty deeply to our people,” Bowden said. “You want to do something about it.”

Through an unofficial survey, the Bucksport Fire Department found that at least 40 percent of homes in Bucksport either didn’t have a smoke detector or didn’t have an operable one.

“The regular smoke detectors you can get for $10 to $15,” said Bowden, adding that batteries for those need to be replaced every six months. “Then for the cost of two batteries a year we’re not protecting our own families.”

If you can’t bring the people to the smoke detectors, bring the smoke detectors to the people. This is the third year in a row Bowden has applied for the FEMA grant, and each application takes over 100 hours of work.

“The guidelines for the grant application are over 100 pages long,” he said. “I probably spend 20 percent of my time doing grant research and grant writing.”

All that work makes a successful grant that much more rewarding, but the real work is yet to come. Now that the department has the money, it has to put out bids for buying 2,400 combination smoke and carbon monoxide detectors: one for every single- and two-family home in Bucksport and Verona Island. Department staff also plan on buying 4,800 smoke detectors to place in those homes’ sleeping areas.

“New regulations recommend one detector outside every sleeping area and one on every level of your home,” Bowden said. “I’ve got 10 smoke detectors in my house.”

Once the department staff buys the detectors, they will spend 10 months installing the 7,800 detectors and giving fire prevention lessons to the 2,400 homeowners in Bucksport and Verona Island.

“Starting in November, we will hit the pavement,” said Bowden, who plans on putting the word out for volunteers to help with the installation and education efforts as November draws closer. “It’s going to be a pretty ambitious goal to complete.”

If some homes already have working smoke detectors, Bowden said they can probably take a few more. The new detectors will last 10 years and they don’t even require a battery replacement every six months.

“We are certainly quite pleased to have been chosen for the award,” Bowden said. “We may never know how many lives this saves or injuries this prevents.”

Beaver Dam Fire Officials Seek Grant To Pay Firefighters At Turnbull Station

By Steve DeVane

Fayetteville (NC) Observer, September 13, 2016

The Beaver Dam Fire Department is seeking a federal grant to help it provide workers for the Turnbull Fire Station, a county official said Friday.

The Beaver Dam fire district board of directors, which oversees fire service in the area, agreed to build a fire station in Turnbull several years ago, after residents there saw their insurance rates increase. Some Turnbull residents became concerned because no firefighters are working at the station, while several paid employees work at the Beaver Dam station.

County officials say the Beaver Dam fire district is the county’s largest, but its least populous. The district encompasses Beaver Dam, Turnbull and two other communities in southeastern Cumberland County.

Cumberland County Emergency Services Director Randy Beeman released a statement Friday saying that he spoke with Beaver Dam Assistant Fire Chief Gary Brock about the situation.

Brock told Beeman that the Beaver Dam Fire Department "has made application and preparation" for a Staffing for Adequate Fire and Emergency Response grant through the Federal Emergency Management Agency, according to the statement.

A FEMA spokeswoman said the agency has not received an application from Beaver Dam Fire Department for a 2015 SAFER grant, which had a March 26 deadline.

Brock did not return a phone message left at the fire station Friday seeking clarification. County officials released a one-sentence statement from Assistant County Manager Tracy Jackson in response to a question about the department's application.

"I received a fax from Gary Brock that indicated they had applied but missed the deadline for the 2015 process," Jackson said.

Applications for the next round of SAFER grants is expected to open this winter, the FEMA spokeswoman said.

The SAFER grant program was created to provide money directly to fire departments and volunteer firefighter interest organizations, according to FEMA's website. The funds are meant to help increase and maintain the number of "front line" firefighters in communities, it said.

The goal of the program is to help fire departments comply with standards developed by the National Fire Protection Association.

Brock said the fire department has no issues related to fire coverage in the area, according to Beeman's statement.

Part-time employees work at the Beaver Dam station from 9 a.m. to 5 p.m. and 6 p.m. to 10 p.m. on weekdays, and from 10 a.m. to 6 p.m. on Saturdays and Sundays, Brock told Beeman.

County officials told the fire district board last year that both stations should be staffed. Sally Shutt, a county spokeswoman, said Tuesday that county officials would prefer that the fire district board have already staffed the substation as previously discussed.

County Manager Amy Cannon said in a Sept. 25 letter to Mike Ake, president of the fire district board, that money from a special fire tax that goes to low-wealth districts should be used to improve response times for emergency calls from 7 a.m. to 7 p.m. An audit of the Beaver Dam district showed that money was being used to pay two firefighters to work during evening hours and on weekends, she said.

"Effective immediately, Beaver Dam (Volunteer Fire Department) must discontinue paying firefighters after 5 p.m. on weeknights and weekends," Cannon's letter said.

Beaver Dam fire officials said earlier this year that they are using money from the district's general fund to pay firefighters who work in the evenings and on weekends.

$1.3M Grant To Bring More Firefighters To Rural Alachua County

WUFT-FM Gainesville (FL), September 14, 2016

Three rural Alachua County communities are set to have an increase in firefighters by the end of the year.

The increase from three firefighters a shift to four will give the responding stations the minimum number of firefighters required by law to immediately go into a burning building when no one's life is in danger. (There are no minimums for when a person is inside the burning building.)

The Alachua County Board of County Commissioners approved the increase in August through a $1.3 million SAFER grant for Alachua County Fire Rescue. The full grant amount will go to hiring one extra firefighter per shift — 12 total — for the Archer, Hawthorne and Waldo communities.

"Lots of things will be done more quickly and efficiently because of the grant," Fire Chief of Alachua County William Northcutt said.

Hiring is ongoing, and the goal is to have the new firefighters start by Dec. 1. All grant money will go toward their salaries and benefits.

SAFER — or Staffing for Adequate Fire and Emergency Response — grants are provided by the Federal Emergency Management Agency. They allow for local fire departments and volunteer institutions to increase or maintain the number of firefighters in their communities, according to the FEMA website.

Alachua County's new grant will last for two years and builds on the one approved in 2014 for the previous two years. Before 2014, certain Alachua County stations had only two firefighters on call.

The Occupational Safety and Health Administration has a policy known as the two-in/two-out rule, which says that firefighters cannot begin interior firefighting until four firefighters are present.

The Archer, Hawthorne and Waldo stations have only three firefighters per shift, meaning that if a fire occurs in their jurisdiction and there is no imminent threat to life, they have to wait for other stations to join them.

"The closest station to Waldo is Melrose, which means it could be a 10- to 12-minute response time," said Harold Theus, Alachua County's deputy fire chief.

A simulation provided to WUFT News by Waldo's fire station showed what the standard procedure is if only three firefighters are available on scene.

The three arrive with a fire engine and a separate tanker truck, which is the main water supply for fighting fires, according to Lt. Misty Woods of the Waldo station.

Woods said firefighters take a 360-degree walk of the area to determine the best spot to enter the building, and they then bring their equipment to that spot. If there is no imminent threat to life in the building, she said, firefighters must wait to enter until another unit arrives.

Theus described the entire situation as "organized chaos."

The difference between having three and four firefighters at a fire, Theus said, could be the difference between saving the building and having it crumble to the ground.

NEWS AROUND THE COUNTRY

HURRICANE RECOVERY

County Looks To Post-Hermine Plan

By Sean Rossman

Tallahassee (FL) Democrat, September 13, 2016

The Leon County Commission adopted measures Tuesday aimed at helping the county through the aftermath of Hurricane Hermine.

The commission gave staff the authority to hold, in conjunction with the city of Tallahassee, a series of community listening sessions to allow residents to give feedback on the preparation and response to Hermine. The commission also approved hiring a consultant to help with FEMA assistance and extended the local state of emergency for a third week.

The county, the city and eligible nonprofits haven't yet applied for federal assistance. Together with the state, they need to pass a 2-part test in order to receive federal assistance. The $10.4 million in preliminary storm damage the city, county and nonprofits have assessed is more than enough to clear the local threshold set by the federal government. The state, which is still compiling its numbers, must exceed about $26.5 million in damage.

The commission opted not to hire a disaster planning professional to help evaluate the county's vulnerabilities, strengths and expectations. Commissioner Mary Ann Lindley asked for the decision to be delayed. Lindley later asked county staff to come up with an incentive program with the city to help people maintain dangerous trees on their property. Numerous limbs and trees fell during Hermine, knocking down power lines and leaving residents without electricity for days and in some cases up to a week.

CHSP

The county also gave final approval for its $1.2 million share of Community Human Service Partnership funds, which will go to various social service agencies next fiscal year.

The commission also voted to continue to collaborate on the CHSP funding process with the city and the United Way of the Big Bend through 2018. The United Way board of directors voted earlier this year to create its own process — separate from the city and county — by which it would review and allocate dollars. The city, the county and the United Way have for years worked together to fund CHSP, which awards local grants to local nonprofits and social service agencies.

Budget

The commission gave tentative approval of its 2016-17 budget and property tax rate with no public comment or discussion.

The $246 million budget including capital and operational spending and is 3.2 percent larger than the current year's spending plan. It includes performance raises of up to 5 percent for county employees, a sidewalk program, funding for festivals and events and economic development incentives.

The county voted to maintain the current year's property tax rate. Under state law, this is considered a tax increase because property values are expected to improve. To avoid the bump, commissioners would have to reduce the property tax rate a little more than 1 percent.

The county will vote on the final budget and property tax rate at their meeting on Tuesday.

Odds and ends

The county also made the following decisions on Tuesday:

Approved using $50,000 in leftover tourism dollars for a concert at Doak Campbell Stadium on Nov. 12 featuring Old Dominion, Tyler Farr and Bobby Bones and the Raging Idiots. The Seminole Boosters, which is hosting the concert, had originally considered Toby Keith, or some other big country act, to play that weekend, but a contract was never signed.

After hearing a status report on the county's Zika fighting measures, the commission scheduled a public hearing to consider an ordinance governing mosquito control.

The commission voted unanimously to rename the Fort Braden Branch Library after Commissioner Jane Sauls, who isn't seeking reelection this year after 20 years on the commission.

The Glenn J. Winuk Humanitarian Service Award was given to Sam Carter, the executive director of Carter's Corner — which provides services to at-risk youth and student athletes.

County Looks For FEMA Help Following Hermine

By Regan McCarthy

WFSU-FM Tallahassee (FL), September 13, 2016

Leon County Commissioners are hiring a consultant to help get funding following Hurricane Hermine. County Administrator Vince Long says filing requests with the Federal Emergency Management Agency, FEMA, can be tricky.

"There have been major rule changes since Hurricane Sandy and we believe that expertise is needed. It's also a reimbursable expenditure," Long says.

Long says the county has exceeded the damage cost required to receive FEMA assistance. He expects Florida to meet the $26-million state threshold required to get assistance from the federal agency.

FLOODS

Local Governments Awaiting Bad News As Assessors In East Baton Rouge, Ascension And Livingston Determine How The Flood Affected Property Values

By Steve Hardy

Baton Rouge (LA) Advocate, September 13, 2016

While tax assessors scramble to figure out how much everyone's property is worth post-flood, small government agencies like suburban and rural fire districts are holding their breath that their budgets won't be gutted.

When the governor declared a flood disaster, the assessor in every affected parish got a letter from the Louisiana Tax Commission reminding them they have to reevaluate property in the flooded areas. The assessors' evaluations determine how much government agencies can expect in tax revenue.

However, the state doesn't lay out a specific procedure for the emergency reassessments. Instead of calculating how much a house is worth, assessors are now concerned with finding out how much value has been lost.

"There's no standard out there that determines … how much of a reduction is warranted," said East Baton Rouge Assessor Brian Wilson.

"This is unprecedented."

Neither he nor Ascension Assessor Mert Smiley have laid out a specific formula for determining taxpayers' new property values. Tuesday, Smiley said his staff has been surveying the damage, and he hopes to publish in a few days a provisional list of the addresses to be reassessed. The assessors said property owners need to keep an eye on the process in case their homes were damaged but not reassessed, or if the new property value gets calculated incorrectly.

In Livingston Parish, Assessor Jeff Taylor is preparing to base the updated assessment on the water height in each house. Buildings that received less than 15 inches will probably get a discount based on one rate, while people above that level will likely get a higher reduction rate since the water will have damaged their electrical system. People who saw more than 4 feet and have to replace additional drywall and cabinets will probably see the highest discount rate of all, Taylor said.

However, his office has not yet determined what those reductions will be. They will be based on the estimated damage price per square foot and multiplied to account for the size of a building, Taylor said.

How long will the reassessment last?

"It's gonna take the time that it takes," Taylor said.

"We're just now getting into data collection. … There's going to be a lot of overtime."

Livingston Parish leaders like fire chiefs are waiting to hear from Taylor to see how much tax revenue they stand to lose, but Taylor said he's still waiting on word from the Federal Emergency Management Agency so he can start assessing the damage.

"I'm extremely concerned," said Brian Drury, chief of the Springfield-area fire district and president of the Livingston Fire Chiefs' Association.

Many local government agencies are completely or mostly reliant on their property tax millages. While a parishwide agency like a sheriff's office or school system may see a drop in property values in some places but not others, in the smaller fire, drainage, school and other hyper-local districts in Livingston Parish, just about every taxpayer flooded.

"I'm trying to stop my spending as much as I can through the end of this year," Drury said.

They'll still perform essential functions, but that new turnout gear is going to have to wait, and anyone who gets trapped in a car after a crash is going to have to rely on 10-to-25 year-old extraction equipment that was scheduled to be replaced.

"That's not gonna happen this year," the chief said.

Like Taylor, the East Baton Rouge and Ascension assessors said they also need FEMA flood data to push on with the reassessments.

None of the three men ventured a guess when asked how much their tax bases may have fallen since the flood.

East Baton Rouge's information technology and mapping professionals late Tuesday released new data comparing the pre-flood tax rolls with their latest stats on properties that flooded.

The city-parish staff looked at assessed property values. The assessed value equals 10 percent of the market value of all land and residential buildings and 15 percent of the market value of commercial buildings.

Wilson has said the city-parish saw a $135 million increase in assessed value between the 2012 and 2016 assessments.

The total assessed value of all the inundated properties is estimated at $723 million.

They won't all be total losses, but some may lose half their property value, at least in the short-term, Wilson said. He and the other assessors said they will have to keep updating the rolls in the coming years as people rebuild and values begin to rise again.

Taylor remarked that this large-scale reassessment will also give his staff a chance to check on properties that may not have been updated in the tax rolls for years. Normal assessments rely on nearby property sales, and in a rural area where land doesn't change hands often, the tax roll can become out of date.

"We're fixing those things. … It is not fair for people that pay their fair share," Taylor said.

The new data from the city-parish is also neighborhood-specific, broken down by U.S. Census blocks. Those units vary in size and population from one to another so they can't be directly compared. However, the map shows some general trends. In nearly every flooded block, most of the property value comes from residences. Some public land flooded around the airport and LSU, and commercial property was prevalent in flood-damaged areas such as those around the Mall of Louisiana and Cortana Mall.

The Tenants Of One Baton Rouge Shopping Center Have Lost Their Leases After The Flood—and An Entire Neighborhood Is Losing The Local Businesses That Helped Create A Sense Of Community

By Stephanie Riegel

Baton Rouge (LA) Business Report, September 14, 2016

The Miller Village Shopping Center wasn't the kind of commercial hub that beckoned you from the street. A modest strip mall built in the early 1990s, it housed a bar, a nail salon, a Chinese restaurant, a GNC and a small dance studio. A Storage Center anchored one side of it, a Rite Aid the other.

If you don't live in the neighborhood and you happened to pass it while approaching the intersection of Old Hammond Highway and Millerville Road, you probably wouldn't have looked twice, unless you needed something at Rite Aid. It lacked the charm of the Antiques District in Denham Springs or the retro chic appeal of Government Street in Mid City. After more than 20 years in business, Hong Kong owners Sandy and Sau Yeung not only lost their business in the flood, but their home also took on seven feet of water. Photography by Allie Appel

But the small businesses that were located in Miller Village meant the world to people who call that part of Baton Rouge home. Until Target and Chili's opened down the street in the late 2000s, little else was around.

For more than 20 years, Hong Kong restaurant was the go-to place for Chinese food, and its bustling take-out business saved many working parents the trouble of cooking dinner on a busy weeknight. Exotica Nails was a popular salon, with cheap quality pedicures and killer foot massages. Big Heads was the neighborhood watering hole, where a clientele of mostly middle-aged guys hung out, drank beer and watched sports on big screen TVs.

Then there was Dance by Trudie, something of an institution in that part of town. Its proprietress, "Miss" Trudie Osterberger, began teaching little Baton Rouge girls to dance in 1967. She'd owned her own studio in Miller Village since 1992. In just a few months, she would have celebrated her 50th anniversary of teaching dance.

"I thought we'd make it to 50 years and then I'd step down and retire," Osterberger says. "We didn't make it."

When the waters began rising in the Capital Region during last month's historic flood, Dance by Trudie was inundated with more than three feet of water. So were the other tenants at Miller Village. Their businesses were ruined, and none of them will be coming back—at least not at Miller Village. A few days after the disaster, the shopping center's owner terminated their leases and began moving forward with plans to redevelop the property.

What will they do now? Where will they go?

"We don't know what we will do," says Vy Nguyen, who ran Exotica Nails, supporting her mother and four siblings with the revenues it generated. "How can we reopen somewhere else? We lost the business, we lost the house and we lost the cars, so there's no money now." Kim and Vy Nguyen aren't sure if they'll be able to reopen their family's nail salon after the flood forced them out of Miller Village. Photography by Allie Appel

The story of Miller Village is one that's playing out all over the greater Baton Rouge area, where an estimated 12,000 businesses—roughly 35% of all businesses in the Capital Region—were located in areas affected by flooding. The majority of them are small businesses, and many have been completely wiped out. Fewer than 20% had flood insurance and, like the Miller Village tenants, some are now finding out that on top of losing their livelihoods they'll have to rebuild somewhere else, if they're able to rebuild at all.

The situation is one of many keeping property and business owners up at night. They're calling their lawyers with questions about the legal, technical and financial issues related to the redevelopment of flooded commercial properties.

But important questions are also being raised about what these losses mean for the future of neighborhoods in the Capital Region. What happens when entire developments of small businesses disappear? What is the cost to the community when its mom-and-pop shops go under?

The answer can't be calculated on a spreadsheet because when a neighborhood loses its locally owned establishments it loses more than a convenient place to get a pedicure or a beer. It loses its sense of community, and the connective tissue that holds people together and binds them to the place they call home. SAVE THE LAST DANCE

Osterberger never thought her studio would flood. She rode out Hurricane Katrina there, as well as Gustav and Isaac. Not once in 24 years had the parking lot even taken on water.

"It wasn't until someone sent me a picture of Millerville late that Sunday night (Aug. 14) did I realize we were under water," she says. "It was so high, we couldn't even get here until (the following) Tuesday." "Miss" Trudie Osterberger would have celebrated 50 years of teaching dance in just a few months, but she has been forced to close her studio instead. Photography by Allie Appel

Osterberger is a petite woman with a sprightly demeanor. She talks fast and exudes energy. She wears her 65 years well, and counts among her former students three generations of Baton Rouge women.

She wasn't much older than some of her students when she landed her first gig teaching dance at a BREC park. Osterberger was only in high school at the time, and for the next 26 years she would teach dance in the BREC system, earning a degree in education from LSU, marrying and raising a family along the way.

In 1992, she decided to open her own studio and rented the space in Miller Village. In its heyday, Dance by Trudie enrolled more than 400 students a year, and every spring it put on a lavish recital at the River Center, one of those three-hour productions with sparkles and lipstick and proud parents snapping endless pictures of 4-year-olds in tap shoes.

"Oh, everybody wanted to come to see their baby up on stage," Osterberger recalls.

The little ones called her "Tutu" and made her pictures, which she proudly hung on her studio walls. They were among the mementos she lost in the flood.

"It was the things the children had given me over the years that meant the most to me," Osterberger says. "It was difficult to put those memories into the trash can. But there's no salvaging very much when there's a flood." THE TAKE OUT

The unprecedented rains that brought on the historic flood of 2016 began late Thursday, Aug. 11. Parts of the metro area began flooding the following morning. At Miller Village, the trouble started that Sunday, and by Monday the floodwaters remained more than three feet high.

By midweek the waters had receded. That's when the manager at Brookwood-Millerville LLC, which owns the shopping center, began notifying tenants their leases would not be renewed. They were told they had 48 hours to get everything out.

The calls came as a shock, though perhaps they shouldn't have: None of the tenants had a current lease with Brookwood-Millerville except Big Heads, and it was set to expire at the end of this month. All the others had been operating under a month-to-month arrangement—in some cases, for years.

Nguyen says she begged for more time. She was tied up at the Federal Emergency Management Agency office registering for disaster assistance when she got the phone call. Her family's home on O'Neal Lane had taken in nearly seven feet of water, and all three of their cars were destroyed. Given what she was already facing, she couldn't believe what the property manager told her.

"She told me the landlord was redeveloping the building so we could not have our space anymore," Nguyen recalls. "She told me, 'If you need to save anything come and get it because we have people coming in, so you need to get everything out.'"

Nguyen panicked. So did Sandy and Sau Yeung, who couldn't understand what was going on. Their restaurant, Hong Kong, had been located in Miller Village for more than 20 years. They'd never been late on their rent. The small operation supported their family, and everything they had was invested in it.

Sau Yeung told the property manger it would take time for him to clear out his space and figure out what to do with the restaurant equipment he hoped to salvage. Unlike the dance studio or the nail salon, he had a heavy commercial oven and refrigerator, and he needed a work crew to help him move them out. But before he could find one, he says, a remediation company hired by Brookwood-Millerville gutted his space and hauled his equipment to the debris heap.

"They just took everything out," says Sau Yeung, who emigrated to Baton Rouge with his wife from Hong Kong in 1994 and opened the restaurant two years later. "This is my whole life. Everything was paid for. They just trashed it. Threw it out." Spanky Torres, Patrick Fewell, Hunter Medlen and Stuart Dickey, from left, salvaged what they could from Big Heads, but the local watering hole was among the casualties of the flood and won't be returning to Miller Village. Photography by Allie Appel

Brookwood-Millerville is owned by Craig Smith, an attorney who declines to comment on the situation at the shopping center. But his attorney, Jeff Barbin, says Smith, too, is a victim of the flood.

Smith owns The Storage Center that anchors Miller Village, as well as two other Storage Center facilities in the area. All three flooded, and Barbin says Smith sustained losses of at least $2 million as a result.

Barbin says Brookwood was fair with the tenants. As for the Yeungs, he says Brookwood-Millerville initially agreed to give them more time to clear out their space, and then secured their permission to remove the equipment.

"The landlord spoke to the tenant on multiple occasions after the flood and asked the tenant to remove all of his equipment so that environmental remediation could begin," Barbin says. "The tenant removed some of his equipment and told the landlord's environmental remediation contractor that the rest could be disposed."

The Yeungs dispute that they gave the remediation company permission to dispose of their equipment. As for the other tenants, Barbin says they were given ample notice, and that the landlord was within his rights to terminate their leases and begin remediating the property.

"Each of the tenants was told that from a practical perspective it was necessary to remove any property which remained as soon as possible to prevent further damage to the center" from the spread of mold, Barbin says. "Each of the tenants was given opportunity to remove possessions that still had some value. Some of the property that was built into the premises became the property of the landlord. However, the landlord still allowed them to take what they wanted."

The Miller Village tenants don't exactly see it that way.

"In the end he didn't have to do it this way," says Stuart Dickey, manager of Big Heads. "He was going to win. Our lease was expired. The others leases already had expired. But there was no need to do it this way." RISING LEGAL QUESTIONS

There are two sides to every story. What's indisputable about this one is that without a lease in place, the tenants at Miller Village have no leverage or legal recourse. And even with a lease in place, it's not entirely clear the Yeungs or anyone else in the shopping center would have been protected.

Some, incidentally, say they had tried to secure new, long-term leases when their old ones expired but were put off by the Brookwood-Millerville property manager or told not to worry about it. Some say they didn't worry about it. Others did. For his part, Barbin says, "most of the tenants were happy with a month-to-month lease and the low rents they were paying."

Whatever the individual circumstances, the situation at Miller Village reflects the kind of nuanced legal questions that have arisen as the floodwaters have receded. Property attorney Charles Landry keeps a copy of the Louisiana Civil Code sitting on his desk these days, so peppered is he with questions about property rights and related disputes in the wake of flood.

"I'm getting hammered on these law school questions I never thought I'd have to deal with," he says.

On the subject of commercial leases, for instance, Landry says they all have different provisions, depending on who drafted them and the terms agreed upon. Some clearly favor the landlord over the tenant. Some even have a clause allowing a landlord to terminate a lease if the cost of repairing a damaged property is more than 50% of the pre-flood value of the property.

If that's the case, then "the landlord can say, 'You're out, you're done,' and not rebuild the building," Landry says. "So even with a lease, a tenant is not entirely protected."

Landry and others say this is just one of the many unfortunate realities business and property owners are waking up to as they turn their attention away from their gutted homes and back to their flooded businesses.

"Some of these folks who have been in business 20, 30, 50 years have worked on a handshake agreement with their landlords," says Dawn Starns, president of the Louisiana chapter of the National Federation of Independent Businesses. "They've counted on their lawyers or CPAs to keep up and they haven't understood it all, so there are a lot of challenges they are facing, especially if they have been in the same location for many years."

The Small Business Administration has set up disaster assistance centers throughout the area to help, offering advice and low-interest loans to home and business owners who need to rebuild. But the response from small businesses has been anemic so far. As of Sept. 8, just $5.4 million—or 7%—of the $214.7 million in loans approved by the SBA went to businesses.

Part of the problem may be that small business owners don't want to take on debt. Yeung, for instance, never borrowed to operate his restaurant. His equipment was paid for, a fact of which he was exceedingly proud. He didn't owe anyone any money.

Part of the problem is also the ambiguity surrounding the amount of money the SBA is willing to loan business that needs to relocate. The SBA disaster loan program will let businesses borrow up to $2 million, but it's vague about whether or not that much is available for business owners who need to move. What happens if they can't find a new space at a comparable price? How do they make the numbers work?

A spokesman for the SBA says the agency makes determinations on a case-by-case basis, and factors into its assessment whether the relocation is voluntary or involuntary. He encourages anyone with questions to meet with an SBA representative at one of the disaster assistance centers the agency has set up in the area.

Starns is giving her members the same advice, though she cannot promise any results.

"These businesses really need to go and sit down with someone and say, 'Here is my business, this is what I do, what are my options?'" she says. "That's what we're telling people to do at this point."

FRAYING THE COMMUNITY FABRIC

But there are larger issues than the details of property rights under the Civil Code or the technicalities of the SBA disaster loan program that the Miller Village story raises. Those issues have to do with the loss a neighborhood sustains when its locally owned businesses are washed away overnight.

Nearly 7,900 businesses in southeast Louisiana shut down in the 18 months following Katrina in 2005. Most of them never returned.

Granted, much of New Orleans in the years since has enjoyed an influx of new commerce and entrepreneurial enterprises, particularly in the neighborhoods that the legions of hip, young investors decided were worth bringing back.

But other neighborhoods never recovered, as much because of the loss of residents as the loss of locally owned businesses.

"When small businesses go under, the fabric of the community is what is lost because the services they provide are not just about the money but about support," says Elizabeth "Boo" Thomas, executive director of the Center for Planning Excellence. "When they go, that sense of belonging, that sense of community is gone."

Starns says NFIB is worried about the future of the area's small businesses, particularly in communities like Denham Springs, where an overwhelming majority of business owners were impacted by the flood. Many of them lost their homes and commercial establishments.

"They're the job creators and the taxpayers," Starns says. "They are the true fabric of the community."

At Miller Village, that fabric is unwoven. Big Heads' three owners say they're interested in reopening somewhere else, but with three flooded houses among them they really can't think about it at the moment.

Hong Kong and Exotica Nails have no idea what to do—or even where to begin.

Dance by Trudie is gone for good. Osterberger says she's too old to start over. It makes her sad, but at least in her case it's not really a financial hardship. She just wishes she could say the same for those who had been her neighbors in the shopping center for so many years.

"I'll be OK," she says. "Some of these other people—Hong Kong, the nail salon—they won't be." One of Denham Springs' beloved local businesses plans to make a comeback after the flood, but the challenges are daunting A local institution since 1953 is gone as a result of the flood, but its spirit lives on through a creative partnership with another well-known retailer

Tomblin To Call Flood Relief Session Next Week

By Phil Kabler

Charleston (WV) Gazette-Mail, September 13, 2016

Gov. Earl Ray Tomblin said Tuesday he plans to call a special session of the Legislature next week to address the state's share of funding for more than $300 million of recovery costs from the June 23 floods in central and southern West Virginia.

"We should have everything ready to go by tomorrow," Tomblin said of the session, which will coincide with regularly scheduled September legislative interim meetings.

Tomblin hopes the Federal Emergency Management Agency will increase its share of the flood recovery costs from 75 percent to 90 percent.

"We're going to continue to push [for] that," he said of seeking the higher share of federal funding. "It's not a guarantee."

That means the Legislature will need to authorize somewhere between $30 million and $75 million of state funding for flood recovery costs, which Tomblin said will likely come from a combination of unspent funds from the 2015-16 budget year and from appropriations from the state's Rainy Day emergency reserve funds.

"Thank goodness we have that," Tomblin said of the Rainy Day funds, a comment apparently intended for legislators who proposed severe raids on the emergency funds to balance the 2016-17 state budget.

During the extended special session on the budget, Tomblin vetoed a plan to raid more than $180 million of Rainy Day funds to close the state's financial shortfall, ultimately agreeing to a budget compromise that took about $70 million out of the reserve funds.

Tomblin said Tuesday afternoon he planned to contact legislative leaders Tuesday evening or today to finalize plans for the special session.

Lawmakers are scheduled to return to Charleston for interim meetings on Sunday, and the interim schedule has blocked out 11 a.m. to 1 p.m. time periods on Monday and Tuesday for the anticipated special session.

Tomblin had put off the special session until school systems in the 12 affected counties — Clay, Fayette, Greenbrier, Jackson, Kanawha, Lincoln, Monroe, Nicholas, Pocahontas, Roane, Summers and Webster — could finalize cost estimates to repair or replace schools.

The cost of repairing damage to state highways from the June 23 flooding is also estimated to be in excess of $55 million.

Tomblin said he expects that the session, which he said will be limited to flood relief, can be completed in a day or two.

"I would anticipate it should be fairly simple," he said.

New Architectural Chapter Begins For University Of Iowa Campus

By Jeff Charis-Carlson

Iowa City (IA) Press-Citizen, September 13, 2016

Ten years ago must have seemed like an opportune time to release a guide to campus architecture at the University of Iowa.

The Old Capitol was set to reopen after five years of post-fire restoration, Kinnick Stadium was completing its renovation and expansion and UI's then newest building — the Steven Holl-designed Art Building West — was winning award after award for its innovation.

That's one of the reasons why UI Press and then UI President David Skorton encouraged the cooperation of Rod Lehnertz — then UI's director of planning, design and construction — and UI art professor John Beldon Scott to co-author "The University of Iowa Guide to Campus Architecture."

"We wanted to show how an institution like a state university can be an important patron of architecture that's significant and adds academic importance to the visual aspect of the campus," Scott said in a phone interview last week.

No one knew at the time that the Iowa River would swell two years later and the resulting flood would do nearly $800 million worth of damage to 20 major buildings on campus — some to the point that they never again opened their doors to the general public.

It took a full eight years — involving countless staff hours negotiating with state legislators, Iowa Homeland Security and the Federal Emergency Management Agency — but UI officials declared earlier this summer that UI is fully recovered from the 2008 flood. The Property and Facilities Committee of the Iowa Board of Regents received its final regular update on UI flood recovery during its meeting last week in Iowa City.

The only deluge this year has been a flood of scheduled open houses and welcome ceremonies for the replacement facilities for Voxman Music Building, Clapp Recital Hall, Hancher Auditorium and the Visual Arts Building. Plans also are underway for similar ceremonies later this year to celebrate the opening of the Stead Family Children's Hospital.

"Those are enormous," Scott said, "and I imagine we're not going to have that many projects of that scale happening so quickly … over the next decade."

It's also hard to imagine, Scott added, any other campus in the country being able to boast a new art school building, performing arts center and music school college building — all designed by world-class architects — coming online at the same time.

"This, of course, is the silver lining in the cloud of the flood," he said. "Because now, after these eight years, the campus is rebounding with an enormous great leap forward."

Thus 2016 seems another opportune time for Scott, now director of UI's School of Art and Art History, and Lehnertz, now UI's senior vice president for finance and operations, to issue a second edition of their decade-old guide with complete information on what is now, and is no longer, visible on the campus skyline throughout the Iowa City and Coralville area.

"The change to this campus will be felt for generations to come," Lehnertz told the Press-Citizen back in 2013.

In addition to the flood-related construction, the past decade also has seen the opening of the Madison Street Services Building (2007), Hope Lodge (2007), the P. Sue Beckwith, M.D., Boathouse (2009), the BioVentures Center (2010), the State Hygienic Laboratory (2010), the Campus Recreation and Wellness Center (2010), the College of Public Health Building (2011), the Pappajohn Biomedical Discovery Building (2014) and the Mary Louise Petersen Residence Hall (2015).

The new guidebook also features descriptions of some buildings still projected or under construction, including the new Elizabeth Catlett Residence Hall (2017) and College of Pharmacy Building (2019).

In addition to the 2013 razing of the flood-damaged Hancher-Voxman-Clapp complex, several other major buildings have disappeared from campus over the past decade

The International Center, built in 1935 and expanded in 1959 as the Law Commons dormitory, no longer sits atop the prominent bluff where Highway 6 and the adjacent railroad turn away from the river. The building was razed in 2008, along with all other remnants of old UI College of Law, to make way for the College of Public Health Building in 2011. Five years later, the college has begun offering an undergraduate major in public health that eventually is expected to bring hundreds of additional students into the building each year.

Quadrangle Residence Hall, built in 1920, was being razed this summer to make way for a new building for the UI College of Pharmacy, which is projected to be completed in 2019. At that point, the college's 1961 building is scheduled to be razed as well. The loss of beds from Quadrangle will be more than made up for when the Catlett Residence Hall opens near the Iowa Memorial Union in 2017.

Oakdale Hall built in 1917 as a tuberculosis sanitarium, was razed in 2011 after the completion of a new state-of-the-art State Hygienic Laboratory. The Oakdale campus in Coralville came under UI's control in 1965, and Oakdale Hall served for three decades as the State Hygienic Laboratory.

Although the scope of changes on campus over the next decade may not be as transformational as the past decade, the UI campus will continue to be a dynamic place.

UI officials hope to have completed substantial construction on a new, $60 million UI Museum of Art building by 2019, the 50th anniversary of the museum on campus. The new facility, to be built adjacent to the UI Main Library, ideally would be far enough along by then to be able to display the most valuable work in UI's collection: Jackson Pollock's "Mural."

UI's former Art Museum Building was damaged in the 2008 flood, but not badly enough for FEMA to agree to cover relocation costs. UI's art collection was removed before the flood, but insurance restrictions and costs have kept the collection from being returned to the building. With the School of Music no longer needing the space as temporary facilities, the museum staff has reoccupied the office portion of the building, and UI officials have yet to announce a new purpose for the building.

It's unlikely that Seashore Hall will be extant by the time a third edition of the campus architectural guide is published. The Iowa Board of Regents has approved plans for UI to construct a new $33.5 million building to house its Department of Psychological and Brain Sciences, which has been housed in Seashore Hall since 1930. Once that facility is completed, UI officials can move forward with plans to demolish the 117-year-old building that initially served as the university's main hospital.

Not all proposed university buildings, however, will make it from the designer's drawing board to brick-and-mortar reality.

Last summer, for example, UI officials received permission from the regents to move forward with plans for a new West Campus Residence Hall to serve the on-campus living needs of student-athletes and the general student population.

That proposed dorm is no longer considered "an active project," Lehnertz said last week.

Kingman County Declares State Of Local Disaster Emergency

KWCH-TV Wichita (KS), September 13, 2016

Monday, Kingman County Commissioners signed a State of Local Disaster Emergency due to flooding.

Signed at the commission meeting, the declaration states that flooding, from heavy rain on September 8, caused or threatened to cause "wide-spread or severe damage, injury or loss of life or property in disaster proportion."

According to the Kingman County Commission, Emergency Manager Fred Simon is working to collect damage estimates from townships. The commission added that most of the damage suffered by townships is to roads, culverts and bridges.

In order to be eligible for assistance from the Federal Emergency Management Agency, the county must meet a public damage threshold of $27,974, according to the county commission. The threshold for the State of Kansas to receive a Presidential disaster declaration is $4,022,896.

This is the second disaster declaration in the past 5 weeks for Kingman County.

On August 8, the county made a disaster declaration, due to flooding. Commissioners said that damage from that event easily exceeded the threshold, topping $100,000. The state threshold was not met.

FEMA discounted claims by other counties, keeping the claim under the state's threshold, disqualifying an additional disaster declaration in May.

Confusion Over FEMA Funding Estimates In Kansas Counties

By Devon Fasbinder

KWCH-TV Wichita (KS), September 13, 2016

KANSAS (KWCH) There's some confusion among emergency managers in Kansas counties, the state and FEMA when it comes to how damage estimates are done after disasters.

Butler County Emergency Manager Tim Schmidt told FactFinder 12 he had heard of some changes from FEMA about how it does estimates for damage after disasters.

"It's harder and harder and harder to qualify for assistance that used to be fairly simple before," Schmidt said.

When counties have natural disasters, they have a certain threshold or dollar figure they have to meet in damages to request assistance. Every county has a different number determined by the population.

If a county needs more than it's threshold, it can go to the state to get more money, though emergency managers tell FactFinder 12 there isn't money from the state to give to local disasters.

The state can then request additional money for counties if it hits it's own threshold or dollar amount, which is $4.02 million. The governor makes the request to FEMA where it is either accepted or denied.

Sumner County Emergency Manager James Fair said it's very rare one county has enough money to meet the state's threshold. Usually, he said, several counties have to have requests to meet that dollar amount for the state to request federal dollars.

In speaking with FEMA, local emergency managers and the Kansas Division of Emergency Management (KDEM), FactFinder 12 learned there is some confusion.

KDEM and the emergency managers said there have been changes to how FEMA does it's damage estimates meaning it's more difficult to get the grants from the agency. In May, the state requested FEMA dollars for a flood and was denied, though the state is appealing the decision.

But FEMA said that's not the case. The agency said there haven't been any changes as to how damage assessments are done. The only change, FEMA said, is who does the assessments.

Before this spring, FEMA said it partnered with the states and local crews to do damage assessments after the states request money. Now, FEMA said it's changed it's policy to give more responsibility to the local agencies since it says those are the people who know their own roads and what it would cost to fix them. But still, no changes to the actual process.

KDEM sent FactFinder 12 documents it said it received around May from FEMA detailing debris and road guidance. KDEM said these are the changes FEMA put into place.

FactFinder 12 sent those documents to FEMA. A spokesperson said she will check to make sure she didn't miss something, but again, said there haven't been any changes to the way damage assessments are done.

We'll update this story once we hear back from FEMA on the road and debris records. Regardless, it's been a confusing change or lack of changes for the parties involved.

FEMA Visiting Flood Damaged Northeastern Iowa

KCHA-AM Charles City (IA), September 13, 2016

Decorah, Iowa – Preliminary estimates of damages to public property in August 24th's flooding are high enough that, beginning Tuesday, four squads of officials from the Federal Emergency Management Agency (FEMA) starting visiting Decorah and Northeast Iowa.

The FEMA inspectors are meeting with state and local officials in an attempt to verify the damage estimates. In Winneshiek County, it's estimated the flooding did $2.4 million in damage to public property. Adding in the figures from Allamakee, Bremer, Chickasaw, Clayton, Fayette, Howard and Mitchell counties produces a total between $4 million and $5 million of damages. In order for the area to be declared a federal disaster area–which would make federal recovery funds available–flooding damages will have to total $4.2 million.

The damage totals do not include damage to private property, which is not considered by FEMA in the possible disaster declaration. The Iowa Homeland Security and Emergency Management agency says 165 private homes and buildings in Winneshiek County were affected by the flooding.

If the FEMA crews believe the August 24th flooding meets the criteria for federal disaster area designation, they will notify the Iowa Governor's Office, which will make the announcement.

WILDFIRES

SBA Offers Loan Assistance To Clayton Fire Survivors

By Elizabeth Larson

Lake County (CA) News, September 14, 2016

LOWER LAKE, Calif. – Thanks to a disaster declaration issued earlier this month, the United States Small Business Administration is making available to Clayton fire survivors – individuals, businesses and organizations – low-interest loans to help with the rebuilding process.

The agency's Disaster Loan Outreach Center is operating out of the first floor parlor at the Lower Lake Historic Schoolhouse Museum, 16435 Main St., from 8:30 a.m. to 5:30 p.m., Tuesdays through Saturdays.

"We're offering the same thing we offered last year during the Valley fire," said SBA spokesman William Koontz.

Koontz visited Lower Lake on Monday, as he and SBA staff fanned out across the state, responding to incidents in Lake, Monterey, San Bernardino and San Luis Obispo counties, and a flood in Ohio.

Koontz said the SBA acted under its own authority to declare the Clayton fire disaster on Sept. 6 in response to a request it received on Sept. 1 from Mark Ghilarducci, director of the Governor's Office of Emergency Services, acting on behalf of Gov. Jerry Brown.

The disaster declaration makes SBA assistance available in Colusa, Glenn, Lake, Mendocino, Napa, Sonoma and Yolo counties, the agency reported.

The process this time around differed from that employed during the Valley fire in that last year the state asked both the SBA and and the Federal Emergency Management Agency to do a damage assessment. President Barack Obama subsequently declared a disaster, which authorized the agencies to offer assistance, Koontz said.

This time, with no presidential disaster proclamation expected, the state asked the SBA to respond and consider the disaster declaration, Koontz said.

Koontz said the SBA has a very simple criteria for making that declaration: If there are 25 homes or businesses damaged in one county, and they have at least 40 percent damage – which is considered major – it's an automatic approval.

The declaration activates the exact same SBA program as was in place during the Valley fire, said Koontz.

The difference is that last year fire survivors first had to apply to FEMA – which is not involved in the Clayton fire response – and then seek out additional help in the form of loans from SBA. If they didn't qualify, they would then be sent back to FEMA for consideration of a grant, Koontz explained.

What's also different for Clayton fire survivors is if they don't qualify for SBA assistance, they won't have FEMA to fall back on but will have to seek assistance from other agencies and organizations, he said.

SBA said businesses of all sizes and private nonprofit organizations may borrow up to $2 million to repair or replace damaged or destroyed real estate, machinery and equipment, inventory and other business assets.

The agency said it also can lend additional funds to businesses and homeowners to help with the cost of improvements to protect, prevent or minimize the same type of disaster damage from occurring in the future.

Disaster loans up to $200,000 are available to homeowners to repair or replace damaged or destroyed real estate. Homeowners and renters are eligible for up to $40,000 to repair or replace damaged or destroyed personal property, the SBA said.

Koontz said the interest rates on the loans change from quarter to quarter.

Interest rates can be as low as 4 percent for businesses, 2.625 percent for private nonprofit organizations and 1.563 percent for homeowners and renters with terms up to 30 years. Koontz said that rate for homeowners is a little lower than it was for the Valley fire, and the lowest he's seen that rate go in some time.

Loan amounts and terms are set by SBA and are based on each applicant's financial condition. Koontz said every case is considered individually.

"We do our darnedest to try to get their loan through the system, but there will be some people who don't qualify," he said.

Koontz said it's free to apply, and no appointment is necessary.

He said the SBA has staff who are expert at helping disaster victims, and can quickly lead them through the application process. He said that process can be completed within 30 minutes. "It's very streamlined," he said, and not unlike getting a bank loan.

Disaster loan information and application forms also are available from SBA's Customer Service Center by calling 800-659-2955 or emailing disastercustomerservice@sba.gov . Individuals who are deaf or hard-of-hearing may call 800-877-8339.

Applications can be downloaded at https://www.sba.gov/disaster . Completed applications should be mailed to U.S. Small Business Administration, Processing and Disbursement Center, 14925 Kingsport Road, Fort Worth, TX 76155.

The deadline to apply is Nov. 7, and he encourages fire survivors to turn in applications, explaining they always can turn the loans down later if they don't need them. He pointed out that many people find out later that the recovery process costs more than expected.

"Our program can lend someone who has insurance for the gap that may occur," he said.

As of Monday, SBA had gotten 11 applications from business and homeowners impacted by the Clayton fire, he said.

Last year, for the Valley fire in Lake County and the Butte fire in Calaveras County, the SBA received a total of 897 applications – 719 for homeowners, 178 for businesses – and issued 287 loans, totaling $25,935,700. That number included 55 business loans totaling $4,499,500 and 232 loans for homeowners amounting to $21,436,200, according to a summary Koontz shared with Lake County News.

Koontz said the SBA does not have a deadline at this point for how long its Lower Lake center will stay open.

ZIKA VIRUS

Funding To Fight Zika Is Not A Done Deal, Senate Leaders Warn

By James Rosen

McClatchy, September 13, 2016

A bipartisan battalion of political leaders from South Florida, Tallahassee and beyond converged on Capitol Hill on Tuesday in an all-out blitz for Zika prevention and research funds.

Democratic Sen. Bill Nelson of Orlando and a half-dozen House of Representatives members from across the Sunshine State appeared at a crowded news conference where they pleaded for Congress to approve $1.1 billion in Zika money after a seven-month impasse over partisan politics.

The full-court press came as Senate Majority Leader Mitch McConnell and Sen. Harry Reid of Nevada, the top Senate Democrat, cast doubt on assertions that a deal had been reached.

"We're continuing on trying to reach an overall agreement," the Kentucky Republican leader said.

"We still don't have an offer in writing from Republicans," Reid said.

Rep. Curt Clawson, a Bonita Springs, Florida, Republican, became emotional as he criticized lawmakers for having failed to pass at least part of the $1.9 billion Zika package President Barack Obama sent Congress in February.

"I'm a conservative Republican," Clawson said. "I support my party. We can't spend $1 billion or $2 billion for babies? Where are our priorities? This is a big moment in the history of Florida."

Clawson added: "By God, if there's one moment that government ought to act and do something, this is the moment. I want to sleep at night knowing I've done everything possible."

In an impassioned speech on the Senate floor, Sen. Marco Rubio, R-Fla., cited Zika cases in Florida and Puerto Rico in calling for congressional action. He accused Republicans of trying "to cut corners on the funding, which will cost us money in the long term." But he also accused Democrats of "inventing excuses, just making it up, in order to oppose it and to do so for political reasons."

Rep. Frederica Wilson, a Miami Gardens Democrat who organized the briefing, said microcephaly, which causes abnormally small brains and heads in newborns, and other birth defects were dire effects of Zika that must be urgently addressed.

"We're talking about the brain of an unborn child," Wilson said. "Even scientists are saying they don't know what will happen to the adult brain. Can you really put a price tag on combating this?"

After arriving in Washington to meet with members of the Florida delegation, Gov. Rick Scott called for an end to the political posturing that has stalled Zika funding.

"I'm here because I think the time for politics is over," Scott told reporters. "We have nearly 800 cases of people who've been tested positive for Zika. We've got 86 pregnant women who've been tested positive for Zika. We have 64 non-travel-related cases in our state."

With the virus having hit Florida harder than any other state, Scott rejected Miami Herald reporting over the weekend that Florida health officials have undercounted the number of Zika cases and withheld information from the public.

Calling the reports "sort of laughable," Scott said: "We have been transparent. We have been timely. We have a good process to get information out. We have done whatever we can to make sure people understand what's going on. We have been working with county health departments and whoever's responsible for mosquito control to make sure that we follow CDC guidelines. So we have done a lot."

Scott, however, criticized the Centers for Disease Control and Prevention, along with the Federal Emergency Management Agency, saying those agencies have been slow to respond to his requests for help fighting Zika.

"The CDC, the Obama administration, has not been a good partner," he said. "It's been almost a month. I've been asking for 10,000 Zika-prevention kits for pregnant women. They don't give them to me. Since June 1, I've asked for a plan to work with FEMA. They haven't given it to me."

The Senate approved a $1.1 billion Zika bill in May. That was less than Obama had requested, but more than the $622 million provided in a separate House measure.

Partisan politics intervened when the two chambers appointed a conference committee to produce unified legislation, and the funding languished over the summer.

Rep. Alan Grayson, an Orlando Democrat who lost his primary bid to run for the Senate, said the amount of money sought by Obama to fight Zika paled in comparison with defense spending.

"He's asking for $1.9 billion," Grayson said. "That's what we spend on the U.S. military every single day. At this particular point in time, Zika is a far bigger threat to Floridians than the Islamic State."

Despite the bipartisan push for Zika funding, Grayson took a shot at Scott's handling of the health crisis.

"We appreciate the governor being here, but the governor should reverse some of the damage he's already done – a 40 percent cut in mosquito control (funding) and zeroing out the budget for our own (state) research."

Scott Blasts Nelson, Obama For Not Doing More About Zika

Fort Myers (FL) News-Press, September 13, 2016

WASHINGTON – Florida Gov. Rick Scott lashed out at the Obama administration and Democratic Sen. Bill Nelson on Tuesday for not doing more to help the state combat Zika.

"The time for politics is over," the Republican governor told reporters on Capitol Hill, accusing Democrats of inaction on the growing crisis.

He said Nelson "turned his back on Florida citizens" by joining other Democrats last week in blocking a GOP Zika funding bill that included unrelated provisions they oppose.

Scott also took aim at administration officials, saying they didn't move quickly enough to meet the state's request for resources to battle Zika.

"The Obama administration has not been a good partner," he said. "It's been almost a month, I've been asking for 10,000 Zika prevention kits for pregnant women. They don't give it to me. Since June 1, I've asked for a plan to work with (the Federal Emergency Management Agency). Haven't given it to me. The White House has not been a good partner."

The White House responded that the department of Health and Human Services has provided Florida with more than $35 million that can be used for Zika-related activities. In August, Florida received materials for an additional 6,300 lab tests, in addition to the 2,000 already provided.

The Center for Disease Control also has provided on-site technical consultation to Florida's public health laboratories, enabling them to substantially increase testing capabilities, according to the White House.

Nelson, through a spokesman, scolded Scott.

"Just as we're about to reach a deal to pass a clean emergency Zika funding bill, the governor chooses to fly up here and stir things up politically," the senator said. "He should know better. This is a serious situation, not a time for partisan politics."

Scott was in Washington to pressure lawmakers to come together on a Zika funding bill. Federal health agencies say they're about to run out of money for vaccine development, mosquito control and Zika testing and preparation kits.

Obama first asked for $1.9 billion in February.

The governor met with Republican Sen. Marco Rubio Tuesday afternoon and was to meet with House Speaker Paul Ryan of Wisconsin later in the day. He's scheduled to meet with more lawmakers Wednesday.

His comments contrasted sharply with remarks from Democratic and Republican Florida lawmakers, including Nelson, who spoke of a bipartisan Zika effort during a news conference earlier Tuesday.

"We need a clean solution to a messy problem," said Rep. Curt Clawson, the Bonita Springs Republican who helped organize the news conference. "Florida's going to be the front lines of this battle. If we don't stop it in the beachhead in Florida, this is going to spread north and around our country."

The number of Zika cases in Florida is approaching 800, including 86 involving pregnant women.

Senate leaders from both parties reported some progress Tuesday on a $1.1 billion compromise. But the House, which passed a much smaller bill in May, would have to go along.

Attempts to pass Zika funding in the Republican-controlled Congress have been blocked by Democrats who object to hot-button policy riders, including barriers to contraception, the display of the Confederate flag at national cemeteries, and laxer environmental standards for pesticides.

Even if Congress passes a bill before they recess later this month, the delay has already taken a serious toll by most accounts.

It's possible the uncertainty in funding has slowed development of a vaccine that's at least 18 months away. And Florida has had to step in to pay for testing kits and mosquito spraying.

"We should have acted immediately," Rep. Alan Grayson, D-Orlando, said Tuesday at a news conference on Capitol Hill where bipartisan lawmakers from Florida gathered to push for Zika funding. "Now we have a second threat — the economic threat. The sense that people are not going to want to come to our beautiful state any longer if they fell it threatens their health."

In a Kaiser Family Foundation poll released last month, 48 percent of those surveyed said they wouldn't be comfortable traveling to places in the United States where people have been infected by Zika, such as parts of Florida.

Gov. Rick Scott Heads To DC To Garner Support For More Funding To Fight Zika

By Lorena Inclan

WJAX-TV Jacksonville (FL), September 13, 2016

There are now nearly 800 Zika cases in Florida, including six new non-travel related cases in Miami-Dade County.

Duval, St. Johns, Clay and now Nassau County have reported travel-related cases, putting them on the list of counties that are under a Public Health Emergency declaration.

The virus is not only a concern for families but; it's also impacting Florida's tourism industry.

Gov. Rick Scott said in Jacksonville on Tuesday that the Zika crisis isn't unique to Florida but he feels like Florida is in the fight alone.

"I'll be going to DC and asking them to be a partner. The president and Congress have to show up," Scott said. "I have asked and requested the CDC ...

right now we need 10,000 more Zika-prevention kits for pregnant women."

Scott said Florida is already offering pregnant women free assessment testing at county health departments at the state's expense but he said the state needs more resources.

"I had the opportunity to put emergency funding that put $26.2 million up so far. We'll put more money up if we need to fight" the virus, Scott said.

Yulee resident Dorothy Shores was surprised to learn Nassau County reported a travel-related case.

"From what I see on TV, we need more help," Shores said.

Of the nearly 800 Zika cases in Florida, 70 were acquired in the state and 86 of them involve pregnant women.

"It's frustrating the federal government has not been a good partner," Scott said. "I've also asked FEMA for a plan to work with them when we had non-travel related cases. That's been since June 1 and I still haven't heard back."

Scott met with Speaker Paul Ryan, Sen. Marco Rubio and Rep. Ted Yoho on Tuesday.

The U.S. Department of Health and Human Services is also sounding the alarm, saying that without more funding from Congress it'll have to slow down or stop efforts such as vaccine development and mosquito-control work.

Senators Bill Nelson and Marco Rubio have criticized Congress for playing politics with the public health crisis.

"Whether the federal government does their part or not, the state's going to do its part," Scott said.

Scott is expected to meet with Senate Majority Leader Mitch McConnell on Wednesday as well as members of the Florida delegation before returning to Florida.

OTHER FEMA NEWS

EMERGENCY PREPAREDNESS

Disturbance Along Florida's Northeast Coast Given 40 Percent Chance Of Development

Tampa Bay (FL) Times, September 13, 2016

Gov. Rick Scott is urging Floridians to prepare as Tropical Storm Julia hits the state's eastern coast.

The system rapidly intensified Tuesday, going from no chance of developing into a tropical depression or storm over the next five days at 8 a.m. to being declared a tropical storm at 10:30 p.m., according to the National Hurricane Center.

"As we know in Florida, storms can quickly develop, bringing severe weather to our state in a moment's notice," Scott said in a news release. "Just as with Hurricane Hermine, I encourage Floridians to get prepared and visit FLGetAPlan.com."

The northeastern coast of Florida between Daytona Beach and the Florida-Georgia border will see heavy rain, thunderstorms, with tropical-storm force winds and rip currents through today, according to the National Hurricane Center.

Julia's sustained winds were about 40 mph, as off 11 p.m. The storm is expected to weaken to a depression by late today.

Isolated tornadoes are possible in Central Florida, said Jerry Combs, a meteorologist with the National Weather Service in Melbourne. A confirmed tornado touched down in southeastern Brevard County on Tuesday, he said.

The Orlando area has a 70 percent chance of showers and thunderstorms today.

"Expect a lot of good, beneficial rainfall," Combs said.

The National Hurricane Center expects heavy rainfall of 3 to 6 inches over the Interstate 95 corridor over the next several days.

Waterspouts are possible, and there also is the potential for heavy rain for portions of the Florida Panhandle. Strong, gusty winds and heavy rains are expected to move over Central and North Florida overnight.

Meanwhile, farther out in the Atlantic, Tropical Storm Ian was churning in its second day. Whereas Ian's maximum sustained winds on Monday were 40 mph, on Tuesday afternoon they were 45 mph, according to the National Hurricane Center.

The storm, which was about 800 miles southeast of Bermuda on Tuesday afternoon, posed no threat to land, the hurricane center said.

In the Pacific, Hurricane Orlene continues to weaken, with maximum sustained winds of 85 mph.

Torres Administration Comes Up With Joint Typhoon Plan

By Jon Perez

Saipan (MNP) Tribune, September 14, 2016

The administration of Gov. Ralph DLG Torres has come up with a CNMI Catastrophic Typhoon Plan, a general public information and warning fact sheet that will be followed by agencies that are first responders and are involve in times of typhoons.

The primary purpose of the fact sheet, put together by the CNMI Joint Information Center, is to support a joint analysis of a Category 4 typhoon response for public information and warning. It describes in detail the impact of a catastrophic typhoon in the Commonwealth.

Last year, Saipan was not prepared to handle Typhoon Soudelor as it pummeled the island, with its tornado-like winds downing power poles and destroying houses.

The fact sheet also describes in detail how to deliver basic information and guidance to the public during times of disaster. For example, most government agencies do not have public information officers and they must have a back-up plan or train someone.

“Disaster public information requires special attention and coordination on the process of preparation and dissemination. Information that concerns an emergency situation affecting the general public must be accurate and timely,” said in the fact sheet.

Providing accurate, coordinated, timely, and accessible information to the public—including the media; newspaper, television, and radio—government officials, and the private sector is a requirement.

“Life-saving and life-sustaining information must be coordinated among local, territory, and federal stakeholders, and be accessible to individuals with disabilities, others with access, and functional needs; those from diverse religious, racial or ethnic.”

The governor’s press secretary’s office will be the lead agency that is responsible in providing the public the information and warning activities for the CNMI. The Department of Homeland Security and the local Federal Emergency Management Agency through the FEMA office of external affairs will be its counterpart.

The CNMI’s Homeland Security Emergency Management Emergency Operation Center will activate the public information plan with the staff of the Commonwealth’s PIO tasked to provide the Governor’s Office updates and other information.

The contents of the fact sheet were gathered from input from different agencies that became part of JIC last year. It is a joint catastrophic plan that would help prepare the CNMI in future disasters like typhoons, earthquakes, volcanic eruption, tsunami, and even civil unrest.

Government agencies need to know its basic responsibilities before, during, and after disasters like evacuation plan, responding to emergencies, and how to address the issue on hazardous materials or other wastes. Releasing accurate information before and after a disaster is important.

Federal Grant Will Fund Research To Better Respond To Drought (AUDIO)

By Brent Martin

Nebraska Radio Network, September 13, 2016

University of Nebraska researchers will use a nearly $300,000 federal grant to help policy makers better prepare to respond to drought.

The National Oceanic and Atmospheric Administration $284,588 grant will finance two years of research to create a web-based tool to help governments make drought-related decisions.

Senior Research Director Denise Bulling with the University of Nebraska Public Policy Center says policymakers don’t always connect drought with emergency response.

“Hopefully, this will bridge that gap between what’s happening in water resource planning and what’s happening in traditional emergency response planning,” Bulling tells Nebraska Radio Network.

Bulling says researchers hope to bridge that gap between traditional emergency response planning and resource planning by using the Federal Emergency Management Agency planning process that incorporates realistic impacts of a long-term drought. The challenge, she says, is wading through all the data available and the numerous tools which have been developed to decide what is useful and what is not.

Climatologist Deborah Bathke at the National Drought Mitigation Center at UNL says researchers will explore a way to tie together the FEMA planning process with the drought risk management tools available at the center.

Two years of data drawn from the Platte River Basin will be used to create the model.

Bathke says those who would use it will be consulted.

“The exact form and what that tool looks like will depend on the feedback and the interactions that we have with stakeholders in the region and in response to what they’re needs are,” Bathke tells us.

Bathke says this web-based tool will not be something developed in a laboratory, but resources will be taken into the field, tested, and refined to be useful to policymakers.

The grant comes from the NOAA Sectoral Applications Research Program. Researchers hope to build a tool that can be used throughout the country to plan for and respond to water-related disasters.

The research team also includes Lisa Pytlik Zillig, senior research manager at the Public Policy Center; Crystal Stiles, applied climatologist and postdoctoral research associate at the High Plains Regional Climate Center.

NATIONAL PREPAREDNESS MONTH

DAVE ROBINSON: September Is National Preparedness Month

By Dave Robinson

Harrison (AR) Daily Times, September 13, 2016

According to the Federal Emergency Management Agency (F.E.M.A.) National Preparedness month began on Sept. 1. Each week of the month carries its own theme. Topics like Preparing Family and Friends, Preparing Through Service, and finally, Individual Preparedness. The central theme is "Don't Wait. Communicate, Make Your Emergency Plan Today." Check www.ready.gov for an overview of all the opportunities to participate.

This current week (Sept. 11-17) puts the emphasis on involvement through community service and coordinating your plans with neighbors. Opportunities such as Community Emergency Response Team (C.E.R.T.), Citizen Corps or the Youth Preparedness Council offer plenty of outlets for contributions at the community level.The week of Sept. 18-24 emphasizes Individual Preparedness and offers a new app for your smartphone featuring weather alerts, disaster resources and safety reminders. The final week, Sept. 23-30 is billed as a Lead Up To A National Day Of Action. Participants are encouraged to organize a preparedness activity, register it on ready.gov/prepare and then share photos and stories of how your activities made a difference.

Also scheduled for Sept. 30 is National PreparAthon! Day. The goals of this and similar events are to increase the number of folks who are aware of what type of disasters can strike their local community, what to do to be safe and mitigate damage and how to increase their preparedness level so the effects of a disaster are minimized. Community resilience planning is also on the agenda. Opportunities to sign up for individuals and organizations are posted on the website as well. F.E.M.A. has come a long way since Hurricane Katrina and their website is an excellent resource for all types of disaster planning and information.

As usual send your questions and comments disasterprep.dave@gmail.com. Previous columns can be found on my blog at www.disasterprepdave.blogspot.com.

Dave Robinson is the Postmaster in Bandon, Oregon, and the author of "Disaster Prep For The Rest Of Us," available on Amazon.com, Barnes and Noble and other online booksellers.

Local Mobile Apps Make Emergency Preparations Easier

Batavia (NY) Daily News, September 14, 2016

September is National Preparedness Month. In our area, we generally think of snow- and ice-related emergencies, however, it is also important to be ready for threats caused by flooding, high winds, earthquakes, fires, chemical spills and infectious diseases.

Thankfully, getting prepared for all types of emergencies is made easier with the assistance of mobile apps like Ready Genesee, Orleans Aware and FEMA. These apps are similar in nature in that all connect consumers to weather alerts, planning features and information on available shelters. Apps like these are user-friendly and give consumers the tools to take part in their own preparedness, which will positively impact the outcome of any emergency.

If you live, work, or visit Genesee or Orleans Counties, download the Ready Genesee and Orleans Aware apps, available on Apple and Android devices, as well as in English and Spanish, too.

"The Emergency Management Offices and Health Departments in both counties teamed up to have these apps made available in an effort to have a local focus," said Bill Schutt, deputy coordinator of Emergency Management Services. "County officials can use this app not only to get information to users before, during and after emergencies in a more direct and modern way, but also to share knowledge on a regular basis, too. Since Ready Genesee and Orleans Aware became available to download earlier this year, the counties have utilized the apps to notify users of road closers, a boil water notice, a gas leak, rabies clinics, as well as sharing of informational articles on the recent drought, Zika virus, Lyme Disease and lighting safety. If you don't travel to either county, the FEMA app is a good, reputable option, too, but it is important to note that users will not receive notifications or general information from their county officials.

Features of Ready Genesee and Orleans Aware:

- My Plan — By answering five simple questions, the app will create a customized emergency supply checklist and plan based on your family's needs, including pets and relatives with special needs.

- Alerts — Get information from the National Weather Service and local county officials. Local officials can instantly inform you of situations including, but not limited to, road closers, evacuation notices, boil water notices, gas leaks, an active shooter or missing persons.
- My Status — With the push of a button let friends and loved ones know "I'm Safe" or "I Need Help."
- EvacMap & Shelters — Find evacuation routes and shelters with on and offline mapping.
- Need to Know — E-books on various topics including Public Health Emergencies, Need to Know Preparedness for Pet Owners, Emerging Infectious Diseases, Floods and Fire Safety.

"The full potential of these new apps will be recognized more so as different emergencies arise, and I predict that utilization will increase, too," said Al Cheverie, public health emergency preparedness coordinator for Genesee and Orleans. "After downloading your app, please take the time to collect the emergency supplies for your home and car. Being ill-prepared for a situation where you are unable to leave your house or car can be dangerous if certain supplies such as necessary medications, blankets, food and water aren't on hand.

To download the apps, visit Ready Genesee or Orleans Aware: http://eocready.com/counties or FEMA: https://www.fema.gov/mobile-app.

For information about Health Department services contact:

- Genesee County Health Department: 344-2580 ext. 5555, www.co.genesee.ny.us/departments/health/index.html. Visit Facebook at Genesee County Health Department and Twitter at GeneseeCoHealthDept.
- Orleans County Health Department: 589-3278, www.orleansny.com/publichealth. Visit Facebook and Twitter: the user name for both is OrleansCoHealth.
- Wyoming County Health Department: 786-8890, www.wyomingco.net/health/main.html.

"Don't' Wait, Communicate" FEMA Says Make A Plan Now For An Emergency

By Alex George

WKBN-TV Youngstown (OH), September 13, 2016

YOUNGSTOWN, Ohio (WKBN) – September is National Preparedness month and the Federal Emergency Management Agency is encouraging families to make a plan and be informed in the event of an emergency.

"Don't Wait, Communicate. Make Your Emergency Plan Today"- is the theme this year. Mahoning County EMA Director Dennis O'Hara said it's important to understand the types of emergencies that can impact anyone – flooding, tornadoes, severe thunderstorms and power outages.

"You want to have supplies on hand for 72 hours. That's a gallon of water per person per day for three days and non-perishable food items such as granola bars and protein bars," O'Hara said.

O'Hara also recommends having blankets, a whistle and flashlight on hand.

It's also important to know the unique needs of your family members, including children, the elderly and pets when making an emergency supply kit, and make sure everyone knows how to send a text message.

"In a large-scale disaster, often times the first thing that fails would be the phones and they are jammed up because everyone is trying to make a phone call and you just can't get a signal," O'Hara said. "But often times a text message will go through, so just learn to text and say I'm okay, this is where I am."

O'Hara also suggests making an emergency plan and confirm that everyone knows how to get out of the house, where to meet, and any contact information for other family members and emergency services. Once a plan is set, practice it.

CITIZEN CORPS

Aspinwall Team To Help In Large-scale Emergencies

By Tawnya Panizzi

Pittsburgh Tribune-Review, September 13, 2016

Aspinwall is recruiting for a new Community Emergency Response Team, or CERT, that would aid first responders in a large-scale incident.

Examples include communicating with residents or conducting light search and rescue, said Andy Marsh, the borough's emergency management coordinator.

A lieutenant with the Aspinwall Volunteer Fire Department, Marsh is in his 36th year as an emergency service provider.

"I am trying to better prepare our community," Marsh said. "CERT is community-oriented and enables members to help rebuild and recover from incidents like a super storm, flash floods or major fires. It takes a community to rebound from a tragic and unfortunate incident."

CERT teams can help with evacuation and shelter operations, first aid, traffic control, damage assessments, debris removal and multi-municipal strategy.

Marsh already has trained about 10 volunteers, who underwent 24 total hours of class to learn skills in fire extinguishing, lifting and moving victims, CPR, disaster psychology and incident command systems.

Borough Manager Melissa Lang said Aspinwall always has been a town where neighbors help each other. The CERT team will be an advantage, because volunteers will have an established plan to augment professionals, she said.

"The CERT volunteers will add knowledge and resources to our community in order to better prepare and react to an emergency situation," she said.

CERT was introduced in California in the 1980s, Marsh said. Training is recognized by both the Pennsylvania Emergency Management Agency and Federal Emergency Management Agency.

With their extensive training, CERT teams help a community prepare for incidents that can tax the efforts of firefighters, paramedics and police officers, Marsh said.

"For our purposes in Aspinwall, the intention is to help our first responders," he said.

The team also will be called on to assist with communication, when phone and power outages occur during a large-scale emergency.

Already, members of the team have had a taste of life as a responder. During a water main break this summer, Marsh and his team gathered at the VFD No. 2 firehouse at the top of Center Avenue to distribute water bottles.

Marsh said emergency response is determined by each local municipality. He expects to offer ongoing training for new members and continuing education for current members.

"It is my expectation that this team will grow," he said. For more information, email Marsh at aspinwall ema@gmail.com.

Surprise Tropical Storm Julia To Drench Coastal South Carolina

By Jason Samenow

Washington Post, September 14, 2016

Out of the blue, a tropical storm was named over northeast Florida on Tuesday night. Now it could unload flooding rains in coastal South Carolina as it stalls over the region.

The storm, named Julia by the National Hurricane Center, stunned meteorologists by forming over land — about five miles west of Jacksonville — rather than water.

"The center has not spent any time over water, and probably never will. This is extraordinary, and from what I can tell, unprecedented," says Brian McNoldy, Capital Weather Gang's tropical weather expert. "While there are dozens of examples of tropical cyclones forming inland near a coastline (Agnes in 1972 over the Yucatán Peninsula and Leslie in 2000 over northern Florida are two examples), they eventually tracked over water and strengthened."

Capital Weather Gang contributor Phil Klotzbach says Julia became the first tropical cyclone on record to form over land in Florida. He told USA Today that the last storm to develop over land anywhere in the United States was Tropical Storm Beryl, which formed over southeast Louisiana in 1988.

Because of weak steering currents, Julia is forecast to meander near the Georgia and South Carolina coastline for days. Weak, slow-moving tropical storms are notorious for producing torrential rainfall, and that is the primary concern with Julia.

The National Weather Service has placed the area from roughly Georgetown, S.C., to Savannah, Ga., including Charleston, in a moderate risk zone for excessive rainfall. Its discussion qualifies the rainfall risk some, noting the most intense thunderstorm activity so far has remained offshore but cautions that some heavier activity could still soak the coast:

> Thus far the deep and persistent convection has remained to the east and southeast of the circulation center … favoring the warm waters … and showing some reluctance to move onshore. Without any strengthening of the cyclone this may remain the case … with the heavy rainfall not quite wrapping around

the north or northwest side of the circulation. Still … the track of the system as a whole shows enough of a northward component to likely bring steady tropical rainfall and some embedded heavier elements onshore.

The National Hurricane Center's rainfall forecast calls for three to six inches of rain along the South Carolina coastline south of Georgetown, and two to four inches around Savannah. Isolated totals of 10 inches are possible, it says.

The areas expected to receive the heaviest rainfall have not received much rain in the past 30 days — only about half of what's normal — which will help slow the onset of flooding.

Any flooding in coastal South Carolina is unlikely to rival the historic event in early October when up to two feet of rain fell in central Charleston County, and Charleston had its wettest day on record.

Although Julia's formation over land is a meteorological oddity, it is not a requirement for the center of a tropical weather disturbance to be over water to develop into a storm. As long as its circulation is in contact with the ocean, it can tap moisture and organize.

Also, in some instances, storms have shown the ability to maintain their intensity or even strengthen passing over saturated or swampy land areas — which they can draw moisture from, sometimes referred to as the "brown ocean" phenomenon.

UPDATE 5-Storm Julia Threatens Flooding In Coastal South Carolina

Julia Weakens To Tropical Depression Off US East Coast

By Bruce Smith

Associated Press, September 15, 2016

CHARLESTON, S.C. (AP) — Julia has weakened to a tropical depression off South Carolina after bringing steady rains, but not the torrential downpours and widespread flooding that had been feared, to the coast of the Southeast from Florida to the Carolinas.

The depression's maximum sustained winds early Thursday had decreased to near 35 mph (56 kph) with little change in strength forecast over the next two days. The National Weather Service forecast that most of the rain would now remain out at sea.

As of 5 a.m. EDT, Julia was centered about 60 miles (96 kilometers) south-southeast of Charleston. The storm was forecast to meander and then dissipate offshore in the next few days.

Flood watches were dropped for the South Carolina coast Thursday although forecasters issued a small craft advisory for waters near the shore and said there was a danger of rip currents along the coast through Thursday evening.

Street flooding that came about the time of high tide late Wednesday caused a handful of downtown streets in Charleston to be closed. All the streets had reopened by rush hour Thursday morning and the pavement on major arteries leading into town were dry.

Many areas along the South Carolina coast saw more than 2 inches of rain during the storm on Wednesday, but nowhere near the 6 to 8 inches that had earlier been forecast.

Forecasters had issued flood watches, concerned about additional rains coming less than two weeks after Tropical Storm Hermine sloshed across the state. That storm brought from 3 to 6 inches of rain but mainly in areas of the Midlands farther inland.

Meanwhile, a new tropical depression formed far out over the Atlantic and is moving west. The depression's maximum sustained winds are near 35 mph (56 kph) with little change in strength expected over the next two days. It's centered about 365 miles (587 kilometers) west-northwest of the Cabo Verde Islands.

Elsewhere, Tropical Storm Ian is moving north in the central Atlantic but is no threat to land.

Julia, Off S.C. Coast, Weakens To Tropical Depression

USA Today, September 15, 2016

COLUMBIA, S.C. — Tropical Storm Julia has weakened to a tropical depression off the coast of South Carolina and Georgia, the National Hurricane Center in Miami said Thursday morning.

The storm, located about 60 miles south-southeast of Charleston, S.C., has maximum sustained winds of 55 mph.

Julia is expected to linger off the coast of Georgia and South Carolina for the next few days, the hurricane center said.

The storm system continues to drop rain along the South Carolina coast.

According to the hurricane center, additional rainfall of less than an inch is expected across coastal parts of South Carolina and southeast North Carolina into Friday.

There are no watches or warnings associated with the system.

Minor storm damage from Julia was reported in several Florida coastal communities, including Mayport, Neptune Beach and St. Simons.

St. Simons Island set a record for rainfall Tuesday, recording 4.43 inches, easily surpassing the old record of 2.03 inches, according to the National Weather Service.

Meanwhile, the National Weather Service in Melbourne, Fla., confirmed an EF-0 tornado touched down in southern Brevard County, Fla., on Tuesday. It had an estimated peak wind of 75-85 mph. The tornado was on the ground for 3 miles.

No injuries were reported, but there was some damage.

Louisiana, Florida Governors Take Different Approach On Aid

By Andrew Taylor

Associated Press, September 15, 2016

WASHINGTON — It's a tough time for a governor to come to Washington, hat in hand, to ask for billions of dollars for a hard-hit state, especially with Congress in the midst of election-season dysfunction and dominated by tightfisted tea party Republicans.

But Gov. John Bel Edwards is back for the second straight week, pleading for almost $3 billion to help Louisiana rebuild from last month's devastating floods, undeterred by warnings that he should keep expectations low. This is, after all, not the same Congress that voted for $60 billion in the span of a week after Hurricane Katrina slammed Louisiana in 2005.

"What I was told to expect was that there would be a tremendous difference in the way I'm perceived than what would have happened after Katrina because even disaster recovery funding seems to be caught up in partisan gridlock, whereas that was never the case before," Edwards said in an interview. "But that has not been my experience thus far."

Congress was generous in approving $95 billion to help Louisiana, Mississippi and Texas rebuild after Katrina. Funding to help the Northeast after Superstorm Sandy four years ago was a much more difficult lift, with the bulk of President Barack Obama's aid request opposed by House Republicans. More recently, GOP conservatives have been slow to embrace the need for $1 billion or so to battle the mosquito-borne Zika virus.

Edwards, a first-year Democrat, has teamed up with the Pelican State's GOP-dominated delegation behind a drive to add Louisiana flood aid to a short-term, government-wide spending bill that Congress needs to pass to avoid a government shutdown in a little more than two weeks. Louisiana is known for rough-and-tumble politics — Edwards handily beat GOP Sen. David Vitter in last year's gubernatorial race — but the rival sides are united now.

"We've all been working really well together to stay focused on helping people get back in their houses, and that's where our focus needs to be," said Rep. Steve Scalise of Louisiana, the No. 3 Republican in the House.

Edwards wasn't the only governor in Washington this week. Another visitor, GOP Gov. Rick Scott of Florida, met with top Republicans on Zika aid on Tuesday and Wednesday — and was spitting fire at Democrats for holding up a GOP-drafted measure to fight the virus, which can cause grave birth defects and is spreading in Florida. But Scott arrived just as the long-stalled Zika measure appears about to break free.

Scott said Democratic Sen. Bill Nelson of Florida had "turned his back on Floridians" by supporting a filibuster of the measure over a controversial provision targeting Planned Parenthood.

"This is about pregnant women and developing babies and he said, you know, that he was going to play politics instead," Scott said.

Sen. Marco Rubio, R-Fla., who joined Scott at a meeting with Majority Leader Mitch McConnell, R-Ky., went out of his way Wednesday to praise Nelson for "his partnership and hard work" on Zika.

Edwards, meanwhile, met with House Speaker Paul Ryan, R-Wis., who was "noncommittal" as to whether Louisiana will get Obama's full $2.6 billion request to rebuild housing and infrastructure ruined by the floods. He's finding that the Capitol works at a much slower pace and is a stingier place than it was when Katrina smashed Louisiana a decade ago.

Edwards has a meeting with Obama on Friday after sitting down with two Cabinet members last week, including budget director Shaun Donovan, who submitted the administration's official request Tuesday evening.

"It's incumbent upon us to have good relationships and good communication regardless of party, but it's just easier when you are in the same party. And I think that has been helpful when I've been meeting with the president but also with his Cabinet secretaries," Edwards said. "But it's also obviously helpful to have folks from the Louisiana congressional delegation who can work the Republican side of the aisle."

Timing may also work in Edwards' favor. Part of the difficulty for the Zika request was that it traveled alone in the middle of the political season. It's now catching a ride on the stopgap spending bill, which is the sole must-do item before Congress adjourns for the elections. Flood aid may not be so lucky, though the Louisianans are pushing hard. Odds are good that flood aid could advance in a year-end spending bill.

"We're just pushing," said Sen. Bill Cassidy, R-La.

___

This story has been corrected to replace 'not' with 'now' in the second-to-last paragraph, so it reads, "It's now catching a ride on the stopgap spending bill ..."

Louisiana Flooding Makes Case For Changes To Insurance Program

By Joe Coughlin

Roll Call, September 15, 2016

Last month's flooding in Louisiana has once again focused attention on shortcomings with the National Flood Insurance Program (NFIP). As co-designer of the Federal Emergency Management Agency's mandatory purchase guidelines in the 1980s, I believe that recent events show beyond doubt that the program has significant problems and needs to be reformed.

For Congress, there is a bigger issue: Our nation's entire approach to natural disasters, both public and private, needs to be revisited.

There are two issues involved: Is it wise policy to place all natural hazard insurance risk coverage in a single "all hazards" policy? And second, should we require all property owners to purchase this?

Former Louisiana Sen. Mary L. Landrieu is among many who have recently suggested the need for insurance that covers flood, fire, tornadoes and earthquakes. What about wind, other than tornadoes? All forms of wind are already covered in homeowner policies and through wind pools in Eastern and Gulf Coast states. Fire is also already similarly covered in residential and commercial policies.

Mortgage lenders typically require both fire and wind coverage either through a standard homeowner policy for dwellings away from the immediate coasts, or a homeowner policy and a separate wind policy in such coastal areas.

Earthquake coverage is available in California. But it is run by the state and rarely purchased as the coverage amounts, terms and conditions are not attractive.

Mortgage lenders under NFIP jurisdiction are mandated to require flood insurance on mortgages for those structures located inside FEMA-identified Special Flood Hazard Areas. So an "all natural hazard" insurance approach would require owners of all mortgaged structures to buy such a policy regardless of location.

The end result would mean that mortgaged properties throughout the United States would be covered for all such risks. The impacted would likely approach the number currently covered by private sector policies covering fire and/or wind only — in the high tens of millions. That would also mean that the same number of structures would be covered by flood insurance, instead of the current 5 million to 6 million, and earthquake insurance, instead of the handful today.

The issues of a broad all natural hazard, single property insurance policy, together with a broad mandate of its purchase, have been raised in the past with discussions between private insurers and federal officials. Although those discussions were helpful, they were inconclusive.

A congressional proposal would likely result in opposition from the property insurance industry, as its members may not want to give up their wind and fire coverage. In recent years, however, there have been limited indications of a possible softening of positions on wind coverage in the Gulf coast and Southeast coastal areas.

Requiring such coverage on all mortgaged property would likely prove difficult because it would result in a significant expansion of the current flood insurance requirement. Opposition may arise from the mortgage, homebuilding and real estate industries out of concerns that it might cost buyers more and increase the overall costs of home ownership.

Yet such an approach could actually reduce the cost of such coverage because it would spread risk and the expanded protection for millions of structures. That could actually reduce the costs of disaster assistance.

Such coverage would require a legislative change to NFIP statutes. But it may now be time to revisit this approach and expand it.

Requiring an all natural hazard policy to be purchased by all mortgaged property would be a large improvement over the current situation. It should be fairly easy to administer and could use some of the same concepts used by the NFIP. The federal government would use the existing property insurance companies to sell and service the policies, and the current agency system to interface with insured property owners.

Cost- and risk-sharing details would have to be worked out between the government and insurers. But if the private insurers would change their views on all of this, I am convinced the details could be worked out.

Finally, any plausible proposal must address mitigation of risk. The natural hazard risk problem cannot be addressed by financial means alone. There must be a corresponding mitigation component. The NFIP employs this joint approach and without it, our flooding problem would be much worse.

Tough natural hazard mitigation requirements would also be a very political issue. To date, whenever the NFIP has proposed strengthening its standards, officials run into the usual opposition which has prevented implementation.

The most recent effort by FEMA to improve such standards for FEMA-funded projects is an encouraging start. Although supportive and optimistic of such attempts, I am guardedly so about a successful outcome, at least in the near future. At some point, all parties may finally bring something to that table, no matter how much they may be reluctant to do so.

Coughlin is a senior adviser at Dawson & Associates who helped design FEMA's Mandatory Purchase of Flood Insurance Guidelines.

Louisiana Republicans: This Isn't Like Sandy

By Timothy Cama And Devin Henry

The Hill, September 15, 2016

Louisiana lawmakers are defending their 2013 votes against aid for Hurricane Sandy relief — even as they request billions of dollars to help their state recover from last month's floods.

GOP Sen. Bill Cassidy and Republican Reps. John Fleming and Steve Scalise — all of whom voted against the Sandy bill in 2013 — are now asking for more than $2 billion for flood aid for Baton Rouge and other cities in their state.

Fleming and Cassidy say they voted against the $50 billion Sandy bill -because it included $33 billion for programs unrelated to the storm damage. They say the Louisiana request has no such extraneous spending.

Gov. John Bel Edwards (D) formally asked Washington this week to provide up to $2.8 billion in emergency aid after the August floods, which destroyed more than 100,000 homes and killed 13.

The White House mostly supports the effort and formally submitted a request Tuesday for $2.6 billion in emergency spending for the state.

The proposal also has the approval of the congressional delegation, which wrote a letter to the president asking him to remember the state during spending battles between now and the end of the fiscal year, on Sept. 30.

The question now is whether Congress will do anything with the request and if members detect any hypocrisy in funding disaster relief for a state where most members have voted against it in the past.

"I guess there is a certain irony in it, or poetic justice or something, but no, it wouldn't stop me at all for voting for it," Rep. Pete King (R-N.Y.) said.

King aggressively criticized members for delaying votes on the Sandy aid package in 2013, and he said Wednesday that the fight for funds to assist his home state "caused me to change my feelings toward some people."

But aid for Louisiana, he said, "absolutely ... has to be done. No one can even think of voting against it for any political reason."

Fleming, Scalise and Cassidy, then a House member, all voted for a $17 billion lower chamber version of the Sandy bill, complaining that the Democrat-led Senate added unnecessary funding.

"All Louisiana's asking for is direct relief for damage," Fleming said of his state's aid request. "That's what I was willing to vote for in Sandy, and that's what I'm going to vote for on this. And that's all we're requesting. We're not asking for wasteful spending on projects unrelated to flooding."

Cassidy made a similar argument.

"I voted against that final package, you're right," he said. "But I voted for that $17 billion package that was truly recognized as Sandy aid."

The state's other representatives either voted for the Sandy bill or were not in Congress at the time.

Hurricane Sandy caused more than $70 billion of damage in New York and New Jersey, and the $51 billion aid package appropriated billions for community block grants, restoring utilities, rebuilding homes, repairing transit systems and coastal reconstruction.

Sen. Bob Menendez (D-N.J.), another outspoken critic of lawmakers who voted against the Sandy aid, said he warned his colleagues back then that they might someday need disaster aid themselves.

"I called out those early on to say that you have to think about that phrase, 'There but for the grace of God go I,' and you're going to need somebody some day," Menendez said. "I think they're going to have to come to some type of reckoning about why this is good in one case and not good in another."

Rep. Cedric Richmond, Louisiana's lone Democrat in Congress, said he doesn't think his party will be uneasy about backing the emergency funding for his state.

"While we did have three that did not vote for [Sandy aid], I came down to the floor and argued for it because it was important," he said. "I think that I have great goodwill among members of my side, so I think as long as we're pushing for a bill that is not insensitive to other needs of other communities, I think we're OK."

Fleming and Cassidy said that because their request is reasonable and doesn't contain unneeded funding, it should pass easily.

Sen. David Vitter (R-La.), who voted for the Sandy bill, told reporters that his colleagues' past votes shouldn't doom this aid package.

"I think when there is a disaster, Congress, administrations, whoever they are, come together and respond in a responsible way," he said shortly after the floods, according to the Greater Baton Rouge Business Report. "I was involved in the Sandy package and built good relationships based on that, so I don't foresee that difficulty."

King said each congressional fight over disaster aid should serve as a warning for all members.

"I would just hope that anyone would look at this and remember the next time there is a natural disaster somewhere to step up and do what has to be done," King said.

Overnight Energy: Trump Visits Flint | GOP Chairman Defends Subpoenas In Climate Probe

By Timothy Cama And Devin Henry

The Hill, September 14, 2016

SUBPOENA FIGHT LIGHTS UP HOUSE: Congress has a "constitutional obligation" to subpoena state attorneys general in its investigation into their climate change-related probes, Rep. Lamar Smith (R-Texas) said on Wednesday.

Smith, chairman of the House Science Committee, said at a hearing that as head of the House's lead panel overseeing federal science programs, he is well within his rights and responsibilities.

"The committee has a constitutional obligation to conduct oversight any time the United States's scientific enterprise is potentially impacted," he said.

Smith, a climate change skeptic, wants to learn more about the investigations of two Democratic attorneys general into whether Exxon Mobil Corp. committed fraud by allegedly denying global warming publicly while knowing internally that emissions from fossil fuels warm the climate.

He subpoenaed the attorneys general over the summer, looking for documents related to their investigation. The two attorneys general have refused to comply, and Democrats have supported their opposition.

Smith convened his Wednesday hearing to assert that his panel has power over the state officials and can enforce his wide-ranging subpoenas demanding numerous documents related to their work.

Democrats, led by Rep. Eddie Bernice Johnson (Texas), shot back at Smith on Wednesday, saying his actions are little more than political stunts and comparing them to the House Un-American Activities Committee's hunt for communist sympathizers.

"In my own mind, I have to go back to the Red Scares of the '50s to recall a similar effort," Johnson said.

Read more here.

TRUMP TALKS FLINT: Republican presidential nominee Donald Trump toured a water treatment facility in Flint, Mich. on Wednesday, pledging to "fix the problem" plaguing the city's drinking water supply if he's elected in November.

"The damage can be corrected, and it can be corrected by people who know what they're doing," Trump said at an area church after touring the water facility.

"Unfortunately, the people that caused this tremendous problem had no clue. They had absolutely no clue."

Michigan officials have been roundly criticized for switching Flint's drinking water supply to a local river, which then corroded pipes and caused lead problems with the city's water.

The state eventually moved Flint's water supply back to a Detroit municipal source. But recovery efforts in the city are ongoing.

"It's amazing the damage that's been done," Trump said. "But we'll get it fixed, and it's going to get fixed quickly, if I'm elected. But it will be fixed quickly and effectively and Flint will come back. Most importantly, we'll bring jobs back to Flint."

Democrats dismissed Trump's visit to Flint.

"We all know why he's doing it: belated photo-op," Sen. Debbie Stabenow (D-Mich.) told reporters in Washington. "We're here solving the problem. The people of Flint don't need politics; they need solutions."

Flint Mayor Karen Weaver (D) also waved off Trump's visit and discouraged him from coming to the city.

"Flint is focused on fixing the problems caused by lead contamination of our drinking water, not photo ops," she said in a statement, adding that Flint "seeks real action and real help to recover from the lead crisis."

AGENCY OPPOSES NEW PIPELINE LAWSUIT, BACKS REVIEW: The Army Corps of Engineers opposes a tribe's court appeal to block construction on the Dakota Access Pipeline, but it supports an Obama administration review of the project.

The Army Corps told a federal court Wednesday that it shouldn't grant the Standing Rock Sioux Tribe's request for an injunction against a North Dakota stretch of the project, noting a lower court's Friday decision approving of the way the agency permitted the pipeline project.

Even so, the Corps wrote in a filing, the agency said it supports a temporary halt of construction on the route while federal officials consider whether there needs to be a more rigorous round of assessments on the 1,170-mile, $3.8 billion pipeline.

"While the Corps opposes the Tribe's current motion and believes that it should be denied, the Departments believe that the pipeline company should implement the relief that the Tribe is seeking voluntarily," the agency's lawyer wrote in its filing.

House Democrats asked President Obama to "maintain [the administration's] hold on further permitting" for the project until it can fully vet the tribe's concerns about the pipeline's impact on cultural and environmental areas in North Dakota.

"We stand with tribal leaders in asking you to uphold our federal trust responsibility and protect tribal interests in this and future permitting decisions by the [Army Corps]," said a letter to Obama, signed by 19 House Democrats and led by Rep. Betty McCollum (D-Minn.).

Read more here.

TOMORROW IN THE HILL: The Louisiana congressional delegation wants Congress to spend billions of dollars to help assist recovery efforts following severe flooding there in August.

The only problem: many of the state's lawmakers voted against similar aid for Superstorm Sandy relief, raising questions about tensions between lawmakers seeking emergency funding for their constituents.

Tomorrow in The Hill, we preview the politics of the aid request, as Louisiana increasingly emerges as an issue on lawmakers' plates this month.

ON TAP THURSDAY I: The Senate could finish up work on its Water Resources Development Act, legislation to inject more than $9 billion into water infrastructure projects around the country. The bill also contains aid for Flint.

The Senate voted 94-3 to end debate on the bill Thursday, setting up a potential final passage vote on Thursday.

Check The Hill for more.

ON TAP THURSDAY II: President Obama will speak at the State Department's Our Ocean Conference.

Rest of Thursday's agenda ...

Energy Secretary Ernest Moniz will testify at a House Energy and Commerce subcommittee hearing on energy security.

A House Science Committee panel will hold a hearing on Environmental Protection Agency methane regulations.

AROUND THE WEB:

A county sheriff testified in the Malheur National Wildlife Refuge takeover trial, the Oregonian reports.

Americans are willing to pay more on their electric bills – but only a little more – to help fight climate change, the AP reports, citing a new poll.

The Wall Street Journal dives into oil giants' big bets on the future of natural gas.

IN CASE YOU MISSED IT:

Check out Wednesday's stories...

-Feds roll out conservation, energy plan for California Desert

-Feds argue against pipeline injunction, support new review

-Senate nears finish line on Flint aid bill

-Michigan senator: Trump's Flint visit is a 'belated photo-op'

Overnight Finance: Senators Struggle With Spending Bill | Obama Lifting Myanmar Sanctions | Dems Turn Up Heat On Wells Fargo | Panel Votes To Exempt Olympic Medals From Taxes

By Sylvan Lane

The Hill, September 14, 2016

House conservatives want first crack at funding bill: The conservative Republican Study Committee (RSC) will urge Speaker Paul Ryan (R-Wis.) and his GOP leadership team to move a short-term government funding bill through the House before the Senate takes action on its own funding bill, RSC Chairman Bill Flores told The Hill on Wednesday.

In an interview, the Texas Republican said the 178-member caucus discussed a 10-week continuing resolution, or CR, at its weekly lunch meeting and came to the consensus that the House should vote first so the lower chamber doesn't get jammed with a Senate bill it doesn't want.

Senate Majority Leader Mitch McConnell (R-Ky.) and Minority Leader Harry Reid (D-Nev.) have been negotiating a 10-week funding bill to keep the government's lights on past Sept. 30 but are at an impasse over a Planned Parenthood provision and other issues. The Hill's Scott Wong and Sarah Ferris tell us why: http://bit.ly/2cFRHba.

Reid: We've got some issues: Over in the upper chamber, Senate Democratic Leader Harry Reid (Nev.) says there "are lots of problems" with a Republican proposal to fund the government beyond the end of the month, dampening hopes a deal might be reached this week.

Reid told reporters Wednesday that Republican and Democratic leaders are at loggerheads over the stopgap funding measure, which includes tens of millions of dollars to fight the Zika virus.

Republicans don't want any of the $80 million slated for Puerto Rico's Zika response to go to Planned Parenthood clinics.

"The CR is not done; it's a work in progress," Reid said, referring to the funding continuing resolution. "Zika funding is not done; it's a work in progress."

Asked whether the partisan dispute over granting Planned Parenthood access to federal funds remains a sticking point, Reid said, "Planned Parenthood is not gone." The Hill's Alexander Bolton takes us there: http://bit.ly/2cFRYur.

Lew meets with lawmakers on offshore tax rules: Treasury Secretary Jack Lew met with House Ways and Means Committee members Wednesday as the Obama administration works to finalize rules aimed at curbing offshore tax deals.

The rules, proposed in April, have drawn concerns from business groups and lawmakers on both sides of the aisle. They would treat some inter-company debt as equity.

The rules were designed to take aim at a tax-avoidance strategy called "earnings stripping" that is used by companies that participate in "inversions" – transactions in which U.S. companies move their headquarters overseas to lower their taxes. However, stakeholders say the proposal is too broad and would hurt routine business transactions. The Hill's Naomi Jagoda tells us what happened inside the meeting: http://bit.ly/2cs9aSW.

Obama requests $2.6B in aid for Louisiana floods: The Obama administration is asking Congress for a $2.6 billion emergency appropriation to fund aid efforts following Louisiana's disastrous flooding last month.

The White House Office of Management and Budget (OMB) said Tuesday the money would go to block grants that Louisiana could use for a wide variety of purposes, like emergency aid, small business loans, infrastructure and affordable housing.

The plea to congressional leaders and appropriators comes a day after Louisiana's eight-member congressional delegation asked President Obama to formulate an aid request so Congress could consider it for a stopgap funding measure that the Senate could consider as early as this week. The Hill's Timothy Cama breaks it down: http://bit.ly/2cxD7l.

US restores trade benefits to Myanmar: The United States will reinstate Myanmar's eligibility for benefits under the generalized system of preferences (GSP) program, which lowers tariffs on imports from poorer countries.

President Obama signed a proclamation on Wednesday allowing the Southeast Asian nation to participate in the program again starting in November after a 27-year-hiatus.

"While there is more work to be done, including to address concerns regarding human trafficking, Burma has made important progress in recent years with respect to worker rights," said U.S. Trade Representative Michael Froman. The Hill's Vicki Needham tells us why it's important: http://bit.ly/2c9oYqR.

Obama lifting sanctions: The move came after President Obama earlier Wednesday said he intends to lift sanctions on Myanmar, rewarding the former military dictatorship for its move toward democracy.

The president made the announcement after meeting with the country's de facto leader, Aung San Suu Kyi, in the Oval Office.

Obama said he is "now prepared to lift sanctions that we have imposed," pointing to a "remarkable social and political transformation" in Myanmar.

"It is the right thing to do to ensure that the people of Burma see rewards for a new way of doing business," he said, sitting beside Suu Kyi. The military junta in Myanmar changed the country's name from Burma in 1989.

Asked by a reporter when sanctions will be lifted, Obama replied, "soon." The Hill's Jordan Fabian has more on the ramifications: http://bit.ly/2cW2ks4

Happy Wednesday and welcome to Overnight Finance, where we're wondering how it's only Wednesday. I'm Sylvan Lane, and here's your nightly guide to everything affecting your bills, bank account and bottom line.

Tonight's highlights include good news for Olympic medalists, more Congressional heat on Wells Fargo and a proposal from Hillary Clinton's potential Defense secretary.

See something I missed? Let me know at slane@thehill.com or tweet me @SylvanLane. And if you like your newsletter, you can subscribe to it here: http://bit.ly/1NxxW2N.

On tap tomorrow:

Senate Agriculture Committee: Hearing to examine the nominations of Christopher James Brummer, of the District of Columbia, and Brian D. Quintenz, of the District of Columbia, both to be a Commissioner of the Commodity Futures Trading Commission, 10 a.m. http://bit.ly/2cIZ5Qk.

House panel votes to exempt Olympic medals from taxes: The House Ways and Means Committee on Wednesday approved a bill that would exempt many Olympic athletes' medals and prize money from taxes.

The measure was approved by voice vote and heads to the House floor. The vote comes one month after the Rio de Janeiro Olympics and during the Paralympic games.

House Majority Leader Kevin McCarthy (R-Calif.) has said that the full chamber will consider the measure. The Senate passed a version of the legislation in July.

The bill would generally exempt from taxes the value of Olympic and Paralympic medals as well as prize money awarded to medalists by the U.S. Olympic Committee. The bill would apply to medals and prizes athletes received in 2016 and future years.

The Ways and Means Committee adopted an amendment from Rep. Bill Pascrell (D-N.J.) that would prevent the tax exemption from applying to athletes whose adjusted gross income was more than $1 million. Naomi Jagoda tells us more: http://bit.ly/2cWaros.

GOP rep: Flood insurance bill coming this month: Rep. Blaine Luetkemeyer (R-Mo.) said on Wednesday that he plans to introduce a bill this month reforming a federal flood insurance program.

Luetkemeyer, chairman of the Financial Services subcommittee on insurance, said his bill – the product of almost a year of work – would expand private flood insurance coverage, change rates within the industry and reduce the National Flood Insurance Program's $23 billion debt.

"As taxpayers ... you're paying that $23 billion that's a shortfall right now, some way, some how, some point in time," Luetkemeyer said during an event sponsored by The Hill and Zurich North America.

"So, how do we structure the program in the future so that doesn't increase and be another burden on all of you to have to take care of down the road?"

The program is due for congressional reauthorization next year, creating an opportunity to make changes to the 50-year-old program. The Hill's Devin Henry walks us through: http://bit.ly/2cxDyMw.

GOP lawmaker: Obama must rally Dems on Pacific trade deal: The head of a House trade subcommittee said Wednesday that President Obama must rally members of his own party to pass an expansive Pacific trade agreement in Congress this year.

Rep. Dave Reichert (R-Wash.), chairman of the Ways and Means Subcommittee on Trade, said that passage of the Trans-Pacific Partnership (TPP) trade agreement will need more than the 40 Democrats who may possibly support the expansive deal.

"There are some political realities here that we all know are creating this uphill battle for us," Reichert said during the Export-Import Council meeting at the White House, the final one of Obama's presidency.

All 28 Democrats who voted with Republicans more than a year ago to pass trade promotion authority, or fast-track, are on board with the TPP, Reichert said. Vicki Needham breaks it down: http://bit.ly/2c9pnt8.

Potential Clinton Defense secretary calls for lifting budget caps: A key Defense Department figure thought to be a candidate to be Hillary Clinton's secretary of Defense is calling for caps on the defense budget to be lifted early in the next administration.

Under Secretary of Defense for Policy Michele Flournoy on Wednesday said raising the caps is “a national security issue.”

“We have to get out from under [Budget Control Act] caps,” she added, speaking at an Institute for the Study of War conference in Washington.

The 2011 Budget Control Act enacted caps on the Pentagon’s budget that slashed its budget by $500 billion over 10 years, when lawmakers failed to reach a deal on how to close a $1 trillion budget deficit.

Those cuts were on top of an already-planned cut of $487 billion during that time. The Hill’s Kristina Wong has more: http://bit.ly/2c9oOQj.

GOP senator wants hearing on international tax issues: Sen. Dean Heller (R-Nev.) is asking the Senate Finance Committee to hold a hearing on international tax issues, such as the Treasury Department’s proposed rules aimed at curbing offshore tax deals and the European Union’s investigations of U.S. companies.

“I believe it is critical the Senate Finance Committee has the opportunity to discuss these issues and the ramifications of these issues in a hearing,” Heller, a member of the committee, said in a letter sent this week to Chairman Orrin Hatch (R-Utah).

Treasury’s proposed rules and the EU’s ruling that Apple owes Ireland $14.5 billion in back taxes have drawn criticism from lawmakers on both sides of the aisle. Naomi Jagoda has more: http://bit.ly/2cydqOr.

Lawmakers look to boost agricultural exports to Cuba: Lawmakers at a House Agriculture Committee hearing on Wednesday pushed to expand American agricultural trade with Cuba.

“I believe there lays an opportunity – albeit a rather narrow one – to make changes that will positively benefit both agricultural producers here at home while contributing to economic growth in Cuba,” said Chairman Michael Conaway (R-Texas) in his opening statement.

Conaway and Ranking Member Collin Peterson (D-Minn.) are co-sponsors of the Cuban Agricultural Exports Act, which would permit private financing for agricultural exports to Cuba.

Conaway said the Castro regime’s “heavy hand” still controlled Cuban agriculture but that their legislation could spur positive change.

Peterson also said more must be done to boost American agricultural exports to the island nation. The Hill’s Ellie Silverman has more: http://bit.ly/2cK1jQv.

Treasury floats gold jewelry ban for banks: The Department of the Treasury is proposing a ban on gold jewelry for banks.

Investing in gold jewelry and certain other precious metals does not fall within the “business of banking,” the Treasury Department said Wednesday in the Federal Register.

As such, the Treasury Department’s Office of the Comptroller of the Currency is looking to block national banks and federal savings associations from buying and selling metals that are “primarily suited for industrial or commercial use,” such as gold jewelry, copper cathodes, and aluminum T-bars. The Hill’s Tim Devaney tells us more: http://bit.ly/2cycIAN.

Cummings demands more details on Wells Fargo fraud scheme: A top House Democrat is calling on Wells Fargo & Co. to produce documents that would help determine whether the bank’s managers spurred employees to create fake accounts by using incentives and threats to meet sales goals.

Maryland Rep. Elijah Cummings, ranking member of the House Oversight and Government Reform Committee, sent a letter on Tuesday to Wells CEO John Stumpf requesting information on how the company is holding employees and executives accountable for allegedly opening more than 2 million bank and credit card accounts without customers’ knowledge.

“Wells Fargo apparently just fired more than 5,000 employees, but it is unclear whether the executives who orchestrated this scheme will be held accountable,” Cummings said after meeting with Tim Sloan, Wells Fargo’s president and chief operating officer, in Washington.

Cummings gave Sloan the letter for Stumpf requesting documents about how its “managers used quotas, bonuses, threats and other punitive measures to perpetrate these abuses.”

Any managers who directed the abuses or enforced the quotas should be investigated and prosecuted, he said: http://bit.ly/2cWbV26.

The School Doomed By Climate Change

By Mareesa Nicosia

The Atlantic, September 15, 2016

Newtok, AK.—In Dawn Wilson's classroom, fourth-graders are writing a story about what they would need to survive if their families were forced to quickly leave their homes and relocate down river. Astutely, her young students tick off the essentials: food, clothing, guns, and ammunition.

In this remote Yup'ik tribal community on Alaska's southwest shore, this sort of brainstorming is not an abstract academic exercise. It's a real-life lesson built around the environmental forces now threatening to upend the already-hardscrabble existence of some 400 people for whom hunting is essential to eating.More From The Seventy Four

The very school where Wilson's fourth-graders contemplate their survival supplies will soon be gone, submerged by a fast-rising river that's grown so wide you can't see the other side. Each year, the water slides closer, buoyed by wind and rain storms, record-high temperatures and melting permafrost.

Next year, estimates say, the river will flow past the shoreline houses and reach the school, which is the village's highest point, its community center, and its only source of running water. If the current rate of erosion remains constant, the school—the first in the country to shutter because of climate change—may not make it through 2018.

The current roster of high-school seniors will likely be the last graduating class of Newtok.

"We have to move … the water is eating the land," Wilson read, back in the classroom a few weeks ago, reciting to her students the narrative they had composed together during the first week of school.

* * *

If they don't already, Wilson's young pupils will soon know this lesson by heart: Their village is at the front lines of the global climate-change crisis that could ultimately devastate dozens of small indigenous communities scattered along Alaska's Bering Sea coast. They lie within the Yukon Delta National Wildlife Refuge, a 19.5-million-acre expanse of wetlands and tundra between the Bering Strait and the Aleutian Islands.

The village of Newtok—a few dozen dilapidated buildings splayed on a treeless, marshy bend of the Ninglick River just before it opens into the ocean—is disappearing. More than 100 feet of its shoreline was ripped away in a single storm; most years average 72 feet. The layer of earth that forms the village's foundation and was once frozen solid is turning to mud.

The Ninglick River has swallowed at least 500 feet of Newtok's southern shoreline since 2005. Erosion claims an average 72 feet of earth each year. (Hanna Craig)

Just a few hundred feet from the encroaching river, Newtok's school sits perched on splintering wooden stilts, a T-shaped modular covered in peeling blue and white paint. Wilson, an elementary-reading specialist from Ohio, arrived here in early August, but her two-year contract could be cut short by the very manifestation of what she is teaching.

In mid-August, though, time feels abundant here. The days stretch on and on, the sun does not set until 11 p.m., and children play and ride their bikes on the rickety wooden boardwalks that serve as Newtok's streets late into the night.

But sooner rather than later, the belongings that Wilson's fourth-graders listed in their story must be packed up, along with their books, pencils and backpacks. And the residents of Newtok will leave their sinking village and abandon the land their ancestors have lived off of for generations, finally moving to sturdier ground—they hope—after years of anxious waiting, bureaucratic missteps and political infighting.

* * *

Newtok's school, also sometimes known as Ayaprun School, is part of the Lower Kuskokwim school district, which serves 4,100 students in 27 schools in a region about the size of West Virginia.

In Newtok, all but a few of the 132 students are Alaska Natives from poor homes. The 28 staff members are a mix of certified teachers from the Lower 48, like Wilson, who are recruited to work on short-term contracts, and local Alaska Natives, often uncertified, who typically work as classroom aides. Part of the draw for outsiders is that certified teacher salaries start at $52,000, quite a bit higher than the recent national average of $36,141.

While students and staff officially occupy the building from 8 a.m. to 4 p.m., the doors don't lock most nights until 11 p.m. Any afternoon or evening, the sounds of students singing and drumming Yup'ik music fill the halls. Youth and adult teams play basketball, Newtok's favorite sport, every day in the gym, which doubles as cafeteria. It's also where students on the Native Youth Olympics team practice for the annual statewide competition. They perform a series of traditional endurance and agility feats, like the one-foot high kick, the wrist carry, and the seal hop, which originated with the daily activities of early Alaska Natives.

There are monthly movie nights and occasional extracurriculars, like when a village resident volunteered to teach students archery. This year, another resident offered guitar lessons, so the school purchased a few instruments.

The school is the only building in the village with its own generator, flush toilets, and showers (two for men, two for women). The homes here do not have indoor plumbing or running water, so young men are sent to haul five-gallon jugs of water from the school every day.

When there's a funeral, the gym is where residents gather to eat and mourn. And when other areas of the village flood—as they do almost every year now—the school, as Newtok's highest point, is where residents go to shelter.

"The school is like the qasgiq," said Principal Grant Kashatok, using the Yup'ik term. "It's the communal house from 100 years ago where people come together to become a community."

* * *

The first Newtok school was built in 1958 by the federal Bureau of Indian Affairs (BIA), which was, at the time, building schools at many Alaska Native seasonal camps, an attempt to encourage the people to settle year-round and enroll their children in school.

For thousands of years, the camps were inhabited by semi-nomadic Yup'ik who lived off the land and followed their food sources from season to season—fishing, hunting moose and muskox in the winter, hunting seals, and foraging for berries and other plants in the summer."For a lot of them, having a high-school education is important, but it's not as important as, … 'Am I going to have food for my family?'"

As in many native communities, the village of Newtok developed around that first school. Since the 1960s and '70s, according to State Department records, the village has been a year-round residence, but the tradition of subsistence living persists.

"For a lot of teachers, it's hard to get past, 'My student's gonna be gone for a week, because they're gonna go moose-hunting,'" said Brandi Portie, a math teacher and Louisiana native who moved here with her husband 10 years ago. "It's hard to work around, but that's part of the culture, and so it's something you have to accept as a teacher."

This is a place where the daily tasks that ensure students' safety and survival often take precedence over getting to class.

"For a lot of them, having a high-school education is important, but it's not as important as, … 'Am I going to have food for my family? Do I need to miss class this morning to get some stove oil to heat the house? Do I need to go dump the honey bucket because the honey bucket's full?'" The buckets, filled with human waste, are emptied daily into the smaller Newtok River, to the east, where residents dock their boats. There's no other alternative, as the community dump site, along with the village's barge-landing dock, were swallowed by the Ninglick River years ago.

Educators aren't blind to the fact that in many ways, the lifestyle the community has chosen to maintain and protect comes with certain costs. About half of Newtok students graduate from high school in four years, compared to 71 percent statewide and 82 percent nationally. The majority of village students in all grades lag behind their peers in the district and around the state on Alaska's reading and math proficiency tests, school data shows. Ten percent or less of Newtok students were considered proficient in science as of 2015, according to state data.

Many students don't consider leaving the village for college, often because they're relied upon to help care for elderly relatives or siblings (most families have around seven children, Kashatok said). "Teachers don't come in here and think that they're gonna, like, save the world," said Wilson, the elementary-reading teacher, "because this is not our world to save. It belongs to the people of Newtok ... it's up to us to come here and become part of them. It's not up to us to come here and change them."

More than a third of Newtok residents live below the federal poverty line, according to 2010 census data—although the number is likely higher now, officials said. Newtok is legally a dry town, but alcoholism and drug abuse is widespread. School officials say it's not unusual for parents to leave their children to look after each other while they drink away their annual permanent fund dividend check—every Alaska resident received $2,072 in 2015—in Bethel or Anchorage.

Navigating the sometimes bleak realities of their students' lives, Portie and her colleagues can't help but feel weary some days. Yet in nearly a decade of teaching here, she has proudly watched her students inch forward academically.

All students study the Yup'ik language through the school's burgeoning dual-language program. Since the school expanded the program a few years ago, starting English lessons in kindergarten rather than third grade, students have made strides, Portie said.

They are better readers and sharper mathematicians, she said. They stay after school to attend her homework-help sessions, tempted by the knowledge that they'll get a free snack afterward. Kids often show up at teacher's doors at 11:30 p.m. just to talk. When a few visitors recently camped out in the school library, which serves as a makeshift hostel for journalists and state officials, a swarm of smiling and inquisitive elementary-school kids peppered them for information: name, age, place of origin.Past estimates ... have put the total cost of the move at $130 million.

"I don't want to see the kids fall any further behind," Portie said. "I would hate to see for it to go backwards and I feel like that's the way it would go if they plan a move without planning everything together."

It's unclear to what extent local, state, and federal leaders have considered the educational disruption that the village relocation will create for Newtok's 132 students, but what is apparent is the pending move's enormous difficulty. Kashatok, who has been principal for 12 years, has operated in perpetual wait-and-see mode; the relocation will mark the first of its kind in Alaska. He expects to meet with village-council members and state officials this fall to discuss the plans.

Soft-spoken and prone to wry humor, Kashatok is the self-described "gatekeeper" of the school. His roster of duties includes math teacher, sports coach, nurse, back-up cook, guidance counselor, data analyst, and social worker. He likes to hunt, fish, and play bingo in his free time, what little there is of it. His wife, Sarah, is the school librarian, and the youngest of their four children is in eighth grade. Two sons are already in college and their daughter graduated high school in June, with plans to go to the University of Alaska in Fairbanks.

* * *

More than 180 Alaska Native villages have experienced gradually worsening erosion and flooding for decades, and Newtok continues to surface at the top of government warning lists. In 2003, it was named one of four villages in "imminent danger" in a U.S. General Accounting Office study; a follow-up report in 2009 reaffirmed that finding. In 2009, the Army Corps of Engineers labeled Newtok one of 26 "priority communities" that were so at risk of damage that they were recommended for "immediate and substantial intervention" by state, federal, or other agencies. Between 2005 and 2014, nearly 500 feet of land along the Ninglick riverbank eroded, according to data provided by the state Department of Natural Resources.

A few villages, including Shishmaref, located on a barrier island north of the Bering Strait, have begun to map out plans for a move. Statewide, Newtok is the furthest along in addressing the crisis, having actually started building anew over the last 10 years at the relocation site, a large island of rolling hills nine miles downriver.

The quiet northern tip of Nelson Island where Newtok plans to relocate is called Mertarvik, which in Yup'ik means "getting water from the spring." Mertarvik's grassy ridges rise 500 feet above sea level versus Newtok's 10, and it's an ideal location in other ways: It has plentiful well water, loads of blueberries, and nearby hunting grounds—muskox roam on the ocean-facing side.

Past estimates by the Army Corps of Engineers have put the total cost of the move at $130 million. The village has so far cobbled together funds piecemeal. Currently it has access to about $20 million from the state and the Bureau of Indian Affairs that's earmarked for "pioneer-level" infrastructure, said Sally Russell Cox, a state employee in the Department of Commerce, Community, and Economic Development who has worked with the Newtok Planning Group for years. It can be used for relocating 12 homes, work on a quarry and a Dura-base road that leads to the quarry, finishing the emergency evacuation center, building a temporary landing strip for deliveries of construction supplies and emergencies, as well as water, sewer, and a landfill.

Most everyone agrees on what needs to be done, and done quickly, Russell Cox said. And yet the plans have sputtered along for decades, stymied in large part by a bitter power struggle between rival factions of local leaders. (Wavering state and federal support as administrations turn over hasn't helped either.) The former village council was led by Stanley Tom, the longtime relocation coordinator for the move. He and his council were ousted a few years ago after some residents accused him of embezzling funds for the project and alleged that local elections were rigged to keep the council in office for the duration of the relocation. As a result, several million dollars in government aid that had been scraped together was frozen, residents said.

The new council stepped in after the Bureau of Indian Affairs took the rare step of intervening in a local issue in 2013. While the two sides remain divided and barely communicate, village officials insist that the lingering dispute is not preventing progress.

This year, in fact, the Newtok project has finally picked up some momentum, officials said, and Romy Cadiente, the relocation coordinator, hopes the village can serve as a “template” for other communities that are or soon will face death by erosion in rural Alaska. “This thing is in full bloom,” said Cadiente, who works closely with the state and other agencies. “There’s a lot of people that are putting their blood, sweat, and tears into this.”

As of late August, the council was considering entering a FEMA buy-out program to demolish some of the most decrepit Newtok homes. Officials would seek grant funding for the remaining cost of building new, replacement ones in Mertarvik, Cadiente said. While each new home is estimated to cost up to $350,000, the appraised value of the existing ones is likely far less. No one can say for sure yet how they’ll make up the difference. Three houses already built in Mertarvik are seasonally occupied by pioneering Newtok elders with strong ties to the old council; three other houses stand vacant save for electric wires, new window screens stacked by piles of dead flies, and a dusty white porcelain toilet practically still in its packaging—signs of a project abandoned without explanation.

The rising river could reach the Newtok School as soon as 2017, by some government estimates. (Hanna Craig)

Workers with the Fairbanks-based nonprofit Cold Climate Housing Research Center and villagers spent the summer building a new self-sufficient, energy-efficient home on movable skids that will serve as a prototype for future construction.

For now, the relocation site is only accessible by boat, which drives up the cost of transporting construction materials. The five gallons of fuel required for a recent round trip between Newtok and Mertarvik to carry five people 18 miles by powerboat cost $34.

* * *

When he visited Alaska last September, President Barack Obama spoke at the high school in the village of Kotzebue, where he was greeted with nose-rubbing Eskimo kisses by the president of the regional school district; in the village of Dillingham, he joined students for a traditional Yup’ik dance.

He was there—the first sitting president to visit the U.S. Arctic—to call attention to the threat of global warming and announce that the Denali Commission would coordinate federal, state, and tribal resources used to address erosion, flooding, and climate change in Alaskan communities.

Tucked into the $20 million relocation aid Newtok has now is about $3 million from the Denali Commission for planning and design work, according to Russell Cox, the state staffer. But that’s not nearly enough—and it’s unclear how much, if any, would aid the school relocation.

The current Newtok school was built in 2000 using $14 million in insurance money after a fire burned down the old school, according to Kashatok, the principal. At the time, Newtok residents had already voted to relocate the village, so the new school was designed to be taken apart and reassembled at the new site.

In the 16 years since, however, the building has aged beyond its intended use, and local officials say it is unfit to be moved by barge to Mertarvik. Plan B, which is being hashed out this school year, is for the village to build new homes at Mertarvik, possibly relocate others, and move several families in next summer.

By next school year, 2017-18, a makeshift school could be up and running in a storage facility that is already built at the new site. Once 25 students have made the move, Newtok can apply through the state education department for an estimated $40 million in capital funding for construction of a new school, local officials said.

The timeline is clearly problematic, some teachers and parents have noted drily.

“You have to have so many kids to build a school, but how can the kids move there without a school?” said Kylie Riches, 24, a teacher from Fairbanks who moved to Newtok three years ago, right out of college.

It’s the Catch-22 that will likely consume officials’ workdays for months to come.

In an interview, Lower Kuskokwim school district Superintendent Dan Walker said getting through the transition will probably require using portable classrooms or relying on parents to homeschool their children. A few teachers will be assigned to the site to start. The district has a robust distance-learning program that students in Mertarvik could participate in once the new site has internet access, he said.

Meanwhile, the odds of squeezing out extra education funding from the state are slim, especially as several other schools in the Lower Kuskokwim district that need renovations and additions are competing for some of the same pot of money. The village of Napakiak, just downriver from the school-district headquarters in Bethel, is facing similar erosion and flooding problems, Walker said. It could one day be grappling with the same challenge of relocating residents and rebuilding a school.”We need to get heard out there [by people who can help] because this place is sinking.”

Some 470 miles north, Kivalina is another Alaska Native community of less than 1,000 people located on the tip of an island that is trying to relocate. Officials there asked the state for $64 million in capital funds to build a new school for 175 students. They were granted $43 million, said Tim Mearig, the facilities manager in the state education department.

Newtok and villages like it have no local tax base to support a municipal bond for a project, like most U.S. public-school districts in the United States do. The main state aid source that rural districts like the Lower Kuskokwim can access to build or fix schools is capped at $70 million for 2017, Mearig said, and the fund was cut this year by 25 percent. Once each school project is added to the department's priority list, it must be individually approved by the state Legislature.

Alaska's budget deficit has surpassed $3 billion, thanks mostly to the plummeting price of oil, the state's main source of revenue. That's expected to lead to state spending cuts in education and other areas over the next few years. In 2015, about 22 percent of all state spending went to education.

* * *

Back in Newtok, an environmental disaster is bearing down but life moves along for most at an unhurried pace. "Tomorrow morning but not today," one man quipped, laughing, when asked for his take on when the Mertarvik move will begin.

Then he squinted into the sun and suddenly turned solemn. "We need to get heard out there [by people who can help] because this place is sinking," he said. "I'm not sure how long we got, but it's not long."

The village's slow but certain deterioration is set against a deceptive tranquility. During a handful of sun-drenched days in August, geese honked overhead and the dogs that wander freely barked at a stranger passing by. Children whooped and adults moved over the bleached-out boardwalks that lead from the school through a maze of mud tracts and tall, soggy grass.

A splatter of one-story, weather-worn wooden homes and a few other buildings—two churches, two general stores, a health clinic, the post office, and the tribal council office—make up the whole of Newtok.

Occasionally, the whine of an engine broke the air as an all-terrain vehicle rumbled from one end of the village to the other. A few times a day, weather permitting, a prop plane bound from Bethel buzzed down on the airstrip, shuttling supplies and visitors in and out. The sense that Newtok is drifting and that its inhabitants feel powerless to right its course was palpable in many conversations with village residents.

Andy Patrick Sr., 69, a member of the old tribal council, said he led early efforts to research the move and obtain grants. He's still fuming over the loss of that money and the council's authority. It chafes him that the new relocation manager, Cadiente, hails not from Newtok, but from Hawaii. In separate interviews, both sides indicated their distrust of the other, and any early willingness to cooperate has long since disappeared. Patrick prefers that the village move forward with the relocation independently, without the help of bureaucrats who, he says, are full of empty promises.

"They died waiting for that dollar!" he bellowed, stabbing the air at a photo collage of smiling Newtok elders that hangs on the wall in his office. "Right now, I'm not fighting for my future 'cause I don't have that much time left," he added. "I'm fighting for the future of my grandkids. If we don't fix this problem, they won't have any future. They will have no voice."

Hints that this deep-rooted conflict still simmers beneath Newtok's polite, quiet exterior seem to surface everywhere. Walking north near the village water tank, Sophie Simon, a mother of six, was on her way to the school to find out about selling her handmade grass baskets. Embroidered with a colorful abstract design, they might go for $20 or $30 apiece. The week before, Simon said someone had set fire to the mechanic's shop, destroying several snowmobiles. Not too long before that, the post office was burglarized. State troopers swept into Newtok to investigate one day, and while someone eventually turned themselves in for the burglary, weeks later, nobody had been held responsible for the fire.

Some villagers think these incidents, what in most other communities would be felonies, may be Newtok's disaffected youth acting out. Simon looked pained when asked about the arson, and what could be done to improve life here. She said she lost her mother and her home in 2006 in an accidental fire started by her then-5-year-old son. When kids feel that no one is invested in their future or the community, they're going to spark trouble, she said, and things have steadily been getting worse.

Last year, a 17-year-old student tried to bring a rifle into the school, triggering a lockdown. Kashatok, the principal, said the teenager was drunk and had been targeting him. No one was harmed. Kashatok, who is aligned with the new council, said the incident was unrelated to the tribal dispute, though parents said children of former council members have been bullied in school.

Could the move to Mertarvik be a fresh start? Will it ever actually happen? Standing on the boardwalk, Simon cupped her basket in her hands and looked skyward. "I'm just a resident patiently waiting to move," she said. "Patience and prayer, that's (what) I go by."

* * *

Kashatok is one of only three Alaska Native principals of the 27 schools in the Lower Kuskokwim school district—a point of personal pride but also a symptom of what he views as a potential threat to the survival of the Yup'ik culture.

Grant Kashatok has been the Newtok School principal for 12 years. (Eric Keto)

If educators are not interested in or simply not fluent in the Yup'ik language and traditions, their students will lose touch with their heritage, he reasons. In Kashatok's school, the daily morning assembly is spoken in Yup'ik. Every object in each classroom, including the ceiling, is clearly labeled in both English and Yup'ik.

Kashatok, 52, was born in the nearby village of Kipnuk. Growing up in a culture that relates to the natural world on an intimate, often spiritual level—where village heroes are the young hunters who can fell the largest moose—Kashatok's preference for reading and studying language from an early age made him feel like a misfit, he said.

As a young educator, he grappled with a perceived conflict between his academic ambitions and the strong desire to uphold the Yup'ik way of life.

Eventually, he found that the two parts of his identity could exist in harmony—and he makes a point to convey this to his students with the hope that it will help them overcome any tendencies toward suicide or drugs, which have taken many young lives in Alaska Native villages. (Alaska has one of the highest suicide rates per capita in the country.) "As long as I remain true to being a Yup'ik man, then I will feel good about myself," he said. "If we show that to the other students, then we'll make some inroads (on those problems)."

Kashatok likes to brag that more than half of Newtok's sixth-graders are proficient in the Yup'ik language, even as they struggle with English.

Though there are no Advanced Placement classes and no test prep sessions for juniors and seniors eyeing college, several students each year travel to Bethel, the hub community about an hour east by plane, to live in dorms and take STEM classes in preparation for college. Last year, students raised $18,000 to send all seven seniors in the class of 2015 to Honolulu, an exotic destination for almost anyone, never mind these teens, some of whom had never left their village. "Since we've been having the kids travel more … [their] worldview has gradually changed so that they see themselves succeeding in college and getting professional careers going and so on, which is a good thing," Kashatok said. "[It's a] big change from how it was before."

Bosco Charles, who graduated in June, will be the third in his family to go to college, with plans to major in accounting at the University of Alaska in Fairbanks. "I want to do a lot of things," he said, leaning his tall frame, clad in basketball jersey, against a locker. "I want to (come back) and be a Yup'ik teacher."

When the principal envisions the future of his school, at the top of his wishlist is a soundproof Yup'ik room for dancing and drumming. A spacious new gym and a separate cafeteria are a close second. And of course, the tight-knit sense of community that grounds the Newtok school—where teachers can tick off the names of the 10 children in one family, from youngest to oldest, without batting an eye—will be preserved.

Above all, the new school will be safely located on rocky volcanic soil in Mertarvik, far from the rising water that seeps further inland on Newtok's shore every day. And when he considers the futures of his students, Kashatok dreams of them returning home with engineering degrees, prepared to help rebuild their community in its new island berth.

"What I hope are … a lot of students saying 'I went to Newtok School' and that means something," he said. "(And that) even though there was poverty and no running water, shit on the ground … that they made it."

Outdated FEMA Flood Maps Don't Account For Climate Change

NPR, September 15, 2016

The floods that hit Louisiana last month were caused by rainfall that was unlike anything seen there in centuries. Most of the southern part of the state was drenched with up to two or three inches in an hour. A total of 31 inches fell just northeast of Baton Rouge in about three days; 20 parishes were declared federal disaster areas.

Climate scientists and flood managers suspect there could more like that to come — in Louisiana and in other parts of the country.

There have always been extraordinary rainstorms — storms stronger than anyone can remember. But Nicholas Pinter, a geologist at the University of California, Davis, who researches floods, says we shouldn't write these off as once-in-a-lifetime freak events.

"[In] our experience," Pinter says, "these kind of — call them 'acts of God explanations' — are served up just a little too easily." Sure, he says, amazing rainstorms do happen. But lately, big floods seem to be following storms more often.

"Hundred-year floods — floods of a magnitude that usually occur only once a century — [and] other large [weather] events are occurring bigger and more frequently than the published probabilities predict," Pinter says.

And some of those floods look different.

For example, satellite photos show that about a third of the flooding in Louisiana last month was outside the local flood plain. The flood plain is the area that historically gets inundated by a once-a-century flood.

Pinter says floods that occur outside the historical flood plain appear to be happening more often — in Louisiana and elsewhere.

"Maybe we're seeing a different character of flood event beginning to appear," he says. "More like a climate-driven flash flood event that's affecting these big river systems, which might be a new and different phenomenon that we need to throw into the statistics. Maybe."

A heavy rain, for example, that flashes down onto urban areas and just overwhelms sewers and drains might be this sort of event, he says.

At this point, the evidence that the increasing floods is climate-related is still tentative, because you need a lot of storm data over many years to identify a trend. But Paul Osman, flood plain manager for the state of Illinois, is seeing changes too. Osman studies floods for the state and is charged with figuring out how to prepare for them. He calls these sudden floods that lie outside of flood zones "drainage events."

"We found that 90 percent of our damages in Illinois are not traditional overland flow damages (like a river overflowing its banks)," he says, "but rather heavy rainfall events that cause basements to back-fill with water."

Osman says a 2015 study by Illinois flood authorities found that between 2007 and 2014, almost all the flood damage in urban areas occurred outside the traditional flood plain.

This satellite map of Baton Rouge, La., shows the broad extent of the flooding that resulted from rainstorms in August 2016. The darker blue shows flood inundation on Aug. 14, compared to locations that more typically get flooded after a storm (shown in lighter blue). Mapped flood extent is likely an underestimate, due to cloud cover in the satellite imagery, the mappers say. The background image is from May 2016.

Osman says he suspects that's partly because the region is increasingly covered by concrete — shopping malls, parking lots, and other impervious surfaces that lead to flash-flood runoff. But he says he and other flood plain managers are noticing a shift in rainfall patterns, as well.

"There's no doubt," Osman says. "All the scientific evidence points at those rainfalls, [which] are changing. We're having a lot more of these intense, short-duration storms that happen in relatively small geographic areas" — such as the regions recently affected in Louisiana.

That's consistent with what climate scientists have been predicting. A warmer atmosphere holds more water vapor and can create bigger, more intense storms. And the federal government's latest National Climate Assessment notes that average precipitation is up overall in the U.S., and points to particularly intense rainfall events in the Midwest and East.

Osman says many drainage systems can't handle these intense storms. "Most of those storm sewer designs were built on historic records and historic rainfall events that are no longer the case," he says.

If historic rainfall data no longer hold true, that's a problem for the Federal Emergency Management Agency. FEMA draws up maps that show where flood plains are. People with federally backed mortgages in the highest risk areas have to get flood insurance. People outside those areas don't.

Kathy Schaefer is an engineer who spent 10 years drawing those maps at FEMA, and says those in use now don't take into account any rainfall changes that might have started to take place because of climate change.

"You had to ignore climate change [in drawing the maps]," she says. "All of the mapping had to be based on the existing conditions [at the time they were drawn, or many years earlier]." Those conditions were rainfall and flooding statistics from the past, she explains. Sometimes decades in the past.

Schaefer says local flood managers have begun to suspect that "existing conditions" are changing. But, until recently, anytime they came to Washington, D.C., looking for help to deal with those changes, they had to mince their words.

"They [couldn't] even use the words 'climate change,' " she says. "They call it a 'slow moving disaster,' which is sort of a code word for climate change."

Over the past couple of years, FEMA has begun to consider climate change in its flood analyses, Schaefer says. An executive order from the White House now requires it, and the agency is also proposing new operating procedures that require research into the effects of climate change on flooding.

But there's a time-lag problem: FEMA only updates its insurance flood maps every five years. Climate scientists fear that the weather may be changing faster than that.

Climate Change Poses "Significant Risk" To US Military, Report Says

Fox News, September 14, 2016

U.S. military officers and national security officials reportedly believe climate change pose a very real threat to U.S. military operations and could increase the danger of international conflict.

A Washington-based think tank, the Center for Climate and Security, said in a statement that climate change "presents a strategically-significant risk to U.S. national security, and inaction is not a viable option."

According to Reuters, the statement was endorsed by more than a dozen former senior military and national security officials. The group wants the next president to create a cabinet position to deal with climate change and its potential impacts on national security.

The Center for Climate and Security published a separate report, arguing that "extreme weather" poses a threat to coastal military bases.

"The complex relationship between sea level rise, storm surge and global readiness and responsiveness must be explored down to the operational level, across the Services and Joint forces, and up to a strategic level as well," according to the report.

Another report revealed earlier this year that faster sea level rises in the second half of the century could make tidal flooding a normal occurrence for some military installations.

Climate change hasn't been a major focal point of the 2016 campaign. Republican presidential nominee Donald Trump has called global warming a concept "created by the and for the Chinese" to hurt the U.S.

Democratic presidential nominee Hillary Clinton wants to have the U.S. use 50 percent cleaner energy by 2030 and promised heavy fracking regulations.

Climate Change Is A Military Problem, Former US Officials Say

By Steven Porter

Christian Science Monitor, September 14, 2016

From time to time, tidal flooding soaks portions of the US Naval Academy grounds in Annapolis, Md., where service members have studied since its founding in 1845. As sea levels rise and extreme weather strikes more often due to climate change, however, flooding could affect the site so frequently that it becomes unusable by the end of the century.

That warning is among many outlined in a report unveiled Wednesday by The Center for Climate & Security, with endorsements from retired US military officers and former national security officials. The bipartisan group of supporters called upon the current and coming administrations to anticipate the global conflicts that climate change could cause, and to protect the more than 1,700 coastal sites maintained by the American military across the globe.

"There isn't a region in the world where rising seas don't affect our military readiness and operations, and complicate our ability to do our job," retired US Coast Guard Vice Adm. Rob Parker said in a statement released with the report.

Even certain current conflicts can be attributed, in part, to climate, as US Secretary of State John Kerry noted during a speech last fall at Old Dominion University.

"It's not a coincidence that immediately prior to the civil war in Syria, the country experienced its worst drought on record," Mr. Kerry said. "As many as 1.5 million people migrated from Syria's farms to its cities, intensifying the political unrest that was just beginning to roil and boil in the region."

Alongside the report on rising seas, the Washington-based think tank released a national security "briefing book" for the next president and a consensus statement on climate change signed by 25 former officials.

"These reports make it crystal clear. To national security and defense leaders, there's absolutely nothing political about climate change," the think tank's co-presidents, Francesco Femia and Caitlin Werrell, said in a written statement. "It's a security risk, it makes other security risks worse, and we need to do something big about it."

Since the reports drew such bipartisan support from so many former officials, they could increase future pressure on the White House to dedicate more resources to climate change, which has not been a top priority on the 2016 campaign trail.

Democratic candidate Hillary Clinton has advocated for clean energy and fracking regulation, while her Republican opponent Donald Trump has said global warming is a concept “created by the and for the Chinese” to hurt American business.

Recommendations in the reports include the creation of a cabinet-level official to focus on domestic climate change and related security issues.

The reports and their endorsements failed to impress James Lewis, a senior vice president and program director with the Center for Strategic and International Studies, who suggested the military has more pressing threats to address.

“We tend to militarize everything,” Dr. Lewis tells The Christian Science Monitor. While climate change is an indisputable fact and fixing it would be worthwhile, it’s not a Department of Defense mission, he adds.

“People have gotten used to tagging the word ‘security’ to any issue we have,” Mr. Lewis adds. “Trying to cram everything into the security framework means we end up being less effective in addressing things.”

But the officials who spoke in support of the reports contend they have no choice but to engage.

“Because we define our interests globally, we have to take these things into account,” retired US Army Gen. Charles Jacoby Jr. said during an interview with The Weather Channel. “Many conflicts throughout our history have been based on resource competition. Increasingly in the future we’ll be defining some of our national security interests in those resource contests.”

Seneca Man Lost Home In Tornado; Finds New Friends

Associated Press, September 15, 2016

SENECA, Ill. (AP) — Two months ago, Rodney Seibert survived a tornado, which swept across North Central Illinois and La Salle County, but his rental home and the majority of his personal belongings, including his cargo van and work tools, did not.

On Aug. 24, Seibert explained it was through compassion of the local community he is succeeding in his recovery.

Interviewed in the wake of the storm, Seibert, a self-employed contractor, carpenter and cabinet maker, explained he considered himself and other storm-affected neighbors to be fortunate people, despite his personal loss.

No local persons were injured in the June 22 storm.

Standing in the rubble of the rural Seneca house where he had lived for almost 10 years, Seibert, who survived the tornado only by running to his home’s basement, told The Times, “Satan was outside my door that night. He was screaming. I thought he had come for me. I never heard anything like it.”

Wednesday, Seibert unpacked boxes in his new place.

“I am so grateful for the generosity of the community, of my friends — even strangers — who have given me furniture, a computer, tools, some money and other things to help give me a new start in a new place. I wouldn’t have known what to do, who to turn to. Without them, I’d probably be living in some campground someplace.”

Instead, just days ago, Seibert, moved into a new rental home in Marseilles and has remodeling work lined up to help him and his three employees in the near future.

Seibert said his new landlord also has arranged some work for his company, P.L.S. Remodeling, and his small crew, which should help them through the lean winter months.

“The shock of that night is still with me,” he admitted. “But thanks to many people, I’m on my own two feet again and working toward the future. And to know that people cared was just as important as the things people gave me. I knew people would probably help me, but I was surprised how many actually did. It has all been very nice.”

Seibert said he also appreciated the kindness and assistance of his former landlords, The Maierhofer family, of Seneca, as he picked up the broken pieces of his life. He had no renters insurance and only liability on his work van, which was a total loss after the storm.

“The entire Maierhofer family made sure I was taken care of and were very helpful after the tornado even though they had tremendous home and property damage of their own to deal with,” said Seibert. He also thanked friend and business client, Jennifer Bilyeu, who arranged a savings account MB Financial Bank in Seneca for donations and set up a GoFundMe page online at gofundme.com/senecatornado.

Seibert said he has used some of the money out of the bank and a few dollars from the internet site. As of Wednesday, the internet site still had $2,321 available to him.

He said it was difficult to drive past the now empty lot where his home and workshop once sat.

"The house, the big trees, the workshop are all gone, leveled and hauled away. It is hard to see that the place I lived at for so long is no longer there."

Asked what does he think he survived the tornado, he said, "God wanting me on a different path and, right now, every day, I am following his lead on that path. I have work every day on the job or here at the new house, and that's great because I need to keep my employees busy and my customers happy.

"It just wasn't my time yet. I know God stayed with me that night and, I guess, he is still looking over my shoulder. The storm changed my life and completely drained me, but, so far, it has been way better than I thought it would be. There are so many people to thank."

FEMA HOUSING

FEMA Mobile Homes Arriving

By Lauren Langlois

Hammond (LA) Daily Star, September 15, 2016

Tangipahoa Parish is starting to see mobile homes the federal government is providing for displaced residents, Parish President Robby Miller told the Amite Chamber of Commerce Wednesday.

Speaking at the chamber's luncheon, Miller said the parish is getting roughly 100 mobile homes from the Federal Emergency Management Agency. The mobile homes have started streaming in, and some will be going on people's properties as they work on repairing their homes.

The other FEMA mobile homes will be going into empty slots at existing trailer parks.

Built according to the U.S. Department of Housing and Urban Development standards, these mobile homes are supposed to be of better quality than the FEMA trailers provided after Hurricane Katrina in 2005.

Miller reflected on this year's two major floods and the recovery from the August flood that damaged several parishes across south Louisiana.

More than 9,000 homes in Tangipahoa Parish were flooded from August's storm, he said. Many of them also flooded in the March flood that caused water damage to about 5,200 homes.

FEMA has given out more than $27.1 million in aid to those who qualified so far, he said.

The recovery process has slowed now that the parish has gotten past the first few hectic weeks. Hotels and motels are seeing 75 percent occupancy rather than being 100 percent full as they were in the early days. However, for some the road to normalcy will take months, he said.

"We got a long way to go," he said. During the immediate aftermath of the flood, hundreds of motorists were trapped for many hours on Interstate 12 between Baton Rouge and Covington. Miller said it was a shocking scene.

"It was like a parking lot," he said.

The Louisiana National Guard dropped off supplies by helicopter to stranded people, and Miller told of going on one of those trips.

When he saw the mass of people below, he was unsure what to expect when he stepped out of the helicopter. But then he saw them form an orderly human chain to hand down supplies to the next person. It was a moment during the chaos that has stuck with him since it showed how caring and selfless people can be, he said.

"They were not worried about themselves," he said. "It proved to me that people are good."

Miller also touched on the state bridges that are still out because of flood damage. He said the bridge repairs should take months, as the damage was major.

In Tangipahoa Parish, state bridges that are unsafe to cross include Dunnington Bridge on Morris Road, an La. 22 bridge east of La. 445 going toward Bedico and an La. 1054 bridge on the north end, which has been out since the March flood. Miller said the Dunnington Bridge, which is about 340 feet long, may even need to be replaced.

Flood debris pickup also is continuing, he said. More than 28.39 cubic yards of flood debris has been picked up by trucks that have brought more than 709 loads to the parish landfill. Miller said space at the landfill has not been an issue.

"Shelter At Home" Program Sees Slow Start, But Pace Expected To Pick Up

By Elizabeth Crisp

Baton Rouge (LA) Advocate, September 14, 2016

Just four of the more than 18,000 households that have sought help from Louisiana's signature housing recovery program have had emergency repair work completed, following the catastrophic floods that swept across South Louisiana last month.

But leaders say that they expect the number to ramp up as the "Shelter At Home" program gets past the initial hurdles of its launch.

"It takes time to establish a program and get it moving," said Lael Holton, of AECOM, the company selected to administer the program. "Those homes are going to start moving forward very rapidly."

Holton said that at least 900 homes are currently in the process of repairs two weeks after the program formally launched. That number is expected to continue to increase, as more construction crews hit the ground.

"18,000 people are all seeking the same service at the same time," Holton said. "We're pushing it as fast as we absolutely can."

Shelter at Home was unveiled last month as a key component of the state's plan for addressing the needs of thousands of people left displaced by the August floods, while also easing the burden on an already squeezed housing market.

Gov. John Bel Edwards has on several occasions, including during a recent congressional hearing, touted the program as the preferred housing recovery method, as opposed to rental assistance and hotel stays, because it allows people to remain in their communities.

The idea is to get homes into a livable state, so people can live there while they make more permanent repairs.

On Wednesday, Edwards' spokesman, Richard Carbo, said that the governor is closely monitoring the Shelter at Home roll out and remains optimistic about it.

"I think over the next 24-to-48 hours, the numbers will spike dramatically," Carbo said. "We're doing everything we can to get people into their homes as quickly as possible. It's a process."

The state and federal partnership is a first for Louisiana, and leaders have touted it as an innovative solution for the complex housing needs that have arisen following the floods.

But Holton said that homeowners in the pipeline have already been expressing frustration over the pace of the roll out.

"Right now, we are continuing to let folks know that we are hearing their concerns," he said.

During a recent congressional hearing on the flood response, U.S. Rep. John Mica, R-Florida, said that he had also was aware of concerns over the Shelter at Home program's pace.

Mica, who chairs the House subcommittee that oversees FEMA and visited Baton Rouge following the flood, said that FEMA blamed the state for delays.

"The thing I heard was that it took a long time to get Shelter at Home in place," he said. "I'm saying, 'Why hasn't anything been done?' (FEMA) said the state had not approved a plan."

Officials estimate that as many as 160,000 homes have been affected by the flood. The central goal of Shelter At Home is to help people return to their communities and settle back into their lives as they continue the recovery process.

If a home can be back in a livable state with up to $15,000 in repairs, then the state will OK the work and a crew will be sent out to do the work.

The program only covers minor repair work: basic electrical and plumbing inspections; carpet and insulation removal; air conditioning and hot water heater repairs; and installing temporary bathroom fixtures, are among the types of tasks they will consider.

The program will also pay for mini-refrigerators or microwaves to be installed to serve as makeshift kitchen appliances.

Holton said that despite the initial backlog, he thinks that it's important to spread word about the program. Shelter at Home representatives will be setting up at disaster recovery centers in the coming days and work to promote the program throughout affected parishes.

"One of the things we need to focus on is getting the word out to folks," he said.

More Than 32K Homes Can Stay On The Ground After Metro Council Exempts Many From Elevation Requirement

By Steve Hardy

Baton Rouge (LA) Advocate, September 14, 2016

The Metro Council on Wednesday made perhaps the most sweeping change to its flood ordinance yet, meaning many people now won't have to worry about whether the government will make them elevate or demolish their homes.

According to the latest numbers from the city-parish, more than half the households that flooded — some 32,000 households — are in areas variously described as X zones, low-and moderate-risk zones and non-special hazard zones. The practical difference is that those people are not required by their mortgage companies to buy flood insurance, as the people in high-risk zones are.

Wednesday, the Metro Council voted to exempt existing buildings in low- and moderate-risk flood zones from elevation requirements.

"That's a big deal," said Mayor Pro Tem Chandler Loupe.

City staff said Wednesday they aren't sure how many of the more than 32,000 homes now relieved of elevation requirements would have actually reached the threshold that would have required they raise or wreck their homes.

Several other flood topics were brought before the Metro Council on Wednesday, including an update on local waterways and the start of talks about how many millions of dollars it's going to cost to pay for all the damaged public property.

There's also a chance the airport could serve as a future site for trailers from the Federal Emergency Management Agency. FEMA has previously announced its preference for rental assistance and performing basic repairs so flood victims can shelter at home, but many politicians have said the trailers will be the only way forward for many residents, and not every lot has enough space to fit one.

The East Baton Rouge Sheriff's Office submitted a $35,000 proposal to lease five acres at the airport to place trailers for deputies and their families, though the measure was pulled without discussion.

However, Aviation Director Anthony Marino said FEMA has expressed interest in renting about eight acres for 27 trailers, but no deal has been struck.

The Metro Council also introduced a measure to allocate $47 million to pay for flood-related expenses. The matter will go up for discussion and vote during the next meeting on Sept. 22. According to supporting documents, it will cost at least $31 million to pay for debris removal, $10 million for building and equipment repairs, $5 million for emergency protective measures and $899,000 for contractors to apply for flood-related grants and oversee the disbursement of federal funds.

The city-parish expects that all or nearly all the money will be reimbursed by the federal government's public assistance program. Recently, the White House upped the amount it will pay local governments' flood expenses from 75 percent to 90 percent. The city-parish intends to pay the rest with its budget stabilization fund, and the East Baton Rouge finance director has said the local government won't have to put off any capital projects to make up its share.

Besides the cost of debris removal, the city took damage to dozens of police vehicles, fire departments, libraries and other public property.

The council also signed off on the $899,000 deal with the grant contractors, which will apply for grants on behalf of the city and oversee the disbursement of federal money. Several asked questions about whether the bid was properly advertised and what it would pay for, but city-parish Chief Administrative Officer William Daniel said it was competitively bid and that the amount is the "not to exceed" amount based on the salaries at the company, CSRS Inc.

Public works staff also submitted a report on parish waterways. Fallen trees have worsened erosion around the Comite River, and water levels in the south of the parish near Bayou Manchac were still high.

Canals appear to be back to normal, but portions of Cypress Bayou and Redwood Creek still had some tree debris when workers performed their observations at various points in the past two weeks.

In their written report, staff recommended three methods to improve drainage. First, the parish could bring back the plan to bond out money to update 42 miles of channels, though a bond issue to support such a strategy has failed three times. The unfunded Comite River Diversion Canal would also help, though it will require federal support. Finally, the connections between subdivision and municipal channels need to be improved to increase capacity.

Public works staff shot aerial photographs of the damage they encountered and made a map for the council. Loupe asked that it be made public. The city-parish has been publishing its flood-related public maps at gis.brla.gov/.

While the big news out of Wednesday's meeting for many was the news that they definitely won't have to elevate their homes, there are a few caveats.

Buildings in high-risk zones — sometimes called A zones — that sustained 50 percent damage and are not currently at least one foot above the base flood elevation level will still have to be torn down or raised up.

"There's nothing we can do about A (zones,)" Daniel said.

High-risk zones must meet standards set forth by the federal government so residents of a parish or municipality may participate in the National Flood Insurance Plan.

For decades, the city-parish has enforced stricter building codes than the federal minimum to receive cheaper flood insurance rates. Earlier this month, the

Metro Council made other changes to try to reduce the number of people who will be forced to rebuild.

Previously, people had to raise or rebuild when their homes received 40 percent damage. The threshold was raised to 50 percent. Also, homes in high-risk flood zones only have to be a foot above the base flood elevation after the council exempted the recent flood from any elevation standards.

The city-parish has lost points toward its flood rating for changing its standards. However, Daniel said Wednesday that none of the changes so far has pushed the parish into a lower rating that will force people to pay higher premiums.

The newest rule does not affect new construction in low- and moderate-risk zones, which must still be built one foot above the street center line, manhole covers and record inundation excluding the recent event, explained engineer Shannon Dupont, the city-parish's floodplain manager.

Furthermore, property owners who have land in a high-risk zone, but their houses are in a low-risk zone and flooded, will not have to meet any type of elevation standard, said interim assistant chief administrative officer Carey Chauvin.

State Politicians Frustrated At FEMA's Slow Flood Response

By Brett Buffington

WBRZ-TV Baton Rouge (LA), September 14, 2016

BATON ROUGE – As state politicians countinue to fight for funding, many are saying they're dissatisfied with the time it's taking FEMA to get resources to families.

"This isn't the first time we've had a disaster," Congressman Garret Graves told News Two's Brett Buffington. "It's not the first disaster we've had in Louisiana. They need to have better systems in place to more efficiently get people answers."

Graves says he's frustrated because thousand of people have been asking questions, and they are going unanswered.

"The fact that they can come out in two weeks and blame this entire flood on climate change," Graves explained, "yet can't give us answers on if someone is eligible for financial assistance, can't cut them a check on flood insurance, and other things? Absolutely unacceptable.

Newly released numbers show a clear sign of shockingly slow federal response. FEMA's holding site in North Baton Rouge is storing 198 modular housing units, which started rolling in nearly 3 weeks ago. As of Wednesday, 893 applicants have been approved for the homes, but only 12 are being used.

"They're apparently spendin gup to $20 thousand per trailer just to ship it down from North Carolina," Graves said. "There are trailer dealers here in Louisiana, travel trailers and other trailers. There are more efficient ways to do this."

Graves also suggested any money wasted now would only hurt the Baton Rouge area in the future, saying "the cost of inaction is not free."

Graves, along with the Louisiana Delegation, is pressuring for policy that would put long-term federal funding in place to stop the worst flooding disaster in our nation's history from getting even worse.

"If congress does not step in," Graves said, "if the White House does not step in, you are going to see mas foreclosure and bankruptcies, mortgages backed by the federal government, Fannie May, Freddie Mack, FHA, VA, and others. This is going to be a federal liability one way or another."

Graves added mass bankrupcies would trickle down to falling property values. He says that could mean trouble for some of Baton Rouge's biggest assets, like education and law enforcement.

Gonzales City Council Amends Budget $450,000 For Flood-emergency Repairs To City Hall, Debris Collection

By Peter Pasqua

The Creole (LA), September 14, 2016

GONZALES – The Gonzales City Council approved an ordinance to amend the general fund budget by $450,000 for emergency repairs to City Hall and debris collection after floods inundated the structure and others in the city limits about a month ago.

City Clerk Clay Stafford said emergency protective measures will be sent to FEMA for disaster recovery during the previous meeting and had estimated costs for repairs to City Hall at $300,000 and debris cleanup to be $150,000.

The City Council held their meeting at the Ascension Parish Courthouse East Annex for the second meeting in a row during to flooding of City Hall and Stafford said then that initial estimates on repairs to the structure may be higher, while the collection of debris could be lower.

City engineer Jackie Baumann addressed residents' flood concerns at the beginning of the meeting. She said that a FEMA expert is coming on board and the goal is to help people. A rough estimate of 250 homes were flooded it was reported earlier.

Baumann said the city ordinance doesn't have an inundation clause regarding raising their homes and if a structure has flooded multiple times and you prove a loss has happened it will fit into a category that increases cost of compliance and could result in raising, relocated or demolishing.

"We are not going to force people to raise their homes because of this flood," Baumann said. "There are no places that the city knows are repetitive."

Baumann also said the city has a website to apply for a building renovations permit and it is being used as a tracking mechanism. She also said the clock is ticking encouraged folks to get their project worksheets in as quick as possible to be eligible for reimbursement repairs.

"The truth is we don't require an inspection," Baumann said. "We feel like we have a handle on the depths where it was over two feet."

Mayor Barney Arceneaux said having to deal with rules and regulations is so slow and wants the process accelerated.

"These folks are afraid to make a move," Arceneaux said.

The City Council also unanimously approved temporary housing options for flood victims allowed for up to 180 days as a starting point. Building official Jerry Self said the ordinance has been relaxed temporarily to assist with travel trailers as long as they are connected safely to electric and sewer.

Self also said the FEMA mobile homes are 16×40 and he is not sure if they will fit on some lots as residents repair their homes.

The council also accepted the minutes of its planning and zoning commission which included the denial of a request for a Sober Living Home for Women at 422 E. McArthur Street. There were many that spoke in favor and against the home which would house 10 women there during the Sept. 6 meeting.

Some stated these type of homes helped saved them, while others applauded the effort but said it is just too many people living in one home. The zoning commission voted unanimously to deny the request.

NFIP AND FLOOD MAPS

FEMA And City Officials To Hold Workshop On New Flood Insurance Maps For New Orleans

Baton Rouge (LA) Advocate, September 13, 2016

New Orleans officials and FEMA representatives will hold a workshop Thursday to discuss the new flood insurance rate maps for the city.

The new maps, which go into effect Sept. 30, shift 53 percent of properties in New Orleans from categories deemed to be at high risk of flooding to lower-risk zones. That typically means lower rates for flood insurance.

The new maps can be found at www.Maps.RiskMAP6.com.

The meeting will begin at 10 a.m. in the City Council chamber at City Hall, 1300 Perdido St.

Because seating is limited, those who plan to attend must register in advance at www.eventbrite.com/e/orleans-parish-flood-insurance-workshop-for-homeowners-tickets-27314906621.

FEMA Hosting Flood Insurance Workshop For Residents Thursday

By Kelsey Davis

WDSU-TV New Orleans, May 15, 2012

FEMA will host a flood insurance workshop for home owners on Thursday at City Hall.

FEMA's new flood insurance rate maps will go into effect on Sept. 30.

Major changes have been made to federal flood maps that could affect people's flood insurance rates, so officials are encouraging everyone to attend the workshop to get a better understanding of those changes and how or if they will impact their insurance rates.

Officials say because of significant improvements made to drainage and flood protection, more than 53 percent of properties in the city were removed from the special flood hazard areas.

Under the new FEMA flood insurance maps, approximately 85,000 policies will be affected. Officials say these policy holders will see significantly lower insurance rates.

Once City Council adopts the new flood maps, homeowners will be required to build homes higher. The new elevation requirements will be for new construction and major renovations that the city permitted after June 1, 2016.

The workshop is free but seating is limited, so residents and property owners planning to attend should register online in advance.

The workshop starts at 10 am inside City Council chambers.

Dozens In Denham Springs Issued Invalid Flood Repair Permits, Must Reapply

By Heidi Kinchen

Baton Rouge (LA) Advocate, September 14, 2016

As frustrated as many homeowners have become with post-flood rebuilding, some Denham Springs residents will have to go through the permitting process twice because the initial trip turned out to be handled by the wrong people.

Denham Springs Building Official Rick Foster said at least 30 homeowners in the city had received inspections and permits from the Livingston Parish permit office, rather than from city officials, within the past few weeks. Those permits were issued "in error, with no authority and are not valid," he said.

Any construction performed under the invalid permits may be in default under city regulations, Foster said, and those homeowners must seek a valid permit from the city's planning and development office. City officials will do everything they can to expedite those requests, he said.

DeeDee Delatte, the parish's assistant permit director, said the invalid permits were the result of the office's heavy workload after the flood and their use of out-of-town inspectors unfamiliar with the municipal boundaries.

Delatte said the parish permit staff has been swamped with applications, issuing 200-300 permits per day, working six or seven days each week since the office reopened Aug. 22.

"We have outside agencies helping us, people from Tennessee and from Baton Rouge, not from permit departments," Delatte said. "Some of them have been working our front desk on the weekends to give us time to catch up on entering our data, and some permits were issued in error by those outside entities."

Just how many invalid permits were issued and to whom is unclear. Foster asked the parish for a list of homeowners inside city limits who received parish permits, but Delatte said they cannot provide that list.

"We've been hand-writing everything and don't have a way to go back and search for those until they have all been entered in our system," she said.

The parish also cannot guarantee the errors won't recur, Delatte said.

The out-of-town inspectors discovered the problem when a Denham Springs resident told them they had no jurisdiction in an area where they were working this past week. After speaking with parish permit staff, the inspectors decided they would no longer conduct inspections at Denham Springs addresses, Delatte said.

"Is it going to happen again? Possibly," she said. "We're seeing so many applications, I just can't say that it absolutely won't happen again. But these were mistakes. We have so much of a workload here, I definitely don't need to be grabbing any from other places."

It's not clear how many of the thousands of parish permit applications have resulted in a "substantial damage" determination — meaning, the cost of repairing the home equals 50 percent or more of its pre-flood value.

Homes in special flood hazard areas that are built lower than the base flood elevation and determined to have been substantially damaged will have to be elevated, according to Federal Emergency Management Agency regulations the parish adopted in order to participate in the National Flood Insurance Program.

Delatte said parish Building Official Chuck Vincent had found some homes to be substantially damaged, but she was unsure how many.

"I'm not quite sure on that total," Delatte said. "He (Vincent) is just running that part on his own. ... Most of them are houses on piers, not slab homes, where the foundation has been shifted and the subfloors are bad. I'm sure there's a whole lot more to come."

In Denham Springs, city inspectors have found 10 homes — among 260 for which repair permits were sought — to be substantially damaged, Foster told the City Council on Tuesday.

Delatte said residents in the unincorporated areas of the parish who believe their homes may have been substantially damaged should call the parish permit office for an inspection.

"We'll come out and look at it and make that determination based on appraised value," she said. "Then at that point, we'll determine if you have to elevate or if you can go in and repair it."

Delatte said what may appear to a homeowner to be substantial damage could wind up falling below the 50 percent threshold.

"If the foundation is there, the outer walls are still intact and the roof is good, there may still be a lot of work to be done but it might not necessarily meet the threshold," she said.

Foster said Denham Springs officials will look at two figures to determine whether homes inside city limits have been substantially damaged: the pre-flood market value and the estimated cost of repairs. FEMA provided a list of approved sources for those figures, which is available on the city's website at www.cityofdenhamsprings.com/docs/MarketValue.pdf.

Realtor: Homeowners Should Consider Flood Insurance Even If Not

By Candy Rodriguez

KPLC-TV Lake Charles (LA), September 14, 2016

SOUTHWEST LOUISIANA (KPLC) –

Residents across South Louisiana never expected recent floods to have the damaging results they did – homeowners who never flooded before and didn't have flood insurance are having to deal with the impact left behind.

That's why realtor Brandon M. Duhon, with Keller Williams Realty, recommends people looking to buy a home reconsider buying flood insurance, even if the home is not in a flood zone.

"You and your family just have to decide – is it worth it to spend the extra money on insurance in case if it does happen,

" he said. "Because it's not a guarantee that it won't happen and with the things we have seen here in the last year, is it worth protecting our home."

The hundreds of dollars you spend yearly on flood insurance could save you thousands in the long run if something was to happen.

Zones: A, AE, A1-A30, AR, AH, AO are just some of the zones that require flood insurance. It is mandatory because "areas subject to inundation by the 1-percent-annual-chance flood event," according to FEMA, as well as, Zone V which are coastal zones like Cameron Parish.

Zone X does not require flood insurance because the likelihood of flooding is 0.2-percent-annual-chance (or 500-year).

Click HERE for flood insurance rates.

Click HERE or visit www.fema.gov/flood-zones to take a closer look at the flood zone details.

If you would like to see a map to look at a certain area, click HERE or visit maps.lsuagcenter.com/floodmaps.

FEMA Officials Discuss New SC Flood Map

WBTV-TV Charlotte (NC), September 14, 2016

AIKEN, SC (WFXG) –

New flood maps have been released for the upper and middle Savannah water sheds in South Carolina.

On Wednesday, FEMA officials hosted an open house in Aiken for residents to see if their properties fell in a flood-prone zone.

They were also able to get information and flood insurance and hear from local officials pertaining to ordinance requirements.

Officials explained why residents need to know what their area of town is labeled under the new maps.

"So, these tell you your level a risk--low, moderate or high risk of flooding. If you were to have a federally backed mortgage on a home that's located in that designated area, you would be mandated to purchase flood insurance," said Maria Cox Lamm, DNR state coordinator.

Officials will be in Edgefield on Thursday to share information on the flood maps:

MITIGATION

Jefferson Anticipates $29.8M FEMA Grant Funding By January

By Wilborn Nobles

New Orleans Times-Picayune, September 14, 2016

In what officials call the largest federal share to a single jurisdiction in this year's funding cycle, Jefferson Parish will receive $29.9 million in FEMA funding for 115 elevation and 36 reconstruction projects.

In addition to working with FEMA, Michelle Gonzales, the parish director of Floodplain Management & Hazard Mitigation, said her office is working with the Governor's Office of Homeland Security & Emergency Management to finalize the grant awards now.

She anticipated January to be the earliest date that FEMA will be award the funds as the federal government performs a environmental review. FEMA announced the opening of the grant period in early March 2016 and Gonzales said Jefferson mailed an application opening notice to just over 1,000 properties that were featured on FEMA's Severe Repetitive Loss Properties.

"The grant application was written with focus of properties that met FEMA's priorities," Gonzales said Wednesday (Sept. 14).

The application also focused on what the current flood risk is such as in a flood zone, how low is the structure below the Base Flood Elevation, and how frequently is the structure flooding, she said.

FEMA made $199 million available for Flood Mitigation Assistance Grants within a March 15 – June 15, 2016 application period. Officials said the projects selected had recognized FEMA's priority on projects that mitigate four National Flood Insurance Program insured properties.

The properties include structures having two or more NFIP building claim payments that cumulatively exceed the market value of the insured structure. FEMA also focused on structures that incurred NFIP claim payment on two occasions, in which 25 percent of the market value of the insured structure was exceeded at the time of the event.

FEMA also focused on structures having four or more separate NFIP claim payments with each exceeding $5,000 and the mitigation of the largest number of NFIP-insured properties.

FEMA Report Underscores DHS' Interagency Emergency Response Efforts

By Ramona Adams

ExecutiveGov, September 14, 2016

The Federal Emergency Management Agency has released the 2016 National Preparedness Report which highlights the Department of Homeland Security's efforts to prepare emergency first responders through interagency cooperation.

DHS said Monday that FEMA's report tracked progress from the last five years in prevention, protection, mitigation, response and recovery initiatives.

DHS and interagency partners continue to build on the capacity of National Network of Fusion Centers to facilitate intelligence collection and sharing between fusion center customers, the department noted.

The National Counterterrorism Center, DHS and FBI jointly sponsored counterterrorism awareness workshops to educate first responders across the U.S. on prevention and response strategies against terrorist attacks, DHS added.

DHS' counterterrorism efforts include the launch of web-based messaging materials for public awareness as well as the "If You See Something, Say Something" campaign which aims to provide information on indicators of potential terrorism and crime.

The department has also established the Regional Resiliency Assessment Program to help assess critical infrastructure systems and DHS seeks ways to apply the assessment process to issues such as climate change, cybersecurity and electromagnetic-pulse preparedness.

DHS worked to engage public and private sector partners in the 12th annual National Cyber Security Awareness Month in October 2015 which aimed to increase cyber threat resilience.

FIRE GRANTS

Hanover Fire-EMS Awarded $559,500 FEMA Grant To Train, Recruit Volunteers

By Debbie Truong

Richmond (VA) Times-Dispatch, September 14, 2016

The department that oversees Hanover County's firefighters and medics was awarded more than $550,000 in federal money for training and recruitment.

Hanover Fire-EMS was awarded a $559,500 SAFER grant from the Federal Emergency Management Agency to recruit, train and retain 48 volunteer firefighters over the next four years. The grant arrives less than a year after a dwindling number of volunteers forced a fire squad in Hanover to disband.

NEWS AROUND THE COUNTRY

HURRICANE RECOVERY

FEMA Officials Wrap Up Tour

By Mike Wright

Citrus County (FL) Chronicle, September 15, 2016

Round 2 of Hurricane Hermine storm surge damage inspection came and went Wednesday and, other than submitting some final paperwork, Citrus County's role in seeking a federal disaster declaration is complete.

Pinellas Beaches Show Effects From Hurricane Hermine

By Jennifer Rich

Tampa Bay (FL) Times, September 14, 2016

City crews in Pinellas County's beach communities have been cleaning up debris and filling in eroded sand that created 3- and 4-foot drops at beach accesses after Hurricane Hermine's strong winds and tides battered the shoreline.

The mid-county beach communities like Indian Rocks Beach and Redington Shores were hit the hardest, according to a survey by the University of South Florida's Coastal Research Laboratory.

Professor Ping Wang, director of the laboratory, said the storm surge and wave action along the county's shoreline were greater than those of Tropical

Storm Debby in 2012, the last significant storm to impact the area. However, neither lasted as long as during Debby.

Data collected one day after the storm and compared with data collected two weeks before show significant dune erosion and sand escarpments on beachfronts from Sand Key in the north to Mullet Key at Fort Desoto Park, Wang said.

"It passed the coast rather closely and generated very energetic conditions," he said.

Areas with wider beaches such as the north end of Sand Key near Clearwater Pass and Treasure Island's central beachfront survived the storm better than areas like Belleair Beach, Indian Rocks Beach and Redington Shores with thinner beachfronts.

The state granted an emergency permit to Indian Rocks Beach and other impacted communities to haul in additional replacement sand.

About 30 truckloads of sand purchased from a private company were dumped this week in Indian Rocks Beach to help alleviate the scouring that occurred at beach crossovers, City Manager Greg Mims said.

"We have 28 beach access points and a large number have a 3- to 4-foot drop," he said.

The city also lost beach signage, and recycling and garbage cans that were located along its 2½ miles of beachfront.

Mims estimates the emergency sand replacement and restoring other damage will cost the city around $30,000.

Though Treasure Island beaches might not look as severely damaged, Wang said that doesn't mean they weren't significantly impacted.

"It's probably because of their 2014 beach renourishment," he said. "But the beach is wider to start with so that doesn't mean they didn't lose a lot of sand."

Treasure Island City Manager Reid Silverboard said the hardest hit areas were to the north and south — Sunshine and Sunset beaches.

"It created an escarpment along a portion of the beach so that police and sanitation vehicles can no longer get to some areas," he said.

"We definitely have a flatter beach profile now. We are waiting to see how much beach returns and the impact of the winter storms," Silverboard said.

Both Mims and Silverboard are hoping a scheduled beach renourishment will be moved up after further details of the recent storm are analyzed.

"It does appear there was significant dune erosion," said John Bishop, Pinellas County coastal management coordinator, who has made frequent trips to survey the beaches since the storm.

The county is pushing the Army Corps of Engineers for an estimated $25 million for the renourishment of Sand Key and $12 million for Treasure Island in hopes of moving up the project to 2017, Bishop said.

"We have been trying to get the renourishment moved up for some time now so the storm has given us more impact," he said. "It all comes down to federal funding."

Wang and others are still working on a more detailed analysis and expect to have more details soon.

"We should have numbers on the amount of sand lost in a week or so," Wang said.

FLOODS

Louisiana Leaders Remain Optimistic About Federal Flood Aid Chances

By Elizabeth Crisp

Baton Rouge (LA) Advocate, September 14, 2016

Louisiana leaders say they remain optimistic that the state is close to securing federal relief package that will help provide funding for housing, infrastructure and community development programs following the catastrophic floods that left 13 people dead and thousands displaced last month.

Gov. John Bel Edwards spent Wednesday in Washington, D.C., lobbying for what he says is a more than $2 billion immediate need back home to help jump start the recovery process in flood-wracked communities.

Edwards spokesman Richard Carbo said that the governor on Wednesday night was waiting for legislation to be finalized, including an official dollar amount that the state could see, but the latest round of meetings, including with U.S. House Speaker Paul Ryan, R-Wisconsin, were positive.

"As far as the delegation is concerned I think everyone is very committed to getting something as quickly as possible," Carbo said. "There are still hurdles to climb but we are working through them."

President Barack Obama's administration has requested $2.6 billion in flood relief for Louisiana that could be used for housing repair or replacement that won't be covered by insurance; additional individual assistance awards through FEMA; small business repair needs; infrastructure improvements and other programs to benefit flood victims, including affordable housing and community development projects.

"The administration urges the Congress to provide additional funding to address Louisiana's unmet housing and infrastructure needs as soon as possible," White House Budget Director Shaun Donovan wrote in the letter formally requesting aid for the state's recovery Tuesday.

Edwards this week announced a 21-member task force that will help lead the state's recovery, including coordinating resources for the rebuilding and redevelopment of flood-wracked areas to "maximize their impact, improve efficiency and avoid duplication of efforts." That group would likely help direct how the federal aid makes its way to communities.

U.S. Sen. Bill Cassidy, R-Baton Rouge, said he's confident that Louisiana will receive federal assistance.

"Everybody's on board and everybody's doing their part," he said. "I'm confident that we will have more relief. The question is whether it will happen in September or December."

The U.S. House and Senate are scheduled to recess by the end of the month and won't return until after the November elections.

The continuing resolution that would be a vehicle to carry the flood aid is needed to keep government funded past the end of the month.

"There is a chance, and we've been working with others to line things up, so at least a portion of it can come out now," Cassidy said. "Aid will be most impactful if it comes out earlier, and not later."

One of the concerns for Louisiana's leaders has been over whether other projects might also get tacked onto the continuing resolution, derailing the flood aid.

Cassidy said that's a concern for him as well, but he sees things generally tilting toward Louisiana's favor at this point.

"I'm the kind of guy that until it's signed into law, I'm going to keep working at it and working for it and not take anything for granted," he said. "We do receive positive feedback as we're working on this."

"We continue to have things lining up," he said.

Representatives from the Louisiana Association of Business and Industry were in Washington on Wednesday for an unrelated meeting with the state's congressional delegation. It's by coincidence that a major issue affecting Louisiana is also going on at the same time, LABI President Stephen Waguespack said.

But the business leaders quickly shifted into unofficial flood ambassador mode – spreading the word about just how badly aid is needed back home.

"They can't wait until December," Waguespack said. "For some of these areas, if there's not an immediate investment of some sort, you just won't have recovery there. We're trying to stay on that message."

Waguespack said that representatives from LABI had met with Edwards and Louisiana's delegation throughout the day. He said they had also been working to stress to lawmakers from other states.

"At this point, I think everyone understands that something has to be done," he said. "It sounds promising that they'll get something done."

Livingston School Board Approves Selection Of FEMA Consultant, School Restoration Company

By Heidi Kinchen

Baton Rouge (LA) Advocate, September 14, 2016

LIVINGSTON – The Livingston Parish School Board, meeting this past week for the first time since the flood, ratified Superintendent Rick Wentzel's declaration of a state of emergency for the school system and his selection of contractors for emergency recovery and water damage assessment and restoration services.

The School Board, during the Sept. 8 meeting, also ratified Wentzel's selection of David M. Shapiro Disaster Planning & Recovery Consultants as project manager to guide the school district through the Federal Emergency Management Agency's public assistance grants process.

The contract cost is capped at $3.85 million based on an initial estimate of $100 million in damage to school system facilities due to the flood. If actual damages exceed that amount, the cost could be renegotiated.

"Initially upon meeting with FEMA, they suggested we hire a project manager to handle this for us," Wentzel said, adding that Shapiro was selected from among 11 companies that sought the job.

Wentzel said he had met twice already with the consultant and representatives of FEMA and the Governor's Office of Homeland Security and Emergency Preparedness, and he was impressed with the firm's work.

"I'm going to tell you, those guys know the ins and outs, and they have definitely got our backs," Wentzel said. "I appreciate them being a part of helping us get through this process, and I believe they're going to do everything they can to get us our due."

The contract with Shapiro, which Wentzel signed Aug. 29, is for a five-year term with the option of two one-year renewals.

Wentzel said Guarantee Restoration Services, of Baton Rouge, helped the district take action immediately after the flooding to save school buildings and point the school system toward recovery. The School Board unanimously supported his selection of that firm for emergency services.

The board also affirmed Wentzel's selection of United States Health and Environmental Liability Management, LLC, to be the district's environmental consultant.

U.S. Helm will perform water damage assessments on 19 School Board-owned properties, including 17 school campuses, the district's central office and an Albany property previously designated as a site for a possible new elementary school.

The contract also calls for the company to perform asbestos testing, lead-based paint testing and HVAC assessments for potential impact from moisture and mold as part of the restoration process at each site.

The work is projected to cost up to $524,400, according to the contract.

In a separate matter, the School Board approved Wentzel's selection of Gregory Hayden as principal of Juban Parc Junior High. Hayden, who has 23 years of experience in education, previously served as the school's assistant principal for four years and was instrumental in the school's flood response, Wentzel said.

"I called Greg Hayden on Aug. 16 and told him I needed him to be principal of Juban Parc Junior High because we were pulling (former principal) Jeff (Frizell) off of that because we needed Mr. Frizell up here to do some stuff for us," Wentzel said. "Mr. Hayden didn't bat an eye. He said, 'Yes sir, you don't worry about Juban Parc Junior High.' And I want you to know I have not worried about Juban Parc Junior High because Greg Hayden has handled that, has done an excellent job thus far, and I just really want to put an exclamation mark on my recommendation of him as principal."

Lafayette School Board Agrees To Move Ahead On Performing Arts Facility At Comeaux High

By Lanie Lee Cook

Baton Rouge (LA) Advocate, September 14, 2016

A project to build a multi-million-dollar performing arts facility at Comeaux High School is moving forward after the Lafayette Parish School Board voted Wednesday to allocate initial funds toward its design and to advertise for bids.

Although the board deferred the finance committee's recommendation to designate $6 million in bond money for the project, it instead authorized $500,000 to secure an architect who will begin design plans and then provide a cost estimate.

"I think we might be better served if we get into a habit of developing more accurate estimates," said board member Erick Knezek, who suggested deferring the bond designation, pointing out that projects often need more money than what's allocated.

The board voted earlier this year to transfer the performing arts program from the overcrowded Lafayette High School to Comeaux, which will lose about 900 students next year once the new Southside High School opens in Youngsville. But Comeaux does not have an adequate performing arts facilities.

The board's finance committee last week recommended allocating the $6 million, about a million lower than initially recommended by the administration.

The performing arts program, like other specialized Schools of Choice programs within the district, allows students to attend schools outside their attendance zones for the training. Students in the program study dance, theater arts or music, including guitar, piano, stringed orchestra, choral or instrumental music.

Board member Justin Centanni, who serves on the board's finance committee, said the committee explored options for reducing the project's cost, including reusing existing space — an effort that will be included in the project.

In another matter Wednesday, the board allocated another $500,000 toward flood-damage repairs, putting the system's out-of-pocket costs so far at $1 million, which covers the insurance deductible.

About three-fourths of that money should be reimbursed by FEMA, Superintendent Don Aguillard has said.

Fourteen schools received flood damage, although Westside Elementary School in Scott bore the brunt, taking in 1.5 feet of water. Estimates for repairing that school, which will include construction to bring the facility up to modern coding requirements, have topped $5 million.

The expenses come at a tight budget time for the school system, which budgeted for decreased sales tax collections this year amid the local economic downturn and cut positions throughout the district.

But the school system may receive up to $6 million in new revenue this year because of increased property values in Lafayette Parish, prompting the board to vote last week to maintain its property-tax rates at 33.56 mills. The move means those whose property values increased will pay more in property taxes than last year.

Georgia Pacific Donates $50,000 To Louisiana Flood Relief, Matches Employee Contributions

Baton Rouge (LA) Advocate, September 14, 2016

Georgia-Pacific has contributed $50,000 to the Baton Rouge Area Foundation Flood Relief Fund for southeast Louisiana flood recovery efforts.

The company also will match up to $50,000 in contributions from its employees to the Georgia-Pacific Employees Assistance Fund that's held and managed by the Baton Rouge Area Foundation, an August news release said.

Contributions to the fund from employees of Georgia-Pacific or any other Koch company, as well as Georgia-Pacific's match, will go directly to help affected employees in the area.

Hundreds of employees from the company's Port Hudson operations in Zachary have been impacted — some of whom have lost everything, the release said. In addition, Georgia-Pacific has aided employees there with additional emergency supplies.

"We are deeply saddened by the devastation to the region and particularly the impact to our Georgia-Pacific families and the Port Hudson mill community," said Jim Hannan, CEO and president. "Our thoughts and prayers are with southeast Louisiana as they continue rebuilding the community after this terrible loss. This contribution is targeted to the region where our employees live and work."

Additionally, Convoy of Hope, the company's ongoing partner for distributing Georgia-Pacific products in disaster areas, has delivered numerous truckloads of bath tissue and paper towels into the area. Convoy of Hope also has been working with the Federal Emergency Management Agency in expanding distribution to other areas for several weeks.

Louisiana is home to more than 1,000 Georgia-Pacific employees and another 800 employees of other Koch Industries' companies. Georgia-Pacific's Port Hudson operations are in East Baton Rouge, one of the parishes declared a state of emergency by FEMA.

According to the release, the Port Hudson mill in Zachary did not sustain damage and remains operational.

Haunting Photo Puts Baton Rouge Flood, Post-flood Struggles Into Perspective For One Dad

Baton Rouge (LA) Advocate, September 14, 2016

Trey Peters watched as daughter Ashlyn, 9, stood and silently stared at the piles of debris.

He quickly grabbed his phone and took a picture. By the time he lowered the phone, the girl and the moment were gone.

What remained was a haunting photo of a little girl in a white dress, dwarfed by mounds of carpet, cabinets and drywall scraps removed from flooded homes on one Baton Rouge street.

Peters is a teacher – 6th-grade world history at Southeast Middle School – but he hasn't taught in more than a month. Like so many in south Louisiana, he and his family are in work mode, recovering from the roughly three feet of water that inundated their home on Woodlore Drive, forcing family members to rely on the Cajun Navy to escape the flood.

On the day the picture was taken, last Sunday, Ashlyn was visiting the house for only the second time since the water came.

"What caught me off guard was that she didn't say anything," Peters said. "She just stood there and stared for roughly a minute... It was a very surreal moment, and I am still wondering what she was thinking.

Ashlyn is a straight-A student in 4th grade at St. Jean Vianney and a "very critical/analytical thinker," her dad said.

"But because I'm taking this so seriously, she probably was wondering what was for dinner," he joked.

The family is now living with relatives in Shenandoah.

"With the help of many friends, donations, FEMA, Shelter At Home Program, and the grace of God, we are trying to rebuild," Peters said.

And there's the picture – Ashlyn looking into what Peters calls "the abyss."

"That picture really put things into perspective for me," he said.

Gonzales To Move Forward With Repairing City Hall

By Ellyn Couvillion

Baton Rouge (LA) Advocate, September 14, 2016

GONZALES — Gonzales will be moving ahead on repairs to the flooded city hall on Irma Boulevard after the City Council this week approved increasing the city's emergencies and contingencies budget from $15,000 to a whopping $465,000.

The additional funds come from the general fund balance and will also be going toward the cost of picking up debris at flooded homes and businesses.

"The city crew has made multiple passes" through the city, picking up debris, City Engineer Jackie Baumann said at Monday's City Council meeting, which was held at the parish courthouse in Gonzales.

Baumann said 318 loads have been picked up since Aug. 22, amounting to 815 tons of debris.

That figure represents about 80 percent of the debris brought out to curbs after the flooding, she said. The remainder of the debris should be picked up within the next week, she said.

"The public works department has done a great job," said Councilman Kirk Boudreaux. "I really appreciate the work they've done."

The city will also be temporarily relaxing its regulations regarding placing travel trailers in the yards of homes, as residents continue the recovery and rebuilding process. City officials previously reported that 120 homes flooded.

The council approved a motion to allow travel trailers to be placed at residences for 180 days.

"We're going to be as compassionate as we can," said Jerry Self, building official for Gonzales.

"We certainly want to work with residents as much as we can," Mayor Barney Arceneaux agreed.

City officials met last week with representatives of the Federal Emergency Management Agency and provided the agency an early list of projects — including the repair of city hall and the Gonzales Civic Center, roadwork, sewer projects and work at two playgrounds that flooded — the city expects will be required for recovery. The list will be refined in the coming weeks, officials said.

The city will also be hiring a consultant to oversee the recovery.

Last month's massive flooding highlighted the predicament of residents on Silverleaf Street, a one-street subdivision in Gonzales that floods regularly in run-of-the-mill thunderstorms.

At Monday's meeting, Shana Ryland and Dana Richardardson, both of whom live on Silverleaf, told the council about their efforts to gather information from FEMA on recovery, particularly in light of the repetitive flooding to their homes.

"We flooded three times in four years," Ryland said of her family's home.

Another street in the city, Sybil Street in the Park Vista subdivision, is also known to have repetitive flooding.

Baumann told Ryland and Richardson that the city will help them work with FEMA.

"When we have a consultant on board, it is definitely one of our goals. It is a priority," she said.

FEMA Warns Of Inspector Fraud

KLFY-TV Lafayette (LA), September 14, 2016

LAFAYETTE, La. (KLFY)—FEMA is warning flood survivors to beware of inspector fraud.

According to the government, FEMA will not ask you for financial or payment information up front.

FEMA inspectors also will not ask you for your FEMA registration number or social security number.

A news release states that flood victims should beware of any inspector that seeks payment from you, especially if they promise disaster grants in return.

To ensure that you do not become a victim of inspector fraud, ask to see the inspector's ID prior to the inspection.

If you suspect inspector fraud, call your local law enforcement immediately and then the FEMA Disaster Fraud hotline at 866-720-5721.

FEMA Reinterment Assistance

KATC-TV Lafayette (LA), September 14, 2016

FEMA disaster assistance may be available for reinterment efforts in Louisiana cemeteries, where floodwaters have dislodged or destroyed caskets, vaults, and mausoleums.

FEMA disaster assistance for reinterment of exposed human remains or dislodged burial vessels is available to individual survivors and cemeteries on a case-by-case basis. Factors that affect eligibility for assistance include where the cemeteries are located, who has legal responsibility for them, and who has legal ownership of them.

Information regarding reinterment assistance is available at the FEMA helpline,800-621-3362. Help is available in most languages from 6 a.m. to 10 p.m., seven days a week, until further notice.

Tomblin Requests Additional Flood-related Federal Funds, Anticipates Special Session

By Wendy Holdren

Beckley (WV) Register-Herald, September 15, 2016

Gov. Earl Ray Tomblin anticipates a special legislative session next week to address the state's portion of costs related to the devastating June 23 floods.

In a letter submitted Wednesday to President Obama, Tomblin requested $310 million in Community Development Block Grant Disaster Recovery (CDBG-DR) funds. This request is in addition to funds already requested from the Federal Emergency Management Agency (FEMA).

Tomblin noted in the letter that more than 20 percent of the state's 55 counties were affected by the floods. He said 23 people lost their lives; more than 5,000 homes and businesses were damaged; 35 schools were damaged, six likely beyond repair; and hundreds of miles of state and local roads were damaged.

While he thanked Obama for his support and assistance, he said, "(T)he path to successful and sustainable long-term recovery in an area of West Virginia that had already been struggling through economic upheaval will require even further support."

The towns and communities once reliant on coal now have "no capacity to build back on their own," Tomblin wrote.

He requested $310 million for "investments in housing, economic development and public resilient infrastructure."

In the letter, he said he will ask the Legislature to allocate $75 million for the state's 25 percent match of FEMA assistance.

Jessica Tice, communications director for the Governor's Office, said traditionally FEMA covers 75 percent of disaster-related costs and the state covers 25 percent. However, Tomblin has requested the White House consider approving a 90/10 cost share.

FEMA has responded that if West Virginia meets a threshold of $253 million in damages, the state will qualify for the 90/10 cost share.

Tice said public school damages have been estimated at $130 million, which could put the state over the threshold. FEMA monies would be used for immediate costs, whereas requested money from CDBG-DR would aid long-term recovery efforts, such as community rebuilding.

More information will be available soon, possibly today, about the special session, Tice said. Other media outlets have reported lawmakers are scheduled to return Sunday to Charleston for interim meetings, and 11 a.m. to 1 p.m. Monday and Tuesday has been reserved for the anticipated special session.

Sens. Joe Manchin and Shelley Moore Capito, along with Representatives David McKinley, Alex Mooney and Evan Jenkins, sent a letter Wednesday to the president to express their full support for Tomblin's new request for additional funding.

In their letter of support they said, "Unfortunately, much like Louisiana, the vast majority of the flooded homes and businesses (nearly 90 percent) did not carry flood insurance at the time of the disaster, and, according to FEMA estimates, the average grant award for each eligible West Virginian will be less than $9,000. The challenge we face is clear – without additional assistance, these individuals and the communities in which they live simply cannot afford to rebuild."

Tomblin Seeks Millions More In Federal Flood Relief

West Virginia MetroNews, September 14, 2016

CHARLESTON, W.Va. — Gov. Earl Ray Tomblin has sought an additional $310 million in flood relief for West Virginia through a disaster relief funding package that could be considered by Congress.

The amount Tomblin is requesting would be beyond what West Virginia already has requested from the Federal Emergency Management Agency.

"(This is) to basically go back in and help some of these small communities for the things that were not covered. Being able to get people up out of the flood plane and so forth and businesses as well as individuals," Tomblin told reporters Wednesday at the state Capitol.

Another letter supporting Tomblin's request was sent by U.S. Senators Joe Manchin and Shelley Moore Capito, as well as Congressmen David McKinley, Alex Mooney and Evan Jenkins.

"I think it's going to be a bipartisan support. Hopefully, it'll bring some more money into West Virginia to help those that were affected in such a negative way by the flood," Tomblin said.

"We have plenty of needs," he said, referring to West Virginia's damaged roads, river banks and schools.

Tomblin's request, addressed to President Obama, notes that many of the West Virginia communities hit hardest by the flooding were already struggling economically.

"The recovery plan for West Virginia represents an atypical strategy," Tomblin wrote. "It recognizes not only the unique challenges associated with rebuilding in an area that has limited develop-able land in a rural and mountainous region of Appalachia, but it also acknowledges that dramatically depressed conditions require us to reposition and reinvent these communities in a way that will make them sustainable for our citizens and give them hope of economic diversification and recovery."

The letter by West Virginia's congressional delegation noted, "This was one of the deadliest disasters our country has experienced this year, and we owe it to the memory of those that we lost to do everything in our power to ensure a tragedy like this never happens here again."

Louisiana leaders have requested $2.8 billion in federal relief for that state, which was hit by its own devastating floods this summer.

A disaster relief package could be part of a government-wide temporary funding bill that would avert a government shutdown Oct. 1.

Any flood relief component could be considered after this year's general election.

Gov. Tomblin Asks White House For $310 Million In WV Flood Aid

WOWK-TV Charleston (WV), September 14, 2016

The rebuilding of flood damaged communities like Clendenin is a work in progress. All over town the signs of the June floods are still unmistakable, just as they are elsewhere in West Virginia. Today Governor Tomblin wrote to the White House, requesting $310 million more federal dollars to help rebuild the state.

"We feel very confident about it. Our whole delegation. Our two Senators and three Congress members are all in support of it and I think it's going to be a bipartisan support and so hopefully it will bring some more money into West Virginia," said Governor Earl Ray Tomblin, (D) West Virginia.

In addition to disaster repair, the Governor wants money for economic development, for communities destroyed by the downturn in the coal industry, even before the floods hit. Meanwhile in Clendenin, where two new schools must be built, Megan Hall was wondering about her 14 year old son's education.

"What are they going to do? Are they still bringing the portables? If they are going to make the kids go year round, after summer break hits again?" said Megan Hall, a Clendenin resident.

Statewide, the bill for school construction and repairs is $130 million dollars. Add another $60 million for road repairs; and 120 million for other expenses. The need for more federal aid is clear.

"What we need to press for is this 90 percent reimbursement figure. And that will help us in terms of rebuilding the schools; the roads; homes; all kinds of things," said Sen. Shelley Moore Capito, (R) West Virginia.

The aid request to the White House, is in addition to what FEMA has already provided West Virginia.

"Nearly every community has specific needs. For example, Clendenin needs $400 thousand dollars to repair the flood-damaged town hall and community center," said Mark Curtis, 13 News Chief Political Reporter.

W.Va. State Leaders Petition Obama For Flood Relief

By Glynis Board

West Virginia Public Broadcasting, September 14, 2016

In a rare unified effort, Senators Joe Manchin and Shelley Moore Capito joined with Representatives David McKinley, Alex Mooney, Evan Jenkins, and Governor Tomblin today to petition president Obama on behalf of flood victims in the state.

23 are dead and eight counties are still under a state of emergency after flooding this June. The delegation pointed out in a letter that 5,000 homes and businesses were damaged, and 90 percent carried no flood insurance.

Dear Mr. President: The hardworking men and women of West Virginia have pulled together to help each other rebuild from the devastating one-in-a-thousand-year floods that inundated their communities earlier this year and led to a major disaster declaration on June 25, 2016 (DR-4273). While we are humbled by the heroic actions of our first responders and the thousands of individual citizens who helped friends, neighbors and complete strangers escape rising flood waters, we now find ourselves unable to help many of these same individuals begin down their own road to recovery, and we urge you to include West Virginia in any Presidential supplemental appropriations request that your Administration may submit to Congress. In West Virginia, more than two months after the deadly June floods that killed 23 people, eight counties remain under a state of emergency. More than 5,000 homes and businesses were damaged during the disaster and over 70% of all applicants incurred at least some FEMA-verified loss. Unfortunately, much like Louisiana, the vast majority of the flooded homes and businesses (nearly 90%) did not carry flood insurance at the time of the disaster, and, according to FEMA estimates, the average grant award for each eligible West Virginian will be less than $9,000. The challenge we face is clear – without additional assistance, these individuals and the communities in which they live simply cannot afford to rebuild. We strongly support West Virginia Governor Earl Ray Tomblin's request for $310 million in disaster funding for the Community Development Block Grant (CDBG-DR) program to address the critical unmet needs of our constituents. The additional CDBG-DR funding requested by the Governor would help homeowners rebuild safer and stronger. It would give our small businesses an opportunity to reinvest in the communities on which they depend. It would give these communities the resources they need to reduce their exposure to flood threats and promote sustainable development for decades to come. It would be a shame to miss this opportunity. While the scope and scale of this disaster may seem relatively small to some, we cannot forget the 23 men, women and children whom we lost during these floods. This was one of the deadliest disasters our country has experienced this year, and we owe it to the memory of those that we lost to do everything in our power to ensure a tragedy like this never happens here again. Thank you for your prompt attention to this matter.

Governor Earl Ray Tomblin's separate letter to the president asked for 310 million dollars in disaster funding through the Community Development Block Grant program. In his request, Tomblin also pointed out that, "Most of the areas devastated by floods were towns and communities that had been reliant on coal. The industry's downturn has left most of the with no capacity to build back on their own."

FEMA estimates the average grant award for each eligible West Virginian will be less than 9 thousand dollars. Tomblin announced Tuesday total damages in the state topped $300 million.

FEMA Green-lights Portable Classroom Installation At 2 Kanawha County Schools

West Virginia MetroNews, September 14, 2016

CLENDENIN, W.Va. — After a longer wait than expected, FEMA approved the installation of portable classrooms for two flood-damaged schools in Kanawha County Wednesday.

The Kanawha County Board of Education is expected to officially approve the plan at its Thursday evening meeting. The portables will accommodate Herbert Hoover High at Elkview Middle School and Clendenin Elementary students at Bridge Elementary until new schools are built.

One change made is that portables at Elkview Middle won't be on the football field, but in the parking lot instead.

"I think there was some concern with the football field being in a flood zone. As far as exactly where they'll be on the parking lot I'm not sure," said Kanawha BOE member Ric Cavender.

Cavender said that it was a long process to get the plan approved but FEMA, but the board had no choice but to play by their rules.

"If we're planning on using their funding to execute this project, we have to make sure we're following their guidelines," he explained. "Part of their guidelines throughout this process was that we had to explore a lot of different options for placement of the portables. Our goal and intention was always to make sure they would go where we said they were going to go to make sure students stay together."

Herbert Hoover Principal Mike Kelley wasn't concerned about the change in location, as long as his students would all be in the same spot.

"The main thing that was really important to our kids and our parents was that we keep our kids together here in our community," said Kelley. "I think it's going to be fine. The initial plan was for it to be on the football field but there was some additional costs with raising the portables up out of the flood plain."

Kelley said Hoover students would still use the Elkview Middle cafeteria and gymnasium, and that he saw a silver lining in the very unusual, inconvenient year.

"I really feel like this is good preparation for college, because it's very similar to a college schedule where you go to classes every other day (for about four hours) as opposed to seven or eight," he said. "You have to take more responsibility for your own learning by studying and doing work outside of the classroom."

The Kanawha BOE was expected to approve a plan for the portables at a meeting last month, but it was put on hold indefinitely. The exact cost and number of portables at each school was not announced Wednesday.

The board meets at 6 p.m. Thursday evening.

FEMA Approves Portables For Flooded Kanawha County Schools

WOWK-TV Charleston (WV), September 14, 2016

FEMA has approved the Kanawha County Schools site plans for putting portables at Elkview Middle School at Bridge Elementary School.

The portables at Elkview will be used for temporary classrooms for Herbert Hoover High School and portables at Bridge Elementary will be used for temporary classrooms for Bridge and Clendenin Elementary Schools.

The next step for KCS is putting together additional information and going out for bids.

We will continue to update this story as more information becomes available.

S.C. Emergency Officials, Military Review Flood Response, Plan For Next Disaster

Columbia (SC) State, September 14, 2016

For two years, South Carolina's emergency responders and its federal military installations worked to coordinate their responses in the event of a disaster.

Last year, that disaster came, in the form of an historic flood that swamped the Midlands.

Now with the one-year anniversary of the flood coming up, federal, state and local representatives sat down again Wednesday in West Columbia to discuss their response and plan for South Carolina's next major disaster – with Tropical Storm Julia threatening to dump even more water onto the state.

"To make it more realistic, we've cooked up a tropical storm," joked Kim Stenson, director of the S.C. Emergency Management Division, in opening the third annual seminar on the mutual support of local government and military installations at the emergency management headquarters.

Both civilians and soldiers credit the ongoing meetings with improving the state's response to last year's flooding crisis.

"We were so well-prepared because of the relationships we've built," said Maj. Gen. Gregory Batts, South Carolina's assistant adjutant general. "Everybody understood the system."

Batts said the seminar should be a "springboard for later success."

The point man for all sides is Army Col. Bill Connor, the Emergency Preparedness Liaison Officer for South Carolina under the FEMA regional office in Atlanta.

"I took over just before the flood, so I kind of had to drink from a fire hose," said Connor, a Reserve officer who practices law in South Carolina in civilian life.

"We were watching Hurricane Joaquin, so a hurricane was what we were planning for," he said. "We didn't think it would just dump that much water on us."

Military forces on the ground in South Carolina were fast to respond to requests for help after flooding hit the state in October, including boats deployed from Fort Jackson at the request of Columbia's police chief.

That request is key, Connor said, because the Posse Comitatus Act prohibits military personnel from operating directly on American soil in the absence of an emergency situation. They must receive a request for help from a civil authority – a governor, mayor or some other civilian – and then work under the local civilian agencies leading the response.

"Troops cannot perform any law enforcement functions, period," Connor said. "We're here strictly in a support role."

After 72 hours, the request has to be reviewed to ensure the emergency situation still exists.

For someone outside the military, knowing the process can be helpful in a pinch. Beth Fletcher, direct services manager for the S.C. Red Cross, said the previous meetings were invaluable in getting that information out.

"Just being able to coordinate, how to access different things, how long it's going to take," Fletcher said. "It definitely helps."

OTHER NATURAL DISASTERS

State Officials Visit To Assess Storm Damages

Bemidji (MN) Pioneer, September 14, 2016

BEMIDJI – Minnesota Department of Public Safety staff planned to be in Beltrami County on Wednesday and Clearwater County on Thursday, to meet with local officials and possibly survey damage from late July windstorms.

The assessment crews are part of the Homeland Security and Emergency Management division of the public safety department.

Local emergency managers reported the following estimates from their initial assessments right after the July 19-21 storms, which included heavy winds, hail and lightning strikes. Damages included thousands of fallen trees, downed power lines and roofs blown off of buildings on private property. That debris resulted in blocked roads and widespread power outages.

$289,761 in Beltrami County including the Leech Lake Reservation.

$289,137 in Clearwater County including the White Earth Reservation.

The damages do not meet federal requirements for FEMA's Public Assistance Program, but they could qualify for reimbursement through the Minnesota State Disaster Assistance Program, a release said.

ZIKA VIRUS

The Importance Of Planned Parenthood In The Zika Epidemic

By Amy Faith Ho

The Hill, September 14, 2016

While Congress hasn't been able to pass funding for fighting zika virus for over six months since President Obama's request for emergency supplementation, the Planned Parenthood controversy isn't a trivial one.

Specifically, Democrats have been holding out on passing the likely $1.1 billion (down from the $1.9 billion President Obama originally requested in February of this year) due to hidden provisions from Republicans to divert some of those funds from Planned Parenthood.

This is not just political theater, but a medical one, one that reinvigorates debate about women's health. Zika virus is a mosquito-born disease that thus far has its primary effects on the unborn children of infected pregnant women. One in five zika-infected patients are asymptomatic themselves, but the virus is also sexually transmitted. In a fairly grotesque mechanism, zika virus causes microcephaly in unborn fetuses. The skull of a fetus develops prior to the brain, and as the brain grows, it "fills out" the skull and helps it hold its shape. In zika, as the virus attacks the nervous system, the brain never grows to its appropriate capacity, and the skull collapses around it, forming the misshapen and small character of microcephaly that is sometimes not survivable after birth.

The Centers for Disease Control and Prevention (CDC), Food and Drug Administration (FDA) and National Institutes of Health are fundamentally out of money, even after diverting funds from many other areas — HIV prevention, malaria, tuberculosis, diabetes, cancer — just to get initial action started while Congress took their seven-week recess. These efforts have focused on mosquito prevention and spraying, education, research, testing and vaccination. The importance of Planned Parenthood, however is fundamental as an immediate response to zika-infections in pregnant women. It offers important roles on safe sex education, birth control, and yes, termination of pregnancies.

This is not a new thought, but a politically charged one so close to an election. Defunding Planned Parenthood in the face of zika is like defunding firefighters in the face of a forest fire. All the other efforts of government agencies are focused on prevention. Planned Parenthood offers an essential right to choose for women. Admittedly this choice is an unpopular one that could be spun by pundits as eugenics, but it is a personal one that mothers should have as to the life they would like their unborn child to have. There are very real considerations as to the capabilities and resources mothers will be able to offer for caring for a special-needs child.

Abortion aside, Planned Parenthood offers a highly effective way of limiting spread of zika without spraying chemicals into the air: condoms and birth control. While hundreds continue to protest as spraying of mosquitoes commences despite CDC assurance that it is safe for humans, even the Pope has already stated condoms are acceptable in the face of zika virus.

Congress needs to put aside political theater and realize that while vaccines, testing and diagnostics will be limited by the natural speed and expense of scientific research, the magic bullet is already here: Planned Parenthood. Fight fire with firefighters, not Smokey the Bear. Fund Planned Parenthood.

Memo To Congress: Confederate Flags Won't Cure Zika

Washington Post, September 14, 2016

BACK AT the start of this year, Republican leaders were full of promises that Congress could overcome inaction and partisan stalemate. Senate Majority Leader Mitch McConnell (Ky.) said, "Some thought the Senate could never be cured of its dysfunction and its gridlock. . . . We believed the Senate could be restored to a place of high purpose again." House Speaker Paul D. Ryan (Wis.) declared, "We need to raise our gaze." Well, gentlemen, it is now September, a dangerous virus has hit U.S. shores, and all Congress has contributed so far is bickering. Definitely time to raise your gaze — and do something constructive.

The Zika virus, transmitted by mosquitoes and by sex, has no effective cure or vaccine. To date, some 1,080 pregnant women in the United States and its territories, chiefly Puerto Rico, have been infected; the total number of infections is more than 18,000. For now, most cases involve travelers who brought the virus from abroad. Usually, infection causes a minor illness, but pregnant women are vulnerable because the virus can cause severe fetal birth defects. Florida has already identified two areas of Miami-Dade County where mosquitoes are spreading Zika; local governments are attempting to fight mosquitoes by spraying, but it appears that Zika will not disappear soon.

President Obama requested nearly $1.9 billion in emergency funds in February but ran into partisan delays and sniping. Republicans dithered, then approved a far smaller amount, attaching provisions they knew would be objectionable to Democrats, such as effectively denying money to Planned Parenthood clinics and rescinding some funding for Obamacare. Another amendment would allow Confederate battle flags to fly in military cemeteries. These add-ons have nothing to do with fighting Zika but triggered vigorous objections from Democrats. When Congress returned from summer recess, a $1.1 billion Zika bill again stalled in the Senate. Now it seems the best hope for action is a Zika measure attached to a stopgap spending bill that could be voted on before the end of the fiscal year, Sept. 30.

The president said Monday after meeting bipartisan congressional leaders that he is optimistic there will be some action. We hope he is right, because so far Congress has done little to justify optimism on this score. In the absence of approval for emergency funding, the administration earlier reprogrammed $589 million from other sources — chiefly Ebola-fighting money — to cope with the immediate cost of combating Zika. In recent days, the nation's top public-health officials have warned that the money is running out. Moreover, this is no way to run a railroad. Vaccine development is a long-term project requiring difficult clinical trials, and to starve it for funds now will postpone the day when an effective vaccine will be ready.

This is a political season, and after Congress goes home again in a few weeks, voters will be asked to render a verdict on its performance. So far, the record is abysmal. Let's hope members raise their gaze before heading for the exits.

Editorial: Congress Should Approve Zika Funding

Tampa Bay (FL) Times, September 14, 2016

A tentative deal that finally would provide federal funding to fight the Zika virus offers a glimmer of hope — and sanity — that leaders in Washington will put words into action to combat this spreading public health threat. Congressional leaders are expected to include money for Zika in a broad spending bill that could be considered by the Senate as early as today. That approach has bipartisan support from Florida's congressional delegation and approval is of paramount importance for Florida, where Zika has infected nearly 800 residents and continues to spread.

Zika, which is primarily transmitted by mosquitoes, can cause microcephaly and other grave birth defects in babies born to infected mothers. As the virus appeared across Central and South America earlier this year, President Barack Obama requested $1.9 billion to contain the outbreak. The request should have been easy to pass, but Congress never misses a chance to inject partisanship into governing. House Republicans attached provisions to the funding bill that were deal breakers for Democrats — namely cutting off money to Planned Parenthood. Both of Florida's senators, Democrat Bill Nelson and Republican Marco Rubio, have rightly supported efforts to pass a clean bill that gets the money flowing.

The deal now on the table includes $1.1 billion for Zika in a short-term spending bill that keeps the federal government running into December. It's considered "must-pass" legislation, because without it federal agencies would have to shut down. Congress won't let that happen so close to the election. Voters should remember that this 11th-hour effort did not materialize because leaders in Washington decided to do the right thing and address this crisis. They just want to get out of Washington and back on the campaign trail.

In addition to money, the Zika fight needs more transparency. While Gov. Rick Scott has made himself plenty visible — joining local government roundtables, urging Floridians to use insect repellent and lobbying in Washington — the state Department of Health has been opaque about the real numbers behind cases of locally transmitted Zika. The Miami Herald reported that state health officials stopped providing detailed information on local Zika transmissions, such as the number of people tested in each county and the results. They underreported Florida's total of locally transmitted Zika infections by excluding out-of-state residents from the count, and they won't say how many local cases involve pregnant women. The one non-travel-related case of Zika in Tampa Bay affected a Pinellas resident who is a firefighter for Tampa Fire Rescue, but state Surgeon General Celeste Philip would not specify where in the county that patient lives until health officials confirmed whether the virus was spreading locally. That was more than two weeks ago, and there has been no update. Floridians need timely, complete information about this health threat.

Scott traveled to Washington this week to lobby for money, acting above the fray a la former Gov. Jeb Bush in a hurricane and preaching that "the time for politics is over." Then he singled out Nelson for voting against earlier Zika bills that cut money to Planned Parenthood. The governor's self-serving tour isn't helping Floridians, and his shot at the Democrat he may run against in 2018 was unnecessary. He should come home and get back to handing out bug spray.

Centers for Disease Control and Prevention director Thomas Frieden warned last week that the United States is "about to see a bunch of kids born with microcephaly." Days later, Congress failed for the third time in three months to commit emergency funding. The deal in the works now will not make up for months of lawmakers' willful inaction, but it will provide the crucial ingredient for fighting Zika: money. Lawmakers must get it done.

OTHER FEMA NEWS

EMERGENCY PREPAREDNESS

N. Hempstead Offers Disaster Preparations In Many Languages

Newsday (NY), September 15, 2016

Korean and Vietnamese translations of disaster preparation advisories will be distributed in North Hempstead in an effort to reach more residents in an area with rapidly changing demographics.

Officials from North Hempstead and Adelphi University have partnered to distribute the materials that have been published by the Federal Emergency Management Agency and include the essentials for an emergency supply kit, including medication, flashlights and water. Officials said the documents will be made available to nail salons around the town — businesses often operated by Asian residents.

A public service announcement on the town's website urging residents to pack emergency kits will soon have Vietnamese and Korean subtitles. An Adelphi University grant was used to fund the video, which was previously released last year with Mandarin and Spanish subtitles. See alsoSearch N. Hempstead salaries

The town is looking to accommodate a growing number of Asian and Hispanic residents. Officials, wary of hurricane season, said they do not want any residents to be excluded from receiving the preparation materials.

North Hempstead Supervisor Judi Bosworth said the recent threat of Tropical Storm Hermine, which did not make landfall on Long Island but caused strong winds, waves and some coastal flooding, inspired the multilingual outreach. "We narrowly missed Hermine," Bosworth said. "We missed so many of the people who don't speak English or can't read English."

The town's video features a family's efforts to prepare for a storm. A sequence offers a comical, but serious look at what could happen if storm survivors were without water or other necessities.

In North Hempstead, about 15.3 percent of the town's population — nearly 35,000 residents — is Asian, according to 2015 U.S. Census figures. In 2000, the town was home to 20,000 Asians, making up more than 9 percent of its residents, according to U.S. Census data.

The town's Hispanic population was nearly 31,000 in 2015, about 13.5 percent of North Hempstead's population. The town had 22,000 Hispanic residents in 2000, or about 9.8 percent of its residents, according to census figures.

North Hempstead also has worked to reach more of its residents through its informational signs. Pictorial signs were added near fishing line receptacles, instructing residents to dispose of material that can harm coastal life.

Meghan McPherson, assistant director for the Center for Health Innovation at Adelphi University, said the effort allows non-English speakers to "have this information correctly translated to them to be prepared, so when they hear a storm is coming, they know what to do, and they're clear on what to do, and they can tell their families, and they're less vulnerable."

The public service announcement can be viewed online at northhempsteadny.gov/ready.

Bosworth said she is considering adding subtitles in additional languages, including Farsi and Haitian Creole.

"We're in a multicultural society. We need reach out to as many people" as possible, Bosworth said.

NATIONAL PREPAREDNESS MONTH

Disaster Prep Dave

Mena (AR) Star, September 14, 2016

September is National Preparedness Month! According to the Federal Emergency Management Agency (F.E.M.A.) National Preparedness month began on September 1. Each week of the month carries its own theme. Topics like, "Preparing Family and Friends, Preparing Through Service, and finally Individual Preparedness. The central theme: "Don't Wait. Communicate, Make Your Emergency Plan Today." Check www.ready.gov for an overview of all the opportunities to participate.

This current week (September 11-17) puts the emphasis on involvement through community service and coordinating your plans with neighbors. Opportunities such as Community Emergency Response Team (C.E.R.T.), Citizen Corps or the Youth Preparedness Council offer plenty of outlets for contributions at the community level. The week of

September 18-24 emphasizes Individual Preparedness and offers a new app for your smartphone featuring weather alerts, disaster resources and safety reminders. The final week, September 23-30 is billed as a Lead Up To A National Day Of Action.

Participants are encouraged to organize a preparedness activity, register it on ready.gov/prepare and then share photos and stories of how your activities made a difference. Also scheduled for September 30 is National PreparAthon! Day. The goals of this and similar events are to increase the number of folks who are aware of what type of disasters can strike their local community, what to do to be safe and mitigate damage and how to increase their preparedness level so the effects of a disaster are minimized. Community resilience planning is also on the agenda.

Opportunities to sign up for individuals and organizations are posted on the website as well. F.E.M.A. has come a long way since Hurricane Katrina and their website is an excellent resource for all types of disaster planning and information. As usual send your questions and comments disasterprep.dave@gmail.com. Previous columns can be found on my blog at www.disasterprepdave.blogspot.com. Dave Robinson is the Postmaster in Bandon, Oregon, and the author of "Disaster Prep For The Rest Of Us," available on Amazon.com, Barnes and Noble and other online booksellers.

FEMA CORPS

St. John's United Methodist Aids Flood Relief Responders

Baton Rouge (LA) Advocate, September 14, 2016

St. John's United Methodist Church continues to host Team Rubicon, a disaster response veterans service organization and FEMA Corps.

On Sept. 2, 10 young adults arrived from IsraAID, an organization headquartered in Israel committed to provide lifesaving disaster relief and long-term support all over the world.

St. John's provides cots in the Family Life Center, has two mobile shower trailers and is fixing a hot breakfast Monday through Friday for all of the teams. Twice a week, they feed the teams a hot supper.

POLITICAL COMMENTARY, COLUMNS AND EDITORIALS

Gazette Editorial: A Culture Gap Between WV And FEMA?

Charleston (WV) Gazette-Mail, September 15, 2016

West Virginia is deeply grateful to the federal government for life-supporting aid that bolstered state residents after the savage June floods. But occasionally, it seems rules, however necessary, can rule out help.

For example, West Virginia Public Broadcasting reported the plight of Tammy Rhodes's family in Clay County. Their home was destroyed by cascading water, forcing them to live temporarily in a camper.

They applied three times for aid from the Federal Emergency Management Agency, but were rejected three times. The wife explained:

"They said, because my mom and dad had given us this part of the property to live on, and because a title had never been switched or a deed had never been put into our name, that they considered us renters."

Of course, many rural families recognize this arrangement. A younger family builds or owns a home on the property of parents. Parents naturally share with children, without going to the courthouse. It's a shame the FEMA rules, which must draw a line somewhere, of course, do not reflect this cultural norm.

It's also a cautionary tale for West Virginia families.

Subject: FEMA-State PIO Coordination Call

Stacie—

I realize after I got home on Friday that I never closed the loop with you about an agenda. See draft agenda below. Also, I forwarded you an invite reminder that can be forwarded to state PIOs, after you make any changes to the agenda.

I never did hear back from PIOs, so the state reports are suggestions that may help facilitate the call, but we probably don't want to include this information in the agenda that we distribute.

Tony, Joe and Cecily have confirmed. I think Micki will join but not sure about Kelly and Ryan. I'll check in with Kelly when I'm in Wyoming and will encourage her to call in. I will try to call from Wyoming, too.

Thanks,
Jerry

FEMA—State Public Information Officer Conference Call
Wednesday, August 24, 2016, 10:00-11:00 a.m. MOUNTAIN

Call-in: (b)(6), Pin: (b)(6) #

10:00 a.m. Welcome – Stacie Greff

State reports:

Colorado—Micki finishing Naval Post Graduate School. Project relates to media access.

Montana—Baker disaster. Wildfires.

North Dakota—DES role in pipeline protest.

South Dakota—OEM involvement in Sturgis rally.

Utah—September PIO conference in St. George.

Wyoming—Wildfires. Lusk one year later.
Region VIII reports:

- Region VIII IMAT in Louisiana. Daniel Green is the new IMAT EA Advisor.
- September is Preparedness Month. Be sure to let us know if states have plans. We want to support state efforts.
- NEMA-FEMA meeting in Chicago.
- OST wrap.
- Upcoming Tribal consultation.
- Status of ARA/RA position.

From: Greff, Stacie
Sent: 22 Aug 2016 21:22:03 +0000

Subject: RE: Standing Rock

There was recently an article posted on Facebook from anarchic news that gave this information about a shoot on sight order given in North Dakota.

Here is a summary and direct quote from the article accusing Homeland Security of giving the order:

At the end of the article in question from the Anarchicnews site, there is an unattributed quote forming the last paragraph that does say "Now though homeland security has taken over, legally, and the situation and the level of threat has been bumped up. This means they consider this a terrorist action and have the authority to shot on sight." The first paragraph and headline attribute the order to North Dakota and the governor. I think this particular Snopes article debunking that the governor issued any such order is a good think and valid.
I have searched diligently and not found any reference anywhere else to Homeland Security issuing such an order.

While Snopes debunked the article as it pertained to the Governor, they did not address the Homeland Security reference. This is now under discussion among members of my tribe and people are very disturbed about it.

Please clarify what Homeland Security;s role is regarding DAPL Pipeline and whether a shoot on sight order was issued. What is Homeland Security's policy on shooting perceived protestors. Is the DAPL protest classified as a terrorist action?

Thank you.

FYSA. See last two paragraph. Although the HS reference may refer to ND DES, it is worth noting that it could apply to DHS. ND DES director was quoted earlier in response to limiting relief measures to protesters who are participating in an "illegal activity. "

Article is far outside mainstream but apparently has the tribe's interest.
First mention of possible HS involvement.

Subject: a few things

Hi Milo and Margeau –

I wanted to touch base on three things….

1) Are we still looking at tomorrow as the start for consultation for the Tribal Policy? And will we get to see the changes before it goes out?
2) There are significant protests going on just north of the Standing Rock Reservation (southwestern SD) regarding the XL Pipeline. Media is anticipating large busloads of people from other reservations arriving today. We are tracking from here. We haven't gotten any questions on it, but depending on how long it goes on, it could impact some of our travel plans and the availability of tribal EMs and Council as well as their interest in FEMA. The protests have all been peaceful and are expected to stay that way.

Hope you are both doing well!

Taking a Stand at Standing Rock (New York Times)

By DAVID ARCHAMBAULT II
AUG. 24, 2016

Near Cannon Ball, N.D. — It is a spectacular sight: thousands of Indians camped on the banks of the Cannonball River, on the edge of the Standing Rock Sioux Reservation in North Dakota. Our elders of the Seven Council Fires, as the Oceti Sakowin, or Great Sioux Nation, is known, sit in deliberation and prayer, awaiting a federal court decision on whether construction of a $3.7 billion oil pipeline from the Bakken region to Southern Illinois will be halted.

The Sioux tribes have come together to oppose this project, which was approved by the State of North Dakota and the United States Army Corps of Engineers. The nearly 1,200-mile pipeline, owned by a Texas oil company named Energy Transfer Partners, would snake across our treaty lands and through our ancestral burial grounds. Just a half-mile from our reservation boundary, the proposed route crosses the Missouri River, which provides drinking water for millions of Americans and irrigation water for thousands of acres of farming and ranching lands.

Our tribe has opposed the Dakota Access pipeline since we first learned about it in 2014. Although federal law requires the Corps of Engineers to consult with the tribe about its sovereign interests, permits for the project were approved and construction began without meaningful consultation. The Environmental Protection Agency, the Department of the Interior and the National Advisory Council on Historic Preservation supported more protection of the tribe's cultural heritage, but the Corps of Engineers and Energy Transfer Partners turned a blind eye to our rights. The first draft of the company's assessment of the planned route through our treaty and ancestral lands did not even mention our tribe.

The Dakota Access pipeline was fast-tracked from Day 1 using the Nationwide Permit No. 12 process, which grants exemption from environmental reviews required by the Clean Water Act and the National Environmental Policy Act by treating the pipeline as a series of small construction sites. And unlike the better-known Keystone XL project, which was finally canceled by the Obama administration last year, the Dakota Access project does not cross an international border — the condition that mandated the more rigorous federal assessment of the Keystone pipeline's economic justification and environmental impacts.

The Dakota Access route is only a few miles shorter than what was proposed for the Keystone project, yet the government's environmental assessment addressed only the portion of the pipeline route that traverses federal land. Domestic projects of this magnitude should clearly be evaluated in their totality — but without closer scrutiny, the proposal breezed through the four state processes.

Perhaps only in North Dakota, where oil tycoons wine and dine elected officials, and where the governor, Jack Dalrymple, serves as an adviser to the Trump campaign, would state and county governments act as the armed enforcement for corporate interests. In recent weeks, the state has militarized my reservation, with road blocks and license-plate checks, low-flying aircraft and racial profiling of Indians. The local sheriff and the pipeline company have both called our protest "unlawful," and Gov. Dalrymple has declared a state of emergency.

It's a familiar story in Indian Country. This is the third time that the Sioux Nation's lands and resources have been taken without regard for tribal interests. The Sioux peoples signed treaties in 1851 and 1868. The government broke them before the ink was dry.

When the Army Corps of Engineers dammed the Missouri River in 1958, it took our riverfront forests, fruit orchards and most fertile farmland to create Lake Oahe. Now the Corps is taking our clean water and sacred places by approving this river crossing. Whether it's gold from the Black Hills or hydropower from the Missouri or oil pipelines that threaten our ancestral inheritance, the tribes have always paid the price for America's prosperity.

Protecting water and our sacred places has always been at the center of our cause. The Indian encampment on the Cannonball grows daily, with nearly 90 tribes now represented. Many of us have been here before, facing the destruction of homelands and waters, as time and time again tribes were ignored when we opposed projects like the Dakota Access pipeline.

Our hand continues to be open to cooperation, and our cause is just. This fight is not just for the interests of the Standing Rock Sioux tribe, but also for those of our neighbors on the Missouri

River: The ranchers and farmers and small towns who depend on the river have shown overwhelming support for our protest.

As American citizens, we all have a responsibility to speak for a vision of the future that is safe and productive for our grandchildren. We are a peaceful people and our tribal council is committed to nonviolence; it is our constitutional right to express our views and take this stand at the Cannonball camp. Yet the lieutenant governor of North Dakota, Drew Wrigley, has threatened to use his power to end this historic, peaceful gathering.

We are also a resilient people who have survived unspeakable hardships in the past, so we know what is at stake now. As our songs and prayers echo across the prairie, we need the public to see that in standing up for our rights, we do so on behalf of the millions of Americans who will be affected by this pipeline.

As one of our greatest leaders, Chief Sitting Bull of the Hunkpapa Lakota, once said: “Let us put our minds together and see what life we can make for our children.” That appeal is as relevant today as it was more than a century ago.

David Archambault II is the chairman of the Standing Rock Sioux tribe.

Panel votes to borrow $6M for costs associated with pipeline protests, blasts feds inaction

By Mike Nowatzki Today at 12:18 p.m.

NO DAKOTA ACCESS PIPELINE
NO DAKOTA ACCESS PIPELINE
HONOR THE EARTH....

Demonstrators against the Dakota Access Pipeline south of Mandan, N.D., gather in opposition early this month. File photo.

BISMARCK — The state Emergency Commission voted Wednesday, Sept. 21, to borrow up to $6 million from the state-owned Bank of North Dakota to support law enforcement efforts

related to the Dakota Access Pipeline protests, but not before members blasted the lack of federal support to deal with protesters camped out on federal land.

"I know we have to do it, but it's not right, and the lack of federal involvement is disgusting," said House Majority Leader Al Carlson, R-Fargo. "And we need to protect our North Dakota people, but this is just plain wrong that they're ignoring this issue."

Maj. Gen. Alan Dohrmann, adjutant general of the North Dakota National Guard, said the state has spent $1.88 million on protest-related costs so far, the bulk of it personnel costs for assistance from the National Guard and law enforcement agencies from across the state. Morton County estimated last week it had spent about $400,000 on top of that.

The $6 million line of credit from the Bank of North Dakota will fund future efforts as authorized by Gov. Jack Dalrymple's emergency declaration Aug. 19. The Legislature will have to make a deficiency appropriation from the state's general fund to pay back the bank after lawmakers convene in regular session in January, Budget Director Pam Sharp said.

Authorities have responded to multiple protests at pipeline construction sites and in Bismarck-Mandan since protests began to ramp up in mid-August. They've also created a traffic checkpoint and increased patrols in Morton County, which they say are necessary for the safety of local residents, farmers and ranchers and the thousands of protesters camped out on U.S. Army Corps of Engineers land about 35 miles south of Mandan.

Last Friday, the Corps of Engineers issued a special use permit for protesters to use Corps land south of the Cannonball River but not the land north of the river where the majority of them are camping, because that land is subject to an existing grazing lease.

Carlson said it bothers him that it's "a federal problem that they've ignored" and the Legislature will have to cover the costs at a time of budget shortfalls. Rep. Jeff Delzer, R-Underwood, agreed.

"The taxpayers shouldn't have to be paying for this," he said.

Dalrymple said he's been in contact with the White House, U.S. Department of Justice, Corps of Engineers, Department of Interior and the state's congressional delegation but is still waiting to hear if they're going to help financially or with in-kind services.

"The problem that we have, of course, is that these public safety needs are imminent every day," Dalrymple said. "We really have no choice but to protect the public with law enforcement. Recovering funds from the federal government is definitely a top priority, but it undoubtedly will take some time."

The commission's other members are Secretary of State Al Jaeger, Rep. Jeff Delzer, R-Underwood, Sen. Rich Wardner, R-Dickinson, and Sen. Ray Holmberg, R-Grand Forks.

State of North DakotaLNO and Regional Tribal Report #1As of 16 August 2016/1200 MDT)

Situation: On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census). Threats/Impacts/CIKR/Key Resources: Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the construction site.As of August 12, 2016, thirty-four officers are on scene including county and ND State Highway Patrol.Tribal concerns include contamination of local water not only for health and environmental reasons but because water is considered sacred to the Native Americans.The Tribe is also concerned about other cultural implications of this pipeline.The pipeline could have ecological threats and impacts.The pipeline will be located under the Missouri River.State communications requested an increase in cellular coverage for the area. Disaster Emergency Communications connected State communications to AT&T and Verizon.There are no road closures in effect at this time. State & Federal Posture/Actions: State EOC is in Level IV – Daily Operations. Communication with State/Tribal/Local officials: No contact has been made with the Tribe regarding this issue.The Acting Regional Administrator has been in contact with the Director of North Dakota Department of Emergency Services for situational awareness only. Shortfalls or limiting factors, currently or anticipated, including any support requirements from FEMA HQs: None at this time, State and Local authorities are actively monitoring the event. LNO Summary: FEMA LNO and FEMA Region VIII Tribal Liaison are monitoring the situation.Source of Information: North Dakota Department of Emergency Services and Standing Rock Sioux Tribe Facebook.

ANALYSIS

- **Colorado:** Construction will begin on a million-dollar bridge over a spillway at Button Rock Preserve. The previous bridge was destroyed in the 2013 floods, and it will be paid for by FEMA, state and local money.

- **Montana:** *The Billings Gazette* carried a summary of the 35 large wildfires burning in the West at present… About 40 people turned out for a protest in solidarity with the Indians protesting an oil pipeline project in North Dakota.
- **North Dakota:** More stories report on the pipeline protest: Standing Rock Sioux Chairman David Archambault II has an opinion piece in the *NY Times* explaining the tribe's stand: BBC News carried a piece on the protest; *The Hill*, the D.C. political paper and web site, carried a piece on the lawsuit seeking to stop the project. ("Dakota Access can't begin clearing space for the pipeline there until after an easement is cleared by federal regulators and is submitted to Congress, so issuing an injunction against the construction isn't immediately urgent.") Amnesty International will come to observe the protest, citing concerns about law enforcement withdrawing water supplies for the protestors. *The Bismarck Tribune* also carried a piece on the court action in Washington, where the judge said he would rule by September 9.
- **South Dakota:** No FEMA-related stories.
- **Utah:** Utah gave a $1 million grant to its Department of Environmental Quality to study a pervasive algae bloom that has raised public health concerns in the state… A new state director for the BLM has been appointed. He faces a number of challenges in the state, which are highlighted below. … An AP fire roundup noted a Utah fire near the Beaver Mountain ski resort has crossed into Idaho.
- **Wyoming:** Four wildfires are burning within Yellowstone National Park, and a fire in neighboring Grand Teton National Park has caused a one-hour detour through Idaho to access Yellowstone, though all roads within Yellowstone remain open. Both parks are hosting events this week to celebrate the 100th anniversary of the National Park Service.

Construction to start on spillway bridge at Longmont's Button Rock Preserve
(Longmont Times-Call)

By Karen Antonacci
Staff Writer

Posted: 08/24/2016 06:24:00 PM MDT

Crews with Lawrence Construction will start work on a new bridge spanning the spillway at Button Rock Preserve in September, according to a city news release.

There used to be a way across the spillway, but it was destroyed in the September 2013 flood.

The new bridge will cost $1,081,000 and is being paid for from Federal Emergency Management Agency, city and state money, Longmont Spokeswoman Jennifer Loper said.

FEMA will reimburse the city for 75 percent of the cost, while Longmont and Colorado will each cover 12.5 percent of the $1,081,000, Loper said.

Lawrence Construction, based in Littleton, also built the Martin Street bridge, Loper said.

Water enters the spillway from Ralph Price Reservoir in order to keep water from overflowing Button Rock Dam.

Construction on the spillway bridge is scheduled to start Sept. 7 and last until May.

"An area west of Longmont Dam Road to the top of the spillway will be closed throughout the work period," Longmont engineer Jason Elkins said in the news release.

Hiking trails within the preserve will remain open throughout construction, but hikers will be rerouted to access the popular North Shore Trail that takes people around the reservoir.

"We will lower the water level at the reservoir to create an access point to North Shore Trail at the top of the spillway," Elkins said in the news release.

Button Rock Preserve is a 3,000-acre property that Longmont owns west of Lyons. The preserve is a protected watershed that provides the majority of the drinking water for Longmont and Lyons.

Many hiking trails and infrastructure at the preserve were wiped out in the flood. The preserve reopened to the public in June 2015.

MONTANA

Crews battling 35 large, uncontained wildfires in the West (Bozeman Daily Chronicle)

Updated 4 hrs ago

BOISE, Idaho (AP) — Thirty-five large, uncontained wildfires were burning in the West, and firefighters were making initial attacks on another 112 new blazes to prevent them from spreading.

Firefighters in the region mostly faced windy, dry conditions that have fanned flames that destroyed buildings and forced evacuations in California, Washington, Idaho and elsewhere.

Late last week, the National Interagency Fire Center in Boise, Idaho, upped what it calls the National Preparedness Level to 4, one shy of the highest level, as competition for limited firefighting resources increased.

Here's a look at the major wildfires in the West:

CALIFORNIA

Authorities say a wildfire that destroyed 45 homes on California's central coast was not intentionally set but they were still trying to determine the cause.

Cal Fire says arson has been ruled out in the 10-day blaze that has charred 64 square miles of dry brush and timber.

The fire was 39 percent surrounded and at least 2,400 people were under evacuation orders in San Luis Obispo and Monterey counties. Additional warnings for people to be ready to flee were issued Wednesday and one arm of Lake Nacimiento was closed to boaters.

Cal Fire's Rich Eagan says flames were more than two miles from Hearst Castle, which remains closed but was no longer at immediate risk.

A fire burning for a month north of Big Sur grew again to 135 square miles. Hundreds of homes remain threatened by the fire in rugged wilderness coast along Highway 1. The blaze was sparked by an illegal campfire. It is 60 percent contained.

___

IDAHO

A fast-moving rangeland wildfire in eastern Idaho expanded to nearly 70 square miles Wednesday, forcing evacuations, threatening a windfarm and burning habitat needed by sage grouse, a federally protected bird.

The Bonneville County Sheriff's Office says evacuations are in place, with up to 70 buildings along U.S. Highway 26 threatened.

Officials say the human-caused fire reported Sunday about 7 miles east of Idaho Falls is making wind-driven runs to the north and east.

Officials say high winds are again predicted Wednesday along with low humidity.

In central Idaho, a 160-square-mile wildfire in a remote, mountainous area continues to defy containment and burn through timbered slopes that are difficult for firefighters to reach.

___

MONTANA

Cooler weather has slowed Montana's largest wildfire, though 45 homes are still evacuated and 130 more are on alert.

The fire northeast of Thompson Falls had burned 33 square miles as of Wednesday morning.

Fire officials say crews have made progress in securing fire lines and protecting structures. The weather was cooperating again Wednesday with lighter winds and higher relative humidity forecast.

Minimal fire activity is also being reported from a fire burning west of Lakeside.

About 75 homes and other structures are within a half-mile of the fire's perimeter. No evacuations have been ordered.

___

UTAH

Firefighters in northern Utah are working to contain a growing wildfire near a ski resort that's now crossed the border into southern Idaho.

Fire spokeswoman Sierra Hellstrom said Wednesday that wind and high temperatures Tuesday afternoon had pushed the fire to 1.4 square miles.

Connect with the Chronicle on Facebook for the latest news, links and more.

It's burning about 23 miles northwest of Logan, and about one-fourth of a mile from the Beaver Mountain Ski Resort, which was on pre-evacuation notice this week.

Hellstrom says no buildings are imminently threatened at the resort.

WASHINGTON

Favorable weather conditions helped crews make progress Wednesday against a series of wildfires in Eastern Washington that have burned at least 18 homes this week.

A fire burning on the Spokane Indian Reservation was 30 percent contained. That fire covered more than 27 square miles and had destroyed at least 13 homes on the reservation, said Jamie Sijohn, a spokeswoman for the tribe.

"The devastating fire jumped the Spokane River from Lincoln County onto the Spokane reservation in three separate locations," Sijohn said.

It roared toward the town of Wellpinit, forcing the evacuation of the entire town on Sunday. But that order has since been lifted, Sijohn said.

Meanwhile, a fire near the town of Davenport in Lincoln County covered 6.5 square miles, and was 20 percent contained.

Another fire south of Spokane, in the Valleyford area, was 50 percent contained. It had burned more than 10 square miles and destroyed at least five homes, officials said. Mandatory evacuations ended on that fire on Tuesday night.

___

WYOMING

Some tourists heading to Yellowstone National Park during the busy summer season were facing an hourlong detour Wednesday as a wildfire in neighboring Grand Teton National Park kept a highway closed.

Major tourist areas in both parks are open as the National Park Service holds events to celebrate its 100th anniversary this week. A route leading into Yellowstone's South Entrance was shut down, so visitors coming from the south through Wyoming had to take a detour into Idaho.

But firefighters hope cooler weather slows the flames over the next couple of days.

Crowd turns out in Billings for North Dakota pipeline protest (Billings Gazette)

By MIKE KORDENBROCK mkordenbrock@billingsgazette.com

Dozens of people in Billings turned out Wednesday to protest the construction of a $3.8 billion pipeline beginning in North Dakota, standing in solidarity with the hundreds who have been protesting the pipeline with the Standing Rock Sioux tribe.

At its height, around 40 people stood on the sidewalk near the Yellowstone County Courthouse lawn holding signs encouraging supporters to honk and chanting, "Water is sacred, water is life." That was double the people event organizer Bailey Brown had expected.

The Dakota Access Pipeline is proposed to transport Bakken crude to Illinois, passing under the Missouri River.

The importance of clean water and clean air were on the mind of Tajin Perez, a Billings resident who helped Brown with the event.

"Clean air and clean water should be a right to everybody, not just those who can afford it," Perez said. "That's why people are here. They've been drawn out to the same call to stand up for what's right, for what's fair for everyone, especially those who have been disadvantaged for so long in regards to contemporary issues between the U.S. government and the Native peoples of this country."

Gerald Sherman and his wife, Jael Kampfe, made the drive from Bearcreek with four coolers of meat for Brown to deliver along with other supplies to protesters when she heads to North Dakota on Friday in a rented van.

“I’m not against oil, but I’m against a pipeline crossing the river,” said Sherman, a banking industry retiree and Oglala Sioux tribal member. “These pipelines have a history of breaking. It happened in the Yellowstone.”

When he and his wife heard about the protest in Billings, they posted their plans to attend on Facebook, and three families from Red Lodge responded by donating meat for them to take.

Sherman and Kampfe joined Lucky’s Market, Natural Grocers and others who have provided camping supplies and food for Brown to transport.

“I’m really impressed,” Brown said of the turnout. “Especially the people honking.”

Collette Montclair, a member of the Standing Rock Sioux Tribe who has lived in Billings for two years, said she’s proud of the efforts of her family and friends who have been protesting in North Dakota and that she is sad that she can’t join them. Work has interfered with her plans to return home, Montclair said, and she expected she wouldn't make the journey until October.

Like Brown, she also noted how honking car horns raised her spirit.

“I love all the support, everybody going by honking their horns,” she said.

Joining Monclair was her 4-year-old daughter, Ayasha.

“We want her to be a part of everything,” Montclair said of her daughter, who was seated on the sidewalk with a sign.

As challenges to the pipeline and its protesters continue to play out, it’s unclear what Montclair will tell her daughter when she grows older, but she offered some thoughts about what she hopes she can say.

“That everybody stood up for what’s right, stood up for what’s ours, and that we were all a part of it.”

NORTH DAKOTA

Taking a Stand at Standing Rock (New York Times)

By DAVID ARCHAMBAULT II
AUG. 24, 2016

Near Cannon Ball, N.D. — It is a spectacular sight: thousands of Indians camped on the banks of the Cannonball River, on the edge of the Standing Rock Sioux Reservation in North Dakota. Our elders of the Seven Council Fires, as the Oceti Sakowin, or Great Sioux Nation, is known, sit in deliberation and prayer, awaiting a federal court decision on whether construction of a $3.7 billion oil pipeline from the Bakken region to Southern Illinois will be halted.

The Sioux tribes have come together to oppose this project, which was approved by the State of North Dakota and the United States Army Corps of Engineers. The nearly 1,200-mile pipeline, owned by a Texas oil company named Energy Transfer Partners, would snake across our treaty lands and through our ancestral burial grounds. Just a half-mile from our reservation boundary, the proposed route crosses the Missouri River, which provides drinking water for millions of Americans and irrigation water for thousands of acres of farming and ranching lands.

Our tribe has opposed the Dakota Access pipeline since we first learned about it in 2014. Although federal law requires the Corps of Engineers to consult with the tribe about its sovereign interests, permits for the project were approved and construction began without meaningful consultation. The Environmental Protection Agency, the Department of the Interior and the National Advisory Council on Historic Preservation supported more protection of the tribe’s cultural heritage, but the Corps of Engineers and Energy Transfer Partners turned a blind eye to our rights. The first draft of the company’s assessment of the planned route through our treaty and ancestral lands did not even mention our tribe.

The Dakota Access pipeline was fast-tracked from Day 1 using the Nationwide Permit No. 12 process, which grants exemption from environmental reviews required by the Clean Water Act and the National Environmental Policy Act by treating the pipeline as a series of small construction sites. And unlike the better-known Keystone XL project, which was finally canceled by the Obama administration last year, the Dakota Access project does not cross an international border — the condition that mandated the more rigorous federal assessment of the Keystone pipeline’s economic justification and environmental impacts.

The Dakota Access route is only a few miles shorter than what was proposed for the Keystone project, yet the government’s environmental assessment addressed only the portion of the pipeline route that traverses federal land. Domestic projects of this magnitude should clearly be evaluated in their totality — but without closer scrutiny, the proposal breezed through the four state processes.

Perhaps only in North Dakota, where oil tycoons wine and dine elected officials, and where the governor, Jack Dalrymple, serves as an adviser to the Trump campaign, would state and county governments act as the armed enforcement for corporate interests. In recent weeks, the state has militarized my reservation, with road blocks and license-plate checks, low-flying aircraft and racial profiling of Indians. The local sheriff and the pipeline company have both called our protest “unlawful,” and Gov. Dalrymple has declared a state of emergency.

It’s a familiar story in Indian Country. This is the third time that the Sioux Nation’s lands and resources have been taken without regard for tribal interests. The Sioux peoples signed treaties in 1851 and 1868. The government broke them before the ink was dry.

When the Army Corps of Engineers dammed the Missouri River in 1958, it took our riverfront forests, fruit orchards and most fertile farmland to create Lake Oahe. Now the Corps is taking our clean water and sacred places by approving this river crossing. Whether it’s gold from the Black Hills or hydropower from the Missouri or oil pipelines that threaten our ancestral inheritance, the tribes have always paid the price for America’s prosperity.

Protecting water and our sacred places has always been at the center of our cause. The Indian encampment on the Cannonball grows daily, with nearly 90 tribes now represented. Many of us have been here before, facing the destruction of homelands and waters, as time and time again tribes were ignored when we opposed projects like the Dakota Access pipeline.

Our hand continues to be open to cooperation, and our cause is just. This fight is not just for the interests of the Standing Rock Sioux tribe, but also for those of our neighbors on the Missouri River: The ranchers and farmers and small towns who depend on the river have shown overwhelming support for our protest.

As American citizens, we all have a responsibility to speak for a vision of the future that is safe and productive for our grandchildren. We are a peaceful people and our tribal council is committed to nonviolence; it is our constitutional right to express our views and take this stand at the Cannonball camp. Yet the lieutenant governor of North Dakota, Drew Wrigley, has threatened to use his power to end this historic, peaceful gathering.

We are also a resilient people who have survived unspeakable hardships in the past, so we know what is at stake now. As our songs and prayers echo across the prairie, we need the public to see that in standing up for our rights, we do so on behalf of the millions of Americans who will be affected by this pipeline.

As one of our greatest leaders, Chief Sitting Bull of the Hunkpapa Lakota, once said: “Let us put our minds together and see what life we can make for our children.” That appeal is as relevant today as it was more than a century ago.

David Archambault II is the chairman of the Standing Rock Sioux tribe.

Protests over huge N Dakota oil pipeline (BBC)

24 August 2016

More than 100 protesters have gathered in Washington DC to express their fears about a huge oil pipeline which will cross four states in the western US.

The $3.7bn (£2.8bn) Dakota Access pipeline has prompted huge protests, notably in North Dakota where Native Americans have halted its construction.

It will run 1,168 miles through Iowa, Illinois, and North and South Dakotas.

US District Judge James Boasberg said on Wednesday he will make a decision on the issue by 9 September.

Outside the court in the US capital, environmental activists made their feelings clear.

They believe the transporting of up to 570,000 barrels of crude oil a day will imperil local waterways.

The company behind the pipeline, Energy Transport Partners, has said the project will boost local economies and is much safer than transporting oil by rail or road. But protesters disagree.

Activists Desiree Fairooz and Lenny Bianchi were among the demonstrators outside the court, where a federal judge was set to consider the Standing Rock Sioux tribe's request for an injunction that would effectively block the pipeline's construction.

"We're concerned about the Native Americans and the threat to their water supply but we're also concerned about the fossil fuel issue," said Mr Bianchi, a Blue Mountain, Virginia native.

"We don't feel that we should be building pipelines, we feel that the money should instead be spent on alternative sources of energy."

Protesters gather outside the US District Court while awaiting a judge's decision on whether to issue an injunction against the construction of the Dakota Access pipeline.

Dozens of protesters convened outside the US District Court, with environmental activists and members of the Standing Rock Sioux tribe uniting behind one message - water is life.

The crowd was studded with signs bearing the words "native lives matter", "water is life" and "be on the right side of history, no DAPL [Dakota Access pipeline]."

Valentine Little Shield, a member of the Cheyenne River Sioux tribe in South Dakota, took a bus to Washington to show her support for the Standing Rock Nation Tribe.

Ms Little Shield describes the contested pipeline as personal. Her grandchildren use the waters where the pipeline poses a threat to swim, fish and bathe their horses.

"I'm here because of my grandkids and what they're going to go through," she said. "They can't drink the oil, they can't take a bath in the oil."

Generations of native Americans, both young and old, took turns sharing personal accounts of why halting the pipeline was important to them as crowd broke into battle cries and pounded tribal drums.

"We're not here to protest, we're here to protect," said Lance Frazier, a member of the Cheyenne River Sioux Tribe in Eagle Butte, South Dakota.

But for many, the pipeline symbolises a deeper issue among Native Americans.

Denise Desiderio, the policy director for the National Congress of American Indians, called the unilateral support of tribes across the country a "historic" moment.

"We need to make sure our tribal voice is heard and when we raise our voice, we need to make sure it transcends this issue," she said, noting the important symbolism of land to the Native American community.

"We have had enough lands taken away, we can't let what we have left be destroyed."

Hundreds of people have been occupying one of the construction sites in North Dakota, where tensions have been running high between demonstrators, police and builders.

Judge hears tribe's argument against ND pipeline (The Hill)

By Devin Henry - 08/24/16 04:13 PM EDT

Opponents of a major North Dakota pipeline project brought their case to federal court Wednesday.

The Standing Rock Sioux tribe told a federal district judge that the government didn’t consult the tribe before approving a route for the pipeline of energy company Dakota Access, which is to run close to sacred and environmental sites in North Dakota.

They worry a breach in the pipeline will imperil the Missouri River, which runs near the project.

The tribe last month sued the Army Corps of Engineers, which approved the pipeline route. On Wednesday, lawyers for the tribe asked District Judge James Boasberg to block construction on the project until the tribe can conduct more assessments of its route.

“The law gives the tribes the opportunity to go out and evaluate the impact on important sites,” Jan Hasselmen, the Earthjustice lawyer representing the tribes, said. “The tribe and other tribes are concerned about impacts all along the length of the pipeline.”

Federal attorneys dismissed the complaint, saying they offered the Standing Rock Sioux the chance to assess the pipeline with them and that the tribe declined, while other tribes in the region took them up on the offer.

“The Corps followed procedure in this case when it actively worked to engage with the plaintiffs, the Standing Rock Sioux,” said federal lawyer Matthew Marinelli.

Dakota Access said it has taken steps to avoid damaging culturally important areas in the region. The company’s attorney, William Leone, told the court, “This is not a cowboy process.”

Early construction on the pipeline route is mostly complete in North Dakota, and the focal point of Wednesday's hearing was on its route under the Lake Oahe segment of the Missouri River.

Dakota Access can't begin clearing space for the pipeline there until after an easement is cleared by federal regulators and is submitted to Congress, so issuing an injunction against the construction isn't immediately urgent. Boasberg said he will try to decide the case within two weeks.

The 1,170-mile, $3.7 billion Dakota Access project would carry 570,000 barrels of Bakken crude oil from North Dakota to Illinois. Tribal groups have waged legal battles against the pipeline for months, and the project has drawn protests from tribes in North Dakota and anti-pipeline activists around the country.

Wednesday's hearing was preceded by a rally outside the federal district court building in Washington, D.C., with tribal representatives and allies slamming federal energy policies that they say minimize tribal input. The protest drew celebrity activists like actresses Susan Sarandon and Shailene Woodley.

In North Dakota, protests against Dakota Access have landed up to 20 people in jail. Construction on the pipeline has stopped, and a federal judge in North Dakota has issued a restraining order against protesters at the site.

He will hear arguments on issuing an injunction against the protests in early September.

Amnesty International to observe pipeline protest (Bismarck Tribune)

JENNY SCHLECHT Bismarck Tribune

Amnesty International has sent a delegation of human rights observers to monitor the law enforcement response to the camp protesting the construction of the Dakota Access Pipeline under the Missouri River.

Thousands of people, including members of at least 60 Native American tribes, have camped out south of Mandan near the construction site of the pipeline -- which, if completed, will take Bakken oil to Illinois.

Tarah Demant, a spokeswoman for the delegation, said the international human rights organization has been concerned about reports that the state of North Dakota took away water resources that had been provided to protesters.

"We are concerned about the health and safety of protesters," she said.

State-owned trailers and water tanks were removed earlier this week from the protest camp after reports of unlawful activity stoked fears among state officials that equipment would not be secure.

Amnesty International sent identical letters to North Dakota Highway Patrol Col. Michael Gerhart and Morton County Sheriff Kyle Kirchmeier to remind them of how officials are called upon to act during protests according to international human rights standards and the U.S. Constitution.

The letters discuss use of force, decisions to break up protests and how those decisions should be communicated, the use of detention and other issues.

Demant said Amnesty International only recently began sending observers to protests within the United States to ensure that law enforcement officials were protecting the right to peaceful protest, though the organization has a long history of such observations internationally. It has not previously visited North Dakota for that purpose.

The delegation arrived in Bismarck midafternoon Wednesday and had not yet traveled to the protest camp.

“Our hope is that we won’t have anything to report,” Demant said.

North Dakota Highway Patrol Lt. Tom Iverson and Donnell Preskey, a spokeswoman for the Morton County Sheriff’s Department, said they were not aware of any communications between local enforcement and Amnesty International. The group’s arrival will not change anything about how the patrol approaches the protest, Iverson said.

“Our message remains the same,” he said. “We need to keep everybody safe and promote safety for everybody involved — protesters, workers, law enforcement and the motoring public.”

Federal judge to rule Sept. 9 on Dakota Access injunction (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

A federal judge will rule on the injunction filed by the Standing Rock Sioux tribe to stop construction of the Dakota Access Pipeline by Sept. 9, according to attorneys representing the tribe.

U.S. District Court Judge James Boasberg decided Wednesday in Washington, D.C., to take a couple weeks before issuing his ruling whether or not to halt the pipeline's construction while a suit filed by the tribe against the U.S. Army Corps of Engineers alleging violation of the National Historic Preservation Act during its permitting process of the pipeline goes through the court system.

Stephanie Tsosie of Earthjustice, co-council for the case, said Boasberg stated he wanted more time to look at the issues.

In the meantime, Dakota Access Pipeline developer Energy Transfer Partners discontinued work at the site of tribal protests of the project in advance of this week's hearing, however, pipeline construction is continued at other locations in North Dakota along with South Dakota, Iowa and Illinois and is still expected to be completed by the end of the year.

According to court documents filed by Dakota Access Pipeline Aug. 18 the project is about 45 percent complete.

“A temporary injunction would have devastating short and long term impacts to the DAPL project. Construction of the entire project would cease and the project itself would be jeopardized. Hundreds of deviations from the construction schedule would occur costing as much as $540,000 per occurrence. The aggregate direct impact of these changes would exceed $100 million," the company argued.

In its arguments, Tsosie said Earthjustice focused on the fact that the tribe wants to be better consulted before a portion of the 1,168-mile crude oil pipeline is drilled beneath the Missouri River north of the Standing Rock Indian Reservation. The tribe has expressed concerns that, should the pipeline leak, the tribal water supply would be affected.

Eileen Williamson, a spokeswoman for the corps, said the corps does not make comments on ongoing litigation per agency policy. In court documents the agency countered it had hundreds of communications with the tribe.

"Rather than constructively participating in the process that has been going on for the last three years, Plaintiff has waited until this critical juncture to invoke the jurisdiction of the Court," Dakota Access argued in court documents.

Tsosie said Tribal Chairman Dave Archambault II was on hand for the Wednesday court hearing, as well as several members of the tribal council, the tribe's historic preservation officer and many general tribal members.

"It highlighted how important this is to the tribe; this is not a small issue to them," Tsosie said.

$1 million hardship grant awarded for Utah Lake study (Deseret News)

By Amy Joi O'Donoghue, Deseret News

Published: Wednesday, Aug. 24 2016 3:50 p.m. MDT

Algae is seen floating near the shoreline at Utah Lake State Park in Provo on Friday, July 15, 2016. Public health officials decided to close the lake due to the large bloom. It was reopened on July 28, 2016. *Spenser Heaps, Deseret News*

Summary
The Water Quality Board awarded $1 million in a hardship grant to the Utah Department of Environmental Quality to continue its nutrient pollution probe of Utah Lake. This summer's pervasive algal bloom has created widespread public health worries.

SALT LAKE CITY —The second phase of a Utah Lake nutrient study to probe the algal bloom problem will begin thanks to a $1 million hardship grant awarded Wednesday to the Utah Department of Environmental Quality.

Members of the Utah Water Quality Board voted to approve the emergency grant in light of the extensive and pervasive spread of cyanobacteria at Utah's third largest lake — a problem that began early in the season and has been unprecedented in its scope.

“It’s time for us to take a hard look at the impacts of nutrients on Utah Lake,” said Walt Baker, director of the Division of Water Quality. “This study will provide us with the data and tools we need to evaluate the complex chemical and biological factors at play in the lake and make decisions that improve and protect this valuable resource.”

The funding continues a two-phase, four-year water quality study that will evaluate water quality data and look at the nutrient loads — or the amount of phosphorus and nitrogen in the lake — that is the cause of the harmful algal bloom.

Additional goals include developing tools for effective decision-making and involving partners and interested groups in stewardship of the lake's health.

Utah Lake was closed to public access for two weeks in mid-July because of an algal bloom that covered most of its surface. Lincoln Beach has been posted off-limits since the outbreak. The cyanobacteria can produce toxins that can be deadly to domestic animals and cause severe symptoms in people.

The bloom eventually spread to the Jordan River, and subsequent blooms have been reported at Payson Lake and Scofield Reservoir.

Multiple southern Salt Lake County communities suspended delivery of secondary water over fear the contamination would pose a health risk to people or make irrigated crops and gardens unsafe for consumption. The Utah Department of Agriculture and Food has since received lab results that showed no toxins in the produce that may have come in contact with the water.

This week, the Utah County Health Department upgraded two of its advisories based on new test results, elevating the public health warnings at the Saratoga Springs Marina and at Sandy Beach.

Conditions this summer have been ideal for the formation of the blooms. Utah Lake is 4 feet lower than what is typical, and the combination of heat and sunlight helps to foster the growth of algae.

In 2014, the Utah Water Quality Board approved a rule regulating the amount of phosphorus that wastewater treatment plants can discharge into water, including at Utah Lake. The rule, which does not take effect until 2020, requires technology upgrades at the plants to reduce the nutrient's presence in treated effluent.

“The challenges facing Utah Lake affect all of us,” Baker said. "We believe a collaborative, informed and science-based approach is our best hope for finding solutions that meet the needs of the lake, its users and the aquatic life that depend on a healthy lake for their survival.”

BLM gets new Utah director, and land challenges await (Deseret News)

By Amy Joi O'Donoghue, Deseret News
Published: Wednesday, Aug. 24 2016 4:00 p.m. MDT

Summary

A 37-year veteran of the Bureau of Land Management has been selected to lead state operations in Utah, a position that has been without a permanent head for a year. Edwin Roberson was director of the BLM's National Operations Center.

SALT LAKE CITY — The Bureau of Land Management announced Wednesday that an agency veteran will lead Utah operations, filling the shoes of Juan Palma, who left more than a year ago.

Edwin L. Roberson, a 37-year career leader with the BLM, comes to the Utah post after serving as director of the BLM National Operations Center in Denver, where he oversaw the agency’s operational and technical support for information technology, finance and human resources.

Roberson also served in top leadership roles in New Mexico and held senior level positions in Washington, D.C., including a seven-year tenure as the BLM's assistant director for renewable resources and planning, a position that oversees a number of BLM resource programs.

“Ed is a good listener, a proven coalition-builder and a natural leader. We are fortunate to have his experience and expertise in Utah,” said BLM Director Neil Kornze. "Ed has guided some of the agency's most important work during his career, and his experience working with local communities makes him the perfect fit for this job.”

Roberson will lead an agency at the forefront of the public lands controversy in Utah, where frustrated rural leaders have challenged BLM road closures by participating in ATV rides that left them with federal criminal convictions.

In Salt Lake City, the Utah BLM offices became the first in the country to postpone an oil and gas lease sale because of a protest planned by the Keep It in the Ground Movement.

Law enforcement contracts between the BLM and local sheriff offices have also been a source of rural strife, with multiple county commissioners traveling to Washington, D.C., to demand personnel changes due to accusations of a "rogue" agent who has soured relations.

Ranchers have also sued the U.S. Department of Interior over what they say is mismanagement of the wild horse and burro populations that have degraded rangeland conditions and threatened their livelihood.

On the flip side, the BLM has been a tempest for wild horse enthusiasts who say the agency favors grazers over native horse populations and institutes "cruel" roundups that injure or kill the horses.

Utah, too, is among several states in the West that are suing over BLM management plans on the imperiled sage grouse. States say cornerstones of their own sage grouse conservation plans were ignored in federal plans they assert are too restrictive and not based on science.

As head of the often embattled agency, Roberson will lead a team that administers 23 million acres of public lands and 32 million acres of minerals and energy resources in Utah.

Roberson, who begins his new job Oct. 3, has bachelor's and master's degrees in urban planning from Auburn University in Alabama.

The Latest: Fire Near Utah Ski Resort Crosses Idaho Border (AP)

Associated Press, August 24, 2016

SAN SIMEON, Calif. — The Latest on wildfires burning in the West (all times local):

11:50 a.m.

Firefighters in northern Utah are working to contain a growing wildfire near a ski resort that's now crossed the border into southern Idaho.

Fire spokeswoman Sierra Hellstrom said Wednesday that wind and high temperatures Tuesday afternoon had pushed the fire to 1.4 square miles.

It's burning about 23 miles northwest of Logan, and about one-fourth of a mile from the Beaver Mountain Ski Resort, which was on pre-evacuation notice this week.

Hellstrom says no buildings are imminently threatened at the resort.

WYOMING

Yellowstone tourists face detour for fire but landmarks open (Associated Press)

YELLOWSTONE NATIONAL PARK — Some tourists heading to Yellowstone National Park during the busy summer season faced an hourlong detour Wednesday as a wildfire in neighboring Grand Teton National Park kept a highway closed.

Major tourist areas in both parks are open as the National Park Service holds events to celebrate its 100th anniversary this week. A route leading into Yellowstone's South Entrance was shut down, so visitors coming from the south through Wyoming had to take a detour into Idaho.

But firefighters hoped cooler weather would help slow the flames over the next couple of days.

"Yellowstone National Park is open for business," fire spokesman Bill Swartley said.

U.S. Interior Secretary Sally Jewell is set to visit Yellowstone on Thursday, and no changes have been made to her plans because of the fire, Swartley said.

The fire in Grand Teton has burned about 11 square miles since lightning sparked it last month, forcing the evacuation of about 50 people from a lodge and cabin operation and several campgrounds. Thirty horses also have been evacuated.

Meanwhile, four fires were burning inside Yellowstone, but all major visitor areas and roads were open.

The largest blaze spans about 42 square miles between the community of West Yellowstone, Montana, and Madison Junction, an area in the park with a campground, visitor facilities and staff housing. Lightning ignited it Aug. 8.

Swartley said the fires were mostly being allowed to burn because they were not threatening major tourist areas.

"These fires are being managed as basically a good fire for the ecology and then, of course, if there's anything getting close to cultural resources or public resources, structures, the fire is being engaged," he said.

A 10-mile stretch of U.S. 89/191/287 has been closed since Monday after flames leaped across it and were burning near the highway. The prospects for reopening the route are "not good in the near future" because the fire was close to the highway, fire spokeswoman Karen Miranda said.

Travelers coming from the south via the Jackson Hole area can still access Yellowstone through Idaho and the West Entrance. The detour adds a little over an hour to the drive to Old Faithful.

The fire is burning on both sides of the northern portion of Jackson Lake, but no buildings have been lost. More than 100 firefighters, supported by helicopters, are battling the flames.

Cooler temperatures and higher humidity were expected over the next couple of days and should help firefighters, Miranda said.

Construction to start on spillway bridge at Longmont's Button Rock Preserve (Longmont Times-Call)

By Karen Antonacci
Staff Writer

Posted: 08/24/2016 06:24:00 PM MDT

Crews with Lawrence Construction will start work on a new bridge spanning the spillway at Button Rock Preserve in September, according to a city news release.

There used to be a way across the spillway, but it was destroyed in the September 2013 flood.

The new bridge will cost $1,081,000 and is being paid for from Federal Emergency Management Agency, city and state money, Longmont Spokeswoman Jennifer Loper said.

FEMA will reimburse the city for 75 percent of the cost, while Longmont and Colorado will each cover 12.5 percent of the $1,081,000, Loper said.

Lawrence Construction, based in Littleton, also built the Martin Street bridge, Loper said.

Water enters the spillway from Ralph Price Reservoir in order to keep water from overflowing Button Rock Dam.

Construction on the spillway bridge is scheduled to start Sept. 7 and last until May.

"An area west of Longmont Dam Road to the top of the spillway will be closed throughout the work period," Longmont engineer Jason Elkins said in the news release.

Hiking trails within the preserve will remain open throughout construction, but hikers will be rerouted to access the popular North Shore Trail that takes people around the reservoir.

"We will lower the water level at the reservoir to create an access point to North Shore Trail at the top of the spillway," Elkins said in the news release.

Button Rock Preserve is a 3,000-acre property that Longmont owns west of Lyons. The preserve is a protected watershed that provides the majority of the drinking water for Longmont and Lyons.

Many hiking trails and infrastructure at the preserve were wiped out in the flood. The preserve reopened to the public in June 2015.

MONTANA

Crews battling 35 large, uncontained wildfires in the West (Bozeman Daily Chronicle)

Updated 4 hrs ago

BOISE, Idaho (AP) — Thirty-five large, uncontained wildfires were burning in the West, and firefighters were making initial attacks on another 112 new blazes to prevent them from spreading.

Firefighters in the region mostly faced windy, dry conditions that have fanned flames that destroyed buildings and forced evacuations in California, Washington, Idaho and elsewhere.

Late last week, the National Interagency Fire Center in Boise, Idaho, upped what it calls the National Preparedness Level to 4, one shy of the highest level, as competition for limited firefighting resources increased.

Here’s a look at the major wildfires in the West:

CALIFORNIA

Authorities say a wildfire that destroyed 45 homes on California’s central coast was not intentionally set but they were still trying to determine the cause.

Cal Fire says arson has been ruled out in the 10-day blaze that has charred 64 square miles of dry brush and timber.

The fire was 39 percent surrounded and at least 2,400 people were under evacuation orders in San Luis Obispo and Monterey counties. Additional warnings for people to be ready to flee were issued Wednesday and one arm of Lake Nacimiento was closed to boaters.

Cal Fire’s Rich Eagan says flames were more than two miles from Hearst Castle, which remains closed but was no longer at immediate risk.

A fire burning for a month north of Big Sur grew again to 135 square miles. Hundreds of homes remain threatened by the fire in rugged wilderness coast along Highway 1. The blaze was sparked by an illegal campfire. It is 60 percent contained.

___

IDAHO

A fast-moving rangeland wildfire in eastern Idaho expanded to nearly 70 square miles Wednesday, forcing evacuations, threatening a windfarm and burning habitat needed by sage grouse, a federally protected bird.

The Bonneville County Sheriff's Office says evacuations are in place, with up to 70 buildings along U.S. Highway 26 threatened.

Officials say the human-caused fire reported Sunday about 7 miles east of Idaho Falls is making wind-driven runs to the north and east.

Officials say high winds are again predicted Wednesday along with low humidity.

In central Idaho, a 160-square-mile wildfire in a remote, mountainous area continues to defy containment and burn through timbered slopes that are difficult for firefighters to reach.

___

MONTANA

Cooler weather has slowed Montana's largest wildfire, though 45 homes are still evacuated and 130 more are on alert.

The fire northeast of Thompson Falls had burned 33 square miles as of Wednesday morning.

Fire officials say crews have made progress in securing fire lines and protecting structures. The weather was cooperating again Wednesday with lighter winds and higher relative humidity forecast.

Minimal fire activity is also being reported from a fire burning west of Lakeside.

About 75 homes and other structures are within a half-mile of the fire's perimeter. No evacuations have been ordered.

___

UTAH

Firefighters in northern Utah are working to contain a growing wildfire near a ski resort that's now crossed the border into southern Idaho.

Fire spokeswoman Sierra Hellstrom said Wednesday that wind and high temperatures Tuesday afternoon had pushed the fire to 1.4 square miles.

Connect with the Chronicle on Facebook for the latest news, links and more.

It's burning about 23 miles northwest of Logan, and about one-fourth of a mile from the Beaver Mountain Ski Resort, which was on pre-evacuation notice this week.

Hellstrom says no buildings are imminently threatened at the resort.

WASHINGTON

Favorable weather conditions helped crews make progress Wednesday against a series of wildfires in Eastern Washington that have burned at least 18 homes this week.

A fire burning on the Spokane Indian Reservation was 30 percent contained. That fire covered more than 27 square miles and had destroyed at least 13 homes on the reservation, said Jamie Sijohn, a spokeswoman for the tribe.

"The devastating fire jumped the Spokane River from Lincoln County onto the Spokane reservation in three separate locations," Sijohn said.

It roared toward the town of Wellpinit, forcing the evacuation of the entire town on Sunday. But that order has since been lifted, Sijohn said.

Meanwhile, a fire near the town of Davenport in Lincoln County covered 6.5 square miles, and was 20 percent contained.

Another fire south of Spokane, in the Valleyford area, was 50 percent contained. It had burned more than 10 square miles and destroyed at least five homes, officials said. Mandatory evacuations ended on that fire on Tuesday night.

—

WYOMING

Some tourists heading to Yellowstone National Park during the busy summer season were facing an hourlong detour Wednesday as a wildfire in neighboring Grand Teton National Park kept a highway closed.

Major tourist areas in both parks are open as the National Park Service holds events to celebrate its 100th anniversary this week. A route leading into Yellowstone's South Entrance was shut down, so visitors coming from the south through Wyoming had to take a detour into Idaho.

But firefighters hope cooler weather slows the flames over the next couple of days.

Crowd turns out in Billings for North Dakota pipeline protest (Billings Gazette)

By MIKE KORDENBROCK mkordenbrock@billingsgazette.com

Dozens of people in Billings turned out Wednesday to protest the construction of a $3.8 billion pipeline beginning in North Dakota, standing in solidarity with the hundreds who have been protesting the pipeline with the Standing Rock Sioux tribe.

At its height, around 40 people stood on the sidewalk near the Yellowstone County Courthouse lawn holding signs encouraging supporters to honk and chanting, "Water is sacred, water is life." That was double the people event organizer Bailey Brown had expected.

The Dakota Access Pipeline is proposed to transport Bakken crude to Illinois, passing under the Missouri River.

The importance of clean water and clean air were on the mind of Tajin Perez, a Billings resident who helped Brown with the event.

"Clean air and clean water should be a right to everybody, not just those who can afford it," Perez said. "That's why people are here. They've been drawn out to the same call to stand up for what's right, for what's fair for everyone, especially those who have been disadvantaged for so long in regards to contemporary issues between the U.S. government and the Native peoples of this country."

Gerald Sherman and his wife, Jael Kampfe, made the drive from Bearcreek with four coolers of meat for Brown to deliver along with other supplies to protesters when she heads to North Dakota on Friday in a rented van.

“I’m not against oil, but I’m against a pipeline crossing the river,” said Sherman, a banking industry retiree and Oglala Sioux tribal member. “These pipelines have a history of breaking. It happened in the Yellowstone.”

When he and his wife heard about the protest in Billings, they posted their plans to attend on Facebook, and three families from Red Lodge responded by donating meat for them to take.

Sherman and Kampfe joined Lucky’s Market, Natural Grocers and others who have provided camping supplies and food for Brown to transport.

“I’m really impressed,” Brown said of the turnout. “Especially the people honking.”

Collette Montclair, a member of the Standing Rock Sioux Tribe who has lived in Billings for two years, said she’s proud of the efforts of her family and friends who have been protesting in North Dakota and that she is sad that she can’t join them. Work has interfered with her plans to return home, Montclair said, and she expected she wouldn't make the journey until October.

Like Brown, she also noted how honking car horns raised her spirit.

“I love all the support, everybody going by honking their horns,” she said.

Joining Monclair was her 4-year-old daughter, Ayasha.

“We want her to be a part of everything,” Montclair said of her daughter, who was seated on the sidewalk with a sign.

As challenges to the pipeline and its protesters continue to play out, it’s unclear what Montclair will tell her daughter when she grows older, but she offered some thoughts about what she hopes she can say.

“That everybody stood up for what’s right, stood up for what’s ours, and that we were all a part of it.”

NORTH DAKOTA

Taking a Stand at Standing Rock (New York Times)

By DAVID ARCHAMBAULT II
AUG. 24, 2016

Near Cannon Ball, N.D. — It is a spectacular sight: thousands of Indians camped on the banks of the Cannonball River, on the edge of the Standing Rock Sioux Reservation in North Dakota. Our elders of the Seven Council Fires, as the Oceti Sakowin, or Great Sioux Nation, is known, sit in deliberation and prayer, awaiting a federal court decision on whether construction of a $3.7 billion oil pipeline from the Bakken region to Southern Illinois will be halted.

The Sioux tribes have come together to oppose this project, which was approved by the State of North Dakota and the United States Army Corps of Engineers. The nearly 1,200-mile pipeline, owned by a Texas oil company named Energy Transfer Partners, would snake across our treaty lands and through our ancestral burial grounds. Just a half-mile from our reservation boundary, the proposed route crosses the Missouri River, which provides drinking water for millions of Americans and irrigation water for thousands of acres of farming and ranching lands.

Our tribe has opposed the Dakota Access pipeline since we first learned about it in 2014. Although federal law requires the Corps of Engineers to consult with the tribe about its sovereign interests, permits for the project were approved and construction began without meaningful consultation. The Environmental Protection Agency, the Department of the Interior and the National Advisory Council on Historic Preservation supported more protection of the tribe’s cultural heritage, but the Corps of Engineers and Energy Transfer Partners turned a blind eye to our rights. The first draft of the company’s assessment of the planned route through our treaty and ancestral lands did not even mention our tribe.

The Dakota Access pipeline was fast-tracked from Day 1 using the Nationwide Permit No. 12 process, which grants exemption from environmental reviews required by the Clean Water Act and the National Environmental Policy Act by treating the pipeline as a series of small

construction sites. And unlike the better-known Keystone XL project, which was finally canceled by the Obama administration last year, the Dakota Access project does not cross an international border — the condition that mandated the more rigorous federal assessment of the Keystone pipeline's economic justification and environmental impacts.

The Dakota Access route is only a few miles shorter than what was proposed for the Keystone project, yet the government's environmental assessment addressed only the portion of the pipeline route that traverses federal land. Domestic projects of this magnitude should clearly be evaluated in their totality — but without closer scrutiny, the proposal breezed through the four state processes.

Perhaps only in North Dakota, where oil tycoons wine and dine elected officials, and where the governor, Jack Dalrymple, serves as an adviser to the Trump campaign, would state and county governments act as the armed enforcement for corporate interests. In recent weeks, the state has militarized my reservation, with road blocks and license-plate checks, low-flying aircraft and racial profiling of Indians. The local sheriff and the pipeline company have both called our protest "unlawful," and Gov. Dalrymple has declared a state of emergency.

It's a familiar story in Indian Country. This is the third time that the Sioux Nation's lands and resources have been taken without regard for tribal interests. The Sioux peoples signed treaties in 1851 and 1868. The government broke them before the ink was dry.

When the Army Corps of Engineers dammed the Missouri River in 1958, it took our riverfront forests, fruit orchards and most fertile farmland to create Lake Oahe. Now the Corps is taking our clean water and sacred places by approving this river crossing. Whether it's gold from the Black Hills or hydropower from the Missouri or oil pipelines that threaten our ancestral inheritance, the tribes have always paid the price for America's prosperity.

Protecting water and our sacred places has always been at the center of our cause. The Indian encampment on the Cannonball grows daily, with nearly 90 tribes now represented. Many of us have been here before, facing the destruction of homelands and waters, as time and time again tribes were ignored when we opposed projects like the Dakota Access pipeline.

Our hand continues to be open to cooperation, and our cause is just. This fight is not just for the interests of the Standing Rock Sioux tribe, but also for those of our neighbors on the Missouri River: The ranchers and farmers and small towns who depend on the river have shown overwhelming support for our protest.

As American citizens, we all have a responsibility to speak for a vision of the future that is safe and productive for our grandchildren. We are a peaceful people and our tribal council is committed to nonviolence; it is our constitutional right to express our views and take this stand at the Cannonball camp. Yet the lieutenant governor of North Dakota, Drew Wrigley, has threatened to use his power to end this historic, peaceful gathering.

We are also a resilient people who have survived unspeakable hardships in the past, so we know what is at stake now. As our songs and prayers echo across the prairie, we need the public to see

that in standing up for our rights, we do so on behalf of the millions of Americans who will be affected by this pipeline.

As one of our greatest leaders, Chief Sitting Bull of the Hunkpapa Lakota, once said: “Let us put our minds together and see what life we can make for our children.” That appeal is as relevant today as it was more than a century ago.

David Archambault II is the chairman of the Standing Rock Sioux tribe.

Protests over huge N Dakota oil pipeline (BBC)

24 August 2016

More than 100 protesters have gathered in Washington DC to express their fears about a huge oil pipeline which will cross four states in the western US.

The $3.7bn (£2.8bn) Dakota Access pipeline has prompted huge protests, notably in North Dakota where Native Americans have halted its construction.

It will run 1,168 miles through Iowa, Illinois, and North and South Dakotas.

US District Judge James Boasberg said on Wednesday he will make a decision on the issue by 9 September.

Outside the court in the US capital, environmental activists made their feelings clear.

They believe the transporting of up to 570,000 barrels of crude oil a day will imperil local waterways.

The company behind the pipeline, Energy Transport Partners, has said the project will boost local economies and is much safer than transporting oil by rail or road. But protesters disagree.

Activists Desiree Fairooz and Lenny Bianchi were among the demonstrators outside the court, where a federal judge was set to consider the Standing Rock Sioux tribe's request for an injunction that would effectively block the pipeline's construction.

"We're concerned about the Native Americans and the threat to their water supply but we're also concerned about the fossil fuel issue," said Mr Bianchi, a Blue Mountain, Virginia native.

"We don't feel that we should be building pipelines, we feel that the money should instead be spent on alternative sources of energy."

Protesters gather outside the US District Court while awaiting a judge's decision on whether to issue an injunction against the construction of the Dakota Access pipeline.

Dozens of protesters convened outside the US District Court, with environmental activists and members of the Standing Rock Sioux tribe uniting behind one message - water is life.

The crowd was studded with signs bearing the words "native lives matter", "water is life" and "be on the right side of history, no DAPL [Dakota Access pipeline]."

Valentine Little Shield, a member of the Cheyenne River Sioux tribe in South Dakota, took a bus to Washington to show her support for the Standing Rock Nation Tribe.

Ms Little Shield describes the contested pipeline as personal. Her grandchildren use the waters where the pipeline poses a threat to swim, fish and bathe their horses.

"I'm here because of my grandkids and what they're going to go through," she said. "They can't drink the oil, they can't take a bath in the oil."

Generations of native Americans, both young and old, took turns sharing personal accounts of why halting the pipeline was important to them as crowd broke into battle cries and pounded tribal drums.

"We're not here to protest, we're here to protect," said Lance Frazier, a member of the Cheyenne River Sioux Tribe in Eagle Butte, South Dakota.

But for many, the pipeline symbolises a deeper issue among Native Americans.

Denise Desiderio, the policy director for the National Congress of American Indians, called the unilateral support of tribes across the country a "historic" moment.

"We need to make sure our tribal voice is heard and when we raise our voice, we need to make sure it transcends this issue," she said, noting the important symbolism of land to the Native American community.

"We have had enough lands taken away, we can't let what we have left be destroyed."

Hundreds of people have been occupying one of the construction sites in North Dakota, where tensions have been running high between demonstrators, police and builders.

Judge hears tribe's argument against ND pipeline (The Hill)

By Devin Henry - 08/24/16 04:13 PM EDT

Opponents of a major North Dakota pipeline project brought their case to federal court Wednesday.

The Standing Rock Sioux tribe told a federal district judge that the government didn’t consult the tribe before approving a route for the pipeline of energy company Dakota Access, which is to run close to sacred and environmental sites in North Dakota.

They worry a breach in the pipeline will imperil the Missouri River, which runs near the project.

The tribe last month sued the Army Corps of Engineers, which approved the pipeline route. On Wednesday, lawyers for the tribe asked District Judge James Boasberg to block construction on the project until the tribe can conduct more assessments of its route.

“The law gives the tribes the opportunity to go out and evaluate the impact on important sites,” Jan Hasselmen, the Earthjustice lawyer representing the tribes, said. “The tribe and other tribes are concerned about impacts all along the length of the pipeline.”

Federal attorneys dismissed the complaint, saying they offered the Standing Rock Sioux the chance to assess the pipeline with them and that the tribe declined, while other tribes in the region took them up on the offer.

“The Corps followed procedure in this case when it actively worked to engage with the plaintiffs, the Standing Rock Sioux,” said federal lawyer Matthew Marinelli.

Dakota Access said it has taken steps to avoid damaging culturally important areas in the region. The company’s attorney, William Leone, told the court, “This is not a cowboy process.”

Early construction on the pipeline route is mostly complete in North Dakota, and the focal point of Wednesday’s hearing was on its route under the Lake Oahe segment of the Missouri River.

Dakota Access can’t begin clearing space for the pipeline there until after an easement is cleared by federal regulators and is submitted to Congress, so issuing an injunction against the construction isn’t immediately urgent. Boasberg said he will try to decide the case within two weeks.

The 1,170-mile, $3.7 billion Dakota Access project would carry 570,000 barrels of Bakken crude oil from North Dakota to Illinois. Tribal groups have waged legal battles against the pipeline for months, and the project has drawn protests from tribes in North Dakota and anti-pipeline activists around the country.

Wednesday’s hearing was preceded by a rally outside the federal district court building in Washington, D.C., with tribal representatives and allies slamming federal energy policies that they say minimize tribal input. The protest drew celebrity activists like actresses Susan Sarandon and Shailene Woodley.

In North Dakota, protests against Dakota Access have landed up to 20 people in jail. Construction on the pipeline has stopped, and a federal judge in North Dakota has issued a restraining order against protesters at the site.

He will hear arguments on issuing an injunction against the protests in early September.

Amnesty International to observe pipeline protest (Bismarck Tribune)

JENNY SCHLECHT Bismarck Tribune

Amnesty International has sent a delegation of human rights observers to monitor the law enforcement response to the camp protesting the construction of the Dakota Access Pipeline under the Missouri River.

Thousands of people, including members of at least 60 Native American tribes, have camped out south of Mandan near the construction site of the pipeline -- which, if completed, will take Bakken oil to Illinois.

Tarah Demant, a spokeswoman for the delegation, said the international human rights organization has been concerned about reports that the state of North Dakota took away water resources that had been provided to protesters.

“We are concerned about the health and safety of protesters,” she said.

State-owned trailers and water tanks were removed earlier this week from the protest camp after reports of unlawful activity stoked fears among state officials that equipment would not be secure.

Amnesty International sent identical letters to North Dakota Highway Patrol Col. Michael Gerhart and Morton County Sheriff Kyle Kirchmeier to remind them of how officials are called upon to act during protests according to international human rights standards and the U.S. Constitution.

The letters discuss use of force, decisions to break up protests and how those decisions should be communicated, the use of detention and other issues.

Demant said Amnesty International only recently began sending observers to protests within the United States to ensure that law enforcement officials were protecting the right to peaceful protest, though the organization has a long history of such observations internationally. It has not previously visited North Dakota for that purpose.

The delegation arrived in Bismarck midafternoon Wednesday and had not yet traveled to the protest camp.

“Our hope is that we won’t have anything to report,” Demant said.

North Dakota Highway Patrol Lt. Tom Iverson and Donnell Preskey, a spokeswoman for the Morton County Sheriff’s Department, said they were not aware of any communications between local enforcement and Amnesty International. The group’s arrival will not change anything about how the patrol approaches the protest, Iverson said.

“Our message remains the same,” he said. “We need to keep everybody safe and promote safety for everybody involved — protesters, workers, law enforcement and the motoring public.”

Federal judge to rule Sept. 9 on Dakota Access injunction (Bismarck Tribune)

JESSICA HOLDMAN Bismarck Tribune

A federal judge will rule on the injunction filed by the Standing Rock Sioux tribe to stop construction of the Dakota Access Pipeline by Sept. 9, according to attorneys representing the tribe.

U.S. District Court Judge James Boasberg decided Wednesday in Washington, D.C., to take a couple weeks before issuing his ruling whether or not to halt the pipeline's construction while a suit filed by the tribe against the U.S. Army Corps of Engineers alleging violation of the National Historic Preservation Act during its permitting process of the pipeline goes through the court system.

Stephanie Tsosie of Earthjustice, co-council for the case, said Boasberg stated he wanted more time to look at the issues.

In the meantime, Dakota Access Pipeline developer Energy Transfer Partners discontinued work at the site of tribal protests of the project in advance of this week's hearing, however, pipeline construction is continued at other locations in North Dakota along with South Dakota, Iowa and Illinois and is still expected to be completed by the end of the year.

According to court documents filed by Dakota Access Pipeline Aug. 18 the project is about 45 percent complete.

“A temporary injunction would have devastating short and long term impacts to the DAPL project. Construction of the entire project would cease and the project itself would be jeopardized. Hundreds of deviations from the construction schedule would occur costing as much as $540,000 per occurrence. The aggregate direct impact of these changes would exceed $100 million,” the company argued.

In its arguments, Tsosie said Earthjustice focused on the fact that the tribe wants to be better consulted before a portion of the 1,168-mile crude oil pipeline is drilled beneath the Missouri River north of the Standing Rock Indian Reservation. The tribe has expressed concerns that, should the pipeline leak, the tribal water supply would be affected.

Eileen Williamson, a spokeswoman for the corps, said the corps does not make comments on ongoing litigation per agency policy. In court documents the agency countered it had hundreds of communications with the tribe.

“Rather than constructively participating in the process that has been going on for the last three years, Plaintiff has waited until this critical juncture to invoke the jurisdiction of the Court,” Dakota Access argued in court documents.

Tsosie said Tribal Chairman Dave Archambault II was on hand for the Wednesday court hearing, as well as several members of the tribal council, the tribe’s historic preservation officer and many general tribal members.

“It highlighted how important this is to the tribe; this is not a small issue to them,” Tsosie said.

$1 million hardship grant awarded for Utah Lake study (Deseret News)

By Amy Joi O'Donoghue, Deseret News

Published: Wednesday, Aug. 24 2016 3:50 p.m. MDT

Algae is seen floating near the shoreline at Utah Lake State Park in Provo on Friday, July 15, 2016. Public health officials decided to close the lake due to the large bloom. It was reopened on July 28, 2016. *Spenser Heaps, Deseret News*

Summary
The Water Quality Board awarded $1 million in a hardship grant to the Utah Department of Environmental Quality to continue its nutrient pollution probe of Utah Lake. This summer's pervasive algal bloom has created widespread public health worries.

SALT LAKE CITY —The second phase of a Utah Lake nutrient study to probe the algal bloom problem will begin thanks to a $1 million hardship grant awarded Wednesday to the Utah Department of Environmental Quality.

Members of the Utah Water Quality Board voted to approve the emergency grant in light of the extensive and pervasive spread of cyanobacteria at Utah's third largest lake — a problem that began early in the season and has been unprecedented in its scope.

“It’s time for us to take a hard look at the impacts of nutrients on Utah Lake,” said Walt Baker, director of the Division of Water Quality. “This study will provide us with the data and tools we need to evaluate the complex chemical and biological factors at play in the lake and make decisions that improve and protect this valuable resource.”

The funding continues a two-phase, four-year water quality study that will evaluate water quality data and look at the nutrient loads — or the amount of phosphorus and nitrogen in the lake — that is the cause of the harmful algal bloom.

Additional goals include developing tools for effective decision-making and involving partners and interested groups in stewardship of the lake's health.

Utah Lake was closed to public access for two weeks in mid-July because of an algal bloom that covered most of its surface. Lincoln Beach has been posted off-limits since the outbreak. The cyanobacteria can produce toxins that can be deadly to domestic animals and cause severe symptoms in people.

The bloom eventually spread to the Jordan River, and subsequent blooms have been reported at Payson Lake and Scofield Reservoir.

Multiple southern Salt Lake County communities suspended delivery of secondary water over fear the contamination would pose a health risk to people or make irrigated crops and gardens unsafe for consumption. The Utah Department of Agriculture and Food has since received lab results that showed no toxins in the produce that may have come in contact with the water.

This week, the Utah County Health Department upgraded two of its advisories based on new test results, elevating the public health warnings at the Saratoga Springs Marina and at Sandy Beach.

Conditions this summer have been ideal for the formation of the blooms. Utah Lake is 4 feet lower than what is typical, and the combination of heat and sunlight helps to foster the growth of algae.

In 2014, the Utah Water Quality Board approved a rule regulating the amount of phosphorus that wastewater treatment plants can discharge into water, including at Utah Lake. The rule, which does not take effect until 2020, requires technology upgrades at the plants to reduce the nutrient's presence in treated effluent.

“The challenges facing Utah Lake affect all of us,” Baker said. "We believe a collaborative, informed and science-based approach is our best hope for finding solutions that meet the needs of the lake, its users and the aquatic life that depend on a healthy lake for their survival.”

BLM gets new Utah director, and land challenges await (Deseret News)

By Amy Joi O'Donoghue, Deseret News

Published: Wednesday, Aug. 24 2016 4:00 p.m. MDT

Summary

A 37-year veteran of the Bureau of Land Management has been selected to lead state operations in Utah, a position that has been without a permanent head for a year. Edwin Roberson was director of the BLM's National Operations Center.

SALT LAKE CITY — The Bureau of Land Management announced Wednesday that an agency veteran will lead Utah operations, filling the shoes of Juan Palma, who left more than a year ago.

Edwin L. Roberson, a 37-year career leader with the BLM, comes to the Utah post after serving as director of the BLM National Operations Center in Denver, where he oversaw the agency's operational and technical support for information technology, finance and human resources.

Roberson also served in top leadership roles in New Mexico and held senior level positions in Washington, D.C., including a seven-year tenure as the BLM's assistant director for renewable resources and planning, a position that oversees a number of BLM resource programs.

"Ed is a good listener, a proven coalition-builder and a natural leader. We are fortunate to have his experience and expertise in Utah," said BLM Director Neil Kornze. "Ed has guided some of the agency's most important work during his career, and his experience working with local communities makes him the perfect fit for this job."

Roberson will lead an agency at the forefront of the public lands controversy in Utah, where frustrated rural leaders have challenged BLM road closures by participating in ATV rides that left them with federal criminal convictions.

In Salt Lake City, the Utah BLM offices became the first in the country to postpone an oil and gas lease sale because of a protest planned by the Keep It in the Ground Movement.

Law enforcement contracts between the BLM and local sheriff offices have also been a source of rural strife, with multiple county commissioners traveling to Washington, D.C., to demand personnel changes due to accusations of a "rogue" agent who has soured relations.

Ranchers have also sued the U.S. Department of Interior over what they say is mismanagement of the wild horse and burro populations that have degraded rangeland conditions and threatened their livelihood.

On the flip side, the BLM has been a tempest for wild horse enthusiasts who say the agency favors grazers over native horse populations and institutes "cruel" roundups that injure or kill the horses.

Utah, too, is among several states in the West that are suing over BLM management plans on the imperiled sage grouse. States say cornerstones of their own sage grouse conservation plans were ignored in federal plans they assert are too restrictive and not based on science.

As head of the often embattled agency, Roberson will lead a team that administers 23 million acres of public lands and 32 million acres of minerals and energy resources in Utah.

Roberson, who begins his new job Oct. 3, has bachelor's and master's degrees in urban planning from Auburn University in Alabama.

The Latest: Fire Near Utah Ski Resort Crosses Idaho Border (AP)

Associated Press, August 24, 2016
SAN SIMEON, Calif. — The Latest on wildfires burning in the West (all times local):
11:50 a.m.

Firefighters in northern Utah are working to contain a growing wildfire near a ski resort that's now crossed the border into southern Idaho.

Fire spokeswoman Sierra Hellstrom said Wednesday that wind and high temperatures Tuesday afternoon had pushed the fire to 1.4 square miles.

It's burning about 23 miles northwest of Logan, and about one-fourth of a mile from the Beaver Mountain Ski Resort, which was on pre-evacuation notice this week.

Hellstrom says no buildings are imminently threatened at the resort.

WYOMING

Yellowstone tourists face detour for fire but landmarks open (Associated Press)

YELLOWSTONE NATIONAL PARK — Some tourists heading to Yellowstone National Park during the busy summer season faced an hourlong detour Wednesday as a wildfire in neighboring Grand Teton National Park kept a highway closed.

Major tourist areas in both parks are open as the National Park Service holds events to celebrate its 100th anniversary this week. A route leading into Yellowstone's South Entrance was shut down, so visitors coming from the south through Wyoming had to take a detour into Idaho.

But firefighters hoped cooler weather would help slow the flames over the next couple of days.

"Yellowstone National Park is open for business," fire spokesman Bill Swartley said.

U.S. Interior Secretary Sally Jewell is set to visit Yellowstone on Thursday, and no changes have been made to her plans because of the fire, Swartley said.

The fire in Grand Teton has burned about 11 square miles since lightning sparked it last month, forcing the evacuation of about 50 people from a lodge and cabin operation and several campgrounds. Thirty horses also have been evacuated.

Meanwhile, four fires were burning inside Yellowstone, but all major visitor areas and roads were open.

The largest blaze spans about 42 square miles between the community of West Yellowstone, Montana, and Madison Junction, an area in the park with a campground, visitor facilities and staff housing. Lightning ignited it Aug. 8.

Swartley said the fires were mostly being allowed to burn because they were not threatening major tourist areas.

"These fires are being managed as basically a good fire for the ecology and then, of course, if there's anything getting close to cultural resources or public resources, structures, the fire is being engaged," he said.

A 10-mile stretch of U.S. 89/191/287 has been closed since Monday after flames leaped across it and were burning near the highway. The prospects for reopening the route are “not good in the near future” because the fire was close to the highway, fire spokeswoman Karen Miranda said.

Travelers coming from the south via the Jackson Hole area can still access Yellowstone through Idaho and the West Entrance. The detour adds a little over an hour to the drive to Old Faithful.

The fire is burning on both sides of the northern portion of Jackson Lake, but no buildings have been lost. More than 100 firefighters, supported by helicopters, are battling the flames.

Cooler temperatures and higher humidity were expected over the next couple of days and should help firefighters, Miranda said.

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney
6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department,

Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform’s glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

“Our focus on Zika has changed,” said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up “almost every day” in Recife’s maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a “causal agent” for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

“Now we’ve settled on Zika as the smoking gun, but we don’t know who pulled the trigger,” said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil’s last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

“Sexual habits and hygiene may also play a role,” he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

“We suspect the villain has an accomplice, but we don’t know who it is,” Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies’ brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother’s first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

“If you don’t know about something, you better take preventative measures to minimize the risks,” Espinal said. “So maybe the fact that we don’t have a lot of microcephaly means that we were doing our jobs” and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador’s government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

“It is very difficult to work out truly what is going on,” said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

“The fact is we don’t have any idea how many cases there were,” said Maierovitch, meaning it’s possible Brazil’s birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don’t have symptoms and don’t realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress’s failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

“We’ll have to hold our breath to see what happens in labor and delivery suites in a few months,” he said. “That’s the only way we’ll know whether we’ve dodged a bullet.”

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

“It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so,” said Pallone. “FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies.”

Earlier this year, Frontline’s documentary, “The Business of Disaster,” examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Aaron,

I have not heard from Matt on this matter in 2 or so. Would you have time to sync up on this tomorrow morning. I am interested in understanding what exactly we are paying for and from what source.

Thanks,
Brian

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney
6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline. The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more

than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform's glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that

it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

"Our focus on Zika has changed," said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up "almost every day" in Recife's maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a "causal agent" for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

"Now we've settled on Zika as the smoking gun, but we don't know who pulled the trigger," said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil's last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

"Sexual habits and hygiene may also play a role," he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

"We suspect the villain has an accomplice, but we don't know who it is," Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies' brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother's first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

“It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so,” said Pallone. “FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies.”

Earlier this year, Frontline’s documentary, “The Business of Disaster,” examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Tribal officials arrested at pipeline protest

Resistance builds against startup of Dakota Access Pipeline
By Talli Nauman Aug. 17,2016
Native Sun News Health & Environment Editor

Doctor Sarah Jumping Eagle was one of several pipeline resisters arrested Aug. 12 with Standing Rock Sioux Tribal Chair David Archambault II and tribal council member Dana Wasinzi in an action to prevent construction of the proposed Dakota Access Pipeline. COURTESY/Shauna M. Long CANNON BALL, N. D. — After Standing Rock Sioux Tribal Chair David Archambault II, tribal council member Dana Wasinzi and several other Dakota Access Pipeline resisters got arrested during a direct action to impede the construction startup on the project here, they set Aug. 20 for another action: A Missouri River water crossing to raise support for the cause.

The actions are among a number leading up to an Aug. 24 hearing on the tribe's lawsuit to prevent the construction and to strike down the U.S. Army Corp of Engineers' permits for the private frack oil line to cross 1851 and 1868 Ft. Laramie Treaty territory.

"ALL BOATS ON DECK!!!!" says the announcement of the coming action. "The Camp of the Sacred Stones calls ALL canoeists, kayaktivists, paddlers, and water warriors to bring their boats and courage and join us on the Missouri River on Saturday, Aug. 20," it says. "Please stand with us on the front lines! This pipeline threatens the longest river on Turtle Island and the drinking water of many millions of people."

The physical base for the actions, which have attracted hundreds of supporters and celebrity backers, such as Shailene Woodley, from throughout the Oceti Sakowin and the world, is the Camp of the Sacred Stones, a tipi encampment for prayer gatherings erected with crowdfunding near the place where the pipeline would cross the Oahe Reservoir on the Missouri River.

"The threats this pipeline poses to the environment, public health, and tribal and human rights are strikingly similar to those posed by the Keystone XL," organizers said on Aug. 7, as youth relay runners finished a nearly 2,000-mile journey from here to the White House to raise awareness about DAPL.

The Administration denied a permit to TransCanada Corp. for the Keystone XL tar-sands crude pipeline through Lakota Territory earlier this year, after indigenous and land-based people, as well as climate justice activists, rallied for months against it.

The Dakota Access (or Bakken) Pipeline project is similar in size to the failed Keystone XL project.

Since April 1, campers have been marshaling to defend against the Dakota Access Pipeline, or DAPL, which would carry frack oil from the Bakken Formation centered at the Mandan Hidatsa & Arikara Nation on the Ft. Berthold Indian Reservation, through North Dakota, South Dakota and Iowa to Illinois.

There it would meet a nearly finished line called the Energy Transfer Crude Oil Pipeline that would run to the Texas refineries and export facilities on the Gulf of Mexico.

On Aug. 12 pipeline resisters were met by state highway patrol, city police and sheriff's officers in a scuffle that led to several arrests and was defused when the official in charge of the armed patrol decided to retire it to avoid escalation of tension, according to eyewitnesses. Archambault was released on bond.

Houston-based Energy Transfer Partners and Phillips 66 recently gained the permits to begin building the proposed 1,172-mile DAPL across the Great Plains, the Missouri River, tributaries and wetlands in its watershed.

Then in a significant turn of events on Aug. 2, the Canadian company Enbridge Inc. announced that it is going in on the project instead of pursuing its Sandpiper and its Line 3 Replacement projects to move tar-sands crude to refineries and export facilities.

That means the line could carry, not only light crude from the Bakken, but also heavy tar-sands crude from Alberta Province in Canada, the home of Enbridge.

Enbridge is responsible for the 6-year-old Kalamazoo River tar-sands crude oil pipeline spill in Michigan, which is the worst inland oil spill in U.S. history and remains to be cleaned up to EPA's satisfaction.

A partner in the Enbridge Sandpiper and Line 3 Replacement projects, Marathon Petroleum Corp. is also joining in the Dakota Access Pipeline investment, after the former projects met with strident and sustained grassroots resistance.

Cheyenne River Sioux tribal member and pipeline resister Joye Braun of Indigenous Environmental Network said she is "thrilled Enbridge is pulling away from Sandpiper at the moment. Not so happy that the company is putting its resources into Dakota Access."

Indigenous and conservation groups sued the U.S. State Department in 2014 for allowing Enbridge to build a tar-sands crude line across the U.S. border from Canada without an environmental review. The plaintiffs were White Earth Nation, Honor the Earth, Indigenous Environmental Network, Minnesota Conservation Foundation, MN350, Center for Biological Diversity, Sierra Club, and National Wildlife Federation.

Enbridge "fails to see the death warrant of fossil fuels or that for-profit companies have no right to trample on treaty territory or ignore tribal nations who repeatedly say 'no' to them," Braun said.

Since Standing Rock's lawsuit, the Cheyenne River Sioux Tribe announced that it is filing a legal complaint against the Army Corps of Engineers for the DAPL permits, too. Tribal Chair Harold Frazier visited the spirit camp in a show of support. The Yankton Sioux Tribal Council passed a resolution to file suit as well.

An Aug. 11, Crow Creek Sioux tribal resolution offers the tribe's "full support of the Standing Rock Sioux Tribe's opposition to the Dakota Access Pipeline." It also calls on the U.S. Interior Department to exercise its trust responsibility to ensure the federal government blocks the permitting.

Crow Creek Tribal Chair Brandon J. Sazue Sr. traveled to Standing Rock to express his tribe's position: "We will stand with you my relatives. Whether we are Native, White, African American, etc., our water is our most precious resource, along with our children. We must all stand together in this most urgent of times. This is not about race, but about the human race! What we do today will make a difference tomorrow! If there was ever a time to stand united, that time is now!"

On Aug. 12, Rosebud Sioux Tribal President William Kimble sent a letter extending support for Standing Rock's position, agreeing to "stand in strong opposition to the Dakota Access Pipeline."

The letter states: “The pipeline could potentially damage and destroy sites of great historic, religious and cultural significance as it crosses ancestral lands of the Great Sioux Nation,” making it an “atrocious act.”

According to the Lakota Law Project Report, from 2006 to 2014, North Dakota’s oil industry caused 8,690 reported incidents of oil and brine spills. “The completion of Dakota Access will surely increase this number to record-high levels,” it said.

“We keep praying for the water and land,” said Ladonna Brave Bull Allard, landowner and director of the spirit camp. “We are searching for every avenue through prayer to defeat this Black Snake. Please remember water is life.”

Federal judge to rule Sept. 9 on Dakota Access injunction

- JESSICA HOLDMAN Bismarck Tribune
Jessica Holdman
- 1 hr ago

A federal judge will rule on the injunction filed by the Standing Rock Sioux tribe to stop construction of the Dakota Access Pipeline by Sept. 9, according to attorneys representing the tribe.

U.S. District Court Judge James Boasberg decided Wednesday in Washington, D.C., to take a couple weeks before issuing his ruling whether or not to halt the pipeline's construction while a suit filed by the tribe against the U.S. Army Corps of Engineers alleging violation of the National Historic Preservation Act during its permitting process of the pipeline goes through the court system.

Stephanie Tsosie of Earthjustice, co-council for the case, said Boasberg stated he wanted more time to look at the issues.

In the meantime, Dakota Access Pipeline developer Energy Transfer Partners discontinued work at the site of tribal protests of the project in advance of this week's hearing, however, pipeline construction is continued at other locations in North Dakota along with South Dakota, Iowa and Illinois and is still expected to be completed by the end of the year.

According to court documents filed by Dakota Access Pipeline Aug. 18 the project is about 45 percent complete.

"A temporary injunction would have devastating short and long term impacts to the DAPL project. Construction of the entire project would cease and the project itself would be jeopardized. Hundreds of deviations from the construction schedule would occur costing as much as $540,000 per occurrence. The aggregate direct impact of these changes would exceed $100 million," the company argued.

In its arguments, Tsosie said Earthjustice focused on the fact that the tribe wants to be better consulted before a portion of the 1,168-mile crude oil pipeline is drilled beneath the Missouri River north of the Standing Rock Indian Reservation. The tribe has expressed concerns that, should the pipeline leak, the tribal water supply would be affected.

Eileen Williamson, a spokeswoman for the corps, said the corps does not make comments on ongoing litigation per agency policy. In court documents the agency countered it had hundreds of communications with the tribe.

“Rather than constructively participating in the process that has been going on for the last three years, Plaintiff has waited until this critical juncture to invoke the jurisdiction of the Court,” Dakota Access argued in court documents.

Tsosie said Tribal Chairman Dave Archambault II was on hand for the Wednesday court hearing, as well as several members of the tribal council, the tribe’s historic preservation officer and many general tribal members.

“It highlighted how important this is to the tribe; this is not a small issue to them,” Tsosie said.

The Dakota Access Pipeline: What Would Sitting Bull Do?
By Winona LaDuke
It's 2016 and the weight of American corporate interests has come to the Missouri River, the Mother River. This time, instead of the Seventh Cavalry or the Indian police dispatched to assassinate Sitting Bull, it is Enbridge and Dakota Access Pipeline.
In mid-August, Standing Rock Tribal Chairman Dave Archambault II was arrested by state police, along with 27 others, for opposing the Dakota Access Pipeline. In the meantime, North Dakota Gov. Jack Dalrymple called for more police support.
Every major pipeline project in North America must cross indigenous lands, Indian Country. That is a problem.
The road west of Fargo is rarely taken. In fact, most Americans just fly over North Dakota, never seeing it.
Let me take you there.
My head clears as I drive. My destination is the homeland of the Hunkpapa Oceti, Standing Rock Reservation. It is early evening, the moon full. If you close your eyes, you can remember the 50 million buffalo—the single largest migratory herd in the world. The pounding of their hooves would vibrate the Earth, make the grass grow.
There were once 250 species of grass. Today the buffalo are gone, replaced by 28 million cattle, which require grain, water and hay. Many of the fields are now in a single GMO crop, full of so many pesticides that the monarch butterflies are dying off. But in my memory, the old world remains.

If you drive long enough, you come to the Missouri River.

Called Mnisose, a great swirling river, by the Lakota, she is a force to be reckoned with. She is breathtaking. "The Missouri River has a fixed place in the history and mythology" of the Lakota and other Indigenous nations of the Northern Plains, author Dakota Goodhouse would explain. In the time before Sitting Bull, the Missouri River was the epicenter of northern agriculture, the river bed so fertile. The territory was known as the fertile crescent of North America. That was then, before the treaties that reduced the Lakota land base. But the Missouri remained in the treaty—the last treaty of 1868 used the Missouri as a boundary.

Then came the theft of land by the U.S. government and the taking of the Black Hills in 1877, in part as retaliation against Sitting Bull's victory at the Battle of the Little Big Horn. In a time prior to Black Lives Matter or Native Lives Matter, great leaders like Sitting Bull and Crazy Horse were assassinated at the hands of police.

One truth: The Lakota people have survived much.

Forced into the reservation life, the Lakota attempted to stabilize their society, until the dams came. The 1944 Pick Sloan project flooded out the Missouri River tribes, taking the best bottom lands from the Mandan, Hidatsa and Arikara, the Lakota and Dakota. More than 200,000 acres on the Standing Rock and Cheyenne River reservations in South Dakota were flooded by the Oahe Dam itself, forcing not only relocation, but a loss of the Lakota world. The Garrison, Oahe and Fort Randall dams created a reservoir that eliminated 90 percent of timber and 75 percent of wildlife on the reservations.

That is how a people are made poor.

Today, well over two thirds of the population of Standing Rock is below the poverty level—and the land and Mother River are what remains, a constant, for the people. That is what is threatened today.

Enbridge and partners are preparing to drill through the riverbed. The pipeline has been permitted in sections from the west and from the east. The northern portion was moved away from the water supply of Bismarck, into the watershed of Standing Rock. That was unfortunate for the Lakota.

Despite Lakota legal and regulatory objections, the Dakota Access Pipeline construction began in May 2016. If finished it will snake through North and South Dakota, Iowa and Illinois, where it will link to a 774-mile pipeline to Nederland, Texas.

More than 570,000 barrels of Bakken crude oil will pass through the pipeline daily, along with 245,100 metric tons of carbon daily—enough carbon to combust the planet to oblivion.

The pipeline would span 200 water crossings and in North Dakota alone would pass through 33 historical and archeological sites. Enbridge just bought the Dakota Access pipeline, noting that the proposed Sandpiper route—Minnesota's 640,000 barrel per day Bakken line—is now three years behind schedule.

The route of the Dakota Access Pipeline.

In late July, the Standing Rock Sioux Tribe represented by Earthjustice, filed a lawsuit in the U.S. District Court for the District of Columbia against the U.S. Army Corps of Engineers. Standing Rock claims the project violates federal and treaty law. Standing Rock also filed an intervention at the United Nations, in coordination with the International Indian Treaty Council. As Chairman Archambault explained in a New York Times story:

> "The Environmental Protection Agency, the Department of the Interior and the National Advisory Council on Historic Preservation supported more protection of the tribe's cultural heritage, but the Corps of Engineers and Energy Transfer Partners turned a blind eye to our rights. The first draft of the company's assessment of the planned route through our treaty and ancestral lands did not even mention our tribe.
>
> "The Dakota Access pipeline was fast-tracked from Day 1 using the Nationwide Permit No. 12 process, which grants exemption from environmental reviews required by the Clean Water Act and the National Environmental Policy Act by treating the pipeline as a series of small construction sites.
>
> "Without closer scrutiny, the proposal breezed through the four state processes."

In Iowa where work on the pipeline is underway, three fires erupted causing heavy damage to equipment and an estimated $1 million in damages. Investigators suspect arson, according to Jasper County Sheriff John Halferty. In October 2015, three Iowa farmers sued Dakota Access LLC and the Iowa Utilities Board in an attempt to prevent the use of eminent domain on their properties to construct the pipeline.

The health of the Missouri River has been taken for granted.

Dammed in the Pick Sloan Dam projects, each project increases contamination and reduces her health. Today, the Missouri is the seventh most polluted river in the country. Agricultural run-off and now fracking have contaminated the river. My sister fished a gar out of the river, a giant prehistoric fish, only to find it covered with tumors.

Here's just one case: In a January 2015 spill, saltwater contamination from a massive pipeline spill reached the Missouri River. In the baffling way of state and federal agencies, North Dakota's Health Director David Glatt did not expect harm to wildlife or drinking water supplies because the water was diluted. The saying is: "The solution to pollution is dilution." That is convenient, but not true.

Blacktail Creek and the Little Muddy River were contaminated after nearly 3 million gallons of saltwater with elevated levels of chloride contamination. All was diluted. But then there was that gar fish with the tumors.

There are pipelines everywhere and fewer than 150 Pipeline Hazardous Materials Safety Administration (PHMSA) pipeline inspectors in the whole country.

And now comes the risk from oil.

The pipeline companies generally discuss a 99 percent safety record, but studies have found that to be grossly inaccurate. A former Scientific American Editor, Trudy Bell, reports that PHMSA data from 2001 to 2011 suggest the average pipeline "has a 57% probability of experiencing a major leak, with consequences over the $l million range in a ten year period."

Not good odds.

At Standing Rock, as the number of protesters grew from 200 to 2000, state law enforcement decided to put up a safety checkpoint and rerouted traffic on Highway 1806 from Bismarck to Standing Rock, hoping to dissuade people from coming and put the squeeze on Standing Rock's Prairie Knights Casino, which is served by that road.

We just drove around; the scenic route is beautiful. And as supporters surge in numbers, the casino hotel and restaurants are full.

While North Dakota seeks to punish the Lakota, Chairman Archambault expresses concerns for everyone:

From the New York Times: "I am here to advise anyone that will listen that the Dakota Access Pipeline project is harmful. It will not be just harmful to my people but its intent and construction will harm the water in the Missouri River, which is one of the cleanest and safest river tributaries left in the Unit States. To poison the water is to poison the substance of life. Everything that moves must have water. How can we talk about and knowingly poison water?"

In the meantime, North Dakota Gov. Dalrymple announced a state of emergency, making additional state resources available "to manage public safety risks associated with the ongoing protest of the Dakota Access Pipeline." He may have exceeded his scope of authority and violated civil and human rights to water.

Chairman Archambault's interpretation: "Perhaps only in North Dakota, where oil tycoons wine and dine elected officials and where the governor, Jack Dalrymple, serves as an adviser to the

Trump campaign, would state and county governments act as the armed enforcement for corporate interests."

There are a lot of people at Standing Rock today who remember their history and the long standoff at Wounded Knee in 1973. In fact, some of those in Standing Rock today were there in 1973 at Wounded Knee, a similar battle for dignity and the future of a nation.

I am not sure how badly North Dakota wants this pipeline. If there is to be a battle over the pipeline, it will be here. For a people with nothing else but a land and a river, I would not bet against them.

The great Lakota leader Mathew King once said, "The only thing sadder than an Indian who is not free, is an Indian who does not remember what it is to be free."

The Standing Rock protest camp represents that struggle for freedom and the future of a people. All of us. If I ask the question "What would Sitting Bull do?"—the answer is pretty clear. He would remind me what he said 150 years ago: "Let us put our minds together to see what kind of future we can make for our children."

The time for that is now.

Morton County declares emergency with pipeline protest

LEANN ECKROTH Bismarck Tribune 12 hrs ago

With the protest against the Dakota Access Pipeline swelling to 2,000 people near Cannon Ball, Morton County officials may seek to access emergency funds to pay overtime to their deputies and other law enforcement agencies assisting Morton County in keeping the protest boundaries safe.

Protesters oppose the pipeline beneath the Missouri River because they fear it could contaminate their water supplies.

A special Morton County meeting will be held 4 p.m. Monday to address the emergency declaration, signed by Cody Schulz, chairman of the board, last week.

"This is to maintain public safety and to make sure the legal rights of everyone is enforced," Schulz said Sunday. "This has required a great deal of law enforcement manpower and time."

Schulz signed the declaration Aug. 15 and state law requires the remainder of the county board ratify the declaration within seven days to keep it binding.

County Commissioner Bruce Strinden said Sunday the declaration will allow the county to use its own emergency funds to pay deputies and other law enforcement for overtime tied to the protest.

"Without an emergency declaration, we cannot access those fund," said Strinden, who estimated the county may have banked about $125,000 in emergency funds. "We're getting help from neighboring counties and cities' law enforcement through mutual aid agreements, and appreciate it, but that help doesn't come free. We have to compensate them for food, lodging and of course pay. We're only a week into this."

Protesters said they are keeping the demonstration peaceful. Yet, the protest has challenged the county's enforcement capacity.

"This is a very large protest -- 2,000. So a protest of that size is of a concern to us," Strinden said. "People have a right to protest. The law enforcement will support legal activity in a protest unless it goes the other way."

"Right now, our primary goal is keeping everyone safe," he added, speaking of the need to close Highway 1806 during the protest. "There were vehicles parking on both sides of 1806. We don't want anyone injured or accidents."

Gov. Jack Dalrymple signed a declaration of emergency Friday. Strinden believes the state will pay for a large portion of North Dakota Highway Patrol troopers enforcing the highway because it lies in their jurisdiction, he said the county at this point will have to reimburse other law agencies for their assistance.

"At this point, we aren't seeking additional funds from the state," Schulz said. "The governor's declaration allows us to request extra resources, manpower or equipment from the state."

Governor issues emergency declaration in response to pipeline protests

CAROLINE GRUESKIN Bismarck Tribune

Updated Aug 19, 2016

North Dakota Gov. Jack Dalrymple issued an emergency declaration for southwest and south central North Dakota in response to protests against the Dakota Access Pipeline near Cannon Ball.

The declaration starts a process by which state agencies can get additional funding, said Greg Wilz, director of the Homeland Security Division of the state Department of Emergency Services.

Dalrymple said in the declaration that the state is committed to protecting the right to lawful protests, but recent events have created a "significant public safety concern."

The protests have grown substantially over the past week as about 1,500 people have gathered to demonstrate against the pipeline being drilled under the Missouri River. Large campsites have been established for the protesters. Twenty-nine people have been arrested during the demonstrations.

The Morton County Sheriff's Department has been the central law enforcement agency involved in monitoring the protests, but several state agencies have gotten involved.

North Dakota Highway Patrol has sent officers to the protest site, Wilz said. The health department has provided portable water trailers and a medical trailer at the protest camp. The transportation department has assisted with the road detour on Highway 1806 and put up barriers and signage.

Wilz said he will be looking at funding requests from the agencies, make an estimate and ask the emergency commission for an appropriation. The commission can authorize emergency services to get a loan from the Bank of North Dakota.

He estimated the additional resources could cost from $750,000 to $1 million, if the protests continue for the next few weeks.

The declaration also means an emergency operations center will be set up in the emergency services building, so that the agencies can coordinate their resources, Wilz said.

The money does not funnel directly into the local agencies, such as the Morton County Sheriff's Department. Rather, it reimburses the state agencies that provide personnel and material resources to local authorities.

Morton County declared its own state of emergency on Monday, for the purpose of tapping into its emergency fund and creating public awareness, said Cody Schulz, chairman of the county commission.

Schulz said the biggest expense for the county has been law enforcement, including overtime for the sheriff's deputies and assistance from other agencies, including the Mandan Police and the Cass and Mercer County Sheriffs.

The governor's emergency order does not include activation of the National Guard.

Protesters settle into camp life

CAROLINE GRUESKIN Bismarck Tribune

Aug 19, 2016

CANNON BALL — An upside down flag hangs in the center of a new community larger than most small towns in North Dakota. It’s a protest camp near the Cannonball River at the border of the Standing Rock Indian Reservation.

The flag is a symbol of distress, that the area had been taken over by an enemy. But the atmosphere Thursday afternoon at the Seven Councils or Overflow Camp, where hundreds are staying in Morton County, hardly feels urgent. Rather, it's joyful and cooperative.

The setup is an extension of the Camp of Sacred Stones, located on the reservation at the confluence of the Cannonball and Missouri rivers, where people have been protesting an oil pipeline since April. During the past week, the once-small effort has grown to an estimated 1,500 to 2,000 people.

On Wednesday, after days of protests, work at the Dakota Access Pipeline site just north of the camp was put on hold until Aug. 24, when a hearing will be held on the tribe's lawsuit against the Army Corps of Engineers over its approval of the pipeline crossing under the Missouri River.

Most people at the camp, who rallied at the work site, insisted the demonstrations were peaceful, but law enforcement has said officers received information about weapons. The Morton County Sheriff's Department said in a statement Friday no weapons were seen.

Many at the camp saw the previous days’ efforts as a small victory. Often repeated was a gladness that the tribes were working together.

“It’s been a long time since we all camped together,” said 18-year-old Jasmine LeBeau of Eagle Butte, of the several tribes gathered there. “It feels natural.”

LeBeau traveled back and forth by bus from the Cheyenne River Indian Reservation in South Dakota three days in a row with her family. On Thursday, they said the travel was enough and decided to put down camp.

She asked how she could help and was directed to prepare giant pots of soup. She cooked over an open fire near a tent where women molded dough into fry bread. A few feet away, a dozen kids shucked corn hauled in on a pickup bed.

She was preparing food for the thousands who have come from across the country — the unfamiliar license plates give them away — to show their support for the Standing Rock Sioux Tribe in its protest of the pipeline.

The group at the camp is predominantly native, but many white people are there, too. There are kids, adults and grandparents.

Many are camped in tents and teepees set up between awkwardly parked school buses, which bring people in each day from nearby reservations.

Some people show up with food, water, tents. Others bring just enough gas for the drive down. When people started to flood in over the weekend — many found out about the event through social media or were asked by their tribal chairman to join — and numbers exceeded 500, Standing Rock leaders started planning to provide for the big group.

“We knew immediately that we needed Porta Potties,” said Johnelle Leingang, the tribal chairman’s executive secretary and member of the emergency management task force. “That’s essential.”

The task force coordinates with the state for water tanks, Dumpsters, a medical trailer and a wash station. They have volunteer nursing assistant and emergency medical technicians. Leingang said they arranged for a helicopter pad for emergencies, as ambulances cannot access the site.

"The Lakota people, it is in their nature to mobilize," said Harold Tiger, the emergency manager at the Cheyenne River reservation, who calls himself the EMS Warrior and was assisting in Cannon Ball. "Everyone takes on their responsibilities."

The biggest issue so far has been heat exhaustion, Leingang said. People of all ages are walking a mile and a half to the protest site, where hundreds have stood in recent days demanding workers to stop building an oil pipeline under the Missouri River, in temperatures that exceeded 80 degrees.

There is no real plan for extreme weather, except to keep everyone updated on the forecast. Protesters said they were washing up in a nearby creek or heading over to Prairie Knights casino and Cannon Ball, as there are no showers onsite.

People said most supplies have been donated. There is a tent up front, where people drop off food and water, trash bags and supplements for babies and diabetics. A rumor is going around about two deli trucks coming in from California. No one seems to remember to give feminine hygiene products, a family working in the donation tent contended.

Cashiers at nearby stores said business has been steady as people from around the county pick up supplies and items to donate. Water, ice, sandwich meats and tobacco have gone fast from the Family Dollar and White Buffalo Supervalu in Fort Yates.

Joye Braun, one of the organizers, described the Camp of Sacred Stones similarly to the overflow camp, though the focus is on prayer. She denied a Tribune reporter and photographer access to that camp.

Security also seemed tighter at the entrance to the Camp of Sacred Stones. People coming in were asked if they had alcohol or guns and if they were a "Fed."

Mark Tilsen, a former teacher on the Pine Ridge reservation in South Dakota, said he chose to stay at the second camp, not the original spirit camp, because space is limited there and he wants to turn his attention toward action instead of prayer.

"For Oglala, we've been praying all summer, and we're done with it," Tilsen said. "We're here to stop the pipeline."

North Dakota Oil Pipeline Battle: Who's Fighting and Why (NY Times)

By JACK HEALYAUG. 26, 2016

A protester rode a horse through the construction site for the Dakota Access oil pipeline in south central North Dakota. Credit Daniella Zalcman for The New York Times

This week, an impassioned fight over a 1,170-mile oil pipeline moved from the prairies of North Dakota to a federal courtroom in Washington. The Standing Rock Sioux tribe, whose reservation lies just south of the pipeline's charted path across ranches and under the Missouri River, has asked a judge to halt construction. The American Indian tribe argues that a leak or spill could be ruinous.

It may take until Sept. 9 for a federal judge to decide whether to allow the Dakota Access pipeline to move ahead, or grant an injunction that would press the pause button on construction.

Here is a look at how the battle over the pipeline has become an environmental and cultural flash point, stirring passion across the Plains and drawing hundreds of protesters to camp out in rural North Dakota.

What Is Happening in North Dakota?

American Indians have been gathering since April outside Cannon Ball, a town in south central North Dakota near the South Dakota border, to protest the Dakota Access pipeline as construction commences. Starting with members of the Standing Rock Sioux tribe, the protest has since grown to several hundred people — estimates vary — most of them from tribes across the country.

The protesters have encamped in a field belonging to the United States Army Corps of Engineers. Each day, they march a mile up a highway to a construction site where preparatory work is being done for the pipeline. While the protesters say they are peaceful, there have been reports of heated confrontations with law enforcement officers and construction workers, and 20 people have been arrested. Construction on a road to the pipeline has stopped for the moment.

The pipeline company, Energy Transfer Partners, has sued several protesters, claiming they have threatened and intimidated contractors and were blocking work at the site.

What Does Each Side Want?

The Dakota Access pipeline is a $3.7 billion project that would carry 470,000 barrels of oil a day from the oil fields of western North Dakota to Illinois, where it would be linked with other pipelines. Energy Transfer says the pipeline will pump millions of dollars into local economies and create 8,000 to 12,000 construction jobs — though far fewer permanent jobs to maintain and monitor the pipeline.

Members of the Standing Rock Sioux tribe see the pipeline as a major environmental and cultural threat. They say its route traverses ancestral lands — which are not part of the reservation — where their forebears hunted, fished and were buried. They say historical and cultural reviews of the land where the pipeline will be buried were inadequate. They also worry about catastrophic environmental damage if the pipeline were to break near where it crosses under the Missouri River.

What About Protests in North Dakota?

For the moment, the mood there is calm, but anxious. North Dakota's governor has declared a state of emergency there, and law enforcement has barricaded the main highway leading to the protest site and the campers.

Hundreds of people are camped out about a mile down the road from the construction site. They say they are there to pray and protest peacefully, but some people are worried that the situation could turn volatile if work resumes at the site or the government tries to disband the camp.

Are Others Fighting the Pipeline?

Yes. State and federal agencies have approved the pipeline, and some farmers and ranchers have welcomed the thousands of dollars in payments that came with signing agreements to allow it to across their land. But others oppose the pipeline.

In Iowa, one of the four states that the pipeline would traverse, some farmers have gone to court to keep it off their land. They say that Iowa regulators were wrong to grant the pipeline company the power of eminent domain to force its way through their farms. Most landowners in the 346-mile path of the pipeline through Iowa, however, have signed easements allowing it to be built across their land.

American Indians vs. Dakota Pipeline

The Standing Rock Sioux tribe and others are protesting the Dakota Access pipeline, which they say threatens water supplies and sacred lands.

How Many Pipelines Cross the United States?

The United States has a web of 2.5 million miles of pipelines that carry products like oil and natural gas, pumping them to processing and treatment plants, power plants, homes and businesses. Most of the lines are buried, but some run above ground.

While a natural gas line to a newly built subdivision is not likely to generate national controversy, proposed major pipelines like the Keystone XL, the Dakota Access or the Sandpiper in northern Minnesota have generated huge opposition from environmental groups and people living in their paths.

How Safe Are Pipelines?

Energy companies and their federal overseer, the Pipeline and Hazardous Materials Safety Administration, promote the safety record of pipelines. Pipeline companies say it is far safer to move oil and natural gas in an underground pipe than in rail cars or trucks, which can crash and create huge fires.

But pipeline spills and ruptures occur regularly, sometimes in small leaks and sometimes in catastrophic gushers. In 2013, a Tesoro Logistics pipeline in North Dakota broke open and spilled 865,000 gallons of oil onto a farm. In 2010, an Enbridge Energy pipeline dumped more than 843,000 gallons of oil into the Kalamazoo River in Michigan, resulting in a cleanup that lasted years and cost more than a billion dollars, according to Inside Climate News.

In a 2012 examination of pipeline safety, ProPublica reported that more than half of the country's pipelines were at least 50 years old. Critics cited aging pipelines and scant federal oversight as factors that put public health and the environment at risk.

Corps says pipeline still needs water-crossing easement (Bismarck Tribune)

- LAUREN DONOVAN Bismarck Tribune

-

Lauren Donovan

Standing Rock Sioux Chairman David Archambault II, center, is surrounded by family and friends following his address to the council fire gathering at the Dakota Access Pipeline protest encampment Thursday after returning from a federal court room in Washington, D.C.

MORTON COUNTY — While hundreds are settling in for the long haul at an encampment to protest the Dakota Access Pipeline, the U.S. Army Corps of Engineers confirmed Thursday that the pipeline developer, Energy Transfer Partners, does not yet have a written easement to build the pipeline on corps property.

Corps spokesman Larry Janis said the easement is still under review, though the agency did issue Section 408 permission in late July that allows the easement to be written.

“They can’t build the project by accessing corps property from west to east across Lake Oahe,” Janis said of any current construction.

That could partly explain the company’s decision Aug. 18 to voluntarily stop construction at its work site just north of the Standing Rock Sioux Reservation near the Missouri River-Lake Oahe, where an active protest led to 28 arrests. The company has since received a federal court restraining order to prevent all arrestees — including tribal chairman Dave Archambault — and any “Jane and John Doe” from being at the work site and places such violations in federal, not district court.

The stopped work also stopped active protest, and protesters have since held prayer circles and other gatherings in the camp area about 1 mile south.

The realization that the company still does not have an actual easement surfaced Wednesday in a federal district court in Washington, D.C., where the Sioux tribe's request for an injunction to stop the pipeline pending its suit against the corps was heard. The court judge said he wants more time to study whether the corps failed to follow the National Historic Preservation Act and other federal laws in its environmental review of the project. The judge said he will rule on the injunction Sept. 9.

"Everybody thought they had it (easement)," said attorney Carolyn Raffensperger, executive director of the Science and Environmental Health Network. "This is really important information."

Raffensperger is among four attorneys volunteering legal services to the tribe and the individuals who were or may be arrested.

They addressed several hundred circled around the council fire mid-day Thursday; a cool, breezy day that called for blankets and jackets. They said legal issues may get worse for the state of North Dakota and other agencies.

Amnesty International observers were in the camp Thursday and an observer from the United Nations is scheduled to be in camp Tuesday, said Phyllis Young, the Standing Rock camp coordinator.

Young said the tribe is alleging racial discrimination for acts including a police barricade on Highway 1806 near Mandan that detours anyone going home to the reservation, but gives access to everyone else north of the reservation, and airplane surveillance.

"We are exploring the defense of that roadblock. There's nothing to warrant that kind of lockdown," said Angela Bibens, an attorney.

The roadblock is manned 24 hours a day by North Dakota Highway Patrol troopers and other cooperating agencies. Bibens urged anyone with an outstanding warrant or unpaid child support to refrain from getting arrested to prevent their personal problems from getting worse. She said only people with a clean record should consider themselves arrest-able.

Meanwhile, camp managers met Thursday to discuss logistics now that it appears the camp, with anywhere from 500 to 2,000 people in tents and tepees, will stay active until the court's injunction decision Sept. 9.

Johnelle Leingang, an emergency manager, said a noticeable number of people left the camp after Wednesday's news that the injunction decision would be delayed.

"The majority are coming back, and the head cook said she'll provide the same amount of food for 2,500 people," Leingang said.

The camp is actually three camps: the main Seven Council camp on the north side of the Cannonball River, the Rosebud camp across the river and the original Sacred Stone Spirit camp further southeast.

Even as a small group from the Arizona Navajo Nation that brought meat and produce to the campers earlier this week packed up to go home Thursday, a group of eight Native Descendants from California rode in on motorcycles to stay through the weekend.

"It was a beautiful drive. We had the heart and the spirit to get here and, if we could stay longer, we would. This is history in the making," Anthony Cuevas, said.

Chairman Archambault, who this week had an opinion piece on the protest published in the New York Times, spoke at the council fire after returning from the D.C. court hearing.

He expressed gratitude for the support from tribal nations around the country and for the peaceful prayerful nature of the camp.

"When this is done, if it's ever done, they will remember the people who live on reservations. What I see today is unbelievable. The prayers are never-ending," said Archambault, adding that the protest has caught the attention of the nation.

"We knew immediately that we needed Porta Potties," said Johnelle Leingang, the tribal chairman's executive secretary and member of the emergency management task force. "That's essential."

The task force coordinates with the state for water tanks, Dumpsters, a medical trailer and a wash station. They have volunteer nursing assistant and emergency medical technicians. Leingang said they arranged for a helicopter pad for emergencies, as ambulances cannot access the site.

"The Lakota people, it is in their nature to mobilize," said Harold Tiger, the emergency manager at the Cheyenne River reservation, who calls himself the EMS Warrior and was assisting in Cannon Ball. "Everyone takes on their responsibilities."

The biggest issue so far has been heat exhaustion, Leingang said. People of all ages are walking a mile and a half to the protest site, where hundreds have stood in recent days demanding workers to stop building an oil pipeline under the Missouri River, in temperatures that exceeded 80 degrees.

There is no real plan for extreme weather, except to keep everyone updated on the forecast.

Protesters said they were washing up in a nearby creek or heading over to Prairie Knights casino and Cannon Ball, as there are no showers onsite.

People said most supplies have been donated. There is a tent up front, where people drop off food and water, trash bags and supplements for babies and diabetics. A rumor is going around about two deli trucks coming in from California. No one seems to remember to give feminine hygiene products, a family working in the donation tent contended.

Cashiers at nearby stores said business has been steady as people from around the county pick up supplies and items to donate. Water, ice, sandwich meats and tobacco have gone fast from the Family Dollar and White Buffalo Supervalu in Fort Yates.

Joye Braun, one of the organizers, described the Camp of Sacred Stones similarly to the overflow camp, though the focus is on prayer. She denied a Tribune reporter and photographer access to that camp.

Security also seemed tighter at the entrance to the Camp of Sacred Stones. People coming in were asked if they had alcohol or guns and if they were a "Fed."

Mark Tilsen, a former teacher on the Pine Ridge reservation in South Dakota, said he chose to stay at the second camp, not the original spirit camp, because space is limited there and he wants to turn his attention toward action instead of prayer.

"For Oglala, we've been praying all summer, and we're done with it," Tilsen said. "We're here to stop the pipeline."

Native Americans Protest New Oil Pipeline In North Dakota (NPR)

August 25, 20164:26 PM ET
Heard on All Things Considered
Amy Sisk

Native Americans and environmentalists are protesting a pipeline slated to carry a half a million barrels of crude daily from North Dakota to Illinois. But the oil industry says the pipeline is safe.

KELLY MCEVERS, HOST:
A fight over the route of a new pipeline is gaining momentum while it plays out in court. Hundreds of Native Americans from tribes across the United States are protesting in North Dakota. They're setting up camp at the site where the pipeline is slated to cross under the Missouri River. Reporter Amy Sisk of the public radio collaboration Inside Energy says the group is finding an eager ally in environmental groups.

AMY SISK, BYLINE: In what's usually an empty field, there are cars, trucks, teepees and tents surrounding me in a site near the Standing Rock Sioux Reservation in south central North Dakota. Those protesting here don't want the Dakota Access pipeline built. That pipeline is permitted to cross federal land under the Missouri river a mile north of the reservation border.

UNIDENTIFIED CROWD: (Chanting) Keep it in the soil.

SISK: But the tribe is essentially saying not in our backyard.

UNIDENTIFIED CROWD: (Chanting) Keep it in the soil.

SISK: Alice Brownotter is just 12 years old. Today she's leading a crowd of hundreds of protesters.

ALICE BROWNOTTER: When it goes through - or if - and when it breaks, it will affect everyone.

SISK: Like others here, Brownotter worries that if the pipeline leaks, it will affect the drinking water on her reservation. The pipeline is approved to stretch from the Bakken oil fields of western North Dakota to Illinois. Dallas-based Energy Transfer Partners is building it and says it could carry more than half of North Dakota's daily crude production.

Kari Cutting is with the North Dakota Petroleum Council. She says state-of-the-art equipment will monitor this pipeline, which is a big part of the nation's energy strategy to deliver cheap oil.

KARI CUTTING: This is a product that they desire, they want. They have the markets. They have the people. And we're trying to get it there.

SISK: Safety experts say pipelines are a considerably better way to transport oil. Last year alone, there were more than a half dozen major oil train accidents. But still, it's pipelines that remain the focus of opposition by environmental groups.

Jason Kowalski's with the group 350.org and says environmental groups like his oppose pipelines with the hope of keeping oil in the ground. Despite their efforts, drilling continues, and the oil is transported in other ways. But the groups did successfully block the Keystone XL pipeline slated to bring tar sands crude from Canada to U.S. refineries. The Obama administration rejected it last year.

JASON KOWALSKI: People took a warm-up lap with Keystone. We all focused on one pipeline for a few years.

SISK: This pipeline is their latest target. It's here in this remote part of North Dakota where hundreds of people are now camped out in the grassy prairie close to the construction. That site is near but not on the reservation. Further north in Bismarck, trains carrying oil safely cross Missouri River bridges every day. Jon Eagle Sr. is Standing Rock's historic preservation officer. Today he's rallying the protesters with his microphone.

JON EAGLE SR: For two years, we've been holding them off, waiting for you to come. Hey, well, now you're here with us.

(SOUNDBITE OF ULULATION)

SISK: The protests forced a halt in construction last week. The Standing Rock tribe requested a preliminary injunction, arguing that the U.S. Army Corps which approved the pipeline in July failed to adequately consider its impact on sacred sites. A U.S. district court judge heard arguments yesterday and is expected to rule in two weeks.

Meanwhile, North Dakota's governor has declared an emergency in this area, and more than two dozen protesters have been arrested. But protest organizers say they're not going anywhere and are committed to protesting this pipeline peacefully. For NPR News, I'm Amy Sisk.

MCEVERS: Inside Energy is a public radio collaboration focused on America's energy issues.

Dakota Banning (snopes.com)

Social media rumors inaccurately reported water was cut off to Native Americans protesting against the Dakota Access Pipeline.

Updated: Aug 25, 2016

CLAIM: The state cut off water access to Native Americans protesting the Dakota Access Pipeline.

✖ mostly false

WHAT'S TRUE: The state supplied two supplemental water tanks as part of ongoing support for tribal protests against the construction of the Dakota Access Pipeline, but those tanks were removed after they were determined to be at a secondary site outside the state's jurisdiction.

WHAT'S FALSE: Neither the state of North Dakota nor the federal Department of Homeland Security cut off the water supply to protesters, and the state provided aid and support to Native American protesters situated on a legal encampment.

Greens try to reassemble anti-pipe dream team (Politico.com)

By Eric Wolff

08/25/16 10:00 AM EDT

With help from Bob King and Zachary Warmbrodt

LET THEIR POWERS COMBINE TO STOP PIPELINE: Environmentalists are trying to reassemble the dream team that blocked the Keystone XL pipeline, only this time to prevent construction of the Dakota Access pipeline from North Dakota to Illinois, which is nearly as long. As Pro's Elana Schor reports, most greens have been devoting their energy to the presidential election, leaving smaller groups, and in this case the Standing Rock Sioux Tribe, to wage battles to stop infrastructure alone. "What should have happened after Keystone got rejected was a huge influx of resources to local and state groups fighting pipelines," said Bold Alliance founder Jane Kleeb, a leader of the movement against the Canada-to-U.S. pipeline who is now leading a four-state push against eminent domain for fossil-fuel projects. "That didn't happen." A Wednesday protest in D.C. featured the Sierra Club and 350.org as well as Hollywood actresses/activists Susan Sarandon, Shailene Woodley, and Riley Keough.

Freudian slip from judge? The Sioux have challenged the line, and in a hearing in federal court on Wednesday, the judge on the case may have signaled his openness to putting a temporary hold on the project. He laid out the schedule for "when I issue my injunction." Supporters of the Sioux, who feel developers did not consult them sufficiently on the project, believe the remark could signal the judge's sympathy for their views.

Follow the money: For anyone interested in seeing all the players involved in funding Dakota Access, the Bakken Pipeline Resistance Coalition has created an interactive, visual display of the different investors in the project.

Judge postpones oil pipeline hearing

Posted: Mon 5:30 PM, Aug 22, 2016 |
Updated: Mon 6:13 PM, Aug 22, 2016

BISMARCK, N.D. (AP) – A federal judge has postponed a hearing on whether a preliminary injunction should be issued to prevent protesters in North Dakota from interfering with construction of an oil pipeline.

U.S. District Judge Daniel Hovland moved the hearing scheduled on Thursday to Sept. 8. The judge also extended a restraining order against the protesters until the hearing.

The judge says in his order filed Monday that the two sides are ``strongly encouraged to meet and confer in good faith'' to try and resolve the dispute out of court.

More than two dozen protesters have been arrested in the last month for interfering with the construction of the $3.8 billion Dakota Access Pipeline meant to carry North Dakota crude to Illinois.

Developers have agreed to halt construction until court matters are resolved

Subject: Short update on OST

This weekend could likely be a very continuous weekend up in the Bismarck, Mandan and Standing Rock area.

- Tomorrow Federal court is expected to make a decision about whether to block construction of the pipeline. The Tribe has challenged the USACE decision to grant the permit to the pipeline company.
- This weekend in the United Tribes Technical Collage International Powwow in Bismarck. This is typically a huge event. Many of the tribes who have written support for or are part of the protest at Standing Rock are on the board of directors. This year's theme is *Empowerment Though Unity*.
- Yesterday and today the Tribal Leaders Summit is taking place, this is always happened before the Powwow. There has been a lot of discussion at the meeting about the Pipeline and the protest.
- **The Governor of ND has activated (although no a full mobilization) the National Guard as backup for law enforcement in anticipation of the ruling.**
- There are ongoing reports of violence on both sides,
- The chairman has issued a statement calling for peace.

Subject: RE: Standing Rock

Hi Milo and Rocky -

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA is tied to, we have been monitoring for situational awareness. We have been in contact with the North Dakota Department of Emergency Services. Situational awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);
- Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
- The concern is that the pipeline will contaminate water.
- The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long

time.

- As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
- This is not the Keystone XL Pipeline, this the Bakken Pipeline.
- The protest is about a mile north of the Reservation boundaries in Morton County, North Dakota.

What we are aware of (Sources: Media and Facebook):

- There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
- The Tribal Chairman has called for peaceful protest and prayer.
- The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
- The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
- The Tribe did put out a notice for donations.
- The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
- The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).
- The Tribe gets daily letters of support from other tribes across the United States in support of the protests.
- Dakota Access has filed suit against the protestors for preventing them from working.
- The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.
- September 9-11, the annual International United Tribes Powwow is scheduled to occur in Bismarck, ND, which normally draws approximately 5,000 persons. Due to the protest they expect it could draw up to 15,000. The theme of this year's Powwow is Empowerment Though Unity.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the info could be incorrect. But again, at this time, this is not a FEMA issue.

If there is anything else you need from me, please let me know.

State of North DakotaLNO and Regional Tribal Report #1As of 16 August 2016/1200 MDT)

Situation: On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census). Threats/Impacts/CIKR/Key Resources: Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the construction site.As of August 12, 2016, thirty-four officers are on scene including county and ND State Highway Patrol.Tribal concerns include contamination of local water not only for health and environmental reasons but because water is considered sacred to the Native Americans.The Tribe is also concerned about other cultural implications of this pipeline.The pipeline could have ecological threats and impacts.The pipeline will be located under the Missouri River.State communications requested an increase in cellular coverage for the area. Disaster Emergency Communications connected State communications to AT&T and Verizon.There are no road closures in effect at this time. State & Federal Posture/Actions: State EOC is in Level IV – Daily Operations. Communication with State/Tribal/Local officials: No contact has been made with the Tribe regarding this issue.The Acting Regional Administrator has been in contact with the Director of North Dakota Department of Emergency Services for situational awareness only. Shortfalls or limiting factors, currently or anticipated, including any support requirements from FEMA HQs: None at this time, State and Local authorities are actively monitoring the event. LNO Summary: FEMA LNO and FEMA Region VIII Tribal Liaison are monitoring the situation.Source of Information: North Dakota Department of Emergency Services and Standing Rock Sioux Tribe Facebook.

Hi Ron -

Per our conversation, I wanted to let you know that I sent the below email to the FEMA National Tribal Advisor and Rocky Jones with IHS - this is nothing official and just from our media monitoring.

Thanks

Megan

Subject: RE: Standing Rock

Hi Milo and Rocky -

FEMA Region VIII has been monitoring the situation at Standing Rock. Although there are no issues with the protest the FEMA is tied to, we have been monitoring for situational awareness. We have been in contact with the North Dakota Department of Emergency Services. Situational awareness has come from main-stream media, native-media and Facebook.

Some Background (Sources: Media and Facebook);
? Dakota Access is building a pipeline that will go under the Missouri River near its confluence with the Cannon Ball River. Dakota Access recently go the approved permits from USACE to move forward with construction.
? The concern is that the pipeline will contaminate water.
? The Standing Rock Sioux Tribe, along with others, have been in opposition to the project for a long time.
? As construction started the Spirit Camp started to grow into the protest and current estimates are at about 2,000 people and growing, with support from around the country and Canada.
? This is not the Keystone XL Pipeline, this the Bakken Pipeline.
? The protest is about a mile north of the Reservation boundaries in Morton County, North Dakota.

What we are aware of (Sources: Media and Facebook):
? There seems to be differing perspectives between local and State law enforcement and the tribal protestors regarding what is going on at the protest site.
? The Tribal Chairman has called for peaceful protest and prayer.
? The State has reported threats from protestors and Dakota Access stopped construction for now based on safety concerns.
? The State director of Homeland Security is quoted in the Bismarck Tribune that the State has been providing portable water trailers to the protestors.
? The Tribe did put out a notice for donations.
? The Governor has issued a State of Emergency of the south western part of the State to allow State Agencies to tap into additional state funding to support things like law enforcement. .
? The Governor has NOT activated the National Guard (there have been lots of rumors on this topic).
? The Tribe gets daily letters of support from other tribes across the United States in support of the protests.

? Dakota Access has filed suit against the protestors for preventing them from working.

? The Tribe has asked Federal courts for a preliminary injunction halting work as the sure USACE regarding permits they issues to Dakota Access.

? September 9-11, the annual International United Tribes Powwow is scheduled to occur in Bismarck, ND, which normally draws approximately 5,000 persons. Due to the protest they expect it could draw up to 15,000. The theme of this year?s Powwow is Empowerment Though Unity.

Hope this helps, I would again reiterate that all of this information came from media and Facebook, so some of the info could be incorrect. But again, at this time, this is not a FEMA issue.

If there is anything else you need from me, please let me know.

Thanks

Subject: FW: Invitation to Download a File

Region 8 Directors,

I am hoping this all work. Below is a link to a state of North Dakota secure file transfer site. The file is about 190 meg so it was too large to send regular email. It is a briefing that will help explain what is going on in North Dakota. We are providing it all states that have inquired about what is the risk of sending LEO to North Dakota based on our EMAC.

The complete situation here on the ground is very complex almost unbelievable unless you have been here since the beginning. What has started as peaceful protest by concerned citizens and Tribal members has grown to situation that is at times out of control with recent actions bordering on terrorism with state, national , and international implications.

I look forward to talking to you all this morning. If the file transfer works and you get a chance to look at it before the conference call that would be great.

Greg

You can download the file using the following link:

Subject: Judge postpones pipeline decision

Federal judge to rule Sept. 9 on Dakota Access injunction

- JESSICA HOLDMAN Bismarck Tribune
  Jessica Holdman
- 1 hr ago

A federal judge will rule on the injunction filed by the Standing Rock Sioux tribe to stop construction of the Dakota Access Pipeline by Sept. 9, according to attorneys representing the tribe.

U.S. District Court Judge James Boasberg decided Wednesday in Washington, D.C., to take a couple weeks before issuing his ruling whether or not to halt the pipeline's construction while a suit filed by the tribe against the U.S. Army Corps of Engineers alleging violation of the National Historic Preservation Act during its permitting process of the pipeline goes through the court system.

Stephanie Tsosie of Earthjustice, co-council for the case, said Boasberg stated he wanted more time to look at the issues.

In the meantime, Dakota Access Pipeline developer Energy Transfer Partners discontinued work at the site of tribal protests of the project in advance of this week's hearing, however, pipeline construction is continued at other locations in North Dakota along with South Dakota, Iowa and Illinois and is still expected to be completed by the end of the year.

According to court documents filed by Dakota Access Pipeline Aug. 18 the project is about 45 percent complete.

"A temporary injunction would have devastating short and long term impacts to the DAPL project. Construction of the entire project would cease and the project itself would be jeopardized. Hundreds of deviations from the construction schedule would occur costing as much as $540,000 per occurrence. The aggregate direct impact of these changes would exceed $100 million," the company argued.

In its arguments, Tsosie said Earthjustice focused on the fact that the tribe wants to be better consulted before a portion of the 1,168-mile crude oil pipeline is drilled beneath the Missouri River north of the Standing Rock Indian Reservation. The tribe has expressed concerns that, should the pipeline leak, the tribal water supply would be affected.
Eileen Williamson, a spokeswoman for the corps, said the corps does not make comments on ongoing litigation per agency policy. In court documents the agency countered it had hundreds of communications with the tribe.

"Rather than constructively participating in the process that has been going on for the last three years, Plaintiff has waited until this critical juncture to invoke the jurisdiction of the Court," Dakota Access argued in court documents.

Tsosie said Tribal Chairman Dave Archambault II was on hand for the Wednesday court hearing, as well as several members of the tribal council, the tribe's historic preservation officer and many general tribal members.

"It highlighted how important this is to the tribe; this is not a small issue to them," Tsosie said.

The Dakota Access Pipeline: What Would Sitting Bull Do?

By Winona LaDuke

It's 2016 and the weight of American corporate interests has come to the Missouri River, the Mother River. This time, instead of the Seventh Cavalry or the Indian police dispatched to assassinate Sitting Bull, it is Enbridge and Dakota Access Pipeline.

In mid-August, Standing Rock Tribal Chairman Dave Archambault II was arrested by state police, along with 27 others, for opposing the Dakota Access Pipeline. In the meantime, North Dakota Gov. Jack Dalrymple called for more police support.

Every major pipeline project in North America must cross indigenous lands, Indian Country. That is a problem.

The road west of Fargo is rarely taken. In fact, most Americans just fly over North Dakota, never seeing it.

Let me take you there.

My head clears as I drive. My destination is the homeland of the Hunkpapa Oceti, Standing Rock Reservation. It is early evening, the moon full. If you close your eyes, you can remember the 50 million buffalo—the single largest migratory herd in the world. The pounding of their hooves would vibrate the Earth, make the grass grow.

There were once 250 species of grass. Today the buffalo are gone, replaced by 28 million cattle, which require grain, water and hay. Many of the fields are now in a single GMO crop, full of so many pesticides that the monarch butterflies are dying off. But in my memory, the old world remains.

If you drive long enough, you come to the Missouri River.

Called Mnisose, a great swirling river, by the Lakota, she is a force to be reckoned with. She is breathtaking. "The Missouri River has a fixed place in the history and mythology" of the Lakota and other Indigenous nations of the Northern Plains, author Dakota Goodhouse would explain.

In the time before Sitting Bull, the Missouri River was the epicenter of northern agriculture, the river bed so fertile. The territory was known as the fertile crescent of North America. That was then, before the treaties that reduced the Lakota land base. But the Missouri remained in the treaty—the last treaty of 1868 used the Missouri as a boundary.

Then came the theft of land by the U.S. government and the taking of the Black Hills in 1877, in part as retaliation against Sitting Bull's victory at the Battle of the Little Big Horn. In a time prior to Black Lives Matter or Native Lives Matter, great leaders like Sitting Bull and Crazy Horse were assassinated at the hands of police.

One truth: The Lakota people have survived much.

Forced into the reservation life, the Lakota attempted to stabilize their society, until the dams came. The 1944 Pick Sloan project flooded out the Missouri River tribes, taking the best bottom lands from the Mandan, Hidatsa and Arikara, the Lakota and Dakota. More than 200,000 acres on the Standing Rock and Cheyenne River reservations in South Dakota were flooded by the Oahe Dam itself, forcing not only relocation, but a loss of the Lakota world. The Garrison, Oahe and Fort Randall dams created a reservoir that eliminated 90 percent of timber and 75 percent of wildlife on the reservations.

That is how a people are made poor.

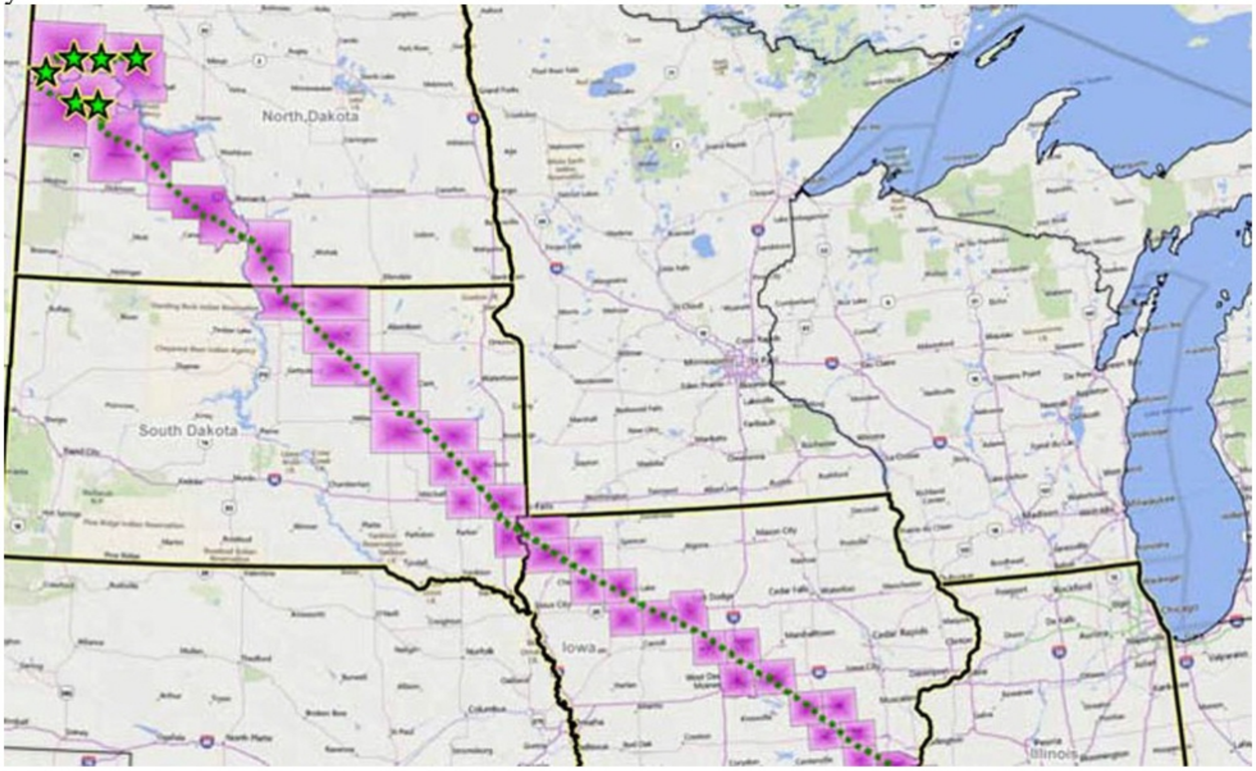
Today, well over two thirds of the population of Standing Rock is below the poverty level—and the land and Mother River are what remains, a constant, for the people. That is what is threatened today.

Enbridge and partners are preparing to drill through the riverbed. The pipeline has been permitted in sections from the west and from the east. The northern portion was moved away from the water supply of Bismarck, into the watershed of Standing Rock. That was unfortunate for the Lakota.

Despite Lakota legal and regulatory objections, the Dakota Access Pipeline construction began in May 2016. If finished it will snake through North and South Dakota, Iowa and Illinois, where it will link to a 774-mile pipeline to Nederland, Texas.

More than 570,000 barrels of Bakken crude oil will pass through the pipeline daily, along with 245,100 metric tons of carbon daily—enough carbon to combust the planet to oblivion.

The pipeline would span 200 water crossings and in North Dakota alone would pass through 33 historical and archeological sites. Enbridge just bought the Dakota Access pipeline, noting that the proposed Sandpiper route—Minnesota's 640,000 barrel per day Bakken line—is now three years behind schedule.



-
-

The route of the Dakota Access Pipeline.

In late July, the Standing Rock Sioux Tribe represented by Earthjustice, filed a lawsuit in the U.S. District Court for the District of Columbia against the U.S. Army Corps of Engineers. Standing Rock claims the project violates federal and treaty law. Standing Rock also filed an intervention at the United Nations, in coordination with the International Indian Treaty Council.

As Chairman Archambault explained in a New York Times story:

> "The Environmental Protection Agency, the Department of the Interior and the National Advisory Council on Historic Preservation supported more protection of the tribe's cultural heritage, but the Corps of Engineers and Energy Transfer Partners turned a blind eye to our rights. The first draft of the company's assessment of the planned route through our treaty and ancestral lands did not even mention our tribe.
>
> "The Dakota Access pipeline was fast-tracked from Day 1 using the Nationwide Permit No. 12 process, which grants exemption from environmental reviews required by the Clean Water Act and the National Environmental Policy Act by treating the pipeline as a series of small construction sites.
>
> "Without closer scrutiny, the proposal breezed through the four state processes."

In Iowa where work on the pipeline is underway, three fires erupted causing heavy damage to equipment and an estimated $1 million in damages. Investigators suspect arson, according to Jasper County Sheriff John Halferty. In October 2015, three Iowa farmers sued Dakota Access LLC and the Iowa Utilities Board in an attempt to prevent the use of eminent domain on their properties to construct the pipeline.

The health of the Missouri River has been taken for granted.

Dammed in the Pick Sloan Dam projects, each project increases contamination and reduces her health. Today, the Missouri is the seventh most polluted river in the country. Agricultural run-off and now fracking have contaminated the river. My sister fished a gar out of the river, a giant prehistoric fish, only to find it covered with tumors.

Here's just one case: In a January 2015 spill, saltwater contamination from a massive pipeline spill reached the Missouri River. In the baffling way of state and federal agencies, North Dakota's Health Director David Glatt did not expect harm to wildlife or drinking water supplies because the water was diluted. The saying is: "The solution to pollution is dilution." That is convenient, but not true.

Blacktail Creek and the Little Muddy River were contaminated after nearly 3 million gallons of saltwater with elevated levels of chloride contamination. All was diluted. But then there was that gar fish with the tumors.

There are pipelines everywhere and fewer than 150 Pipeline Hazardous Materials Safety Administration (PHMSA) pipeline inspectors in the whole country.

And now comes the risk from oil.

The pipeline companies generally discuss a 99 percent safety record, but studies have found that to be grossly inaccurate. A former Scientific American Editor, Trudy Bell, reports that PHMSA data from 2001 to 2011 suggest the average pipeline "has a 57% probability of experiencing a major leak, with consequences over the $l million range in a ten year period."

Not good odds.

At Standing Rock, as the number of protesters grew from 200 to 2000, state law enforcement decided to put up a safety checkpoint and rerouted traffic on Highway 1806 from Bismarck to Standing Rock, hoping to dissuade people from coming and put the squeeze on Standing Rock's Prairie Knights Casino, which is served by that road.

We just drove around; the scenic route is beautiful. And as supporters surge in numbers, the casino hotel and restaurants are full.

While North Dakota seeks to punish the Lakota, Chairman Archambault expresses concerns for everyone:

From the New York Times: "I am here to advise anyone that will listen that the Dakota Access Pipeline project is harmful. It will not be just harmful to my people but its intent and construction will harm the water in the Missouri River, which is one of the cleanest and safest river tributaries left in the Unit States. To poison the water is to poison the substance of life. Everything that moves must have water. How can we talk about and knowingly poison water?"

In the meantime, North Dakota Gov. Dalrymple announced a state of emergency, making additional state resources available "to manage public safety risks associated with the ongoing protest of the Dakota Access Pipeline." He may have exceeded his scope of authority and violated civil and human rights to water.

Chairman Archambault's interpretation: "Perhaps only in North Dakota, where oil tycoons wine and dine elected officials and where the governor, Jack Dalrymple, serves as an adviser to the Trump campaign, would state and county governments act as the armed enforcement for corporate interests."

There are a lot of people at Standing Rock today who remember their history and the long standoff at Wounded Knee in 1973. In fact, some of those in Standing Rock today were there in 1973 at Wounded Knee, a similar battle for dignity and the future of a nation.

I am not sure how badly North Dakota wants this pipeline. If there is to be a battle over the pipeline, it will be here. For a people with nothing else but a land and a river, I would not bet against them.

The great Lakota leader Mathew King once said, "The only thing sadder than an Indian who is not free, is an Indian who does not remember what it is to be free."

The Standing Rock protest camp represents that struggle for freedom and the future of a people. All of us. If I ask the question "What would Sitting Bull do?"—the answer is pretty clear. He would remind me what he said 150 years ago: "Let us put our minds together to see what kind of future we can make for our children."

The time for that is now.

State pulls relief resources from swelling Dakota Access Pipeline protest camp

- Mike Nowatzki Forum News Service
- Updated Aug 22, 2016

CANNON BALL – North Dakota's homeland security director ordered the removal of state-owned trailers and water tanks from the Dakota Access Pipeline protest campsite Monday, citing mounting reports of unlawful activity -- the latest involving lasers -- and the risk of damage.

"Based on the scenario down there, we don't believe that equipment is secure," Homeland Security Division Director Greg Wilz said.

As tribal members from across the nation streamed into the campsite, swelling its population to between 500 to 4,000 people depending on estimates, the loss of their main drinking water supply came as a blow and sent local officials scrambling to find an alternative water source.

"I feel like I just got shot down," said Johnelle Leingang, executive secretary to Standing Rock Sioux Tribe Chairman Dave Archambault II and the tribe's emergency response coordinator. "It's very hurtful."

A black heavy-duty pickup backed up to the water tanks and pulled them away just before noon as the beating sun drove temperatures into the 80s.

Two air-conditioned trailers and a command center vehicle – delivered with the water tanks a week ago by the North Dakota Department of Health at the tribe's request – also were hauled away from the campsite, which overlooks the confluence of the Missouri and Cannonball rivers just south of where the oil pipeline would cross the Missouri.

"People are getting overheated now already," Leingang said shortly before 4 p.m., as the temperature hovered around 90.

Governor seeks fed help

Gov. Jack Dalrymple, who issued an emergency declaration Friday to make additional state resources available to manage public safety risks associated with the protest, called Monday for federal officials to help manage the situation.

In an interview with conservative talk show host Scott Hennen, Dalrymple noted the campsite sits on land owned by the U.S. Army Corps of Engineers, whose approval of the pipeline's river crossings led to the tribe filing a federal lawsuit to stop it. A judge will consider the tribe's request for a temporary injunction during a hearing Wednesday in Washington, D.C.

Dalrymple spokesman Jeff Zent said the governor spoke Monday morning with Jo-Ellen Darcy, who supervises the corps as the assistant secretary of the Army for civil works, discussing the fact the campsite is on corps land and that protesters don't have a permit.

While Zent said the governor requested no specific action by the corps, Dalrymple told Hennen, “I think they have to step up and take some responsibility, as well.”

Corps spokeswoman Eileen Williamson said the agency is just monitoring the situation and has no action planned.

“At this point, there is not a permit, but it is my understanding they are requesting a permit,” which will undergo a review for issues such as environmental impact, health and safety, she said.

The corps may ticket unauthorized campers but has no authority to remove them, leaving that to law enforcement, Williamson said.

“We want to make sure that things are handled peaceably,” she said.

With work temporarily halted on the pipeline, only a handful of protesters stood along Highway 1806 by the construction site Monday morning, with the rest down at the campsite.

The Morton County Sheriff’s Office estimated 2,000 to 2,500 protesters, while one campsite leader, Phyllis Young, pegged the gathering at closer to 4,000.

Standing Rock spokesman Steven Sitting Bear said it had grown to 2,500 to 3,000, with many coming and going as they worked around their work and school schedules.

“I’ve been getting notifications from tribes all over the country that have caravans in route, so it’s continuing to grow,” he said.

Law enforcement on site estimated between 500 and 800 protesters were present Monday morning.

Laser incidents investigated

Authorities had arrested 29 protesters – including the tribal chairman – in the last two weeks for alleged disorderly conduct or trespassing, but things were comparatively quiet over the weekend and no additional arrests were reported as of mid-afternoon Monday, officials said.

However, authorities announced they are investigating two incidents of laser strikes aimed at aircraft being used to observe the protest site.

A pilot reported a laser beam hitting him in the eye around 5:15 a.m. last Wednesday, causing him to be blinded temporarily, according to the Morton County Sheriff’s Department.

A second incident occurred about 12:45 a.m. Sunday. In that case, the pilot said he was able to look away in time to avoid the laser, authorities said.

Aiming a laser pointer at an aircraft is a federal violation. Reports have been forwarded to the North Dakota Highway Patrol and the Federal Bureau of Investigation.

Some at the protest complained last week that aircraft were being used to disrupt cell phone communications.

Morton County Sheriff Kyle Kirchmeier said the planes are being used for public safety observation and not being used to disrupt any services.

A traffic control point remained in place on State Highway 1806 south of Mandan.

Zent said the governor has no plans to mobilize the North Dakota National Guard.

“He’d like to keep this in the law enforcement arena,” he said.

Factions develop

Dalrymple said that while the majority of protesters were peaceful, there's an element of "outside agitators" responsible for vandalism, trespassing on private property and blocking the highway – "hundreds of criminal acts."

Threats also have been made against law enforcement on social media, Kirchmeier noted.

Leingang dismissed claims of unlawful activity at the campsite as rumor and said "nothing bad is happening here."

Still, protesters acknowledged the camp has split into two factions.

"You have the pacifists and then you have the people who feel something should be done, and they're camped across the river from each other," said Jesse Stevens, 32, a member of Wisconsin's Menominee and Oneida tribes.

Stevens and two other men from Keshena, Wis., left Friday evening and arrived Sunday night, delayed by a broken water pump on his GMC Jimmy. While they set up camp on the "peaceful" side, Stevens said he felt like he should be across the river.

"My point in coming out here was some kind of action, regardless of whether it's life-threatening or not," he said. "This is our land, our people."

Dionne Addison, 40, a Northern Arapaho Tribe member who caravanned with family from Wyoming's Wind River Reservation, said she was a little concerned about her children's safety at the campsite. But she added, "I believe there's strength in prayer," and said it's a once-in-a-lifetime opportunity.

"Our water is sacred," she said. "I want to make a difference, and I want them to know they can make a difference, too."

State pulls relief resources from swelling Dakota Access Pipeline protest camp

- Mike Nowatzki Forum News Service
- Updated Aug 22, 2016

CANNON BALL – North Dakota's homeland security director ordered the removal of state-owned trailers and water tanks from the Dakota Access Pipeline protest campsite Monday, citing mounting reports of unlawful activity -- the latest involving lasers -- and the risk of damage.

"Based on the scenario down there, we don't believe that equipment is secure," Homeland Security Division Director Greg Wilz said.

As tribal members from across the nation streamed into the campsite, swelling its population to between 500 to 4,000 people depending on estimates, the loss of their main drinking water supply came as a blow and sent local officials scrambling to find an alternative water source.

"I feel like I just got shot down," said Johnelle Leingang, executive secretary to Standing Rock Sioux Tribe Chairman Dave Archambault II and the tribe's emergency response coordinator. "It's very hurtful."

A black heavy-duty pickup backed up to the water tanks and pulled them away just before noon as the beating sun drove temperatures into the 80s.

Two air-conditioned trailers and a command center vehicle – delivered with the water tanks a week ago by the North Dakota Department of Health at the tribe's request – also were hauled away from the campsite, which overlooks the confluence of the Missouri and Cannonball rivers just south of where the oil pipeline would cross the Missouri.

BISMARCK, N.D. (AP) — A federal judge has said he'll rule by Friday on the Standing Rock Sioux tribe's lawsuit that challenges federal permits for the four-state, $3.8 billion Dakota Access pipeline.

The lawsuit alleges that the pipeline, which would be placed less than a mile upstream of the reservation, could impact drinking water for more than 8,000 tribal members and millions who rely on it downstream. There also have been skirmishes between protesters and private security guards on private land, where the tribe says construction has disturbed ancient sacred sites.

North Dakota's governor said Thursday that a handful of National Guard members will help provide security at traffic checkpoints near the protest site, and another 100 will be on standby.

Some things to know about the pipeline and the tribe's ongoing protest:

WHAT IS THE DAKOTA ACCESS PIPELINE?

Owned by Dallas-based Energy Transfer Partners, the $3.8 billion, 1,172-mile project would carry nearly a half-million barrels of crude oil daily from North Dakota's oil fields through South Dakota and Iowa to an existing pipeline in Patoka, Illinois, where shippers can access Midwest and Gulf Coast markets.

WHAT IS THE LAWSUIT TARGETING?

The tribe sued federal regulators for approving the oil pipeline, challenging the U.S. Army Corps of Engineers' decision to grant permits at more than 200 water crossings. Filed on behalf of the tribe by environmental group Earthjustice, the suit says the project violates several federal laws, including the National Historic Preservation Act, and will disturb sacred sites outside of the 2.3-million acre reservation.

A separate lawsuit filed Thursday by a South Dakota tribe also challenges the decisions to grant the permits.

IS THE PIPELINE SAFE?

ETP says the pipeline includes safeguards such as leak detection equipment, and workers monitoring the pipeline remotely in Texas could close block valves on it within three minutes if a breach is detected.

CAN YOU DESCRIBE THE PROTEST?

Since April, a nonviolent tribal protest by mostly members of the Standing Rock Sioux tribe has been set up at a “spirit camp” at the confluence of the Cannonball and Missouri rivers in the path of the pipeline.

It’s grown considerably, as they’ve been joined by other American Indians and non-Native Americans from across the country, including “Divergent” actress Shailene Woodley.

But the protest has become heated, with nearly 40 arrested, including Standing Rock Sioux Tribal Chairman David Archambault II. None of the arrests stemmed from Saturday’s confrontation between protesters and construction workers.

Green Party presidential candidate Jill Stein and running mate Ajamu Baraka camped with protesters Monday, and her campaign spokeswoman said Stein spray-painted construction equipment Tuesday. Stein and Baraka have been charged with misdemeanor counts of criminal trespass and criminal mischief.

Gov. Jack Dalrymple on Thursday activated the North Dakota National Guard ahead of U.S. District Judge James Boasberg’s impending federal ruling. A handful of soldiers will help provide security at traffic checkpoints near the protest site, and another 100 Guard members will be on standby if needed to respond to any incidents.

---

WHAT ABOUT CULTURAL SITES?

Last weekend, tribal officials said crews bulldozed several sites of “significant cultural and historic value” on private land, which Energy Transfer Partners denies. It led to Saturday’s clash between protesters and private security guards hired by the pipeline company. Law enforcement officials said four security guards and two guard dogs received medical treatment, while a tribal spokesman countered that six people were bitten by guard dogs and at least 30 people were pepper-sprayed.

On Tuesday, Boasberg partially granted the tribe’s request to temporarily stop work near Lake Oahe to prevent the destruction of more sacred sites, but not on the private land that sparked the protest.

North Dakota chief archaeologist Paul Picha plans to inspect the area, likely next week.

ARE THERE PROTESTS ELSEWHERE?

Yes, but nothing like in North Dakota. Construction equipment at several sites in Iowa was set on fire earlier in August, causing more than $1 million in damage.

___

WHY IS THE PIPELINE BEING BUILT?

Announced in 2014, supporters said the pipeline would create more markets and reduce truck and oil train traffic — the latter of which has been a growing concern after a spate of fiery derailments of trains carrying North Dakota crude.

NO-DAPL
DAKOTA
ACCESS
PIPELINE

David Zalubowski, The Associated Press
A line of protesters against the construction of the Dakota Access oil pipeline on the Standing Rock Reservation in North Dakota head to a unity rally on the west steps of the State Capitol late Thursday, Sept. 8, 2016, in Denver. Several hundred marchers walked from the four directions to the Capitol to take part in the rally against the oil pipeline.

By Kieran Nicholson | knicholson@denverpost.com
September 8, 2016 at 9:09 pm

Hundreds gathered at the State Capitol in Denver on Thursday night to protest the Dakota Access oil pipeline, calling for construction of the controversial project to come to a halt.

Protesters in Denver, a great many of them Native Americans, stand in solidarity with members of the Standing Rock Sioux tribe which is trying to stop the pipeline in North Dakota. Native Americans from across the United States have gathered at the confluence of the Cannonball and Missouri rivers, in the Standing Rock Sioux Reservation, to make a stand against the $3.8 billion pipeline.

State Rep. Joe Salazar, D-Thornton, was among the speakers who addressed the crowd on the west steps of the State Capitol.

Salazar rallied the crowd, questioning the safety of oil pipelines and fracking among other means of extracting and transporting fossil fuels. Touching on a recent Colorado Oil and Gas Association statement on oil pipeline safety, Salazar described it as "being full of lies."

- September 6, 2016 North Dakota oil pipeline protest turns violent
- August 14, 2016 In North Dakota, people vs. oil pipeline protest strengthens

Citing an oil spill in the Yellowstone River, a pipeline explosion in New Mexico and recent earthquakes in Oklahoma, which some say are caused by fracking, Salazar asked: "What is the definition of safe?"

The crowd roared in support and approval of the question.

Native Americans in ceremonial dress danced to drums leading protesters from the Denver City and County Building along Colfax Avenue across Civic Center to the Capitol.

Some protesters carried signs, "Save our Water" and many chanted, "you can't drink oil, water is life," as they marched.

The marchers descended on the Capitol from all four directions and on the west steps they numbered about 500. Marchers from the west wore black; from the north, red; the east, yellow; and the south, white. Sage was burned, a song and speech was given in Native American tongue.

At one point some in the crowd chanted: "We stand with Standing Rock."

"Look at you, every face of our nation is represented here," Salazar told the crowd, which included families and children.

Salazar told the crowd that he works in the Capitol, in the "halls of power." But it's "nothing quite as powerful as what we see here."

Morton County declares emergency with pipeline protest

LEANN ECKROTH Bismarck Tribune 12 hrs ago

With the protest against the Dakota Access Pipeline swelling to 2,000 people near Cannon Ball, Morton County officials may seek to access emergency funds to pay overtime to their deputies and other law enforcement agencies assisting Morton County in keeping the protest boundaries safe.

Protesters oppose the pipeline beneath the Missouri River because they fear it could contaminate their water supplies.

A special Morton County meeting will be held 4 p.m. Monday to address the emergency declaration, signed by Cody Schulz, chairman of the board, last week.

"This is to maintain public safety and to make sure the legal rights of everyone is enforced," Schulz said Sunday. "This has required a great deal of law enforcement manpower and time."

Schulz signed the declaration Aug. 15 and state law requires the remainder of the county board ratify the declaration within seven days to keep it binding.

County Commissioner Bruce Strinden said Sunday the declaration will allow the county to use its own emergency funds to pay deputies and other law enforcement for overtime tied to the protest.

"Without an emergency declaration, we cannot access those fund," said Strinden, who estimated the county may have banked about $125,000 in emergency funds. "We're getting help from neighboring counties and cities' law enforcement through mutual aid agreements, and appreciate it, but that help doesn't come free. We have to compensate them for food, lodging and of course pay. We're only a week into this."

Protesters said they are keeping the demonstration peaceful. Yet, the protest has challenged the county's enforcement capacity.

"This is a very large protest -- 2,000. So a protest of that size is of a concern to us," Strinden said. "People have a right to protest. The law enforcement will support legal activity in a protest unless it goes the other way."

"Right now, our primary goal is keeping everyone safe," he added, speaking of the need to close Highway 1806 during the protest. "There were vehicles parking on both sides of 1806. We don't want anyone injured or accidents."

Gov. Jack Dalrymple signed a declaration of emergency Friday. Strinden believes the state will pay for a large portion of North Dakota Highway Patrol troopers enforcing the highway because it lies in their jurisdiction, he said the county at this point will have to reimburse other law agencies for their assistance.

"At this point, we aren't seeking additional funds from the state," Schulz said. "The governor's declaration allows us to request extra resources, manpower or equipment from the state."

Governor issues emergency declaration in response to pipeline protests

CAROLINE GRUESKIN Bismarck Tribune

Updated Aug 19, 2016

North Dakota Gov. Jack Dalrymple issued an emergency declaration for southwest and south central North Dakota in response to protests against the Dakota Access Pipeline near Cannon Ball.

The declaration starts a process by which state agencies can get additional funding, said Greg Wilz, director of the Homeland Security Division of the state Department of Emergency Services.

Dalrymple said in the declaration that the state is committed to protecting the right to lawful protests, but recent events have created a "significant public safety concern."

The protests have grown substantially over the past week as about 1,500 people have gathered to demonstrate against the pipeline being drilled under the Missouri River. Large campsites have been established for the protesters. Twenty-nine people have been arrested during the demonstrations.

The Morton County Sheriff's Department has been the central law enforcement agency involved in monitoring the protests, but several state agencies have gotten involved.

North Dakota Highway Patrol has sent officers to the protest site, Wilz said. The health department has provided portable water trailers and a medical trailer at the protest camp. The transportation department has assisted with the road detour on Highway 1806 and put up barriers and signage.

Wilz said he will be looking at funding requests from the agencies, make an estimate and ask the emergency commission for an appropriation. The commission can authorize emergency services to get a loan from the Bank of North Dakota.

He estimated the additional resources could cost from $750,000 to $1 million, if the protests continue for the next few weeks.

The declaration also means an emergency operations center will be set up in the emergency services building, so that the agencies can coordinate their resources, Wilz said.

The money does not funnel directly into the local agencies, such as the Morton County Sheriff's Department. Rather, it reimburses the state agencies that provide personnel and material resources to local authorities.

Morton County declared its own state of emergency on Monday, for the purpose of tapping into its emergency fund and creating public awareness, said Cody Schulz, chairman of the county commission.

Schulz said the biggest expense for the county has been law enforcement, including overtime for the sheriff's deputies and assistance from other agencies, including the Mandan Police and the Cass and Mercer County Sheriffs.

The governor's emergency order does not include activation of the National Guard.

Protesters settle into camp life

CAROLINE GRUESKIN Bismarck Tribune

Aug 19, 2016

CANNON BALL — An upside down flag hangs in the center of a new community larger than most small towns in North Dakota. It’s a protest camp near the Cannonball River at the border of the Standing Rock Indian Reservation.

The flag is a symbol of distress, that the area had been taken over by an enemy. But the atmosphere Thursday afternoon at the Seven Councils or Overflow Camp, where hundreds are staying in Morton County, hardly feels urgent. Rather, it's joyful and cooperative.

The setup is an extension of the Camp of Sacred Stones, located on the reservation at the confluence of the Cannonball and Missouri rivers, where people have been protesting an oil pipeline since April. During the past week, the once-small effort has grown to an estimated 1,500 to 2,000 people.

On Wednesday, after days of protests, work at the Dakota Access Pipeline site just north of the camp was put on hold until Aug. 24, when a hearing will be held on the tribe's lawsuit against the Army Corps of Engineers over its approval of the pipeline crossing under the Missouri River.

Most people at the camp, who rallied at the work site, insisted the demonstrations were peaceful, but law enforcement has said officers received information about weapons. The Morton County Sheriff's Department said in a statement Friday no weapons were seen.

Many at the camp saw the previous days’ efforts as a small victory. Often repeated was a gladness that the tribes were working together.

“It’s been a long time since we all camped together,” said 18-year-old Jasmine LeBeau of Eagle Butte, of the several tribes gathered there. “It feels natural.”

LeBeau traveled back and forth by bus from the Cheyenne River Indian Reservation in South Dakota three days in a row with her family. On Thursday, they said the travel was enough and decided to put down camp.

She asked how she could help and was directed to prepare giant pots of soup. She cooked over an open fire near a tent where women molded dough into fry bread. A few feet away, a dozen kids shucked corn hauled in on a pickup bed.

She was preparing food for the thousands who have come from across the country — the unfamiliar license plates give them away — to show their support for the Standing Rock Sioux Tribe in its protest of the pipeline.

The group at the camp is predominantly native, but many white people are there, too. There are kids, adults and grandparents.

Many are camped in tents and teepees set up between awkwardly parked school buses, which bring people in each day from nearby reservations.

Some people show up with food, water, tents. Others bring just enough gas for the drive down.

When people started to flood in over the weekend — many found out about the event through social media or were asked by their tribal chairman to join — and numbers exceeded 500, Standing Rock leaders started planning to provide for the big group.

“We knew immediately that we needed Porta Potties,” said Johnelle Leingang, the tribal chairman’s executive secretary and member of the emergency management task force. “That’s essential.”

The task force coordinates with the state for water tanks, Dumpsters, a medical trailer and a wash station. They have volunteer nursing assistant and emergency medical technicians. Leingang said they arranged for a helicopter pad for emergencies, as ambulances cannot access the site.

"The Lakota people, it is in their nature to mobilize," said Harold Tiger, the emergency manager at the Cheyenne River reservation, who calls himself the EMS Warrior and was assisting in Cannon Ball. "Everyone takes on their responsibilities."

The biggest issue so far has been heat exhaustion, Leingang said. People of all ages are walking a mile and a half to the protest site, where hundreds have stood in recent days demanding workers to stop building an oil pipeline under the Missouri River, in temperatures that exceeded 80 degrees.

There is no real plan for extreme weather, except to keep everyone updated on the forecast. Protesters said they were washing up in a nearby creek or heading over to Prairie Knights casino and Cannon Ball, as there are no showers onsite.

People said most supplies have been donated. There is a tent up front, where people drop off food and water, trash bags and supplements for babies and diabetics. A rumor is going around about two deli trucks coming in from California. No one seems to remember to give feminine hygiene products, a family working in the donation tent contended.

Cashiers at nearby stores said business has been steady as people from around the county pick up supplies and items to donate. Water, ice, sandwich meats and tobacco have gone fast from the Family Dollar and White Buffalo Supervalu in Fort Yates.

Joye Braun, one of the organizers, described the Camp of Sacred Stones similarly to the overflow camp, though the focus is on prayer. She denied a Tribune reporter and photographer access to that camp.

Security also seemed tighter at the entrance to the Camp of Sacred Stones. People coming in were asked if they had alcohol or guns and if they were a "Fed."

Mark Tilsen, a former teacher on the Pine Ridge reservation in South Dakota, said he chose to stay at the second camp, not the original spirit camp, because space is limited there and he wants to turn his attention toward action instead of prayer.

"For Oglala, we've been praying all summer, and we're done with it," Tilsen said. "We're here to stop the pipeline."

Megan,

Not sure if you have noticed it yet or not, but Scott Logan posted yesterday about being at Standing Rock Sioux tribe for the next week. Not sure how this could affect us, but after being the face of FEMA for so long I'm sure the name will come up. Just thought I would let you know.

Thanks,

[The Costs of Climate Inaction: How Extreme Weather Burdens U.S. Taxpayers]

[Dem candidates' solution to DAPL: Build a refinery, reroute pipeline]

The Costs of Climate Inaction How Extreme Weather Burdens U.S. Taxpayers (American Progress)

One of the most visible and immediate ways climate change has affected—and will continue to affect—Americans is through extreme weather exacerbated by rising global temperatures. Between 2005 and 2015, the annual average temperature in the United States exceeded the 20th-century average every year, with increases ranging from 0.15 degrees Celsius to 1.81 degrees Celsius above normal. Moreover, the federal government's most recent National Climate Assessment concludes that as temperatures continue to rise, extreme weather events and wildfires will increase in frequency and intensity. Climate change will worsen heat waves, winter storms, and hurricanes. It will exacerbate extremes in precipitation, leading to more severe droughts and wildfires in some areas and heavier rainfall and flooding in others. And when the damage is done, taxpayers will be left to pick up the bill.

Extreme weather events and wildfires not only pose real threats to human health and safety—they put taxpayers at risk as well. Between 2005 and 2015, 93 natural disasters in the United States caused more than $1 billion in damage each, amounting to $586 billion in total losses. This damage can profoundly affect state and local economies. Even after a storm passes or a wildfire is extinguished, displaced people and shuttered businesses impose ongoing financial burdens on communities. The U.S. Bureau of Labor Statistics, for example, found that New Orleans lost 95,000 jobs and an estimated $2.9 billion in wages during the first 10 months after Hurricane Katrina.

When extreme weather strikes and state and local governments are overwhelmed, the federal government must often intervene. In the worst cases, the president can declare an emergency or a major disaster, which releases federal funds for the damaged areas. The Federal Emergency Management Agency, or FEMA, provides financial assistance to local, tribal, and state governments, as well as individual households, after the president declares an emergency or major disaster.

The Center for American Progress examined FEMA data on weather- and wildfire-related disaster declarations between 2005 and 2015 to identify trends in FEMA disaster spending, which is funded by U.S. taxpayers. CAP found that:

- Between 2005 and 2015, FEMA issued more than $67 billion in grants to assist communities and individuals devastated by extreme weather and wildfires. Overall, FEMA spent about $200 per U.S. resident for disaster assistance during that time period.
- FEMA provided the most disaster assistance to Louisiana and New York, which, combined, received more than half of the agency's total assistance over the 10-year period due to damage caused by Hurricane Katrina and Hurricane Sandy, respectively. Texas, Mississippi, and New Jersey rank third through fifth for FEMA disaster spending between 2005 and 2015.
- The states that received the most FEMA disaster assistance spending per capita were Louisiana ($4,345), Mississippi ($1,607), North Dakota ($843), and New York ($807). In North Dakota, unprecedented flooding events in 2009 and storms in 2011 caused substantial damage, driving up per-person costs among a smaller state population.

These findings likely underestimate the true federal cost—and thus the cost to taxpayers—of extreme weather. FEMA provides assistance in response to the worst natural disasters—those that triggered emergency and major disaster declarations. As a result, the findings do not include the costs of smaller but still destructive storms, costs borne by private insurers, and other government spending, such as the U.S. Department of Agriculture's disaster assistance program.

As the climate warms, these types of extreme weather and wildfire events could impose an even greater burden on American communities and taxpayers. In order to prepare for this reality, communities must invest in climate-resilient infrastructure and integrate climate considerations into their development plans.

Findings: FEMA is spending billions on natural disasters

Between 2005 and 2015, the president issued 832 separate emergency or disaster declarations for which FEMA provided either public assistance—defined as funding for state, tribal, and local governments—or individual assistance in the form of grants typically made to homeowners and renters whose home damage was not covered by homeowners insurance. (see text box)

Types of FEMA disaster assistance

In fiscal year 2015, Congress allocated $2.9 billion to FEMA federal assistance programs. The assistance FEMA provides in the wake of a presidentially declared emergency or major disaster typically takes one of two forms:

- Public assistance grants fund disaster recovery projects through state, tribal, and local governments and designated nonprofits. The recipients generally spend this money on debris removal, the repair and restoration of damaged public facilities, and other emergency measures.
- The Individuals and Households Program provides smaller grants to homeowners to repair property damage not otherwise covered through insurance. These grants can also cover temporary housing when an extreme weather event or other disaster displaces people.

In addition to these assistance programs, FEMA provides hazard mitigation assistance to prevent or mitigate long-term risks associated with natural disasters. FEMA also offers fire management assistance to state, local, and tribal governments for the “mitigation, management, and control” of certain fires in forests or grasslands. This issue brief only focuses on the public and individual/household assistance programs that are available after a disaster declaration.

Between 2005 and 2015, FEMA spent $67.7 billion on household and public assistance in response to presidentially declared emergencies and major disasters. Of this amount, $14.36 billion was spent on individual and household assistance, and public assistance outlays to state, tribal, and local governments made up the rest—$53.31 billion.

During this 10-year period, there were extreme weather and wildfire events in all 50 states, the District of Columbia, and several U.S. territories and throughout all seasons. Severe storms were the most frequent cause of disaster declarations, with 470 distinct declarations across the examined time period. Although less common than severe storms, hurricanes caused the most damage. Between 2005 and 2015, FEMA spent $49.5 billion on public and individual assistance to help communities recover from hurricanes. FEMA spent $12.7 billion for assistance related to severe storms over the same 10-year period. (see Table 1)

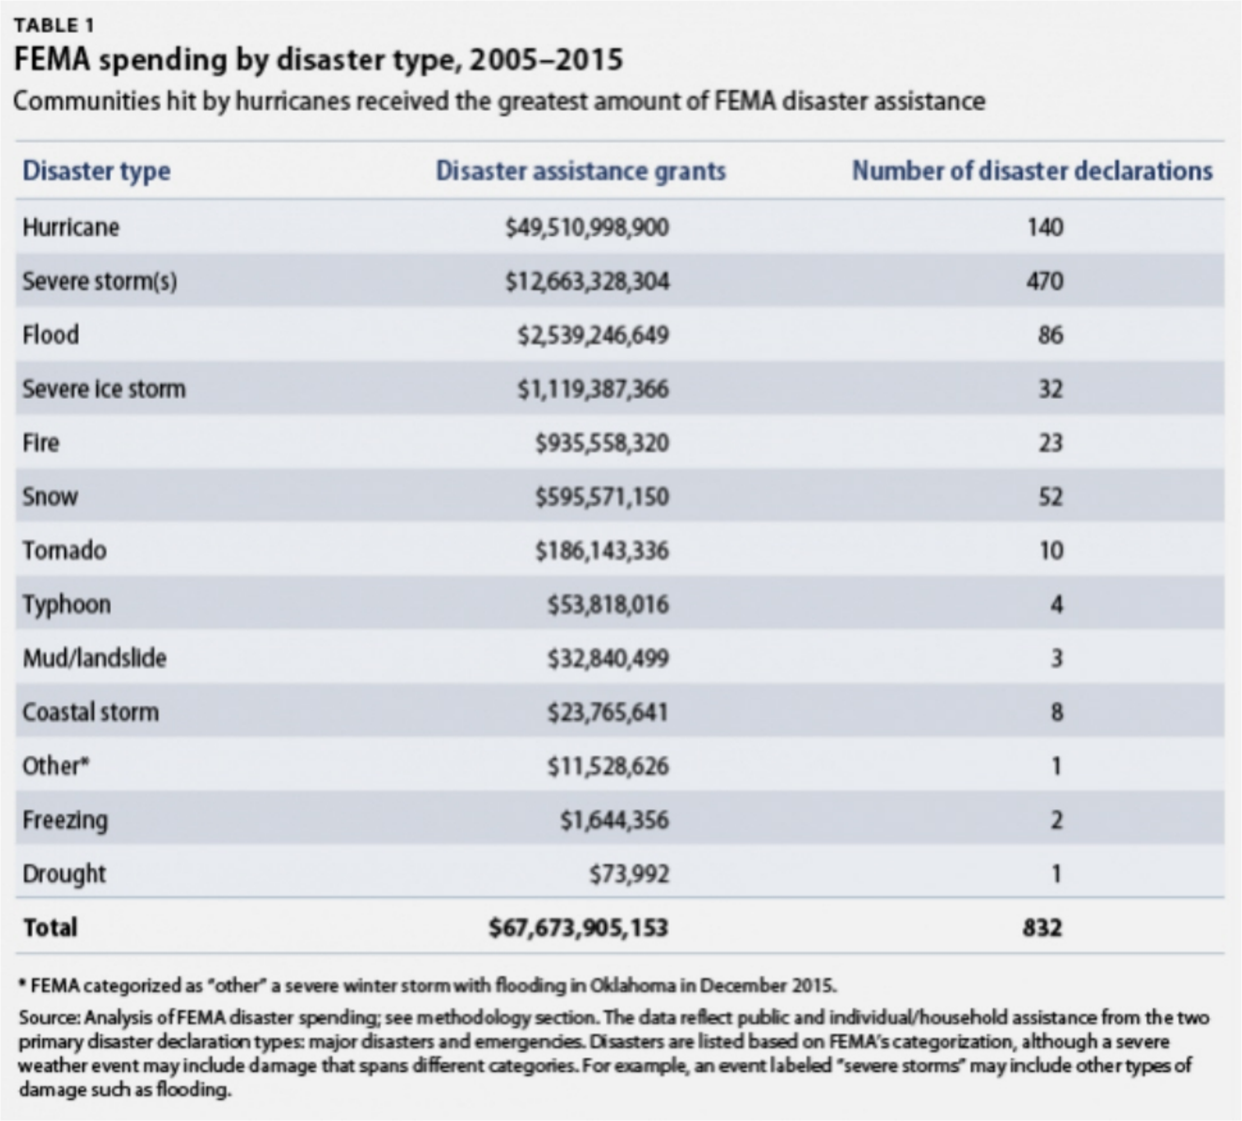

TABLE 1

FEMA spending by disaster type, 2005–2015

Communities hit by hurricanes received the greatest amount of FEMA disaster assistance

Disaster type	Disaster assistance grants	Number of disaster declarations
Hurricane	$49,510,998,900	140
Severe storm(s)	$12,663,328,304	470
Flood	$2,539,246,649	86
Severe ice storm	$1,119,387,366	32
Fire	$935,558,320	23
Snow	$595,571,150	52
Tornado	$186,143,336	10
Typhoon	$53,818,016	4
Mud/landslide	$32,840,499	3
Coastal storm	$23,765,641	8
Other*	$11,528,626	1
Freezing	$1,644,356	2
Drought	$73,992	1
Total	**$67,673,905,153**	**832**

* FEMA categorized as "other" a severe winter storm with flooding in Oklahoma in December 2015.

Source: Analysis of FEMA disaster spending; see methodology section. The data reflect public and individual/household assistance from the two primary disaster declaration types: major disasters and emergencies. Disasters are listed based on FEMA's categorization, although a severe weather event may include damage that spans different categories. For example, an event labeled "severe storms" may include other types of damage such as flooding.

Hurricanes accounted for eight of the top-10 costliest disaster declarations between 2005 and 2010, including hurricanes Katrina, Sandy, Ike, Wilma, Rita, Gustav, Irene, and Isaac. (see Table 2)

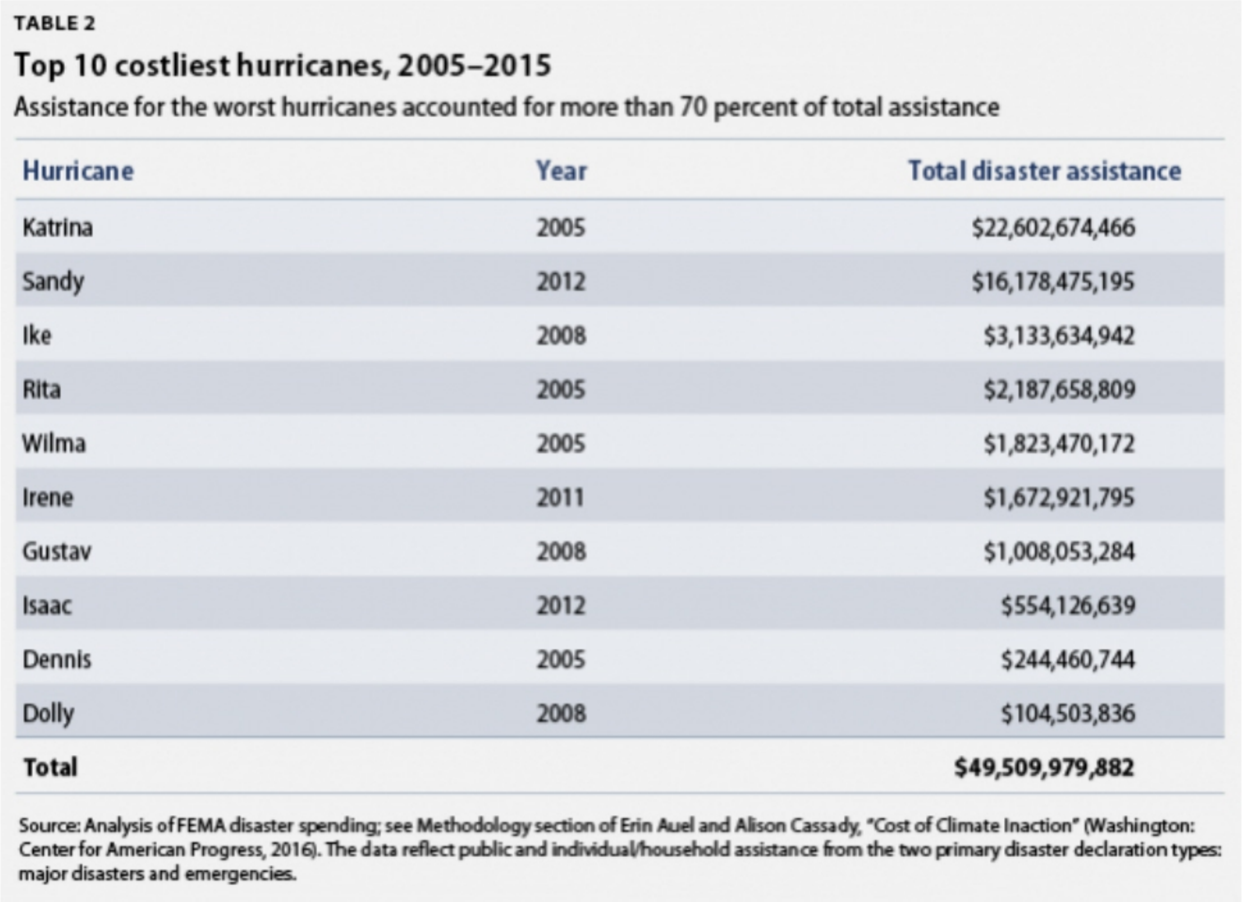

TABLE 2

Top 10 costliest hurricanes, 2005–2015

Assistance for the worst hurricanes accounted for more than 70 percent of total assistance

Hurricane	Year	Total disaster assistance
Katrina	2005	$22,602,674,466
Sandy	2012	$16,178,475,195
Ike	2008	$3,133,634,942
Rita	2005	$2,187,658,809
Wilma	2005	$1,823,470,172
Irene	2011	$1,672,921,795
Gustav	2008	$1,008,053,284
Isaac	2012	$554,126,639
Dennis	2005	$244,460,744
Dolly	2008	$104,503,836
Total		**$49,509,979,882**

Source: Analysis of FEMA disaster spending; see Methodology section of Erin Auel and Alison Cassady, "Cost of Climate Inaction" (Washington: Center for American Progress, 2016). The data reflect public and individual/household assistance from the two primary disaster declaration types: major disasters and emergencies.

Accordingly, although the total assistance by state varied widely, FEMA directed significant disaster spending to states that experienced historic hurricane damage during the period examined. These states include Louisiana and Mississippi, where Hurricane Katrina hit hardest in 2005, and New York and New Jersey, where Hurricane Sandy landed in 2012. (see Table 3) Nationwide, FEMA spent more than $22 billion in assistance responding to Hurricane Katrina, including allocations for states that provided assistance related to evacuations. The agency provided nearly $16 billion in household and public assistance grants in response to Hurricane Sandy.

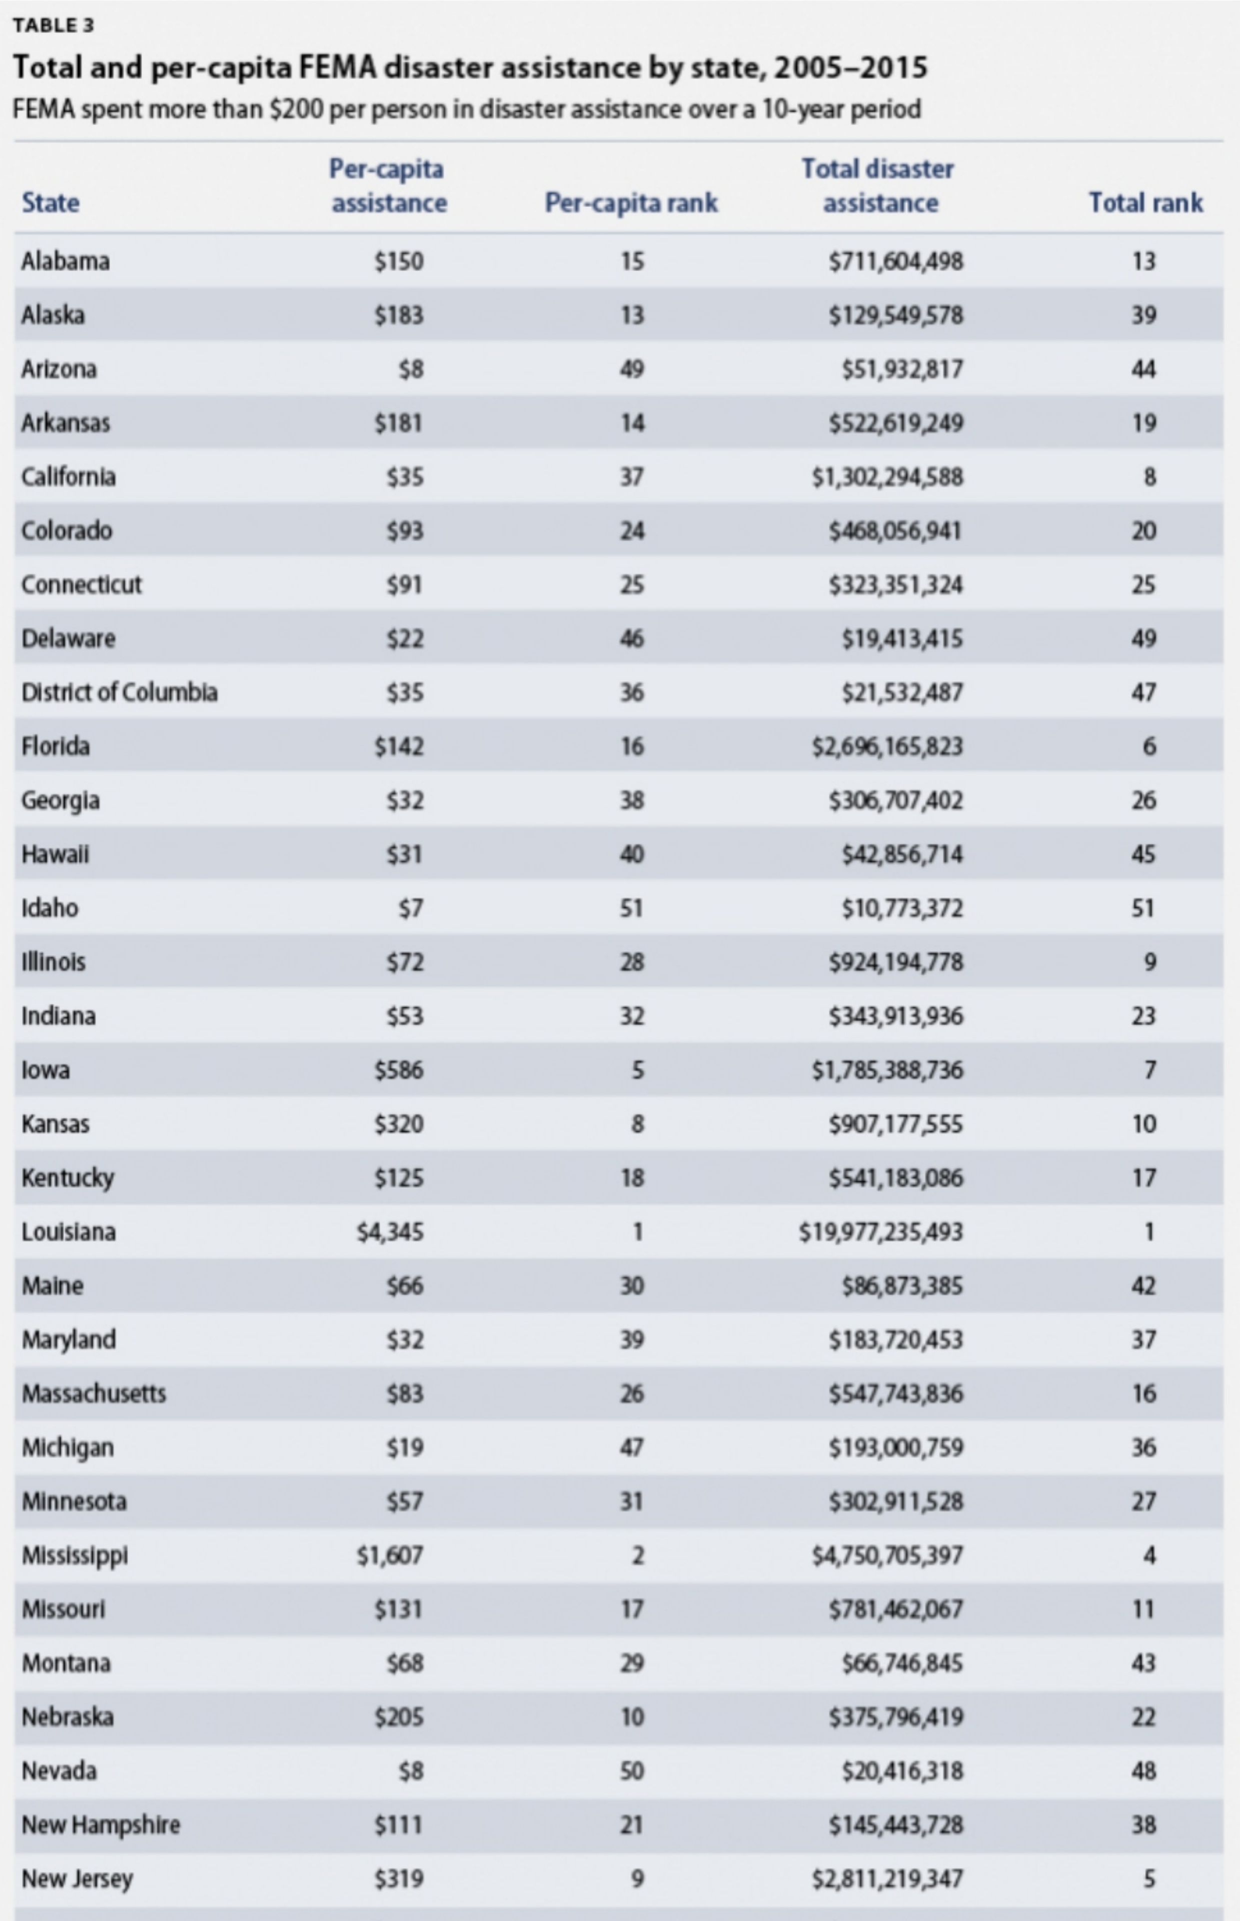

TABLE 3

Total and per-capita FEMA disaster assistance by state, 2005–2015

FEMA spent more than $200 per person in disaster assistance over a 10-year period

State	Per-capita assistance	Per-capita rank	Total disaster assistance	Total rank
Alabama	$150	15	$711,604,498	13
Alaska	$183	13	$129,549,578	39
Arizona	$8	49	$51,932,817	44
Arkansas	$181	14	$522,619,249	19
California	$35	37	$1,302,294,588	8
Colorado	$93	24	$468,056,941	20
Connecticut	$91	25	$323,351,324	25
Delaware	$22	46	$19,413,415	49
District of Columbia	$35	36	$21,532,487	47
Florida	$142	16	$2,696,165,823	6
Georgia	$32	38	$306,707,402	26
Hawaii	$31	40	$42,856,714	45
Idaho	$7	51	$10,773,372	51
Illinois	$72	28	$924,194,778	9
Indiana	$53	32	$343,913,936	23
Iowa	$586	5	$1,785,388,736	7
Kansas	$320	8	$907,177,555	10
Kentucky	$125	18	$541,183,086	17
Louisiana	$4,345	1	$19,977,235,493	1
Maine	$66	30	$86,873,385	42
Maryland	$32	39	$183,720,453	37
Massachusetts	$83	26	$547,743,836	16
Michigan	$19	47	$193,000,759	36
Minnesota	$57	31	$302,911,528	27
Mississippi	$1,607	2	$4,750,705,397	4
Missouri	$131	17	$781,462,067	11
Montana	$68	29	$66,746,845	43
Nebraska	$205	10	$375,796,419	22
Nevada	$8	50	$20,416,318	48
New Hampshire	$111	21	$145,443,728	38
New Jersey	$319	9	$2,811,219,347	5

Nonhurricane events can cause significant and costly damage as well. In August 2016, Baton Rouge, Louisiana, experienced historic flooding from torrential rainfall. As of August 23, 2016, the floods had killed 13 people, and more than 100,000 people had applied for federal assistance. Preliminary analysis from Climate Central and the National Oceanic and Atmospheric Administration, or NOAA, found that increased temperatures due to climate change increased the likelihood of intense downpours in Louisiana by 40 percent. Floods are among the most costly extreme weather events that can hit an area, as they can destroy large areas of property and can take a long time to recede. Between 2005 and 2015, flooding caused eight of the 10 costliest nonhurricane disaster declarations and occurred across several different regions. (see Table 4)

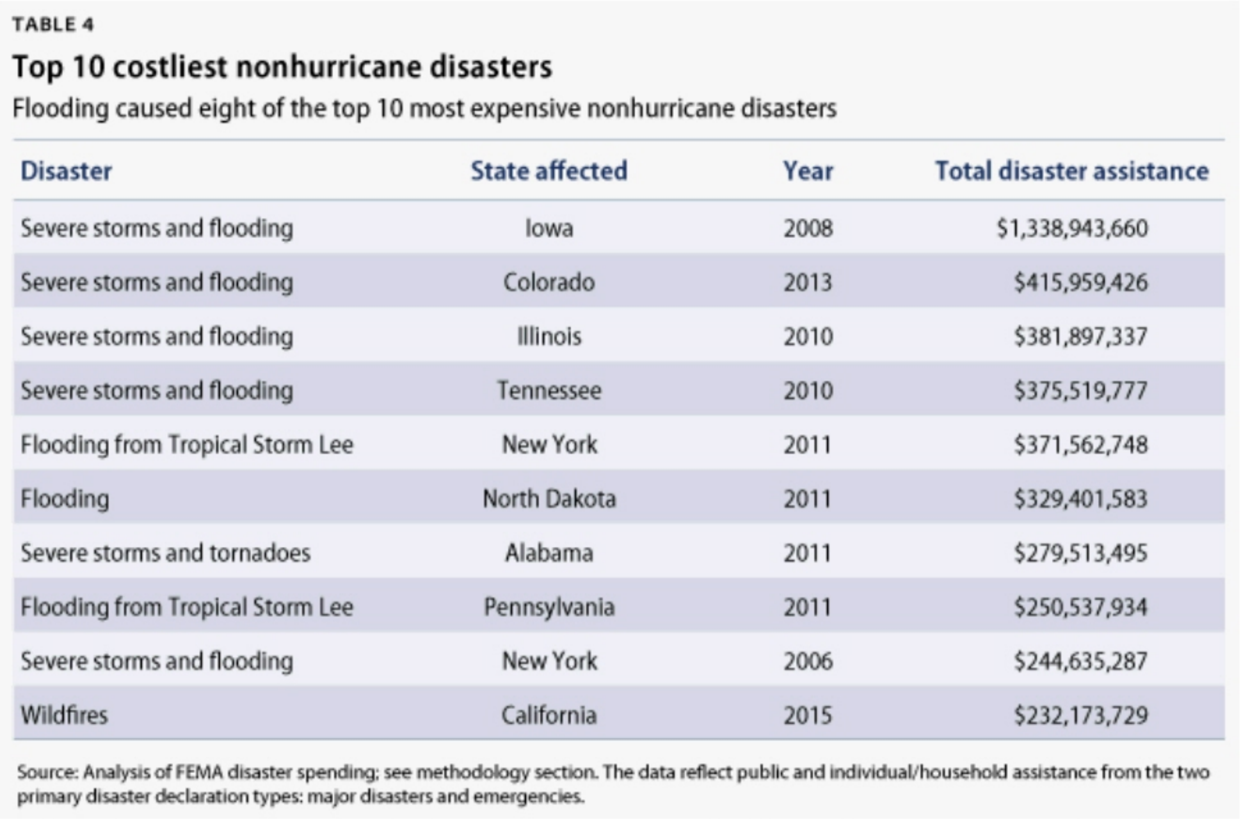

TABLE 4

Top 10 costliest nonhurricane disasters

Flooding caused eight of the top 10 most expensive nonhurricane disasters

Disaster	State affected	Year	Total disaster assistance
Severe storms and flooding	Iowa	2008	$1,338,943,660
Severe storms and flooding	Colorado	2013	$415,959,426
Severe storms and flooding	Illinois	2010	$381,897,337
Severe storms and flooding	Tennessee	2010	$375,519,777
Flooding from Tropical Storm Lee	New York	2011	$371,562,748
Flooding	North Dakota	2011	$329,401,583
Severe storms and tornadoes	Alabama	2011	$279,513,495
Flooding from Tropical Storm Lee	Pennsylvania	2011	$250,537,934
Severe storms and flooding	New York	2006	$244,635,287
Wildfires	California	2015	$232,173,729

Source: Analysis of FEMA disaster spending; see methodology section. The data reflect public and individual/household assistance from the two primary disaster declaration types: major disasters and emergencies.

Looking at the per-capita costs of extreme weather reveals that these disasters have a profound impact on individuals and communities. Louisiana received $4,345 per person in FEMA disaster spending between 2005 and 2015, the most of any state. Mississippi received the second-highest amount per capita—more than $1,600. Overall, FEMA spent about $200 per U.S. resident for disaster assistance between 2005 and 2015. (see Table 3)

Damage is not just limited to coastal areas. States in the central United States with relatively small populations have been hit hard by extreme weather and subsequently received significant assistance from FEMA. North Dakota, for example, ranks third for per-capita FEMA assistance over the analyzed decade due largely to eight distinct flooding events. Iowa ranks fifth for per-capita FEMA spending and seventh for total spending because of severe storms that caused major statewide flooding in 2008. Of the 10 states with the highest per-capita spending, half are located in the central United States. (see Table 3)

Conclusion

Extreme weather is already costing taxpayers and the federal government valuable public dollars and resources. Americans have recognized these costs; in a 2015 *New York Times* survey, 83 percent of respondents said that unmitigated climate change poses “a very or somewhat serious problem in the future.”

Because of the damage already caused to the climate, communities in the United States and around the globe will experience more frequent and intense extreme weather events, even if world leaders take immediate action to cut greenhouse gas emissions. Faced with this reality, FEMA has proposed a rule that would establish a deductible for disaster assistance in order to encourage states to make investments in resilience measures before disasters occur. This rule could incentivize states to invest in climate-smart infrastructure to minimize the financial and human toll of extreme weather.

The FEMA proposal is one among many efforts to push communities to better prepare for storms, floods, and other natural disasters—an effort made even more urgent because of climate change—rather than focusing only on responding to a disaster’s aftermath. Resilience, however, is only one prong in a coordinated response to climate change. The world must also focus on mitigating the worst impacts of climate change by reducing greenhouse gas emissions and transitioning the global economy to cleaner, low-carbon forms of energy.

Methodology

CAP examined FEMA data on presidential declarations of major disasters and emergencies between 2005 and 2015. The data reflect the two primary disaster declaration types: major disaster and emergency. CAP analyzed FEMA data on public and individual/household assistance spending in response to these declarations. The data were last updated on July 12, 2016.

For the per-capita analysis in Table 3, CAP used population data obtained from the U.S. Census Bureau. To calculate the per-capita costs by state, CAP averaged the state population totals from 2005, 2010, and 2015. The national per-capita figure in Table 3 reflects FEMA disaster assistance to all 50 states, the District of Columbia, and the U.S. territories.

CAP developed a methodology for excluding and including disasters to ensure the analysis only includes declarations that reflect the types of events that could become more common with unmitigated climate change.

We included public and individual assistance payments made in response to major disaster declarations and emergency declarations for the following types of incidents: coastal storms, drought, flooding, freezing, hurricanes, mudslides from flooding, severe ice storms, severe storms, snow, tornadoes, typhoons, and wildfires. We excluded public and individual assistance payments made for the following types of incidents that occurred between 2005 and 2015: water main breaks, terrorism, explosions, earthquakes, chemical spills, tsunamis, the 2009 presidential inauguration, bridge collapses, and volcanoes.

Dem candidates' solution to DAPL: Build a refinery, reroute pipeline (WDAY6)

By Mike Nowatzki / Forum News Service Today at 6:20 a.m.

BISMARCK — North Dakota Democrats running for congressional, statewide and legislative office proposed Thursday a state-owned oil refinery and rerouting the Dakota Access Pipeline as potential solutions to the ongoing dispute over the four-state oil pipeline.

Chase Iron Eyes, a Standing Rock Sioux Tribe member and Fort Yates attorney challenging incumbent Republican Rep. Kevin Cramer for North Dakota's lone U.S. House seat, joined other candidates in calling for better communication between state government, protesters and pipeline developer Energy Transfer Partners of Dallas.

"We feel that we can reach a peaceable resolution but that all sides need to be talking to each other," Iron Eyes said during a press conference at a Bismarck hotel. "The eyes of the world are on North Dakota right now."

Iron Eyes, District 30 House candidate Tom Asbridge of Bismarck and District 34 Senate candidate David Gipp of Mandan, a Standing Rock Sioux member and former president of United Tribes Technical College in Bismarck, suggested the state-owned Bank of North Dakota partner with private investors to build a major oil refinery to create jobs and reduce export of crude oil.

"I'm not saying we could eliminate all of the pipeline issue, but we could vastly reduce it," Gipp said, though Iron Eyes later acknowledged the state would have to export refined product and "we're not going to ever get away from the pipeline issue."

Asbridge said if the Dakota Access Pipeline must be built, it should run north of Bismarck — an alternative route the company considered early on but eliminated in favor of the current route that crosses the Missouri River less than a mile north of the Standing Rock Sioux Reservation.

Iron Eyes said they're not anti-oil, but the state needs leadership to incentivize and facilitate such action. "Because no matter what we say, there are 4,000 people that are willing to engage in civil disobedience to protect their interests," he said, referring to the self-described "water protectors" encamped just north of the reservation.

North Dakota Republican Party Chairman Kelly Armstrong, a state senator from Dickinson, said he's comfortable that Dakota Access chose the route and "went through the proper process." As for the refinery idea, he noted the Tesoro refinery that opened near Dickinson in May 2015 was the country's first new refinery since the 1970s.

"Even if that idea had any merit, you are more than likely a decade out from that even being a possibility," he said. "It's not as simple as saying build a refinery here and then we won't have to move as much oil. ... Right now we need serious solutions and not overly simplistic ones."

Also speaking at Thursday's press conference were state insurance commissioner candidate Ruth Buffalo of Mandaree, a member of the Mandan, Hidatsa and Arikara Nation; Public Service Commission candidate Marlo Hunte-Beaubrun, a Standing Rock member from Bismarck; and District 28 Senate candidate Dustin Peyer of Driscoll.

The Standing Rock tribe claims in its lawsuit against the U.S. Army Corps of Engineers that the agency violated the National Historic Preservation Act and other laws in issuing permits for the $3.8 billion, 1,172-mile pipeline, which will stretch from the Bakken oilfields to Patoka, Ill., and is more than 60 percent completed.

Construction within 20 miles of Lake Oahe is on hold as the Corps and courts consider the tribe's claims that it wasn't properly consulted and that the project should have undergone more extensive review.

DALRYMPLE PRESSES WHITE HOUSE, FEDERAL AGENICES TO SUPPORT PUBLIC SAFETY EFFORTS

BISMARCK, N.D. – Gov. Jack Dalrymple today called on the White House and federal agencies to provide federal assistance in maintaining peace and public safety for the duration of protest activities involving the Dakota Access Pipeline.

“The federal government’s announcement on Friday regarding the Dakota Access Pipeline has extended indefinitely the period of time necessary to bring the issue to a resolution,” Gov. Dalrymple said. “With a decision on the pipeline delayed indefinitely, the federal government shares in the responsibility of ensuring that peace and order are maintained.”

Dalrymple spoke today with White House officials and has also been in contact with the U.S. Army Corps of Engineers, the Department of Interior and the Department of Justice to press for federal assistance, both personnel and financial support. Dalrymple called for federal officials to provide assistance for as long as resources are needed to maintain public safety.

“I’m going to hold the federal government to its word, when the Corps and the departments of Interior and Justice delayed a decision on the pipeline’s construction, and offered to deploy resources to North Dakota to help “defuse tensions, support peaceful protest, and maintain public safety,”’ Dalrymple said.

Dalrymple said he has also spoken with the state’s Congressional Delegation, requesting their assistance in securing federal support. That support is needed in the form of financial assistance and in law enforcement personnel.

To date, the state Highway Patrol has incurred more than $700,000 in expenses associated with pipeline protest activities. Morton County officials have reported incurring costs of about $100,000 a week for a total of approximately $400,000.

Morton County Sheriff’s deputies and state troopers today reported arresting 22 people at a pipeline construction site near Glen Ullin. Additionally, the North Dakota Department of Transportation and Highway Patrol today again closed ND Highway 1806 to southbound traffic about six miles south of Mandan. The highway was closed due to a large number of pedestrians and vehicles along the roadway.

State of North DakotaLNO and Regional Tribal Report #1As of 16 August 2016/1200 MDT)

Situation: On August 10, 2016, members of the Standing Rock Sioux Tribe (Hunkpapa Oyate), environmental groups, and other supporters (including other tribal governments) began a protest to halt construction of a pipeline being built by Dakota Access. This is taking place one mile outside of the Standing Rock Reservation near the town of Cannonball, ND (pop. 875, 2010 census located on the Reservation) in Sioux County (pop. 4,153, 2010 census). Threats/Impacts/CIKR/Key Resources: Several tribal citizens have been arrested including the Tribal Chairman for disorderly conduct and criminal trespassing for blocking access to the construction site.As of August 12, 2016, thirty-four officers are on scene including county and ND State Highway Patrol.Tribal concerns include contamination of local water not only for health and environmental reasons but because water is considered sacred to the Native Americans.The Tribe is also concerned about other cultural implications of this pipeline.The pipeline could have ecological threats and impacts.The pipeline will be located under the Missouri River.State communications requested an increase in cellular coverage for the area. Disaster Emergency Communications connected State communications to AT&T and Verizon.There are no road closures in effect at this time. State & Federal Posture/Actions: State EOC is in Level IV – Daily Operations. Communication with State/Tribal/Local officials: No contact has been made with the Tribe regarding this issue.The Acting Regional Administrator has been in contact with the Director of North Dakota Department of Emergency Services for situational awareness only. Shortfalls or limiting factors, currently or anticipated, including any support requirements from FEMA HQs: None at this time, State and Local authorities are actively monitoring the event. LNO Summary: FEMA LNO and FEMA Region VIII Tribal Liaison are monitoring the situation.Source of Information: North Dakota Department of Emergency Services and Standing Rock Sioux Tribe Facebook.

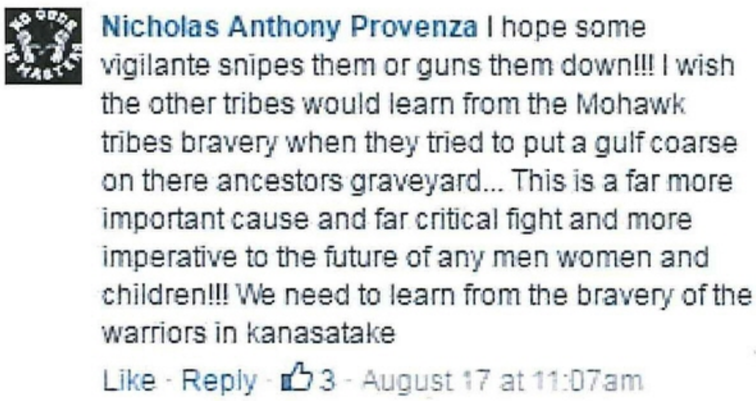
This is NOT TRUE......I was BEHIND our SCHOOL CHARTER BUS. I also had 3 nieces & nephews on this bus as they approached this barricade I PRAYED & PRAYED that they would NOT have to experience any BS as having to pass thru this for SOME of these children is enough TRAUMA...please STOP with the "FALSE" stories...I have POSTED my VIDEO in the comments...DO NOT add fuel to a fire and spread False stories, please people I beg of YOU...Our community & children will still be living here when everyone returns to their "Homelands!" We DO NOT need to make matters any worse then things are...we need to PRAY & remember those children are watching US!♡

Red Warrior Camp
12 hrs ·

Today a bus full of young Lakota kids from Standing Rock were traveling to a cross country meet in Bismarck. They were traveling north on Highway 1806 and as they approached the blockade a North Dakota State Patrol officer allegedly demanded he get on the bus to verify that kids were on the bus. He asked the kids what the purpose of their travel was for. A blatant violation of human rights ON INNOCENT CHILDREN. Morton County Officials are taking things too far now. Wake up America! North Dakota is the new Mississippi of the North.



Nicholas Anthony Provenza I hope some vigilante snipes them or guns them down!!! I wish the other tribes would learn from the Mohawk tribes bravery when they tried to put a gulf coarse on there ancestors graveyard... This is a far more important cause and far critical fight and more imperative to the future of any men women and children!!! We need to learn from the bravery of the warriors in kanasatake

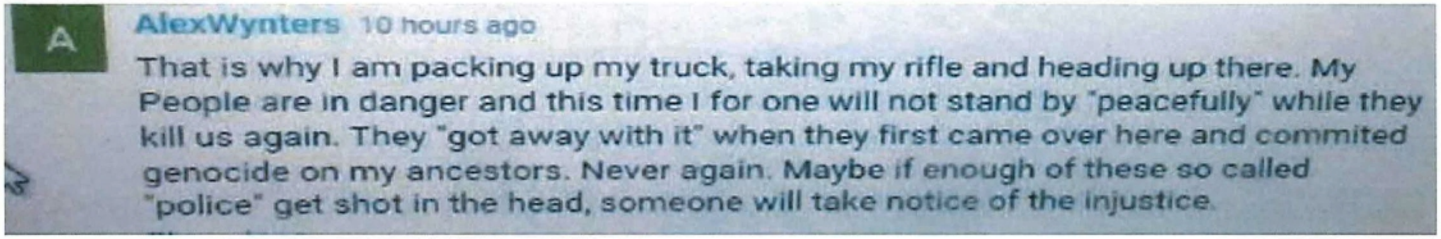
Wtf is wrong with these people these cops need to be shot down already someone please do it already.



AlexWynters 10 hours ago

That is why I am packing up my truck, taking my rifle and heading up there. My People are in danger and this time I for one will not stand by "peacefully" while they kill us again. They "got away with it" when they first came over here and commited genocide on my ancestors. Never again. Maybe if enough of these so called "police" get shot in the head, someone will take notice of the injustice.

The second pipeline dispute…

Tribal consent at heart of court arguments over pipelines below lake

- Mike Nowatzki Forum News Service
- 13 hrs ago

A federal judge will issue what could be a precedent-setting decision after hearing arguments Thursday on whether a Texas company needed consent from Native American tribes to drill two pipelines through tribally owned minerals under North Dakota's largest body of water.

After nearly five hours of testimony and legal arguments in U.S. District Court in Bismarck, Judge Daniel Hovland took the matter under advisement, allowing drilling under Lake Sakakawea to continue until he issues his ruling while also lamenting the lack of legal opinions offered by attorneys and previous case law on the issue.

"It sounds like I'm going to be left to interpret this with no guidance from anybody," Hovland said.

Paradigm Energy Partners LLC has already completed a $125 million oil pipeline under the lake and is boring the hole for a companion $16.6 million natural gas pipeline over the objections of the Mandan, Hidatsa and Arikara Nation, also known as the Three Affiliated Tribes.

The tribes issued a cease and desist order Aug. 8 ordering Paradigm to stop all construction immediately under the lake. They said the company hadn't provided assurance that the oil pipeline, which stretches nearly 9,000 feet at least 100 feet below the lakebed on the Fort Berthold Reservation, posed no threat to their water resources.

Paradigm responded by suing MHA Chairman Mark Fox and Tribal Police Chief Nelson Hart on Aug. 19, arguing they had no authority to halt construction. Four days later, Hovland granted a temporary restraining order preventing the tribe from stopping construction, allowing boring for the gas pipeline to resume.

Thursday's daylong hearing on Paradigm's request for an injunction against the tribe ended without a firm timeline for Hovland's ruling, but the judge noted that the restraining order expires on Monday or Tuesday, and he can extend it for 14 days for "good cause."

"Certainly, in my view, good cause exists because I've got a multitude of issues to sort through," he said.

Attorneys for both sides argued about whether Paradigm needed the tribes' consent to install the two pipelines, which will be owned by Sacagawea Pipeline Co., a joint venture between Paradigm, Phillips 66 and Greywolf Midstream LLC. Greywolf, which holds a 12 percent interest in the oil pipeline, is a subsidiary of MHA-owned Missouri River Resources, giving the tribe a stake in the project.

Paradigm CEO Troy Andrews testified that Fox had been outspoken that the tribe should get more value out of the oil pipeline. But Andrews said he didn't recall Fox or other tribal officials raising the issue of consent until a tribal council meeting June 9, less than a week after boring started on the oil pipeline.

"I definitely thought they were very supportive and on board with the project, for sure," he said.

Fox countered that he informed Paradigm about the consent requirement as early as August 2014 during a Missouri River Resources board meeting, and also brought it up “numerous times” in casual and formal conversations.

“That was always understood,” Fox said.

Tribal officials said Paradigm offered up to $2 million during a June 9 council meeting to resolve the right-of-way and other issues related to the pipelines.

“And I believe they said they had a check there,” Tribal Attorney Caleb Dog Eagle recalled.

Andrews said that while the company never believed it needed the tribes’ legal consent, “I wanted to get a deal done.”

When Paradigm came back a week later with the same request, tribal officials said they felt the company hadn’t fulfilled the council’s request that it reach out to the tribes’ more than 15,000 members to gauge support for the pipelines.

Attorneys for Paradigm argued that the company already had the authority to drill under the lake through its easement from the U.S. Army Corps of Engineers.

“The key here is that these are valid authorizations,” attorney Andrew Emrich said.

But lawyers for the tribes said the Fort Berthold Reservation Mineral Restoration Act of 1984 restored the mineral rights under the lake to the tribe, and Paradigm has no right to invade them without consent.

“They tried to get our consent, they didn’t get it, and they bored anyway,” said attorney John Fredericks III. “So as far as we’re concerned, they’re trespassers.”

Paradigm Chief Operating Officer Criss Doss said the work stoppage in August cost the company $750,000, and it stands to lose $12.6 million -- and potentially go under -- if it’s unable to finish the gas pipeline by its Nov. 1 deadline to remove equipment from a landowner’s property on the east side of the lake.

“We can’t afford any delays at all,” he said.

The Pipeline and Hazardous Materials Safety Administration continues to investigate claims made by workers that the pipeline was not properly inspected before it was installed under Lake Sakakawea. Doss said 109 welds were recoated because they weren’t done right the first time.

“There were not defects in the coating when it was stuck under the lake,” he said.

Attending the hearing in support of the MHA Nation was Standing Rock Sioux Tribal Chairman Dave Archambault II, whose tribe is awaiting a judge’s decision by Sept. 9 on its request for an injunction to halt construction on the Dakota Access Pipeline across the Missouri River just north of the Standing Rock reservation.

North Dakota National Guard to provide backup to law enforcement

- CAROLINE GRUESKIN and BLAIR EMERSON Bismarck Tribune
- 21 hrs ago
-

North Dakota Gov. Jack Dalrymple listens to a question during a press conference in Mandan on Thursday.

The North Dakota National Guard will be activated to assist local law enforcement responding to the Dakota Access Pipeline protests south of Mandan, according to an announcement on Thursday by Gov. Jack Dalrymple.

Dalrymple said the decision was made "out of an abundance of caution" in order to free up law enforcement to patrol Morton County and the Bismarck-Mandan area.

Several armed guardsmen will be posted at a checkpoint along Highway 1806 south of Mandan, which has been reopened. They will provide information about road hazards to drivers passing through.

About 100 guardsmen from the 191st Military Police Company also will be on standby alert, said Maj. Gen. Al Dohrmann. This unit, which is based in Bismarck, Mayville and Fargo, has some law enforcement experience.

Meanwhile, as the annual powwow takes place in Bismarck and a federal court decision is expected today on the tribe's request for an injunction to stop construction on the pipeline, additional law enforcement officers will patrol the area this weekend.

Morton County Sheriff Kyle Kirchmeier said he wanted to be able to respond more quickly to situations that arise at the protest camps and for residents nearby. Deputies will not be stationed at the camps.

Thirty-seven people have been arrested in connection with the protests for trespassing on private property, refusing to stay in boundaries set by police and chaining themselves to construction equipment.

With the resources he had available Saturday, when a clash broke out between protesters and private pipeline security, Kirchmeier said he did not have the manpower needed to go in and make arrests.

"We want people to have a safe weekend," he said.

In a statement, Standing Rock Sioux Chairman Dave Archambault II asked protesters to remain peaceful following the judge's decision Friday.

"Any act of violence hurts our cause and is not welcome here," he said. "Even if the outcome of the court's ruling is not in our favor, we will continue to explore every lawful option and fight against the construction of the pipeline."

Dohrmann said he is in discussions with tribal leaders to find a peaceful resolution to the protests. He said he believes there is a group of "agitators" at the site, some of whom have been asked to leave.

Highway 1806 was closed Aug. 17 by Highway Patrol and the Department of Transportation for safety concerns. Tribal members and civil rights groups called for its reopening, citing economic impacts on the tribe and hindrance to First Amendment rights.

"We want to make sure that everybody that is going down on Highway 1806 can get where they're going with families," said Kirchmeier, explaining the reason for reopening the road. "We have had many conversations with tribal leaders trying to keep the roadway open."

The parks in the area will remain closed.

North Dakota Highway Patrol Col. Mike Gerhardt said measures have been taken to make Highway 1806 safer for drivers. The speed limit around the protest sites has been reduced to 25 mph, new signs have been posted and troopers will be patrolling the area.

Dalrymple said anyone who has cost the government money during the pipeline protest may be asked for reimbursement, including the pipeline company.

Since a state — not federal — emergency declaration has been issued, federal funds are not available, Dalrymple said.

Dallas Goldtooth, a protest organizer with the Indigenous Environmental Network, said Dalrymple is sending a disturbing message by bringing in the National Guard.

“I think it’s deeply concerning to see this escalation from the governor of North Dakota," he said.

Goldtooth applauded the removal of the Highway 1806 barricade, a move he called "two weeks overdue."

Still, he said he's not sure what will happen after the federal judge issues his ruling.

“There’s a general anxiety or uncertainty about (Friday)," he said.

The North Dakota National Guard was last deployed at airports after the 9/11 terrorist attacks. In 1969, it was called to respond to the Zip to Zap rioting.

Morton County wants tribal chairman to intervene as frontline camp grows

By mnowa adalr on Oct 24, 2016 at 6:57 p.m.

FORT RICE, N.D. — With help arriving from other states, authorities say they hope to use communication to come to a peaceful resolution after a frontline "no surrender" camp was established to block construction of the Dakota Access Pipeline.

Morton County Commission Chairman Cody Schulz called on Standing Rock Tribe Chairman David Archambault II to condemn the illegal actions of the protesters, which led to 127 arrests over the weekend in an increasingly tense situation.

The U.S Department of Justice said Monday, Oct. 24, said it is closely monitoring the situation and has offered technical assistance and community policing resources, said Wyn Hornbuckle, the department's deputy director of public affairs.

The department reiterated its call for Dakota Access to voluntarily stop construction within 20 miles of Lake Oahe until the U.S. Army Corps of Engineers authorizes construction on Corps land, Hornbuckle said.

Law enforcement from South Dakota, Minnesota, Wisconsin, Wyoming, Indiana and Nebraska are now providing additional manpower as protesters have established a roadblock and a new camp on private property east of HIghway 1806 that was growing in size Monday.

"We have made 1806 our no-surrender line," said Joye Braun, a protest organizer with the Indigenous Environmental Network.

During a press conference Monday, Schulz called on Archambault to "show leadership and exert his authority" to encourage the protest camp to move to reservation land the tribal council designated last week.

Schulz said local and state officials recognize that the "dangerous actions and illegal activity" are not being perpetrated by tribal members. Schulz said the county is trying to respect the rights of the protesters, but also needs to protect the rights of local residents.

"It's disrupting the lives and injuring the economic well-being of everyone that lives in the area," Schulz said.

Archambault said in a statement late Sunday the tribe does not condone reports of illegal actions, but tribal leaders believe the militarization of local law enforcement and the enlistment of multiple agencies is "needlessly escalating violence and unlawful arrests."

He called on the Department of Justice to intervene and impose an injunction to all developments at the pipeline site to keep all citizens safe.

"The DOJ should be enlisted and expected to investigate the overwhelming reports and videos demonstrating clear strong-arm tactics, abuses and unlawful arrests by law enforcement," Archambault said.

Authorities arrested 126 people Saturday on charges including reckless endangerment, criminal trespass, engaging in a riot, assault on a peace officer and resisting arrest, bringing the total number of arrests to 269 since Aug. 10.

"The acts over the weekend were intentionally planned in an effort to incite fear and were anything but peaceful," said Capt. Bryan Niewind of the North Dakota Highway Patrol.

Officers used pepper spray to protect themselves and control protesters who were trespassing on private property, the Morton County Sheriff's Department said, though protesters pointed to video they said showed the use of pepper spray was unwarranted.

Two officers suffered minor injuries while responding over the weekend and a third was spit on while trying to free a protester who was attached to a vehicle, Niewind said.

One person was arrested Sunday as protesters erected teepees and tents as a "frontline camp" directly in the path of the oil pipeline on the historic Cannonball Ranch, which Dakota Access LLC recently purchased from local rancher David Meyer.

About 15 teepees, several campers, more than 50 tents and several military tents have been set up at the frontline camp, which is across from where Dakota Access security guards armed with dogs and pepper spray clashed with protesters on Sept. 3.

A statement from groups involved in the protest explained that the self-described "water protectors" took back unceded territory affirmed in the 1851 Fort Laramie Treaty between the federal government and Plains tribes, including the Lakota and Dakota.

"We will be occupying this land and staying here until this pipeline is permanently stopped," said Mekasi Camp-Horinek, a coordinator of the Oceti Sakowin Camp, the main protest camp about two miles south of the frontline camp.

Morton County Sheriff Kyle Kirchmeier said, "Individuals trespassing on private property can't claim eminent domain to justify their criminal actions."

When asked about the possibility of law enforcement coming in to remove people, Braun reiterated that they are unarmed and said they're protecting burial sites that are "in imminent danger."

"We're not moving. That's up to them to decide," Braun said.

In the ditch along the highway, protesters were stacking large logs and laying them to form an entrance to the camp.

Frank Archambault, a cousin of the tribal chairman, said the timbers may be used to form some sort of blockade to keep Dakota Access construction from crossing the highway.

About 1 mile south of Fort Rice, law enforcement and the North Dakota National Guard set up a staging area and checkpoint, where they were restricting traffic Monday to local residents.

On Monday, protesters reestablished the roadblock put up Sunday on Highway 1806, north of the camp.

"Even though DAPL bought that from the Meyer family, to us it's an illegal sale because it is unceded territory," said Red Warrior Camp spokesman Cody Hall.

If needed, protesters can move the roadblock to allow first responders through, Hall said.

Highway 1806 will be closed "indefinitely" due to unsafe and illegal protest activities, Niewind said.

On Sunday, a helicopter pilot and a law enforcement officer on board to monitor the protest "were in fear for the lives" Sunday when a drone repeatedly buzzed the helicopter, coming within 30 to 50 feet of the helicopter, Niewind said.

Officers used less than lethal ammunition to shoot at the drone away from the direction of any people, Niewind said.

The shooting at the drone, plus the large law enforcement presence, made protesters fear for their lives, Braun said.

Braun said she is hopeful the federal government will step in and stop construction.

"If the federal government isn't going to protect 18 million people's lives, then we as water protectors and water defenders will do everything we can peacefully to protect people's lives," Braun said.

Hall said more people were continuing to arrive to support the protest.

"They're all bypassing the big camp and going to the front line camp," Hall said.

Around mid-afternoon, there was a call throughout the camp to move north to fortify the roadblock because they said there were law enforcement and military forces coming to surround them, which turned out to be a false alarm.

Kristina Young Bear, 48, Tama, Iowa, showed up Sunday night after tracking the situation on social media. She and her sister, Mary Young Bear, 56, were recruited for cooking duty at the new camp and were preparing bison, boiled potatoes, vegetables and fry bread over a wood fire on Monday.

"Just disgusting what the law's trying to do, using their pepper spray," said Kristina, a member of Meskwaki in Iowa.

Mary said she'd visited the Red Warrior Camp before on a previous trip and said she's "just going where they ask me to go. The people that make these decisions, I assume they know what they're doing. I'm just a visitor, I'm here for support."

Among the 126 arrested Saturday was Sara Lafleur-Vetter, a journalist working on an independent documentary production who was charged with misdemeanor criminal trespassing and engaging in a riot.

Meanwhile, Dakota Access LLC, a subsidiary of Dallas-based Energy Transfer Partners, said in a letter to the North Dakota attorney general's office Monday that it purchased the ranch land in and around the pipeline route in southern Morton County last month "to enhance the safety of its workers" and "to better manage ingress and egress to the right of way."

The company had to explain how its purchase of more than 7,000 acres—including most of the Cannonball Ranch—complied with the state's anti-corporate farming law, which prohibits non-family corporations from owning farm and ranch land, with some exceptions, including for industrial purposes.

"After construction of the pipeline is complete, DAPL will transfer ownership of the property or use the property for some other use in compliance" with state law, Bismarck attorney Lawrence Bender wrote for the company.

Archambault said the militarization of local law enforcement and enlistment of multiple law enforcement agencies from neighboring states is "needlessly escalating violence and unlawful arrests against peaceful protesters at Standing Rock.

"We do not condone reports of illegal actions, but believe the majority of peaceful protesters are reacting to strong-arm tactics and abuses by law enforcement," he said.

Protesters set up a roadblock on Highway 1806 at about 2 p.m. Sunday afternoon, stringing barbed wire and positioning vehicles across the highway and fortifying it with hay bales, rocks, tree stumps, logs and vehicles, the sheriff's department said. They later removed the roadblock after speaking with law enforcement officials who warned them about the liability they could face if something happened at the camp and emergency vehicles couldn't get through.

Opponents of the $3.8 billion, 1,172-mile pipeline also set up roadblocks on Highway 1806 south of the main camp and on County Road 134, an access road to the pipeline construction sites. They said the frontline camp is on the final 3 miles of the pipeline route before it connects with the drill pad that will take the pipeline under Lake Oahe, a dammed section of the Missouri River. Construction was about 2 miles west of the frontline camp as of Sunday, they said.

The U.S. Army Corps of Engineers is currently withholding the lake crossing easement for Dakota Access. In a Sept. 9 statement with the DOJ and Department of Interior, the Corps said it needed to determine whether it should reconsider its previous decisions about the lake crossing under the National Environmental Policy Act or other laws.

U.S. Rep. Kevin Cramer, R-N.D., said last week he doesn't expect a decision on the easement until after the Nov. 8 election.

The Standing Rock Sioux Tribe is suing the Corps over permits issued for the four-state pipeline, which would carry 470,000 barrels of crude oil per day. Tribal members fear the pipeline would leak and contaminate their water supply, and they say construction will desecrate sacred sites on their ancestral lands

$4 million to be requested for response to pipeline protests

- NICK SMITH Bismarck Tribune
  ○
- Oct 31, 2016
- TOM STROMME, TRIBUNE

Law enforcement arrest people protesting the Dakota Access Pipeline on a newly constructed roadway near Fort Rice in Morton County in August. The rock bed road connects to Highway 1806 and will allow construction vehicles to access ranch land for building the pipeline. For video and a photo gallery, go to bismarcktribune.com.

The North Dakota Department of Emergency Services will be requesting an additional $4 million to cover the costs associated with the response of law enforcement to the Dakota Access Pipeline protests in Morton County.

Members of the North Dakota Emergency Commission are expected to green-light the request at a 2 p.m. meeting in the governor's conference room today.

Most of the original $6 million line of credit approved in September has been used as the protest movement near the Standing Rock Sioux Tribe's reservation boundary over the four-state pipeline project and subsequent response has continued to ramp up.

Lawmakers on the emergency commission said last week they have no choice but to approve funding for law enforcement to maintain order and keep the public safe. They also expressed hope the state's congressional delegation can get at least partial reimbursement in federal dollars.

Last week marked an escalation in tensions between protesters and police as an hours-long sweep to clear a camp set up on private land recently purchased by Dakota Access LLC was conducted. There were 142 arrests made as protesters were backed off the property.

The North Dakota portion of the 1,172-mile, $3.8 billion project is nearly complete. A permit is still needed to bore under the Missouri River, which is planned to occur less than a mile from the reservation boundary. Opponents of the project are concerned over future pipeline leaks if the pipeline is completed.

The second pipeline dispute…

Tribal consent at heart of court arguments over pipelines below lake

- Mike Nowatzki Forum News Service
- 13 hrs ago

A federal judge will issue what could be a precedent-setting decision after hearing arguments Thursday on whether a Texas company needed consent from Native American tribes to drill two pipelines through tribally owned minerals under North Dakota's largest body of water.

After nearly five hours of testimony and legal arguments in U.S. District Court in Bismarck, Judge Daniel Hovland took the matter under advisement, allowing drilling under Lake Sakakawea to continue until he issues his ruling while also lamenting the lack of legal opinions offered by attorneys and previous case law on the issue.

"It sounds like I'm going to be left to interpret this with no guidance from anybody," Hovland said.

Paradigm Energy Partners LLC has already completed a $125 million oil pipeline under the lake and is boring the hole for a companion $16.6 million natural gas pipeline over the objections of the Mandan, Hidatsa and Arikara Nation, also known as the Three Affiliated Tribes.

The tribes issued a cease and desist order Aug. 8 ordering Paradigm to stop all construction immediately under the lake. They said the company hadn't provided assurance that the oil pipeline, which stretches nearly 9,000 feet at least 100 feet below the lakebed on the Fort Berthold Reservation, posed no threat to their water resources.

Paradigm responded by suing MHA Chairman Mark Fox and Tribal Police Chief Nelson Hart on Aug. 19, arguing they had no authority to halt construction. Four days later, Hovland granted a temporary restraining order preventing the tribe from stopping construction, allowing boring for the gas pipeline to resume.

Thursday's daylong hearing on Paradigm's request for an injunction against the tribe ended without a firm timeline for Hovland's ruling, but the judge noted that the restraining order expires on Monday or Tuesday, and he can extend it for 14 days for "good cause."

"Certainly, in my view, good cause exists because I've got a multitude of issues to sort through," he said.

Attorneys for both sides argued about whether Paradigm needed the tribes' consent to install the two pipelines, which will be owned by Sacagawea Pipeline Co., a joint venture between Paradigm, Phillips 66 and Greywolf Midstream LLC. Greywolf, which holds a 12 percent interest in the oil pipeline, is a subsidiary of MHA-owned Missouri River Resources, giving the tribe a stake in the project.

Paradigm CEO Troy Andrews testified that Fox had been outspoken that the tribe should get more value out of the oil pipeline. But Andrews said he didn't recall Fox or other tribal officials raising the issue of consent until a tribal council meeting June 9, less than a week after boring started on the oil pipeline.

"I definitely thought they were very supportive and on board with the project, for sure," he said.

Fox countered that he informed Paradigm about the consent requirement as early as August 2014 during a Missouri River Resources board meeting, and also brought it up "numerous times" in casual and formal conversations.

"That was always understood," Fox said.

Tribal officials said Paradigm offered up to $2 million during a June 9 council meeting to resolve the right-of-way and other issues related to the pipelines.

"And I believe they said they had a check there," Tribal Attorney Caleb Dog Eagle recalled.

Andrews said that while the company never believed it needed the tribes' legal consent, "I wanted to get a deal done."

When Paradigm came back a week later with the same request, tribal officials said they felt the company hadn't fulfilled the council's request that it reach out to the tribes' more than 15,000 members to gauge support for the pipelines.

Attorneys for Paradigm argued that the company already had the authority to drill under the lake through its easement from the U.S. Army Corps of Engineers.

"The key here is that these are valid authorizations," attorney Andrew Emrich said.

But lawyers for the tribes said the Fort Berthold Reservation Mineral Restoration Act of 1984 restored the mineral rights under the lake to the tribe, and Paradigm has no right to invade them without consent.

"They tried to get our consent, they didn't get it, and they bored anyway," said attorney John Fredericks III. "So as far as we're concerned, they're trespassers."

Paradigm Chief Operating Officer Criss Doss said the work stoppage in August cost the company $750,000, and it stands to lose $12.6 million -- and potentially go under -- if it's unable to finish the gas pipeline by its Nov. 1 deadline to remove equipment from a landowner's property on the east side of the lake.

"We can't afford any delays at all," he said.

The Pipeline and Hazardous Materials Safety Administration continues to investigate claims made by workers that the pipeline was not properly inspected before it was installed under Lake Sakakawea. Doss said 109 welds were recoated because they weren't done right the first time.

"There were not defects in the coating when it was stuck under the lake," he said.

Attending the hearing in support of the MHA Nation was Standing Rock Sioux Tribal Chairman Dave Archambault II, whose tribe is awaiting a judge's decision by Sept. 9 on its request for an injunction to halt construction on the Dakota Access Pipeline across the Missouri River just north of the Standing Rock reservation.

Mark—

Heads up. See highlighted news story below. Sherriff has deployed four deputies to ND to help with public safety issues surrounding the Dakota Access Pipeline protest.
As HQ email indicates, FEMA is not paying for this EMAC request.

Wyoming is also sending six deputies to support through an EMAC request. There was a news story in today's clips, but did not mention that FEMA was paying for the deployment.

Thanks,
Jerry

I am usually really good about reading the clips, but I missed this one. Sorry.

I have heard nothing else on my end about it, nothing on social media yesterday. Everything I am seeing is talking about things really starting to escalate between protesters and police. I was going to send you an update this morning.

Cav-

Wanted to touch base regarding the clip highlighted below from R8 indicating that FEMA was paying for Indiana police officers to travel to ND to cover security tied to the ongoing Dakota Access Pipeline protest. Last I heard, there was no change in Agency position and the State had not requested to re-program any existing unspent HSGP dollars for these efforts.

Have you heard any more from Cowles & co. on this?

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)
Kara Kenney
6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline. The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform’s glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.
The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

The author, Jacob DeFitch, is a graduate student at Oklahoma State University focusing on social science issues in meteorology. He is one of the founders of SunsetWx, which provides sunset forecasts, and previously worked at AccuWeather.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

"Our focus on Zika has changed," said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up "almost every day" in Recife's maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a "causal agent" for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

"Now we've settled on Zika as the smoking gun, but we don't know who pulled the trigger," said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil's last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

"Sexual habits and hygiene may also play a role," he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

"We suspect the villain has an accomplice, but we don't know who it is," Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies' brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother's first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.

The vast majority of cases the CDC has counted were attributed to infections acquired abroad or through sexual transmission, though mosquitoes have spread the virus in a few neighborhoods in and around Miami. Experts have warned, however, that local mosquito-driven outbreaks may be occurring in other parts of the country, particularly in states along the Gulf of Mexico. An estimated 80 percent of people infected with the virus don't have symptoms and don't realize they have Zika.

Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine, said Congress's failure to approve Zika funding this year means there was no effective way to accurately count how many people were infected.

"We'll have to hold our breath to see what happens in labor and delivery suites in a few months," he said. "That's the only way we'll know whether we've dodged a bullet."

Legislation To Cap Flood Insurance Profits Unveiled (Greater Media Newspapers, New Jersey)

By Bruce Moran

Greater Media Newspapers (NJ), October 25, 2016

The Flood Insurance Reimbursement Standards Transparency (FIRST) Cap Profits Act was unveiled by Congressman Frank Pallone Jr. (D-Monmouth, Middlesex) during a press conference that was held in Highlands on Oct. 19.

That legislation would require increased oversight and transparency of the National Flood Insurance Program (NFIP) by the Federal Emergency Management Agency (FEMA) and cap the profits of private companies providing flood insurance at 10 percent.

A 2009 Government Accountability Office report found that profits for flood insurers averaged 16.5 percent, while a more recent study found profits closer to 30 percent. In the wake of superstorm Sandy and other recent disasters, FEMA and NFIP have faced accusations of incompetence and fraud, which has led to thousands of New Jersey families being overcharged or without the payments they rightly deserve.

"It is shameful that private insurance companies have profited from Sandy while failing to meet their basic obligations under the NFIP. It is inexcusable that FEMA has failed to provide proper oversight of those entities — especially when Congress has already empowered and required the agency to do so," said Pallone. "FEMA has a responsibility to ensure that policyholders are treated fairly and charged a fair market price for the service they purchase, and my bill will take an important step in that direction. I will also be using the reauthorization of the NFIP next year as an opportunity to push for more accountability from FEMA and insurance companies."

Earlier this year, Frontline's documentary, "The Business of Disaster," examined issues with flood insurance after superstorm Sandy. Frontline did its own analysis and concluded that private insurers made more than $400 million in profits from FEMA in the year that superstorm Sandy devastated the Atlantic coast — the highest profit in the four-year period from 2011 to 2014. Between 2011 and 2014, industry-wide profits averaged $325 million a year — nearly 30 percent of the revenues the companies receive from FEMA. At the same time, many of those insurers were underpaying or outright denying legitimate flood insurance claims.

The FIRST Cap Profits Act would rectify this problem by forcing FEMA to review the finances of these companies, something it was required to do by the Biggert-Waters Flood Insurance Act of 2012. Additionally, by capping profits at 10 percent, the legislation would ensure that taxpayer dollars are going towards policyholders, while leaving room for these companies to make a profit for administering a program they bear no risk in.

Pallone has been a leader in demanding transparency and swift action on behalf of those who have suffered from inefficiencies and documented, widespread fraud perpetrated by private insurance companies in the aftermath of superstorm Sandy. This year he pushed FEMA to complete delayed claims in the review process from Sandy. FEMA has now completed 99 percent of the claims, which have so far resulted in $111 million more in payments coming to policyholders.

Subject: North Dakota EMAC request 2016

DATE: November 8, 2016 2:14:26 PM MST

Dear PIOs,

The Division of Emergency Management has received the following request from North Dakota via the Emergency Management Assistance Compact (a system of state-to-state mutual aid). The request is for one PIO to support North Dakota for two weeks during the pipeline protests going on there.

If you are interested in supporting North Dakota, please let me know and I'll get you in touch with our EMAC coordinator.

Please read the following resource request. Here's the short version; the entire request follows:

Deployment period: 11/13-28/16
Description:

> One PIO to act in a support capacity to lead PIO for an ongoing protest incident in ND. 2 week deployment (14 days with 2 days for travel) for a total of 16 days Equipment needed: Laptop computer Assisting lead PIO with media calls, crafting fact sheets, timelines, media alerts, and news releases. Hours are Typically 8:00 am-5:00 pm.
>
> Safety: No safety or health concerns identified; Cold weather gear required.
>
> Working conditions: Field impacted area; Normal - infrastructure & support services operational; Mobile laptop and media phone will be issued.

Resource Request #1102-RR-5386

Contact Name: (b)(6)

Contact Email: (b)(6)@nd.gov

Contact Phone: (b)(6)

Update:

Broadcasted To: All

Total Recipients: 377

Event Name:	Dakota Access Pipeline (DAPL) Protest October 2016		
State Mission TN #:	16-073-227	EM Software TN #:	16-073-227
Requesting Agency:	State of North Dakota	EMAC TN #:	1102-RR-5386

Requesting State REQ-A Contact:

First Name:	(b)(6)	Last Name:	(b)(6)
Phone 1:	(b)(6)	Phone 2:	(b)(6)
Email 1:	(b)(6)@nd.gov	Email 2:	nddes@nd.gov

Mission Type/Source: State Type / Status:

Mission Description: Public Information Offcier

Resource Description: One PIO to act in a support capacity to lead PIO for an ongoing protest incident in ND. 2 week deployment (14 days with 2 days for travel) for a total of 16 days Equipment needed: Laptop computer Assisting lead PIO with media calls, crafting fact sheets, timelines, media alerts, and news releases. Hours are Typically 8:00 am-5:00 pm or as needed to respond to protest activities.

NIMS Type:

Requested: 1 # Type: Personnel

Deployment Dates (including travel days):

Mobilization: Demobilization:

Deployment Date: 2016-11-13 Demobilization Date: 2016-11-28

Duty Length: 16

Deployment Details:

Work Location/Facilities: State EOC

Location/Facility Name: North Dakota State Emergency Operations Center
Address 1: 35 Fraine Barracks Lane
Address 2:
City: Bismarck
Zip Code: 58504
Working Conditions: Normal - Infrastructure & Support services operational
Working Conditions Comments:
Living Conditions: Normal - All amenities available
Living Conditions Comments: Cold weather gear
Logistics Comments: Laptop Media cell phone will be issued

Identify Health & Safety Concerns (All selected Apply):

X	No Safety or Health Concerns have been identified
	Immunizations or Vaccinations are suggested to deploy
	Environmental Hazards Exist
	Personal Protection Equipment Needed

Subject: Notes from congressional call

- Pretty quiet in HQ congressional
- BCEM is November 15-17
- Employees encouraged to vote, perhaps early because of potential of a no-notice event. (Employees can take three hours on election day if needed to make sure they can vote.)
- I reported on the pipeline protest, the letter going out today to seven mayors and the county commissioner (plus congressionals), and a new one received via HQ from Bennet/Polis re Highlands Ditch.
- R5 RA announced his resignation. First political to leave? … Wisconsin got declared, but the state postponed discussion of JFO/DRCs because it is now hunting season. … Request from Minnesota for IA and PA
- R4 has transitioned Hurricane Matthew calls to weekly instead of daily.
- Flood map update is a couple days late this month.

Subject: notes from the 9 am

- IMAT is deploying to LA today to be in place tonight (Conner will be staying and Daniel will be going once he finishes his week at EMI).
- State of ND requested a COW (for support with broadband capability) to put down by the protests that are occurring near the Standing Rock Reservation. We are connecting the State with the Region's contact.
- We have a Red Flag warning in Utah today.
- Rain, Rain and more Rain in LA today and over the next few days.
- MERS will be deploying to Wisconsin, however, they don't have a date yet.
- The new DCO will be starting tomorrow and will start to make the rounds to meet with Divisions. He will be in the Springs the rest of the week for NORTHCOM events.
- Nancy will be here tomorrow and there out the rest of the week.
- Theresa will be teleworking tomorrow morning and then leave in the afternoon (tomorrow is her birthday).
- The cell towner at Rocky Boys is now up and functional. They now have good Verizon service on the reservation.
- Recovery hopes to transition Baker back to the Region by the end of the week (8 PWs).
- Mike O. is back in the office.
- The Region is still looking for a CFC Coordinator.

EA reported:

- Stacie is on leave today.
- Three calls today (pre met for Senate Indian Affairs Committee, call with Senate Indian Affairs Committee and Baker Briefing). Program will be participating in all three calls.
- Protests near Standing Rock Reservation over the oil pipeline have garnered national attention. Representatives from tribes across the region and country will be arriving today. It could impact some of our travel and outreach – we won't be a focus. Tim and Bunk asked that I contact Chris Anderson, even though the protests have been peaceful, for situational awareness.
- Anticipate HQ will open consultation this week for the Tribal Policy, Region VIII will be changing how we engage for this consultation.
- Thanked everyone for support for Sally Clark visit support.

Subject: Notes on CAD call

Hot Issues:

- Matthew, plus other events.

Briefings:

- None scheduled. Congress returns Tuesday after election.

`

Regional Reports

4: Lot of Matthew decs and requests… Attendance was very low on Georgia cong teleconference, only one or two districts affected, so resorting to individual contacts with those offices now.
5: Dan says quiet now, but one pending dec request for Wisconsin and likely MN will ask for IA and PA. Dan will go staff one of those, since apparently everyone else in country is deployed somewhere.
6: Mapping issue in New Mexico, may be corrected OK… Singapore delegation coming through Louisiana to check recovery (from Katrina? State Dept reached out; need to loop in FEMA intern'l affairs)… congressional complaints about housing in B Rouge, still hot…
8: Noted our recent FMAG, that we are watching the ND pipeline situation, and, as R1 had noted, that the teleregistration intake training for the SWAT was helpful and interesting.
10: Collective sigh of relief storm system that came through not as bad as anticipated…

Strat Comm: agreed the customer intake training for SWAT team was interesting and helpful… **Great Shakeout on 10/20!!** … Tribal policy renewal out for public comment till 10/28… IAEM just finished, no senior VTC today because leaders still out. BCEM Nov. 15-17. …

OCC: Working on draft legislative proposal to give reservists employment protection for when deployed. Request from Dep. Administrator. May circulate among different offices next week. Will go through OMB if to ever go to congress. Will take a while, though Dep. Admin. wants it done pretty quickly, during this administration.

North Dakota Oil Pipeline Battle: Who’s Fighting and Why (NY Times)

By JACK HEALYAUG. 26, 2016

A protester rode a horse through the construction site for the Dakota Access oil pipeline in south central North Dakota. Credit Daniella Zalcman for The New York Times

This week, an impassioned fight over a 1,170-mile oil pipeline moved from the prairies of North Dakota to a federal courtroom in Washington. The Standing Rock Sioux tribe, whose reservation lies just south of the pipeline’s charted path across ranches and under the Missouri River, has asked a judge to halt construction. The American Indian tribe argues that a leak or spill could be ruinous.

It may take until Sept. 9 for a federal judge to decide whether to allow the Dakota Access pipeline to move ahead, or grant an injunction that would press the pause button on construction.

Here is a look at how the battle over the pipeline has become an environmental and cultural flash point, stirring passion across the Plains and drawing hundreds of protesters to camp out in rural North Dakota.

What Is Happening in North Dakota?

American Indians have been gathering since April outside Cannon Ball, a town in south central North Dakota near the South Dakota border, to protest the Dakota Access pipeline as construction commences. Starting with members of the Standing Rock Sioux tribe, the protest has since grown to several hundred people — estimates vary — most of them from tribes across the country.

The protesters have encamped in a field belonging to the United States Army Corps of Engineers. Each day, they march a mile up a highway to a construction site where preparatory work is being done for the pipeline. While the protesters say they are peaceful, there have been reports of heated confrontations with law enforcement officers and construction workers, and 20 people have been arrested. Construction on a road to the pipeline has stopped for the moment. The pipeline company, Energy Transfer Partners, has sued several protesters, claiming they have threatened and intimidated contractors and were blocking work at the site.

What Does Each Side Want?

The Dakota Access pipeline is a $3.7 billion project that would carry 470,000 barrels of oil a day from the oil fields of western North Dakota to Illinois, where it would be linked with other pipelines. Energy Transfer says the pipeline will pump millions of dollars into local economies and create 8,000 to 12,000 construction jobs — though far fewer permanent jobs to maintain and monitor the pipeline.

Members of the Standing Rock Sioux tribe see the pipeline as a major environmental and cultural threat. They say its route traverses ancestral lands — which are not part of the reservation — where their forebears hunted, fished and were buried. They say historical and cultural reviews of the land where the pipeline will be buried were inadequate. They also worry about catastrophic environmental damage if the pipeline were to break near where it crosses under the Missouri River.

What About Protests in North Dakota?

For the moment, the mood there is calm, but anxious. North Dakota's governor has declared a state of emergency there, and law enforcement has barricaded the main highway leading to the protest site and the campers.

Hundreds of people are camped out about a mile down the road from the construction site. They say they are there to pray and protest peacefully, but some people are worried that the situation could turn volatile if work resumes at the site or the government tries to disband the camp.

Are Others Fighting the Pipeline?

Yes. State and federal agencies have approved the pipeline, and some farmers and ranchers have welcomed the thousands of dollars in payments that came with signing agreements to allow it to across their land. But others oppose the pipeline.

In Iowa, one of the four states that the pipeline would traverse, some farmers have gone to court to keep it off their land. They say that Iowa regulators were wrong to grant the pipeline company the power of eminent domain to force its way through their farms. Most landowners in the 346-mile path of the pipeline through Iowa, however, have signed easements allowing it to be built across their land.

American Indians vs. Dakota Pipeline

The Standing Rock Sioux tribe and others are protesting the Dakota Access pipeline, which they say threatens water supplies and sacred lands.

How Many Pipelines Cross the United States?

The United States has a web of 2.5 million miles of pipelines that carry products like oil and natural gas, pumping them to processing and treatment plants, power plants, homes and businesses. Most of the lines are buried, but some run above ground.

While a natural gas line to a newly built subdivision is not likely to generate national controversy, proposed major pipelines like the Keystone XL, the Dakota Access or the Sandpiper in northern Minnesota have generated huge opposition from environmental groups and people living in their paths.

How Safe Are Pipelines?

Energy companies and their federal overseer, the Pipeline and Hazardous Materials Safety Administration, promote the safety record of pipelines. Pipeline companies say it is far safer to move oil and natural gas in an underground pipe than in rail cars or trucks, which can crash and create huge fires.

But pipeline spills and ruptures occur regularly, sometimes in small leaks and sometimes in catastrophic gushers. In 2013, a Tesoro Logistics pipeline in North Dakota broke open and spilled 865,000 gallons of oil onto a farm. In 2010, an Enbridge Energy pipeline dumped more than 843,000 gallons of oil into the Kalamazoo River in Michigan, resulting in a cleanup that lasted years and cost more than a billion dollars, according to Inside Climate News.

In a 2012 examination of pipeline safety, ProPublica reported that more than half of the country's pipelines were at least 50 years old. Critics cited aging pipelines and scant federal oversight as factors that put public health and the environment at risk.

Corps says pipeline still needs water-crossing easement (Bismarck Tribune)

- LAUREN DONOVAN Bismarck Tribune
-

Lauren Donovan

Standing Rock Sioux Chairman David Archambault II, center, is surrounded by family and friends following his address to the council fire gathering at the Dakota Access Pipeline protest encampment Thursday after returning from a federal court room in Washington, D.C.

MORTON COUNTY — While hundreds are settling in for the long haul at an encampment to protest the Dakota Access Pipeline, the U.S. Army Corps of Engineers confirmed Thursday that the pipeline developer, Energy Transfer Partners, does not yet have a written easement to build the pipeline on corps property.

Corps spokesman Larry Janis said the easement is still under review, though the agency did issue Section 408 permission in late July that allows the easement to be written.

“They can’t build the project by accessing corps property from west to east across Lake Oahe,” Janis said of any current construction.

That could partly explain the company’s decision Aug. 18 to voluntarily stop construction at its work site just north of the Standing Rock Sioux Reservation near the Missouri River-Lake Oahe, where an active protest led to 28 arrests. The company has since received a federal court restraining order to prevent all arrestees — including tribal chairman Dave Archambault — and any “Jane and John Doe” from being at the work site and places such violations in federal, not district court.

The stopped work also stopped active protest, and protesters have since held prayer circles and other gatherings in the camp area about 1 mile south.

The realization that the company still does not have an actual easement surfaced Wednesday in a federal district court in Washington, D.C., where the Sioux tribe’s request for an injunction to stop the pipeline pending its suit against the corps was heard. The court judge said he wants more time to study whether the corps failed to follow the National Historic Preservation Act and other federal laws in its environmental review of the project. The judge said he will rule on the injunction Sept. 9.

“Everybody thought they had it (easement),” said attorney Carolyn Raffensperger, executive director of the Science and Environmental Health Network. “This is really important information.”

Raffensperger is among four attorneys volunteering legal services to the tribe and the individuals who were or may be arrested.

They addressed several hundred circled around the council fire mid-day Thursday; a cool, breezy day that called for blankets and jackets. They said legal issues may get worse for the state of North Dakota and other agencies.

Amnesty International observers were in the camp Thursday and an observer from the United Nations is scheduled to be in camp Tuesday, said Phyllis Young, the Standing Rock camp coordinator.

Young said the tribe is alleging racial discrimination for acts including a police barricade on Highway 1806 near Mandan that detours anyone going home to the reservation, but gives access to everyone else north of the reservation, and airplane surveillance.

“We are exploring the defense of that roadblock. There’s nothing to warrant that kind of lockdown," said Angela Bibens, an attorney.

The roadblock is manned 24 hours a day by North Dakota Highway Patrol troopers and other cooperating agencies. Bibens urged anyone with an outstanding warrant or unpaid child support to refrain from getting arrested to prevent their personal problems from getting worse. She said only people with a clean record should consider themselves arrest-able.

Meanwhile, camp managers met Thursday to discuss logistics now that it appears the camp, with anywhere from 500 to 2,000 people in tents and tepees, will stay active until the court’s injunction decision Sept. 9.

Johnelle Leingang, an emergency manager, said a noticeable number of people left the camp after Wednesday’s news that the injunction decision would be delayed.

“The majority are coming back, and the head cook said she’ll provide the same amount of food for 2,500 people,” Leingang said.

The camp is actually three camps: the main Seven Council camp on the north side of the Cannonball River, the Rosebud camp across the river and the original Sacred Stone Spirit camp further southeast.

Even as a small group from the Arizona Navajo Nation that brought meat and produce to the campers earlier this week packed up to go home Thursday, a group of eight Native Descendants from California rode in on motorcycles to stay through the weekend.

“It was a beautiful drive. We had the heart and the spirit to get here and, if we could stay longer, we would. This is history in the making,” Anthony Cuevas, said.

Chairman Archambault, who this week had an opinion piece on the protest published in the New York Times, spoke at the council fire after returning from the D.C. court hearing.

He expressed gratitude for the support from tribal nations around the country and for the peaceful prayerful nature of the camp.

“When this is done, if it’s ever done, they will remember the people who live on reservations. What I see today is unbelievable. The prayers are never-ending," said Archambault, adding that the protest has caught the attention of the nation.

Protesters adjust to camp life (Bismarck Tribune)

- CAROLINE GRUESKIN Bismarck Tribune

CANNON BALL — An upside down flag hangs in the center of a new community larger than most small towns in North Dakota. It’s a protest camp near the Cannonball River at the border of the Standing Rock Indian Reservation.

The flag is a symbol of distress, that the area had been taken over by an enemy. But the atmosphere on the afternoon of Aug. 18 at the Seven Councils or Overflow Camp, where hundreds are staying in Morton County, hardly feels urgent. Rather, it's joyful and cooperative.

The setup is an extension of the Camp of Sacred Stones, located on the reservation at the confluence of the Cannonball and Missouri rivers, where people have been protesting an oil pipeline since April. During the past week, the once-small effort has grown to an estimated 1,500 to 2,000 people.

On Aug. 17, after days of protests, work at the Dakota Access Pipeline site just north of the camp was put on hold until Wednesday, when a hearing was held on the tribe's lawsuit against the Army Corps of Engineers over its approval of the pipeline crossing under the Missouri River.

Most people at the camp, who rallied at the work site, insisted the demonstrations were peaceful, but law enforcement has said officers received information about weapons. The Morton County Sheriff's Department said in a statement on Aug. 19 no weapons were seen.

Many at the camp saw the previous days’ efforts as a small victory. Often repeated was a gladness that the tribes were working together.

“It’s been a long time since we all camped together,” said 18-year-old Jasmine LeBeau of Eagle Butte, of the several tribes gathered there. “It feels natural.”

LeBeau traveled back and forth by bus from the Cheyenne River Indian Reservation in South Dakota three days in a row with her family. On Aug. 18, they said the travel was enough and decided to put down camp.

She asked how she could help and was directed to prepare giant pots of soup. She cooked over an open fire near a tent where women molded dough into fry bread. A few feet away, a dozen kids shucked corn hauled in on a pickup bed.

She was preparing food for the thousands who have come from across the country — the unfamiliar license plates give them away — to show their support for the Standing Rock Sioux Tribe in its protest of the pipeline.

The group at the camp is predominantly native, but many white people are there, too. There are kids, adults and grandparents.

Many are camped in tents and teepees set up between awkwardly parked school buses, which bring people in each day from nearby reservations.

Some people show up with food, water, tents. Others bring just enough gas for the drive down.

When people started to flood in over the weekend — many found out about the event through social media or were asked by their tribal chairman to join — and numbers exceeded 500, Standing Rock leaders started planning to provide for the big group.

“We knew immediately that we needed Porta Potties,” said Johnelle Leingang, the tribal chairman’s executive secretary and member of the emergency management task force. “That’s essential.”

The task force coordinates with the state for water tanks, Dumpsters, a medical trailer and a wash station. They have volunteer nursing assistant and emergency medical technicians. Leingang said they arranged for a helicopter pad for emergencies, as ambulances cannot access the site.

"The Lakota people, it is in their nature to mobilize," said Harold Tiger, the emergency manager at the Cheyenne River reservation, who calls himself the EMS Warrior and was assisting in Cannon Ball. "Everyone takes on their responsibilities."

The biggest issue so far has been heat exhaustion, Leingang said. People of all ages are walking a mile and a half to the protest site, where hundreds have stood in recent days demanding workers to stop building an oil pipeline under the Missouri River, in temperatures that exceeded 80 degrees.

There is no real plan for extreme weather, except to keep everyone updated on the forecast.

Protesters said they were washing up in a nearby creek or heading over to Prairie Knights casino and Cannon Ball, as there are no showers onsite.

People said most supplies have been donated. There is a tent up front, where people drop off food and water, trash bags and supplements for babies and diabetics. A rumor is going around about two deli trucks coming in from California. No one seems to remember to give feminine hygiene products, a family working in the donation tent contended.

Cashiers at nearby stores said business has been steady as people from around the county pick up supplies and items to donate. Water, ice, sandwich meats and tobacco have gone fast from the Family Dollar and White Buffalo Supervalu in Fort Yates.

Joye Braun, one of the organizers, described the Camp of Sacred Stones similarly to the overflow camp, though the focus is on prayer. She denied a Tribune reporter and photographer access to that camp.

Security also seemed tighter at the entrance to the Camp of Sacred Stones. People coming in were asked if they had alcohol or guns and if they were a "Fed."

Mark Tilsen, a former teacher on the Pine Ridge reservation in South Dakota, said he chose to stay at the second camp, not the original spirit camp, because space is limited there and he wants to turn his attention toward action instead of prayer.

"For Oglala, we've been praying all summer, and we're done with it," Tilsen said. "We're here to stop the pipeline."

Native Americans Protest New Oil Pipeline In North Dakota (NPR)

August 25, 20164:26 PM ET
Heard on All Things Considered
Amy Sisk

Native Americans and environmentalists are protesting a pipeline slated to carry a half a million barrels of crude daily from North Dakota to Illinois. But the oil industry says the pipeline is safe.

KELLY MCEVERS, HOST:

A fight over the route of a new pipeline is gaining momentum while it plays out in court. Hundreds of Native Americans from tribes across the United States are protesting in North Dakota. They're setting up camp at the site where the pipeline is slated to cross under the Missouri River. Reporter Amy Sisk of the public radio collaboration Inside Energy says the group is finding an eager ally in environmental groups.

AMY SISK, BYLINE: In what's usually an empty field, there are cars, trucks, teepees and tents surrounding me in a site near the Standing Rock Sioux Reservation in south central North Dakota. Those protesting here don't want the Dakota Access pipeline built. That pipeline is permitted to cross federal land under the Missouri river a mile north of the reservation border.

UNIDENTIFIED CROWD: (Chanting) Keep it in the soil.

SISK: But the tribe is essentially saying not in our backyard.

UNIDENTIFIED CROWD: (Chanting) Keep it in the soil.

SISK: Alice Brownotter is just 12 years old. Today she's leading a crowd of hundreds of protesters.

ALICE BROWNOTTER: When it goes through - or if - and when it breaks, it will affect everyone.

SISK: Like others here, Brownotter worries that if the pipeline leaks, it will affect the drinking water on her reservation. The pipeline is approved to stretch from the Bakken oil fields of western North Dakota to Illinois. Dallas-based Energy Transfer Partners is building it and says it could carry more than half of North Dakota's daily crude production.

Kari Cutting is with the North Dakota Petroleum Council. She says state-of-the-art equipment will monitor this pipeline, which is a big part of the nation's energy strategy to deliver cheap oil.

KARI CUTTING: This is a product that they desire, they want. They have the markets. They have the people. And we're trying to get it there.

SISK: Safety experts say pipelines are a considerably better way to transport oil. Last year alone, there were more than a half dozen major oil train accidents. But still, it's pipelines that remain the focus of opposition by environmental groups.

Jason Kowalski's with the group 350.org and says environmental groups like his oppose pipelines with the hope of keeping oil in the ground. Despite their efforts, drilling continues, and the oil is transported in other ways. But the groups did successfully block the Keystone XL pipeline slated to bring tar sands crude from Canada to U.S. refineries. The Obama administration rejected it last year.

JASON KOWALSKI: People took a warm-up lap with Keystone. We all focused on one pipeline for a few years.

SISK: This pipeline is their latest target. It's here in this remote part of North Dakota where hundreds of people are now camped out in the grassy prairie close to the construction. That site is near but not on the reservation. Further north in Bismarck, trains carrying oil safely cross Missouri River bridges every day. Jon Eagle Sr. is Standing Rock's historic preservation officer. Today he's rallying the protesters with his microphone.

JON EAGLE SR: For two years, we've been holding them off, waiting for you to come. Hey, well, now you're here with us.

(SOUNDBITE OF ULULATION)

SISK: The protests forced a halt in construction last week. The Standing Rock tribe requested a preliminary injunction, arguing that the U.S. Army Corps which approved the pipeline in July failed to adequately consider its impact on sacred sites. A U.S. district court judge heard arguments yesterday and is expected to rule in two weeks.

Meanwhile, North Dakota's governor has declared an emergency in this area, and more than two dozen protesters have been arrested. But protest organizers say they're not going anywhere and are committed to protesting this pipeline peacefully. For NPR News, I'm Amy Sisk.
MCEVERS: Inside Energy is a public radio collaboration focused on America's energy issues.

Dakota Banning (snopes.com)

Social media rumors inaccurately reported water was cut off to Native Americans protesting against the Dakota Access Pipeline.

Updated: Aug 25, 2016

CLAIM: The state cut off water access to Native Americans protesting the Dakota Access Pipeline.

⊗ mostly false

WHAT'S TRUE: The state supplied two supplemental water tanks as part of ongoing support for tribal protests against the construction of the Dakota Access Pipeline, but those tanks were removed after they were determined to be at a secondary site outside the state's jurisdiction.

WHAT'S FALSE: Neither the state of North Dakota nor the federal Department of Homeland Security cut off the water supply to protesters, and the state provided aid and support to Native American protesters situated on a legal encampment.

Greens try to reassemble anti-pipe dream team (Politico.com)

By Eric Wolff

08/25/16 10:00 AM EDT

With help from Bob King and Zachary Warmbrodt

LET THEIR POWERS COMBINE TO STOP PIPELINE: Environmentalists are trying to reassemble the dream team that blocked the Keystone XL pipeline, only this time to prevent construction of the Dakota Access pipeline from North Dakota to Illinois, which is nearly as long. As Pro's Elana Schor reports, most greens have been devoting their energy to the presidential election, leaving smaller groups, and in this case the Standing Rock Sioux Tribe, to wage battles to stop infrastructure alone. "What should have happened after Keystone got rejected was a huge influx of resources to local and state groups fighting pipelines," said Bold Alliance founder Jane Kleeb, a leader of the movement against the Canada-to-U.S. pipeline who is now leading a four-state push against eminent domain for fossil-fuel projects. "That didn't happen." A Wednesday protest in D.C. featured the Sierra Club and 350.org as well as Hollywood actresses/activists Susan Sarandon, Shailene Woodley, and Riley Keough.

Freudian slip from judge? The Sioux have challenged the line, and in a hearing in federal court on Wednesday, the judge on the case may have signaled his openness to putting a temporary hold on the project. He laid out the schedule for "when I issue my injunction." Supporters of the Sioux, who feel developers did not consult them sufficiently on the project, believe the remark could signal the judge's sympathy for their views.

Follow the money: For anyone interested in seeing all the players involved in funding Dakota Access, the Bakken Pipeline Resistance Coalition has created an interactive, visual display of the different investors in the project.

A roadblock manned by North Dakota National Guard troops blocks North Dakota Hwy. 1806 before sunrise Thursday, Oct. 27, 2016, north of Cannon Ball. Michael Vosburg / Forum Photo Editor2 / 2

MORTON COUNTY, N.D. — One day after negotiations between Dakota Access Pipeline protesters and law enforcement broke down, the mood was tense but quiet Thursday, Oct. 27, as the sun rose above the resistance camps.

Above, in restricted airspace, a North Dakota Highway Patrol aircraft circled.

Cecily Fong, spokeswoman for the state's Department of Emergency Services, said medical staffing is in place should any injuries occur at the protest sites.

She said law enforcement will likely issue a warning to protesters congregating at a camp along State Highway 1806, where pipeline opponents have set up teepees and staged hay bales, logs and barbed wire to block the road, if necessary.

However, Fong said she didn't know the timing of any law enforcement action planned, and officers want protesters to leave the northern camp, which is on private property recently purchased by the pipeline's developer, Dallas-based Energy Transfer Partners.

Protesters will be encouraged to return to the southern camp on U.S. Army Corps of Engineers land.

By Thursday morning, protesters set up an additional "halfway" roadblock on Highway 1806 — between their main barricade and the frontline camp where they've promised to hold their ground.

At the halfway roadblock, pipeline opponents staged tires, plywood, sheet metal and logs — all ready to move onto the highway should law enforcement approach. The additional roadblock provides more time for those at the main camp to leave or join the protesters at the frontline camp.

Sam Wounded Knee, from Crow Creek Nation in South Dakota, spent the night at the "halfway" roadblock.

He said a plane flew overhead through the night, and it appeared two people were in the surrounding hills to the west and using flashlights to signal back and forth with the plane.

Asked if he expects violence in a confrontation, "from the police, yeah, definitely," he said.

"All we're trying to do is protect our people," Wounded Knee said, adding that women and children were asked to leave the frontline camp Wednesday night. About 200 people are at the frontline camp.

With the new roadblock established by protesters, Highway 1806 has numerous staging areas, camps and road blocks stretched out over several miles, starting with an equipment staging area set up by law enforcement about a mile south of Fort Rice.

Traveling south on 1806, in succession, there is a law enforcement barricade, followed by the protesters' main barricade, halfway roadblock, frontline camp and main camp.

On Wednesday, negotiations between pipeline opponents and law enforcement officials broke down, setting up a possible clash as hundreds of protesters vowed to hold their ground at a the frontline camp directly in the path of the four-state oil pipeline.

A contingent of law enforcement and National Guard officials met with camp representatives on Highway 1806.

Cass County Sheriff Paul Laney of Fargo, who is helping Morton County coordinate the law enforcement response, made one last plea for protesters to remove their roadblock on 1806 and abandon the roughly 200-person "frontline" camp, where teepees and tents continued to pop up on land where the pipeline is planned

"We're here telling you this is private property and you have to leave," Laney told camp coordinator Mekasi Camp-Horinek on Wednesday. "We don't want a confrontation. Please stand your people down and go back to the main camp."

Mekasi pointed at the road – "our no surrender line," he said – and then back at the frontline camp standing in the way of the four-state, $3.8 billion oil pipeline – their "no retreat" line.

"That's your final word?" Laney asked.

"That's my final word," Camp-Horinek said, walking away.

"Good day, gentleman," Laney said, turning toward the staging area about five miles away near Fort Rice, where a mass of law enforcement and military forces has gathered.

Morton County Sheriff Kyle Kirchmeier said authorities will continue to do everything they can to resolve the situation peacefully, but he said discussions with camp leaders Wednesday reached an "impasse."

Kirchmeier emphasized that "the last thing we want to do is do it forcefully."

"If we have the chance for open dialog, that's what we want to continue," he said.

Pipeline opponents say they've reclaimed land under the Fort Laramie Treaty of 1851, noting the Sioux never ceded that territory.

But Kirchmeier said Morton County authorities have to enforce existing laws and treaty issues would need to be resolved by the federal government. He added that currently the protesters are infringing on other residents' rights by blocking the highway.

Pipeline update:

Yesterday was a big day, Jessy Jackson arrived on site and talks between the protestors and law enforcement broke down.

- There was an article today from the Associated Press Regarding WY sending law enforcement to North Dakota: http://trib.com/news/state-and-regional/wyoming-sends-troopers-to-north-dakota-pipeline-protest/article_2972e493-0b71-5cab-9c7d-3c27fb67542e.html (full article pasted below). Pre the article both tribes in WY are opposed to sending the law enforced support.
- There was a media report yesterday that Indiana is sending law enforcement to support ND. The article references FEMA paying for the support. We have reached out to Region IV for awareness and to let them know that FEMA is not paying for any law enforcement. The article is likely referencing EMAC. http://www.theindychannel.com/news/call-6-investigators/call-6-dozens-of-indiana-officers-deployed-to-north-dakota-pipeline-dispute-but-whos-paying (full article below).
- I am hearing a lot about treaty rights on social media, this morning on NPR the Chairman of the Standing Rock Sioux talked about this land belonging to the tribes based on treaties (NPR and other media sources).
- A new encampment (the 1851 Treaty Camp) has been set up directly on the pipeline path, which is private property (KILI Radio).
- On Wed. Jessy Jackson arrived on site to speak out about the many human and civil rights violations being perpetrated by local police (Indian Country Today).

Morton County Sheriff Kyle Kirchmeier said authorities will continue to do everything they can to resolve the situation peacefully, but he said discussions with camp leaders Wednesday reached an “impasse.”

Kirchmeier emphasized that “the last thing we want to do is do it forcefully.”

“If we have the chance for open dialog, that’s what we want to continue,” he said.

Pipeline opponents say they’ve reclaimed land under the Fort Laramie Treaty of 1851, noting the Sioux never ceded that territory.

But Kirchmeier said Morton County authorities have to enforce existing laws and treaty issues would need to be resolved by the federal government. He added that currently the protesters are infringing on other residents’ rights by blocking the highway.

Wyoming sends troopers to North Dakota pipeline protest

Wyoming sends troopers to North Dakota pipeline protest

- BEN NEARY Associated Press

Protesters set up tepees and tents Monday in southern North Dakota on property owned by the pipeline company.

CHEYENNE — Wyoming has sent six highway patrol troopers to North Dakota to help authorities deal with Indian protesters demonstrating against the construction of an oil pipeline, prompting objections Tuesday from some Wyoming Indian leaders.

Sending the troopers merely extends emergency help to another state and does not signal that Wyoming has taken a position on the pipeline controversy, Wyoming Gov. Matt Mead said.

But Dean Goggles, chairman of Northern Arapaho Business Council, called on Mead to recall the troopers immediately.

“The North Dakota tribes and tribal members from around the nation are attempting to protect both the environment and sites which have ceremonial, religious and cultural significance to the tribes,” Goggles said.

More than 100 protesters were arrested last weekend in Morton County, North Dakota, in the faceoff between protesters and Texas-based Energy Transfer Partners, developer of the four-state Dakota Access oil pipeline.

The $3.8 billion pipeline, most of which has been completed, crosses through North Dakota, South Dakota, Iowa and Illinois. Opponents worry about potential effects on drinking water on the Standing Rock Sioux Tribe’s reservation as well as harm to cultural sites.

Col. Kebin Haller of the Wyoming Highway Patrol said six troopers were sent to North Dakota on Saturday and are expected to remain there until Nov. 8.

The troopers volunteered after the governor of North Dakota declared an emergency and asked other states for law enforcement assistance, Haller said.

The six are members of the patrol's Special Services Squad who have additional training and equipment to address large crowds and civil unrest, he said. North Dakota will pay their salaries and the costs they incur while at the protest.

Mead said the decision to send Wyoming troopers happened because "a neighbor state asked for help and Wyoming answered the call."

"North Dakota asked for help from all 50 states, so Wyoming and other states responded," Mead said.

The Eastern Shoshone and Northern Arapaho tribes in Wyoming have expressed formal support for the protesters.

Jason Baldes, a member of the Eastern Shoshone Tribe and staff member at the Wind River Native Advocacy Center, accused Wyoming officials of supporting the pipeline by sending law enforcement officers to face off against protesters.

"It kind of sheds light on really who's running the show here," Baldes said. "The oil and gas industry really has the final say, and has the politicians and our elected leaders in their pockets."

Mead denied that the decision to send troopers was political.

"The Dakota Access pipeline has no impact on Wyoming, and we have not taken a stance on this issue," he said.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney

6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff's deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff's Department, Marion County Sheriff's Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff's Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. "The federal government pays for it through FEMA," said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

"Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request," said Erickson. "They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request."

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including

emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

Pipeline update:

Yesterday was a big day, Jessy Jackson arrived on site and talks between the protestors and law enforcement broke down.

- There was an article today from the Associated Press Regarding WY sending law enforcement to North Dakota: http://trib.com/news/state-and-regional/wyoming-sends-troopers-to-north-dakota-pipeline-protest/article_2972e493-0b71-5cab-9c7d-3c27fb67542e.html (full article pasted below). Pre the article both tribes in WY are opposed to sending the law enforced support.
- There was a media report yesterday that Indiana is sending law enforcement to support ND. The article references FEMA paying for the support. We have reached out to Region IV for awareness and to let them know that FEMA is not paying for any law enforcement. The article is likely referencing EMAC. http://www.theindychannel.com/news/call-6-investigators/call-6-dozens-of-indiana-officers-deployed-to-north-dakota-pipeline-dispute-but-whos-paying (full article below).
- I am hearing a lot about treaty rights on social media, this morning on NPR the Chairman of the Standing Rock Sioux talked about this land belonging to the tribes based on treaties (NPR and other media sources).
- A new encampment (the 1851 Treaty Camp) has been set up directly on the pipeline path, which is private property (KILI Radio).
- On Wed. Jessy Jackson arrived on site to speak out about the many human and civil rights violations being perpetrated by local police (Indian Country Today).
- Actor Mark Ruffalo was at Standing Rock yesterday showing his support and Leonardo DiCaprio announced today he is on his way (Indian Country Today).
- Everyone is still calling for peaceful protests (multiple media outlets).
- It is being reported there have been between 260 and 300 arrests since the protests began with most of them happening last Saturday and pepper spray being used by law enforcement (multiple media sources).
- FAA has issued temporary flight restrictions over the protest camps. Only response aircraft in support of law enforcement activity are authorized in the airspace (Bismarck Tribune).
- Negotiations broke down between protestors and law enforcement yesterday (Bismarck Tribune).
- This inforum link is to a video that shows clear frustration by law enforcement and that they do not want a confrontation. http://www.inforum.com/news/government/4145254-jesse-jackson-joins-pipeline-protest-effort-faa-issues-no-fly-restriction (InForum)

This is a particularly good story about law enforcement and what happened yesterday.

http://www.inforum.com/news/government/4146041-new-roadblock-emerges-highway-1806-confrontation-between-protesters-law

New roadblock emerges on Highway 1806 as confrontation between protesters, law enforcement looms

By Amy Dalrymple and Mike Nowatzki / Forum News Service Today at 10:22 a.m.

MORTON COUNTY, N.D. — One day after negotiations between Dakota Access Pipeline protesters and law enforcement broke down, the mood was tense but quiet Thursday, Oct. 27, as the sun rose above the resistance camps.

Above, in restricted airspace, a North Dakota Highway Patrol aircraft circled.

Cecily Fong, spokeswoman for the state's Department of Emergency Services, said medical staffing is in place should any injuries occur at the protest sites.

She said law enforcement will likely issue a warning to protesters congregating at a camp along State Highway 1806, where pipeline opponents have set up teepees and staged hay bales, logs and barbed wire to block the road, if necessary.

However, Fong said she didn't know the timing of any law enforcement action planned, and officers want protesters to leave the northern camp, which is on private property recently purchased by the pipeline's developer, Dallas-based Energy Transfer Partners.

Protesters will be encouraged to return to the southern camp on U.S. Army Corps of Engineers land.

By Thursday morning, protesters set up an additional "halfway" roadblock on Highway 1806 — between their main barricade and the frontline camp where they've promised to hold their ground.

At the halfway roadblock, pipeline opponents staged tires, plywood, sheet metal and logs — all ready to move onto the highway should law enforcement approach. The additional roadblock provides more time for those at the main camp to leave or join the protesters at the frontline camp.

Sam Wounded Knee, from Crow Creek Nation in South Dakota, spent the night at the "halfway" roadblock.

He said a plane flew overhead through the night, and it appeared two people were in the surrounding hills to the west and using flashlights to signal back and forth with the plane.

Asked if he expects violence in a confrontation, “from the police, yeah, definitely,” he said.

“All we’re trying to do is protect our people,” Wounded Knee said, adding that women and children were asked to leave the frontline camp Wednesday night. About 200 people are at the frontline camp.

With the new roadblock established by protesters, Highway 1806 has numerous staging areas, camps and road blocks stretched out over several miles, starting with an equipment staging area set up by law enforcement about a mile south of Fort Rice.

Traveling south on 1806, in succession, there is a law enforcement barricade, followed by the protesters’ main barricade, halfway roadblock, frontline camp and main camp.

On Wednesday, negotiations between pipeline opponents and law enforcement officials broke down, setting up a possible clash as hundreds of protesters vowed to hold their ground at a the frontline camp directly in the path of the four-state oil pipeline.

A contingent of law enforcement and National Guard officials met with camp representatives on Highway 1806.

Cass County Sheriff Paul Laney of Fargo, who is helping Morton County coordinate the law enforcement response, made one last plea for protesters to remove their roadblock on 1806 and abandon the roughly 200-person “frontline” camp, where teepees and tents continued to pop up on land where the pipeline is planned

“We’re here telling you this is private property and you have to leave,” Laney told camp coordinator Mekasi Camp-Horinek on Wednesday. “We don’t want a confrontation. Please stand your people down and go back to the main camp.”

Mekasi pointed at the road – “our no surrender line,” he said – and then back at the frontline camp standing in the way of the four-state, $3.8 billion oil pipeline – their “no retreat” line.

“That’s your final word?” Laney asked.

“That’s my final word,” Camp-Horinek said, walking away.

“Good day, gentleman,” Laney said, turning toward the staging area about five miles away near Fort Rice, where a mass of law enforcement and military forces has gathered.

Morton County Sheriff Kyle Kirchmeier said authorities will continue to do everything they can to resolve the situation peacefully, but he said discussions with camp leaders Wednesday reached an “impasse.”

Kirchmeier emphasized that “the last thing we want to do is do it forcefully.”

“If we have the chance for open dialog, that’s what we want to continue,” he said.

Pipeline opponents say they’ve reclaimed land under the Fort Laramie Treaty of 1851, noting the Sioux never ceded that territory.

But Kirchmeier said Morton County authorities have to enforce existing laws and treaty issues would need to be resolved by the federal government. He added that currently the protesters are infringing on other residents’ rights by blocking the highway.

PROTECTOR CAMPS REMAIN PEACEFUL

By Brandon Ecoffey
Times Editor

EVERYONE
WElCOME
Sacred Stone
Camp!

Water protectors remain peaceful despite efforts to cast them in a different level light. PINE RIDGE—Despite efforts by the local North Dakota media and county officials water protectors and Standing Rock Sioux Tribal officials say that the message emanating through the camps is one of peaceful resistance.

Nearly 3,000 water protectors gathered peacefully this past weekend in Cannonball, ND., to speak out against the construction of the Dakota Access Pipeline that is set to be built near the Standing Rock Reservation and could possibly threaten drinking water for tribal citizens. The gathering has been peaceful as organizers have directed those in attendance to not engage in violent acts.

“There are no weapons within the camp,” said Cody Hall, who is the media spokesperson for the Red Warrior Camp. “We have security in the camp at all hours and when people arrive they are asked what they have in the car. Our security walks the camps at all hours to make sure nothing like that is happening,” said Hall.

Hall says that all entering the camp are made aware that weapons and alcohol are not allowed.

Additionally, LaDonna Allard, Director of the Camp of the Sacred Stone, addressed these same issues in a press release on Tuesday after the Governor of North Dakota declared a state of emergency.

"The gathering here remains 100% peaceful and ceremonial, as it has from day one. We are standing together in prayer. No firearms or weapons are allowed. Why is a gathering of Indians so inherently threatening and frightening to some people," asked Allard.

Governor Dalrymple declared a State of Emergency last Friday to allow for additional state resources to be directed to the gatherings as he mentioned that he believed "outside agitators" were responsible for committing crime within the camps. The reports have remain unsubstantiated and irresponsible comments from local law enforcement about the possibility of the presence of pipe bombs have contributed to a false narrative about the activities of protectors.

A report from the Bismark Tribune on Tuesday, however, revealed a conflict of interest for Dalrymple as they reported that he owns stock in ExxonMobile. A spokesman for the governor told the Tribune that, "He is not going to discuss the details of his personal finances."

Early efforts by the local media and the representatives from Morton County Law Enforcement to sensationalize "reports" of weapons including pipe bombs have been quickly dismissed by those present within the camps and several journalists including LCT's Karin Eagle who spent time embedded in both camps over the weekend.

Sources inside of the office of Standing Rock Sioux President Dave Archambault Jr., have told LCT that from the start of the protest the goal of the administration is to keep the protests peaceful and prayerful. The nonviolent direct action taken by organizers of the camps has been partly credited with the overwhelming show of support from both tribalnations and non-Native allies who flocked to the camps in the thousands this past weekend.

"The growing support from tribal-nations and others for this movement has partly been brought about by the people's willingness to remain unarmed and nonviolent." **(Contact Brandon Ecoffey at editor@lakotacountrytimes.com)**

Law enforcement beefing up presence ahead of Dakota Access ruling Friday

By Forum News Service Today at 4:25 p.m.

The Dakota Access Pipeline, pictured under construction on Friday, July 29, 2016, in northwest North Dakota, is expected to be complete by the end of 2016. Forum News Service file photo by Eric Hylden

BISMARCK—Authorities are beefing up their presence in the Bismarck-Mandan area in anticipation of a court decision expected Friday on the heavily protested Dakota Access Pipeline, a spokesman for North Dakota Gov. Jack Dalrymple said Wednesday, Sept. 7.

Spokesman Jeff Zent said plans are under way for additional law enforcement officers in the Bismarck-Mandan area and enhanced patrols in Morton County, where hundreds of protesters are camped out near a pipeline construction site along Highway 1806 about 35 miles south of Mandan.

Zent said he didn't have any information on whether the North Dakota National Guard would be on standby, but said, "The governor has always said the National Guard is an option."

Thirty-seven people have been arrested on charges including preventing arrest, disorderly conduct and criminal trespass in connection with protests at pipeline construction sites in Morton County that began in mid-August.

U.S. District Court Judge James Boasberg in Washington, D.C., has said he will rule on or before Friday on the Standing Rock Sioux Tribe's request for an emergency injunction to halt construction of the pipeline, which will cross the Missouri River less than a mile north of the Standing Rock reservation. The tribe fears the pipeline will leak and contaminate its water supply and sacred sites, and its lawsuit claims the corps failed to consider the historical and cultural significance of that area.

A permitted protest is scheduled from 3 to 6 p.m. Friday on the south end of the state Capitol mall in Bismarck to coincide with the ruling. A Facebook page for the "Peace Rally Against the Pipeline" showed more than 350 people planning to attend and 1,200 interested.

Zent said the governor's office, state Highway Patrol and Morton County Sheriff's Department will continue to monitor the situation and re-evaluate the need for law enforcement to ensure public safety. A roadblock restricting southbound traffic on Highway 1806 to local traffic only remains in place.

Protesters have said they expect the ruling to be appealed regardless of which way it goes, and that they plan to continue protesting until the four-state pipeline project is rerouted or scrapped. The 1,172-mile,

$3.8 billion pipeline will initially carry 450,000 barrels of oil per day from the Bakken oil fields to Patoka, Ill., with a capacity of 570,000 barrels per day.

COLORADO:

Black Forest fire recovery leaders think about next time

By: Ellie Mulder Colorado Springs Gazette
August 13, 2016 Updated: August 13, 2016 at 9:32 pm

About 480 were destroyed, but at this point, "it's slowed down a lot. I don't think we're going to see more than what we have now," said Kenneth Clark, forest director for Black Forest Together.

The nonprofit organization, which has been a resource for those recovering after the fire, is looking to the future.

"It doesn't make any sense to clean up the black sticks if you're not trying to prevent another (fire)," Clark said. "The disaster showed us what's going to happen - it gives you a preview of what can happen at any time."

And Eddie Bracken, co-founder of Black Forest Together, said, "It's not a question of if, but when the next fire will come."

Near the organization's booth at the Black Forest Festival Saturday, Bracken and Clark discussed the progress that's been made since the fire and what more there is to be done.

Until 2016, all of the organization's work projects were completed for free, Clark said. Now, volunteers continue to complete mitigation and cleanup work for a small fee.

Education efforts occur in part to demonstrate the importance of continued mitigation and maintenance, Clark said. There is also a sense that after three years, people in the Colorado Springs area have begun to forget about the Black Forest fire.

"What we need people to understand is that there's still a lot of work to be done, and people in Colorado Springs specifically have become somewhat complacent with, 'The fire happened, it's over, it's fine,'" Clark said. "We get hundreds, if not thousands of volunteers from all over the country, but we're not getting them from home, and we need volunteers here to help us with the projects."

But the work continues. In 2014, the organization gave away about 10,000 seedlings for reforestation efforts, followed by between 6,000 and 7,000 in both 2015 and 2016, Bracken said.

And in 2014 and 2015, the organization completed over 180 work projects, including cleaning up burned land, reforestation, erosion control and green forest mitigation.

"There's a responsibility that you have to the forest to keep it mitigated, to your own home and to other people's homes that are adjacent," Bracken said.

MONTANA:

New book recounts 1959 Yellowstone-area earthquake

CLAIR JOHNSON For the Star-Tribune

A powerful earthquake that struck the Hebgen Lake area near Yellowstone National Park in 1959 also left a powerful mark on a 7-year-old boy who was asleep in his Idaho Falls home.

Historian and author Larry E. Morris said he didn’t wake up. “My mom certainly did. I think a jar fell and broke,” he said.

The 7.5 magnitude earthquake killed 28 people, including an Idaho Falls family of five who was believed to have been entombed by a massive, quake-triggered landslide that buried a campground and plugged the Madison River about 9½ miles downstream from the Hebgen Lake Dam.

The slide took less than a minute and brought down more than 80 million tons of rock into the river, forming what became Earthquake Lake. At the time, the earthquake was the second-strongest in the lower 48 states in the 20th century, said the Forest Service, which operates the Earthquake Lake Visitor Center.

“It made quite an impression on me from the start,” Morris said.

Morris, who lives in Salt Lake City, is the author of a book released in July and titled, “The 1959 Yellowstone Earthquake,” published by Arcadia Publishing and The History Press.

The book tells the story of the earthquake with a focus on the victims and survivors and those who responded to the emergency.

The book also features a foreword by Lee Whittlesey, Yellowstone National Park historian.

Morris said his parents took him and his siblings to the memorial site on top of the landslide in the early 1960s, before the visitors center was built, heard a Forest Service ranger talk about the earthquake and toured the area.

“All those dead trees and Earthquake Lake. And one cabin tilted squeewampus. But that plaque with the names on it and how the folks were buried there made a powerful impression on me,” Morris said.

Morris has been captivated by the story ever since and has taken his own family to the site.

“It was a natural subject for a book. I find the story so compelling,” Morris said.

Morris initially began research for a book in 1990 but became sidetracked by other projects and put the earthquake story aside. But, he said, he always knew he’d return to it. A few years ago, Morris resumed his research and finished his book.

“I was really thinking of the human interest, both survivors and first responders. It’s just one incredible story after another. It’s amazing,” he said.

One of the first responders was Montana Highway Patrol Trooper Glen Stevens, who was dispatched from his Whitehall home to warn residents in the Madison River Valley of flooding should the Hebgen Dam fail. In the hours after the 11:37 p.m. earthquake, there were conflicting reports about whether the dam had held.

“I had a nice phone interview with him. He seemed to remember it quite well,” Morris said. Stevens, now deceased, a deputy sheriff and two others drove up the valley, working their way toward the dam.

“They were one of the first people to reach Cliff Lake,” where a boulder dislodged and killed Edgar H. Stryker and his wife, Ethel M. Stryker, who were camping with Edgar’s three young sons, Morris said. The boys, who were in a separate tent nearby, were unhurt.

After helping at Cliff Lake, Stevens and his companions drove on toward the Madison River where they encountered the massive landslide. There they helped Irene Bennett and her son, Phil Bennett, who had camped with their family on the downstream side of the slide. Irene’s husband, Purley, and their three other children died in the quake.

Morris also interviewed Carole Painter, who was 16 at the time and the daughter of Myrtle L. Painter, who later died of injuries in a Bozeman hospital.

And Morris interviewed Billings, Montana, resident Mildred “Tootie” Greene, a nurse who was camped with her family upstream of the slide. The Greene family survived uninjured, and Greene spent the night and next day aiding others, including Myrtle Painter.

Morris said he spent an afternoon about a year ago with Greene at her Billings home. “She was fantastic and sharp as a tack. She’s one of the great heroes. She really stayed cool. I think she probably saved some lives,” Morris said.

“She had a healthy attitude toward the tragedy,” Morris said. Greene has been “extremely cooperative with anyone who ever asked” about the experience, he said.

Another nurse, Frances Donegan of Ohio, was camped with her husband, Fred, and their children near the dam, Morris said. His book recounts how Donegan rushed to help others who had gathered at what became known as Refuge Point.

Fred Donegan also helped rescue Grover and Lillian Mault, an elderly couple who had clung to a tree for hours as water rose around them.

“They deserve a lot of credit,” Morris said. The Donegans went back to Ohio and “didn’t make a lot of noise themselves. They really did a great job and deserve to be remembered,” he said.

Morris’ book features more than 100 photographs from national government archives, from survivors who contributed family photos and Morris’ own photographs. The front and back cover photographs, he said, came from the Gallatin History Museum in Bozeman, Montana.

Morris started his research at the museum. “They were really great in helping me,” he said.

Morris also credits Joanne Girvin, a Forest Service employee at the Earthquake Lake Visitor Center, with keeping the story alive.

The Forest Service opened the center on top of the slide in 1967. More than 50,000 visitors stop annually at the site, the agency said.

Morris dedicated the book to the memory of Ernest Bruffey, the 29th victim of the earthquake. Morris said Bruffey, a Havre resident, had told others of his plan to hike Granite Peak in the Beartooth Mountains between Aug. 16 and 19. Bruffey was never heard from again.

Strong shocks were recorded in the area after the initial quake and there were slides on Granite Peak, Morris said. Searchers never found Bruffey's body and his name was never included on official victim lists, he said. But evidence suggests Bruffey was a victim of the earthquake and deserves to be remembered, he said.

Morris will speak at the Montana Book Festival in Missoula, from Sept. 20 to 25.

His interest in the region extends beyond the 1959 earthquake. He authored, "The Fate of the Corps: What Became of the Lewis and Clark Explorers after the Expedition," and co-authored, "The Mystery of John Colter: The Man Who Discovered Yellowstone."

Morris is an independent writer and historian and has a master's degree in American literature and a bachelor's degree in philosophy, both from Brigham Young University.

NORTH DAKOTA:

Richland County water board appeals ND approval of diversion dam permit

By Tu-Uyen Tran on Aug 14, 2016 at 8:33 p.m.

FARGO — A month after the state of North Dakota gave a permit to the Fargo-Moorhead Diversion Authority for a dam south of the metro, opponents of the $2.2 billion project have appealed in a lawsuit.

It's the third lawsuit filed by diversion opponents, all three of which are still up in the air.

In a brief filed in state district court Aug. 3, the Richland County Water Resource District accused the State Engineer's Office of infringing on the district's right to regulate flood-control projects within the county and failing to give proper notification.

The dam would temporarily submerge farmland, mostly in Cass and Clay counties, when the Red River floods. But it could also flood 10,400 acres, or 16 square miles, of farmland in Richland County.

The state said in a brief filed Thursday, Aug. 11, that the water district needs to first seek a hearing with an administrative law judge, who presides over a separate court system, and asked the state district judge to dismiss the case for now.

Richland County and its neighbor in Minnesota, Wilkin County, are involved in the other two lawsuits as a joint power authority. The counties sued the U.S. Army Corps of Engineers and the Diversion Authority in 2013 and was eventually able to convince the judge to require an environmental review from the Minnesota Department of Natural Resources.

The DNR has completed the mostly favorable review, but the Richland-Wilkin group appealed in a lawsuit, saying the review isn't good enough.

The state of Minnesota is still reviewing the permit application for the diversion dam.

The North Dakota permit signed by State Engineer Garland Erbele July 8 listed the dam and its various components but allowed immediate construction only of an inlet structure that controls how much water from the dam enters the diversion channel. The dam is meant to reduce the Red River's flows into the diversion channel, which would route floodwater away from the metro area through a massive ditch to its west.

Each of the other components, such as the dam itself, also called an embankment, and inlets on several Red River tributaries, will require separate approval by the State Engineer.

Crucially for the Richland County water board, the only local water district the North Dakota permit mentioned the Diversion Authority must work with is the Southeast Cass County Water Resource District. That district is effectively a part of the Diversion Authority through its membership in Cass County Joint Water Resource District, a voting member on the authority board.

While some water will be stored in Richland County, the dam structures regulated by the State Engineer are all in Cass County. The Richland County district argues it must also be consulted because of the water stored within its jurisdiction.

The permit also mentioned another point of contention for diversion foes. The State Engineer had required that the Diversion Authority show it had the ability to acquire all land needed for the project, including in Richland County. Authority attorneys argued state courts have set precedent that allow entities like the Cass County Joint Water Resource District to exercise eminent domain outside their jurisdiction. The Cass County district is the Diversion Authority member charged with buying land for the project.

The Richland County water district argued that such a simple assertion was insufficient.

In a memo accompanying the permit, the State Engineer noted that the Attorney General's Office has said the state won't take a position on the legal validity of the assertion. Nevertheless, the State Engineer agreed the authority did have a "realistic plan for the procurement of the necessary property rights."

The state district court has not set a hearing date yet. In the meantime, the state has filed for a hearing in front of an administrative law judge.

In North Dakota, people vs. oil pipeline protest strengthens

- By JAMES MacPHERSON
- Updated Aug 13, 2016

NEAR THE STANDING ROCK SIOUX RESERVATION, N.D. (AP) — Opponents of a $3.8 billion Midwest oil pipeline are vowing to keep up the pressure after this week's arrests at a construction zone in North Dakota.

The Standing Rock Sioux had quietly opposed the Dakota Access pipeline for months at a "spirit camp" near their reservation, which straddles the North Dakota-South Dakota border.

Protesters' resistance heated up this week as at least 18 people were arrested, and a Hollywood actress joined their gathering.

Tribal members say the pipeline would disturb sacred sites and could affect drinking water on the reservation and for people downstream.

The four-state pipeline's path in North Dakota would cross beneath the Little Missouri River once and the Missouri River twice. The company said the pipeline would include safeguards such as leak detection equipment.

SOUTH DAKOTA:

Disaster Declaration Sends Repairs, New Homes To Pine Ridge Reservation

Associated Press, August 14, 2016

PINE RIDGE, S.D. (AP) – The Federal Emergency Management Agency says roughly 200 manufactured homes have been turned over to tribal residents a year after a federal disaster declaration for the Pine Ridge Indian Reservation.

FEMA initiated a permanent housing construction program to address the extreme housing need on the reservation after the severe weather disaster. Officials identified over 300 households eligible for repairs or for replacement with a new manufactured home.

The agency says 196 new manufactured homes have been turned over to residents. Eighty five homes had been repaired as of Aug. 2, while a remaining 23 homes are expected to be fixed by early September.

President Barack Obama signed the disaster declaration in August 2015.

WYOMING:

Little Growth On Wyoming Wildfires

Associated Press, August 12, 2016

CHEYENNE, Wyo. (AP) – Yellowstone National Park firefighters have contained a wildfire burning between Old Faithful and West Thumb and hope to have it controlled by Saturday.

The fire began Wednesday and firefighters immediately attacked it. They have kept it to less than an acre in size.

Better weather conditions have helped firefighters keep several new Wyoming wildfires largely in check Thursday and Friday.

A fire burning in the Shoshone National Forest east of Yellowstone and northwest of Cody grew slightly Thursday. The fire has burned about 2 square miles and is threatening about 95 structures.

Progress was expected Friday on another new fire burning about 20 miles southwest of Meeteetse.

Firefighters Thursday evening attacked a new fire that started in the John D. Rockefeller Jr. Memorial Parkway between Yellowstone and Grand Teton parks.

Wildfire Near Agate In Eastern Colorado Scorches 2,000 Acres

By Kieran Nicholson

Denver Post, August 15, 2016

A wildfire in northeastern Colorado has burned about 2,000 acres, according to firefighters.

The Basin fire is burning about four miles east of Agate in a wide ravine, said Kara Gerczynski, an Elizabeth Fire Protection District spokeswoman.

There were no reports of injuries or structures lost to the fire, Gerczynski said.

About 30 firefighters and 25 trucks were working the fire, which was first reported at about 6:30 p.m. Monday.

"It's a little hard for the crews to get down into the ravine," Gerczynski said.

The cause of the fire is under investigation.

MONTANA:

Bullock announces funding to rebuild community

AUGUST 12, 2016 IN NEWS ·

Governor Steve Bullock today announced that Federal Emergency Management Agency (FEMA) funding has been made available to the State of Montana to support recovery efforts of Fallon County in the aftermath of a severe tornado on June 11, 2016.

“The community of Baker can now get back on their feet and rebuild to become stronger and create more opportunities for future economic growth and job creation,” said Governor Bullock.

On June 11, the Governor executed the State Emergency Management Plan with the activation of the State Emergency Coordination Center to a level three. A state disaster declaration was declared on July 18, 2016, with an effective date of June 9, 2016, for Fallon County.

A Joint Preliminary Damage Assessment (PDA) was requested on July 1, 2016, and conducted from July 13 to July 14, 2016. The costs of responding to the storm exceeded the capability of the State of Montana.

On July 20, Governor Bullock requested FEMA evaluate the devastating effects of the tornado and affirm the area as a major disaster eligible for a Presidential Major Disaster Declaration. Federal funding is now available on a cost-sharing basis for emergency work and the repair or replacement of facilities damaged by the severe tornado and the deposit of small and large debris into Lake Baker.

NORTH DAKOTA:

Cass County, Fargo voters will vote on diversion sales tax extensions

By Tu-Uyen Tran on Aug 15, 2016 at 8:47 p.m.

FARGO — City and county leaders have agreed to separate ballot measures extending their three sales taxes for decades to help pay for the $2.2 billion Fargo-Moorhead flood diversion.

"That will be the biggest amount of money that we'll ever vote on in the history of our lives," said Fargo City Commissioner Dave Piepkorn after joining his colleagues in a unanimous vote to put the measure on the Nov. 8 ballot.

The Cass County Commission also voted unanimously to do the same.

Together, the three sales taxes will pay for about half the project, which will protect Fargo-Moorhead from flooding on the Red River. The state and federal government has pledged enough funds for the remaining half.

The decision by the city and county commission didn't come easily though everyone agreed a sales tax extension was needed. Deliberating separately, they both agonized over language that was as restrictive as possible to win over skeptical voters.

Though both ballot measures will extend three half-cent sales taxes as late as Dec. 31, 2084, city and county leaders added language that implores their successors to pay off all debts as early as tax revenues allow. That is, they want to prevent future city and county leaders from making minimal payments and allowing surplus revenue to accrue.

County Commission Chairwoman Mary Scherling said the county paid off the jail debt early and taxpayers would want to see the same with the diversion.

Making millions

One of the reasons city and county leaders wanted these restrictions is the continuing growth of sales tax revenues, which will far exceed the annual debt payments required. By 2084, for example, the city and county are expected to collect more than $275 million a year while payments would be less than $50 million. This assumes revenue will grow 3 percent, a conservative rate compared to the actual rate of about 4 percent.

But investors don't like to buy government bonds based on money governments think they'll have but on what they have now. 2084 is how long it'll take for the city and county to pay off the debt if revenue doesn't grow at all.

Tom Rousakis, an executive with Ernst & Young who worked on the diversion financing plan, told county commissioners that it's entirely possible they'll pay off the debt by 2059 or 2061.

Cass County voters will be asked to extend the half-cent sales tax dedicated to flood control, which expires in 2031. The money is used to match city diversion funding with whatever's left — about 9 percent of the total — used for flood control elsewhere in the county, according to commissioners.

City voters will be asked to extend two half-cent sales taxes. One is dedicated to flood control and expires in 2029. Another is dedicated to both flood control and infrastructure, and expires in 2032.

City Commissioner Tony Gehrig won praise from his colleagues for proposing to have the second tax dedicated only to flood control, a move meant to assure voters the commission wouldn't try to take advantage of the revenue to pay for streets and sewers.

North Bismarck homeowners see property slipping away

- LEANN ECKROTH Bismarck Tribune

Aug 14, 2016

Water from an Aug. 10 downpour caused Hay Creek to overflow and flood Pebble Creek Golf Course and a walking trail.

Homeowners along Arizona Drive are questioning the long-term safety of their houses as some backyards dropped as much as seven feet in June.

"It keeps dropping every time there is a rain," said Jim Hopfauf, one of the homeowners affected by the collapsing hill where houses are perched in north Bismarck.

Residents are pointing the blame at overland flooding of Hay Creek below their properties.

The outcome of a Braun Intertec study on the slope above Pebble Creek Golf Course will be presented at 5:15 p.m. Thursday at the Bismarck Park Board meeting at the City/County Building.

Hopfauf and homeowner David Wolf, who cringe when it rains as heavily as it did Tuesday and Wednesday nights, said they have sought help from every local government entity, including the Burleigh County Water Resource District, the Bismarck Engineering Department, city utility services and the Bismarck Park District and consulted with the state. The entities and the homeowners shared in the cost of the study.

Since Hopfauf's home was built in 2004, about one-third of the backyard has sunk with the hill along with a tree line and a walking path — all of which are tumbling into Hay Creek, he said.

The walking path has been blocked off by the Bismarck Park District because it is no longer safe. It is not caused by excess stormwater flowing down his property but by overland flooding feeding Hay Creek from the north of the city, Hopfauf said.

More development has created more pavement and fewer fields to absorb the water before it feeds Hay Creek, according to Hopfauf.

Wolf has experienced the same in the past decade.

"Nobody has come up with a plan, and nobody is spending any money on it," he said. "As homeowners, we can't do anything until the hill is stable."

The problem became serious in October 2013. Noting the park district had installed riprap on the slope, Hopfauf, Wolf and a neighbor invested $20,000 in more riprap. That, too, is failing three years later, Hopfauf said.

Hopfauf suggests that some of the Hay Creek water could be diverted from winding below the hill and further eroding it.

Michael Gunsch, advisory engineer for the Burleigh County Water Resource District, will present the findings of the study at the meeting.

"There are two parts: There is the erosion of the banks near Hay Creek and the falling slopes the landowners are dealing with. They are totally different issues," he said.

The study suggests the rip-rap landscaping the owners placed to secure their land, is actually weighing it down, said Randy Bina, executive director of the Bismarck Parks and Recreation Department.

"The sloping by the residents' homes — that slope failure — is different than what might be happening below by Hay Creek," he said.

Bina said the walking trail, built in 2000, has dropped.

"We are closing that segment of the walking path for the time-being. The two property owners will be removing the rock. After the rock is removed, we'll have to make a determination on that section of trail," he said.

"It appears significant materials were added to the upper slope during the earlier slope repair," said Dave Mayer, operations director for the park district. "They had a direct negative effect with further degraded sloping."

He said water at Pebble Creek Golf Course quickly subsides.

"It's uncommon to close the golf course, but there are days when we do not allow golf carts because the course is wet," Mayer said.

The homeowners said they have been asked to removed the rock because of the study findings. Wolf and Hopfauf said they want to donate it for any future rip-rapping work further below the slope, if it helps.

For the bank stabilization near Hay Creek, the study suggests the city and park district cooperatively seek funding for a $295,000 bank stabilization project, consisting of rock and fabric, from the state Water Commission.

The study recommends a couple of alternatives for the homeowners, Bina said.

"The first is to remove the rock and some is with reshaping the slope. The next is hiring a consultant," he said.

Dakota Access pipeline owners sue North Dakota protesters

- By JAMES MacPHERSON
- 17 hrs ago

BISMARCK, N.D. (AP) — Developers of a $3.8 billion, four-state oil pipeline sued in federal court Monday to stop protesters near an American Indian reservation in North Dakota from interfering with the project, alleging the safety of workers and law enforcement is at risk.

Dakota Access LLC filed a lawsuit against Standing Rock Sioux Tribal Chairman David Archambault II and other protesters, seeking restraining orders and unspecified monetary damages.

The protesters "have created and will continue to create a risk of bodily injury and harm to Dakota Access employees and contractors, as well as to law enforcement personnel and other individuals at the construction site," the company wrote in court papers.

Archambault was among several protesters charged last week with disorderly conduct or criminal trespass at the construction site near the Standing Rock Sioux reservation that straddles the North Dakota-South Dakota border.

The tribe sued federal regulators late last month for approving the pipeline, which will take crude oil from the Bakken oil fields in North Dakota to Illinois and cross the Missouri River just upstream of the reservation. The tribe argues the pipeline would disturb sacred sites and affect drinking water for the thousands of residents on the reservation and the millions who rely on it downstream.

Dakota Access said in court papers that threats have been made to workers, and rocks and bottles have been thrown, and that Archambault excused tribal employees from work last week to protest the pipeline's construction.

Archambault told reporters Monday that he was arrested for "doing what everybody else was doing: demonstrating." He said he expected more arrests and acts of civil disobedience to continue, calling the pipeline "a black poisonous snake" that "is made from nothing but greed."

Workers accompanied by armed private security guards started construction on the project near the reservation last week.

Several sheriff's deputies and about 30 North Dakota Highway Patrol troopers were on site Monday, and the highway patrol asked motorists to avoid a state highway near the reservation because of the protests.

Texas-based Dakota Access claims the protesters are causing the company "to lose goodwill among its customers" because of delays and are "diminishing" its "opportunity to complete construction of the pipeline's water crossing before its permits expire."

SOUTH DAKOTA:

Great Plains Fire reports several fires over weekend

August 14, 2016

Gary Matthews

RAPID CITY, S.D. - The Great Plains Fire dispatch reported several wildfires over the weekend.

On Saturday, the Brady Creek Fire burned had burned over 50 acres northwest of Kadoka. Fire crews had the blaze 75-percent contained Sunday afternoon. The fire was sparked by lightning.

The Mathews County Asist Fire burned approximately 35 acres southwest of Fort Pierre on Saturday. Lightning also sparked that fire.

Two small fires were reported in northeast Wyoming as well.

On Sunday, a grass fire was reported near New Underwood Road, north of I-90. It's believed lightning sparked the fire. There was not an estimate on its size as of Sunday evening.

La Nina to replace El Nino

August 15, 2016
By Jack Taylor

SIOUX FALLS, S.D. (KELO AM) - Warming of the Pacific, or El Nino, is coming to an end and the long range prediction calls for La Nina to develop.

Acting South Dakota State Climatologist Laura Edwards says La Nina may have an impact in the fall and winter season.

Edwards says the likelihood of La Nina did go down a little bit from the prediction's center which indicates to her that it won't ben especially strong event.

She says La Nina means the Pacific will cool below normal adding that the northern plains may not take the brunt of the change.

She say the impacts in the northern plains may not be as strong as what we saw with El Nino last year.

In most La Nina years, Edwards says, our winters are colder.

But she says it doesn't have an impact on snowfall much. She says La Nina usually brings cooler than average temperatures.

Edwards says the extended forecast calls for cooler temperatures and above normal precipitation this fall.

South Dakota responds to Louisiana flooding

August 15, 2016
By Mark Russo

SIOUX FALLS, SD (KELO-AM) The Red Cross of Eastern South Dakota is sending a larger than usual contingent of volunteers to the catastrophic flooding in Louisiana.

"This is an unusually large disaster that is in need of a large response" says Executive Director Jennifer Ross.

She's sending at least seven volunteers. Two to five volunteers is a more typical response. Ross says that for Red Cross chapters in South and North Dakota combined a total of 15 volunteers are heading to the disaster. The Red Cross is also sending four emergency response vehicles.

"They're going to help assist with the relief, which means working in shelters, providing food and care and casework to the individuals who are affected by this flooding," says Ross.

At least seven people have died and some 20,000 have been rescued from the flooding.

Progress made on Wyoming wildfires, several new blazes pop up over weekend

- Updated 12 hrs ago
- CHEYENNE — Firefighters have been making progress on battling wildfires in northwest Wyoming.

The Hunter Peak Fire in the Shoshone National Forest northwest of Cody has increased in size to about 3 square miles, but most of that was because of firefighters conducting burnouts to help contain it.

The fire is about 5 percent contained.

Firefighters have gained about 15 percent containment on another fire that is burning about 20 miles southwest of Meeteetse. The Twin Lakes Fire was reported Friday evening and is about 1,000 acres. Firefighters also are making use of burnouts to help contain it.

In Yellowstone National Park, a new fire that started Saturday on the north side the park of is being monitored along with two other remote fires. A fire between Old Faithful and West Thumb was extinguished over the weekend.

FEMA-RELATED STORIES:

Intensity of 48-hour rainstorm caught Louisiana flat-footed

By MICHAEL KUNZELMAN, MELINDA DESLATTE and REBECCA SANTANA The Associated Press
First Published Aug 15 2016 05:06PM • Last Updated Aug 15 2016 08:42 pm

Baton Rouge, La. • An act of God is how some are describing it, a catastrophic 48-hour torrent of rain that sent thousands of people in Louisiana scrambling for safety and left many wondering how a region accustomed to hurricanes could get caught off guard so badly.

At least six people have been killed and more than 20,000 have had to be rescued since Friday in some of the worst flooding the state has ever seen.

As of Monday, the rain had mostly stopped, but rivers and creeks in many areas were still dangerously bloated and new places were getting hit by flooding. More than 11,000 people were staying in shelters; a movie studio and a civic center, which usually hosts concerts and ballets, were pressed into service.

"It was an absolute act of God. We're talking about places that have literally never flooded before," said Anthony "Ace" Cox, who started a Facebook group to help collect information about where people were stranded. He was in Baton Rouge to help his parents and grandparents, who were flooded out.

"Everybody got caught off guard," he said.

Forecasters said one reason was the sheer, almost off-the-charts intensity of the storm and the difficulty of predicting how bad it would be.

Meteorologist Ken Graham of the National Weather Service's office in Slidell said forecasters alerted people days in advance of the storms. The forecasts Thursday were for 8 inches of rain, with higher totals expected in some areas. But Graham emphasized that forecasting exactly how much rain is going to fall and where is nearly impossible. "It's one thing to say we're getting set up for a lot of rain. It's another thing to say where is this going to be," he said.

Some areas, such as the town of Zachary, received more than 2 feet of rain in a 48-hour period that ended Saturday morning. Another hard-hit area, Livingston, got nearly 22 inches during the same stretch.

Graham said the odds of that much rain were 1 in 500 in some places and 1 in 1,000 in others.

Unlike during a hurricane when shelters are established well in advance by parish governments and the Red Cross when the threat becomes obvious, shelters for those driven from their homes by the flooding were set up more haphazardly by parish officials.

As the scope of the disaster became clear, churches, schools and other places opened their doors to take in evacuees. Shelters filled up so fast that some people had to sleep on the floor Saturday night because not enough cots had arrived. And some shelters had to shut down when they, too, started to take on water.

Marc and Crystal Matherne and their three children loaded up their cars with their three dogs and drove out of their flooded Baton Rouge neighborhood Sunday before the water got too deep to pass.

"I want to blame somebody because of all the hurt that's going on, but I don't know if anybody knew" how bad the flooding would be, Crystal Matherne said. "It just seemed like a normal event for us, but it wasn't."

Volunteers have also been going out in boats — locally referred to as the "Cajun Navy" — to rescue people, supplementing the efforts of National Guardsmen, state officials and Coast Guardsmen in high-water vehicles, boats and helicopters.

Jared Serigne of St. Bernard Parish said he helped organize volunteer efforts involving roughly 70 experienced boaters who helped hundreds of people from flooded communities. He criticized government officials for closing roads, a move that prevented boats from reaching launch areas.

"You've got all of these people who hunt and fish who have more experience than the average first responder," he said.

But going out on the water carries dangers, too.

Lt. Davis Madere of the Louisiana Department of Wildlife & Fisheries, who spent days rescuing people and their animals, said the floodwaters are a potential minefield of submerged vehicles, fences and mailboxes that can trip up boats.

Above the water, he said, snakes trying to escape the deluge have been spotted in trees, and rescuers must be careful of power lines that are close overhead because the water is so high.

National Guard Col. Ed Bush said parish officials want the volunteer rescuers to coordinate more with the authorities overseeing the rescue effort.

"What they're trying to do is prevent overzealous people from getting stuck themselves. We've had a couple of examples of that," Bush said.

By The Numbers: A Look At Flooding That Ravaged Louisiana

Associated Press, August 16, 2016

BATON ROUGE, La. — A look at the deadly flooding that has ravaged Louisiana:

— 7: The number of storm-related deaths since rain began falling Friday.

— More than 20,000: The number of people who have had to be rescued from their homes as floodwaters rose.

— More than 11,000: The number of people staying in shelters.

— More than 2,000: The number of evacuees staying at a large film studio complex that has been turned into a makeshift shelter.

— More than 500: The number of pets rescued.

— 48 hours: The amount of time a torrent of rain fell across parts of south Louisiana.

— More than 2 feet: The amount of rain that fell in two days in the town of Zachary, Louisiana.

— 8 inches: The amount of rain initially forecast on Thursday, with some higher totals possible in some areas.

— 12 percent: The portion of homes in hard-hit Baton Rouge covered by flood insurance; in Lafayette, which has also been hammered, the number is 14 percent.

COLORADO:

U.S. deploys robots to destroy chemical weapons buried under Colorado prairie

Share this:

By Bruce Finley | bfinley@denverpost.com
PUBLISHED: September 14, 2016 at 11:56 pm | UPDATED: September 15, 2016 at 11:01 am

PUEBLO – Destroying the nation's stash of World War II-era chemical weapons is nasty work, and after decades of delays, the Army is using robots to start the job inside a $4.5 billion plant on the Colorado prairie.

A newly trained human workforce of 1,400 controls the robotic machinery — one canary-yellow, long-armed device is dubbed Inga, another Igor — beginning a mission of emptying 780,000 wine-bottle-shaped projectiles inside sealed chambers behind 24-inch-thick blast walls. The process minimizes human contact with deadly chemicals known as mustard agent, which was used to deny enemies access to land by attacking their eyes, skin and lungs.

"I like the work. This stuff has been sitting around 40, 50 years. It's about time we got to destroying it," said Jose Rosario, 33, an Army war veteran who in Iraq found a stash of Saddam Hussein's weapons.

Joe Amon, The Denver Post
Instrumentation technician Philip Kell washes down his partner Eric Irvinin wash down area at the Pueblo Chemical agent Pilot plant training area on Sept. 14, 2016 in Pueblo.

"These robots were built for precision, all computer programmed. I don't have any worries that the machines will make mistakes," Rosario said during training.

The destruction, ordered by Congress in 1986, entered a pilot testing phase last week that, as of Wednesday, has dismantled 80 projectiles at the Pueblo Chemical Depot, located on windswept prairie where tumbleweeds roll and antelope nibble dry grass.

Full-bore destruction of mustard agent cannot begin until state officials issue a permit, expected in January, project manager Rick Holmes said. And the job will be done by July 2020, Holmes said.

“We’re going to make the world cleaner by having this stuff go away, and go away the right way,” he said.

A 1997 international treaty ordered eradication of chemical weapons, outlawed since 1925, and the United States as an original signatory is obligated to comply. Foreign observers are posted at this plant to verify destruction of the weapons. In recent years, concerns about the delay intensified amid cybersecurity threats and evidence that Islamic State and Syrian forces have used chemical weapons.

In 2002, the Department of Defense hired the Bechtel corporation to run and close the nation’s chemical weapons stockpile here, which represents about 8 percent of the nation’s chemical weapons (another 2 percent are sitting in Kentucky). About 90 percent were burned.

Pentagon officials initially planned to install an incinerator in Pueblo. But Congress intervened in 1996, responding to public concerns about safety, ordering a program to demonstrate at least two alternative systems, other than incineration, for destroying chemical weapons.

Project leaders settled on the current low-temperature, low-pressure system that neutralizes the chemicals and then unleashes bacteria – from sludge imported from Pueblo’s wastewater treatment plant – to eat the weapons out of existence.

No liquid waste will remain at the Pueblo Chemical Depot, and a “salt cake” sludge from filters will be hauled to a hazardous waste landfill. Emissions are filtered from a black stack above the facility.

Colorado Department of Public Health and Environment hazardous materials and waste management officials have inspected the facility to ensure safety. The pilot testing is being done under a research, development and demonstration permit, CDPHE spokeswoman Jeannine Natterman said.

The CDPHE “does not believe the Pueblo Chemical Agent Disposal Plant will have a significant impact on air quality,” Natterman said in an e-mailed response to The Denver Post.

The plant “is considered only a minor source by the air pollution control division,” she said. State inspectors also are “overseeing the collection of air samples from plant emission sources during pilot-testing of the facility.”

Today, an estimated 2,611 tons of the mustard chemical agent is stored in projectiles and mortar cartridges buried in igloos at the 35-square-mile Pueblo Chemical Depot.

In 1952, the Army began storing mustard agent hauled here from a manufacturing plant called the Rocky Mountain Arsenal northeast of Denver. A staff of about 250 guards and maintains the weapons. Guards have detected and dealt with at least 90 leaks over 35 years.

Five of the 12-foot-tall yellow robots, run by workers at keyboards, open the projectiles packed with liquid mustard agent, which freezes at 56 degrees. The robots unscrew and remove caps on each projectile, drain the liquid into titanium containers. Robots later inject 190-degree water and sodium hydroxide. Then the bacteria from sludge is used to eat broken-down chemicals.

The project brings total employment at the Army's depot to nearly 2,000, ranking it among the largest employers on Colorado's economically lagging southern Front Range. New jobs pay $40,000 to $70,000 a year, plus health benefits.

"It means a lot," said Kurtis Wolf, 35, a union worker at the Russian-owned Evraz steel factory until that operation recently ran into trouble.

Wolf said his wife a couple months later lost her job at a dental office, jeopardizing the situation for their three children.

"Now I have a job, stable income," he said. "We'll be able to keep paying for our house, for the vehicles. … Lord willing, I hope to be one of the guys who helps close this place down."

Biggest projects still ahead after Colorado's 2013 floods

http://www.9news.com/news/biggest-projects-still-ahead-after-colorados-2013-floods/318085066

Three years have passed since it happened – since the peak of a week of weather that Coloradans had never seen in their lives.
The scale of the disaster defied description. Rivers were overrun, cities flooded.
The floods of September 2013 still don't have a name.

Photos: 2013 floods

It's been three years since the water came and left.
Since the news crews came and left.
Since the attention came and left.
Here's what we've largely missed in 2016…
This summer has been the busiest period for permanently rebuilding roads and bridges, since the floods of 2013. The single largest reconstruction project is just getting started. Most of the federal aid is still unspent.

The permanent reconstruction of Highway 36 from Lyons to Estes Park was completed this year. The permanent fix for Highway 34 from Loveland to Estes is underway, and won't be complete until 2018 or 2019.

We're finishing the summer of construction - the busiest time since the floods - as highways, roads, bridges, river banks and multi-family housing units were put in place.

You have to remember that federal grant money didn't arrive until 2014.

$350 million is promised.

$80 million of it was spent through the first half of this year.

Spending is about to ramp up. Another $40 million will be spent by year's end.

And while we talk numbers, and remember the number of lives impacted, we pause to remember the 10 lives lost in the floods three years ago this week.

Wildfire Near Kremmling Estimated At Roughly 9 Acres, 35 Percent Contained

By Jesse Paul

Denver Post, September 14, 2016

A wildfire sparked near Kremmling on Tuesday and which has prompted the evacuation of roughly a dozen homes was estimated at about nine acres on Wednesday and 35 percent contained.

A mass of resources have been called to battle the fire, including local, state and federal firefighting crews.

Lt. Dan Mayer of the Grand County Sheriff's Office says a smoke report was called in to authorities about 12:20 p.m. on Tuesday. When the chief of the Kremmling Fire Protection District went to investigate, he found that a person was burning a slash pile that had gotten out of control.

The fire is off Grand County Road 14, about five miles from Kremmling. The blaze is burning in heavy timber on county land.

Mandatory evacuations are in effect within a mile of the blaze and residents within three miles of the burn are on pre-evacuation notice.

NORTH DAKOTA:

Emergency officials seek up to $6 million to offset costs during pipeline protests

Issues Associated Press · Bismarck, N.D. · Sep 15, 2016

North Dakota emergency services officials are asking for up to $6 million from the state-owned bank to offset costs associated with help provided to law enforcement during protests against the Dakota Access pipeline.

The Bismarck Tribune reports the state Department of Emergency Services would set up a loan with the Bank of North Dakota and repay it with interest.

Emergency Services Department spokeswoman Cecily Fong says the state had never responded to large protests.

- FAQ: The Dakota Access pipeline and protest

Gov. Jack Dalrymple has also asked for federal help. The newspaper reports his office says the state has spent $1.8 million so far policing the protests.

A federal judge declined to block the four-state pipeline Friday, but federal agencies stopped work near Lake Oahe. Federal agencies also asked pipeline operator Energy Transfer Partners to voluntarily stop work on a 40-mile stretch.

SOUTH DAKOTA:

AARP pushed emergency preparation KSFY-TV, Sioux Falls

SOUTH DAKOTA - September is National Preparedness Month and AARP is working with FEMA to share resources to help you.

The agencies are urging people to have an emergency kit and a plan in place for a wide-array of possible situations

To help you prepare, AARP South Dakota will host a call-in show on their website on Thursday with experts who can answer questions about your specific plan.

FEMA-RELATED STORIES:

Fight For Zika Money Hampered By Partisan Squabbles

By Ledyard King

USA Today, September 14, 2016

WASHINGTON – Turns out Zika is as much a political quagmire as it is a health crisis.

Finger-pointing and partisan backbiting abound on Capitol Hill, despite pleas from both sides of the aisle to take the politics out of efforts to combat the disease that has infected 805 Floridians and tarnished the state’s reputation as a tourist mecca.

Just this week alone:

– Democratic congressman Alan Grayson took GOP Gov. Rick Scott to task for once proposing massive cuts in the state's mosquito control budget.

– Scott blasted the Obama administration for failing to give the state enough help to fight Zika, then accused Democratic Sen. Bill Nelson of abandoning his constituents in voting against a controversial Zika bill last week.

– The pro-choice group NARAL lashed Republican Sen. Marco Rubio for missing a bipartisan news conference on Zika to meet with GOP presidential candidate Donald Trump's running mate, Indiana Gov. Mike Pence. The organization is running online ads to highlight the criticism.

Floridians see the partisan squabbles holding up action on Zika as "one more example of a broken Washington," said Susan MacManus, a political science professor at the University of South Florida in Tampa. But she's not surprised at the stalemate or the bickering.

"This issue is arising in the middle of a very contentious, competitive election," she said. "And each party wants to take credit for the good and dis their opponent with the bad. That's what we've seen happening on the Zika issue."

Congressional leaders have reported some progress in reaching a $1.1 billion deal to fund anti-Zika efforts, including vaccine development, insect spraying and distribution of testing kits. If a compromise is reached, it's likely to be attached to a broad spending bill lawmakers will be asked to vote on at the end of the month.

Earlier Zika legislation in the Republican-controlled Congress was blocked by Democrats who objected to unrelated provisions, including barriers to contraception, the display of the Confederate flag at national cemeteries and laxer environmental standards for pesticides. The deal being discussed would not include those.

Rubio and the Democrat running against him this year, Rep. Patrick Murphy, have spent weeks blaming each other for not doing enough to end the stalemate.

They both initially backed Obama's request in February for $1.9 billion, though Rubio also has supported GOP measures that would have provided less money and included provisions Murphy and others found objectionable.

On Wednesday, NARAL pounced on Rubio's absence from the bipartisan press conference the day before, saying he was "putting his own political needs ahead of the needs of women and families in Florida."

Rubio spokesman Olivia Perez-Cubas responded that Murphy "is the only candidate to have voted against every measure to fund Zika – once again putting himself and his political aspirations before Floridians."

Rubio spent part of Tuesday and Wednesday meeting with Scott, who admonished the Obama administration for ignoring Florida.

"Since June 1, I've asked for a plan to work with (the Federal Emergency Management Agency). Haven't given it to me," the governor told reporters. "The White House has not been a good partner."

Administration officials pushed back against Scott's allegations, detailing efforts they've made to help the state:

– A Centers for Disease Control and Prevention team was recently dispatched to Florida to monitor Zika efforts.

– The Health and Human Services Department has provided more than $35 million that can be used for Zika-related activities. In August, Florida received materials for an additional 6,300 lab tests in addition to the 2,000 already provided. CDC also provided on-site technical consultation to Florida's public health laboratories, enabling them to substantially increase testing capacity.

– FEMA officials have been in contact with the state to discuss the role the agency can play, though the White House said FEMA assistance may not be the best option for a mosquito-borne disease like Zika.

"This is why the president put forward a supplemental request in February, to ensure that states like Florida would have the resources they need to effectively response to Zika," the White House spokesman said.

Grayson, the Democratic congressman from Orlando, said Scott should look in the mirror if there are fingers to be pointed.

Under the governor's watch, state aid to mosquito control programs around Florida in 2011 was sliced 40% — from $2.16 million to $1.29 million — and he vetoed a $500,000 grant that would have kept a state mosquito lab open in Panama City.

"If the governor would revisit those decisions, that would be a good start in itself," Grayson said.

Nelson was miffed that Scott singled him out for joining other Democrats in blocking the Zika bill.

"He should know better," said Nelson. "This is a serious situation, not a time for partisan politics."

Whom do voters blame? MacManus said the accusations have come in such rapid-fire, head-spinning fashion it's hard to decide who's the real culprit.

"There's enough blame to go around for all officials in the minds of Floridians," she said. "What they want is action, and there just doesn't appear to be any out of Washington. That's what they really find fault with."

Rubio tried to strike a bipartisan tone Wednesday afternoon as he spoke on the Senate floor. He defended Nelson as an important ally in the push for Zika funding, then implored his colleagues to rally around a compromise.

"We fight about so many things around here," Rubio said. "We have so many issues we could have a debate over. So let's have debates about those issues. But isn't there at least, when it comes to public health and safety, something we can say on this issue that we're not going to play politics?"

ANALYSIS

- *Colorado:* Two Colorado groups won grants to work on emergency preparedness and underground mine safety… A nonprofit group is asking for donations to help rebuild Haiti after Hurricane Matthew… A donation center has been set up to help victims of the Beulah Hill Fire…. Estes Park will have a public meeting October 26 to discuss floodplain issues… A follow-up article on the federal investigation in Lyons says the FBI is not pursuing a case, and that HUD is focused on contracts between Lyons and a company called Front Range Land Solutions and its owner, former Lyons planner Rosi Dennett.
- *Montana:* A TV station did a story on a Red Cross volunteer heading to help with Hurricane Matthew.
- *North Dakota:* An ag journal reports on a new disaster application that can help small businesses. It uses information from ready.gov and makes it a fill-in-the-blank app for smartphones and tablets… The *Minneapolis Star Tribune* reports on the split between Fargo/Moorhead and the state of Minnesota over the proposed diversion project. The article details the reasons for Minnesota's opposition and notes potential problems in getting congressional approval to go ahead with the project…. Two articles report on the pipeline protest: the courts have denied an emergency injunction to prevent construction, but three federal agencies continue reviewing the issues raised by the protestors and have asked the company to voluntarily suspend construction pending that review. Another article reports on the protests: actress Shailene Woodley and 26 other protestors were arrested Monday, the highest one-day total so far, bringing the total number arrested to 123. The protestors have since been released.
- *South Dakota:* A part of a continuing series looking back at the 2011 flood reports on how the Fort Randall Dam held up.
- *Utah:* No FEMA-related stories
- *Wyoming:* No FEMA-related stories
- *Other FEMA-related stories:*

STORIES

COLORADO:

Mine rescue training, emergency preparedness grants awarded (KOAA TV 5)

MORGANTOWN, W.Va. (AP) - Six groups will share $1 million in grants to develop training for emergency preparedness and accident prevention in underground mines.

The U.S. Mine Safety and Health Administration announced the Brookwood-Sago grants last week.

Receiving grants are the University of Arizona, the Colorado School of Mines, the Colorado Department of Natural Resources, Rend Lake College in Ina, Illinois, the Virginia Department of Mines, Minerals and Energy, and West Virginia University.

WVU says in a news release that the university will use a grant of nearly $172,000 to integrate fire brigades and mine rescue teams in an emergency involving fire and trapped miners.

The grant program is named in remembrance of 25 men who died in mining explosions in Alabama in 2001 and at the Sago Mine in West Virginia in 2006.

Colorado group helping Haiti rebuild after hurricane (FOX 31 Denver)

LOUISVILLE, Colo. – A Colorado nonprofit dedicated to rebuilding rural Haiti is asking for some emergency donations following Hurricane Matthew.

The Colorado Haiti Project has been doing work in Petit-Trou-de-Nippes for almost 30 years. The group focuses on long term rebuilding projects like education, agriculture, livelihood and clean water.

CHP has one dedicated project manager living in Haiti full-time. The Louisville based organization sends several groups throughout the year to do aid work.

They built a school that serves nearly 400 Haitian children. The school suffered major damage in the storm.

“When you look inside any room everything is just thrown all over the place,” explained CHP’s Teresa Henry. “Now they have no books and everything in the classrooms is gone.”

Her co-worker who is in Haiti right now says about half of the community's homes are gone. She also says almost all of the crops have been leveled and most of the livestock has perished.

"They don't have bank accounts. In Haiti, you consider your bank your goats and cows. That is your income," Henry said. "All their crops have been lost. All of it. They have nothing for their livelihood."

She worries if they can't help Haitians rebuild fast enough, the region will eventually starve.

"We're concerned about making sure they eat enough through the winter so getting the crops back in the ground is huge," she said.

CHP is doing several emergency fundraisers to help their Haitian community rebuild and replant. You can visit their website to donate and find more information about local fundraising opportunities.

The money will go directly to the small rural communities where Coloradan are helping rebuild by hand. Their project manager in Haiti will return to Colorado later this week and CHP will decide within the next two weeks a rebuild plan-of-action for the next 12 months.

The group believes donating to them is a good way for Coloradans to see exactly where their money is going and how it is being used.

"You can be like one degree away from where you make your donation," Henry said

Donation center set up for Beulah Hill Fire victims (Pueblo Chieftain)

October 11, 2016

A donation center for victims of the Beulah Hill Fire opened Sunday morning and plenty of donors had already walked through the doors and dropped items off by Monday afternoon.

Beulah Hill Fire at 95 percent containment; blaze expected to be fully contained by Sunday Free pain/injury screening for firefighters

Kathy Hayden of the Adventist Community Services Disaster Response Team said that by 2:30 p.m. Monday there had already been about 30 community members who had stopped by the donation center to bring items of need.

The donation center, located at the Colorado Building on the Colorado State Fairgrounds, was filled with clothing, kitchenware, blankets, sleeping bags, food, water, cleaning and laundry supplies, toilet paper, paper towels, assorted toiletries, tools, shoes and some toys.

A woman was seen Monday afternoon getting out of her car and bringing numerous bags of items to the donation center for victims of last week's Beulah Hill Fire, which burned 5,232 acres of land, destroyed eight homes and forced the entire Beulah Valley to be evacuated until some residents began returning on Wednesday and Thursday, and the rest on Friday.

Volunteers strolled the inside of the Colorado Building, sorting out donated items and organizing racks and shelves.

"It's wonderful to see so many people helping out and taking care of each other," Hayden said.

Beulah residents have been stopping by the donation center since Sunday morning to pick up needed items and can continue to do so.

"They've been really good about it," Hayden said. "They're just taking what they need."

The donation center is open daily from 10 a.m. to 7 p.m. through Sunday.

Hayden said the most needed items right now are children's clothing, food and tools.

"A lot of people lost tools," said Robyn Knappe, a voluntary agency liaison for the Colorado Division of Homeland Security & Emergency Management.

Hayden, who thanked firefighters and emergency crews for their tireless work in battling the blaze, said she's happy the disaster response team can play a role in helping families who lost so much in the wildfire.

"At least maybe we can do something to help put their lives back together," she said.

ryans@chieftain.com

Public encouraged to review new Estes Valley hydrology data Oct. 26 (Estes Park Trail Gazette)

Study contributes to a safer, more resilient community

Town of Estes Park - For the Trail Gazette

POSTED: 10/11/2016 09:38:17 AM MDT

The Town of Estes Park and its consultant, Wright Water Engineers, will present the results of a scientific hydrology study of the Big Thompson River, Black Canyon Creek, Dry Gulch and Fall River on Wednesday, Oct. 26, at 8 a.m. in the Town Board Room of Town Hall, 170 MacGregor Ave. Other topics discussed will be a preliminary map of new floodplain boundaries in the downtown area and how this study impacts floodplain management. The completion of the study is a milestone in the process of ensuring a safer, more resilient Estes Park community. Study results will be available for review at www.estes.org/floodmitigation by Oct. 21.

Educational resources on the hydrology study and other flood mitigation efforts are also posted to this site as they become available.

The Oct. 26 meeting is targeted to both a general interest audience and particularly those concerned with development and flood mitigation opportunities, as the hydrology data is part of the floodplain permitting process. Wright Water Engineers will present the results and be available to answer both general and technical questions. Staff from the Colorado Water Conservation Board will discuss preliminary floodplain maps and staff from the Colorado Resiliency and Recovery Office will be in attendance to answer questions. This meeting will be streamed live on local cable channel 12 and via www.estes.org/videos. It will also be recorded for viewing later via www.estes.org/videos. The Town Board will review the information during a study session the evening of Oct. 25.

The 2013 flood was a stark reminder of flood risk, and the Town is taking action to better understand the hazards Estes Park's residents face. The hydrology study results will serve as the basis of flood mitigation projects and a key part of future flood mitigation decisions. In addition, the new information may help the Town receive grants. It will also provide data for new floodplain maps, which will go into effect in the coming years.

The Town will also host a workshop for realtors, lenders and insurance agents on flood insurance topics presented by FEMA staff Oct. 24, from 10 a.m. to noon at the Estes Park Museum, 200 4th St.

For more information on flood mitigation efforts, please visitwww.estes.org/floodmitigation or contact Floodplain Manager and Planner Tina Kurtz at 970-577-3732 or tkurtz@estes.org.

Lyons residents: 'We're just starting to get it together' (Boulder Daily Camera)

Federal scrutiny stirs concern in town that has struggled

By Amelia Arvesen
Staff Writer

The town of Lyons has submitted to more than one waiting game.

People there have been waiting to rebuild their town and now they're waiting on a federal investigation into the flood-recovery process.

"I'm frustrated because I'd like to know what's going on instead of waiting," longtime resident Craig Ferguson said. "There's been a lot of waiting for three years."

As Lyons entered its fourth year of reconstruction following the devastating September 2013 flood, the FBI and U.S. Department of Housing and Urban Development stopped by to seize documents and computers to probe the handling of federal flood-recovery funding.

Communities savaged by the rushing waters have been receiving fund allocations, totaling millions of dollars from several federal sources, such as HUD and the Federal Emergency Management Agency.

Late Friday, Mayor Connie Sullivan released a statement on behalf of the town's Board of Trustees, stating that the FBI had concluded its portion of the investigation and would not be proceeding with a case.

Also posted to the town's website was a copy of a subpoena from the U.S. Department of Housing and Urban Development, stating that a focus of its investigation was documents relating to negotiations and grant services contracts between Lyons and Longmont-based Front Range Land Solutions.

The subpoena also seeks all "invoices, bills, receipts, and other documents" reflecting charges or payments with respect to that company and its owner, Rosi Dennett.

Dennett, who could not be reached for comment Friday night, identifies herself on her Linkedin page as having served as Town Planner for Lyons from April 2004 to December 2008.

Ferguson, Planet Bluegrass president, said before the flood the town could only fathom a budget of $1 million per year, and suddenly they were expected to keep track of exponentially more in the midst of disaster.

"To take care of that is a completely different job," Ferguson said. "Mistakes might have been made. Personally, I guess, I'm kind of hoping that things can be corrected quickly and it's not personal."

Apparently as a precaution into the investigation's integrity, both the town administrator and clerk were placed on temporary leave and replaced in the interim. Sullivan has said the move should not be construed as a suspicion of wrongdoing by those employees.

Ferguson said he knows most town officials well after living in Lyons 25 years and he said he has a hard time believing there was any foul play.

A hope 'someone is held accountable'

On Friday, LaVern Johnson sat under a shade of an awning behind her house, where she hosted a yard sale benefitting the Lyons Historical Society.

"Why Lyons?" Johnson asked.

She said many people are upset, saddened and disappointed by the mayor's brief and formal announcement Wednesday night at Town Hall that provided little information.

"I would say they could've made mistakes somewhere," Johnson said. "I don't think they did anything that is illegal as to taking money and those kinds of things. I don't know what they're after. I don't know how they could abscond with any money."

A man who did not provide his name and who lives in Lyons' Confluence neighborhood — an area that was hit hard by the flood — said nobody would be interested in what he has to say on the issue.

"I hope someone is held accountable," he said.

At The Stone Cup in downtown Lyons, employee and resident of 12 years Robin Young said she has worked eight hours five days in a row and that the topic has come up. She said the town chatter is that people are frustrated with the lack of information, but also understand that town officials can't say too much yet.

"There's great, great people here and it's been a long three years," Young said. "But I believe, from what I've heard, people are taking a wait-and-see approach and are just anxious."

Ferguson said while the investigation is somewhat a blemish on trust, he is confident the mayor and town board were doing their best and he would be surprised if it involved criminal behavior.

"We just don't need that right now," he said. "We're just starting to get it together."

Johnson said she trusts the town officials. She is confident they've done everything they can in light of the devastation the community has been through.

"With things like this going on, I don't think we can ever recover," Johnson said. "How can you recover when somebody is going to accuse you? I think it's sad."

Johnson said she is also surprised by how much the town has accomplished, such as designing Bohn Park. She said as the town works on the budget, it's not taking on new project proposals, and sticking to the 2016 budget when planning for next year.

A punch in the gut

The continuous beeping of construction vehicles working on streets nearby echoed through the neighborhoods. Sections of streets were peeled back, revealing the dirt below.

Jenny Voss, out walking her dog near the former Foothills Mobile Home Park, said she did not know more than what has already been revealed.

Carrie Davis-Gonzales, who lost her mobile home near the creek, was watching broadcast news reports about the hurricane in Florida Friday afternoon. She moved three years ago to the only remaining home in the park.

In response to the recent investigation of Lyons, she said she is more unquestioning than maybe she should be. She said as a result of trying to rebuild a mobile home park, she has researched and discovered similar federal investigations into devastated towns — from the benign to the extreme.

"From the outside, I can't really say what's going on in there but it could be so tiny because they are extremely meticulous," she said.

It would be difficult to screw up, she said, and wrongdoing would be even harder.

"It's not back in the day where they'd come in with money bags — this is all done electronically," Davis-Gonzales said, sitting on her front porch with a view of the abandoned mobile homes.

State Rep. Jonathan Singer, the Longmont Democrat whose House District 11 includes Lyons, said over the phone it's just another punch in residents' gut — another reminder that they haven't bounced back 100 percent from where they were more than three years ago.

"People are sort of worn down and worn out," Singer said. "They haven't given up but it's really hard to hear from another person, 'Well I know you don't want to hear this but we need to follow this new process.' Obviously that's going to wear anyone out."

He said some people still haven't been able to return home, and some people may never get to.

And while, Davis-Gonzales has been living in the only home left on the mobile home property, she is living each day thinking the next could be her last in Lyons, since the park owner recently opted for the buyout. Her home for the last three years will eventually be leveled.

Singer said he hopes whatever is under review is as simple as a paperwork error.

"If it is something else, I hope we find out very quickly and then we can move on and we can move forward," he said.

Ferguson said it's been easy for a lot of people to be angry at the slow progress, but he knows realistically the process is complicated.

"I'm sure once they know, they'll want to inform us," he said. "I think when someone comes into your place with a subpoena you need to take three or four days to figure out what it means. I know I would."

MONTANA:

Montana Red Cross volunteer helping in wake of Hurricane Matthew (KTVQ-Billings)

Posted: Oct 08, 2016 11:08 AM MST Updated: Oct 08, 2016 11:14 AM MST
By MTN News

KALISPELL - While millions try to escape Hurricane Matthew, Red Cross volunteers are racing into the storm to help with relief efforts, including Joe Kingan with the Flathead County chapter of the American Red Cross.

Kingan had nothing but a cell phone and a bag of survival gear as he waited at Glacier International Airport for his flight.

"Got my headlamp got flashlights, that kind of stuff."

He's been deployed to Hurricane Matthew by the **American Red Cross**, but for the husband and father, perhaps what's most important is his endurance in facing the unknown.

"They want me to go and help, and they're concerned about the safety aspects as well as I am," Kingan said.

The National Weather Service has warned that some places hit by Hurricane Matthew could be uninhabitable for "weeks or months." Kingan will be teaming up with two to four other volunteers to assess the damage.

"We would be recording it and putting it into a database file that actually gets shared with FEMA, other government agencies, Salvation Army, and that data will be used to evaluate future assistant needs," he said.

Kingan said that one tool in particular will play a key role in staying safe as he heads into the danger zone: his smartphone.

"They keep us updated on a regular basis on what's going on in the immediate area where we're located. For example, a while ago I got a text message coming in that alerted us to a tornado warning out in one of the counties in Florida right now with one of the rain bands coming off the hurricane."

Although he leaves a wife and a son behind, he is carrying them with him in spirit.

"We will endure," Kingan concluded. "We like helping other people, so it will be well worth our trip down."

If you would like to join the cause, you can donate blood, text "RedCross to 90-999" to make an automatic $10-dollar or call 1-800-RED-CROSS.

NORTH DAKOTA:

New disaster app can help small businesses prepare for the worst (High Plains Journal)

The sprinklers go off by mistake in your office building. A strong wind blows the roof off your lab. You lose all of your computer files in a major crash.

If you own or manage a small business, a disaster like any one of these could put a major dent in your work and your bottom line.

A new phone app won’t fix such problems, but could help a business start operating again more quickly and easily.

The Small Business Disaster Plan app is available free for iOS and Android tablets and smartphones. It was developed by the North Dakota State University Extension Service and Myriad Mobile, Fargo, N.D.

“We used FEMA’s ready.gov information for businesses and the Extension Disaster Education Network’s Ready Business training program to integrate with the functionality of the tablet and smartphone,” said Bob Bertsch, the NDSU web technology specialist who led work on the app’s content. “Yes, there are online templates for business disaster plans, but this app provides portability and functionality.”

The Extension Disaster Education Network is a collaboration of land grant universities focused on reducing the effect of disasters through education. Kansas State University is a part of EDEN and shares preparedness tips on its Prepare Kansas blog.

“There are two things that I have heard small-business owners say repeatedly: The first is they never have enough time. And the second is, ‘Where did I file that?’” said Glenn Muske, NDSU Extension rural and agribusiness enterprise development specialist.

The Small Business Disaster Plan app takes on both of those, Muske said, by letting you fill out important disaster plan information, along with supporting photos right from your smartphone or tablet – which you always have with you.

“Of course, you should save the information in the cloud, too, in case your phone or tablet is lost,” he added.

The app lets you enter information for your business, including basic and contact information, emergency planning, evacuation, insurance information and more.

Plans should be reviewed annually, Muske said, so the app uses your phone’s alerts to remind you to review the information at a designated time in the future.

The content can be downloaded as a csv file. The app also encourages you to upload the content to a cloud service such as Dropbox, iCloud, Drop or a similar service for backup.

“Planning is never high on anyone’s list,” Muske said. “But think how easy the process is when the structure is there and you just need to fill in the blanks. That’s exactly what this Small Business Disaster Plan app provides. And because September is National Preparedness Month, it’s a great time to get your business prepared for disasters.”

Development of the Small Business Disaster Plan app for tablets and smartphones was supported by a grant from the National Institute of Food and Agriculture, U.S. Department of Agriculture.

Minnesota, North Dakota at a standoff over $2 billion Red River project (Star Tribune)

By Josephine Marcotty and Jennifer Brooks Staff writers

A long-simmering fight between Minnesota and North Dakota has broken wide open now that Gov. Mark Dayton has drawn a line down the middle of the Red River by refusing to allow a massive flood diversion project to go forward on his side of the border.

Residents and local leaders in Fargo are outraged at what they say is his administration's cavalier advice to keep sandbagging in the face of ever higher threats of flooding. The U.S. Army Corps of Engineers and even the mayor of the Minnesota city Moorhead came out swinging last week, vowing to press ahead with the $2.1 billion project.

While proponents say they want to keep talking with Minnesota, the depth of the disagreement about the value and safety of the diversion project is so profound that, other than a legal battle, there is no apparent resolution in sight.

"If there is a confrontation, there will be a confrontation," said Darrell Vanyo, executive director of the Fargo-Moorhead Diversion Authority. He said the U.S. Army Corps of Engineers has all the authority it needs to build a high-hazard dam and flood thousands of acres of mostly farmland on the Minnesota side of the river in order to protect the Fargo-Moorhead urban areas.

But attorneys for residents who have been fighting the project in federal court say that decision would have to be made in Washington, D.C. And riding roughshod over Minnesota, they say, would require strong congressional support.

"The Army Corps, thankfully, is not the king of the United States," said Jerry Von Korff, the attorney representing upstream communities that would be flooded if the project went forward as planned.

And so far, while Congress has approved the project, it's only provided $5 million of the $450 million in federal funds that are part of the deal.

"Just the fact that you've got a lawsuit going on is going to make it difficult to get federal money," said U.S. Rep. Collin Peterson, whose district is bordered by the Red River. "It's hard enough to get things funded without having controversy."

But project supporters didn't seem to heed clear warnings, going back more than a year, that Minnesota was unlikely to grant them the permit they need.

A year ago, Peterson met with diversion officials.

"I asked them, 'What is your Plan B if Minnesota denies the permit?' ”he said.”And they said, 'There is no Plan B.' "

51 floods in 113 years

There is widespread agreement that Fargo needs protection from floods — the question is how.

The Red has flooded 51 of the past 113 years, causing millions of dollars in damage to homes and businesses around Fargo and the region. Across the river, Moorhead sits 4 feet higher and is protected by $130 million worth of walls, dikes and levees that Minnesota has put in place over the years.

After the most recent flood, in 2009, local North Dakota governments asked the U.S. Army Corps of Engineers to come up with a long-term plan. And it came up with a big one.

The Corps would carve a 36-mile ditch around Fargo and build flood control dams across the Wild Rice and Red rivers. In the event of a flood, water from the Red and its five tributaries would be diverted away from Fargo — the region's bustling economic hub — and into miles of North Dakota and Minnesota farmland and prairie.

North Dakota would pay $1.2 billion of the cost and Minnesota would pay $100 million.

If the project goes ahead, a net increase of 2,000 acres in Minnesota would be at risk of flooding. But across the river, many more thousands of acres would be left high and dry and ripe for construction of homes, schools and businesses.

A crucial piece: Construction of what Minnesota officials describe as a "high-hazard" dam across the Red — the kind that would cause catastrophic damage if it fails.

Minnesota officials have been critical of the project for years. They even joined a federal lawsuit to stop preliminary work from going forward while they completed their own environmental review, which was finished last spring.

Then last week Tom Landwehr, commissioner of the Department of Natural Resources, announced that the state would not grant a permit for the dam on Minnesota's side of the project. It didn't meet Minnesota's environmental laws or standards, he said. Instead, Minnesota suggested that current and planned flood mitigation projects around Fargo, in combination with emergency measures like sandbagging and evacuation, were more likely to be in the public interest.

'Shifts the burden'

Vanyo said the Diversion Authority and the Army Corps will keep talking with Minnesota officials to try and resolve differences. But the document Landwehr provided to support the DNR's decision suggests they may be insurmountable.

More than half the area that would be protected by the dam and diversion channel is now flood plain that would be open to development in the future, the document says. But dams "can, and do, fail," the DNR said. "Allowing development in vulnerable areas would increase the consequences of a dam failure. ..."

The DNR said the corps has underestimated the number of potential deaths if the dam were to fail and exaggerated the time Fargo would have to evacuate in such an event.

Peterson pointed out that Minnesota hasn't approved a new high-hazard dam in decades. "It's one thing when you've got a flood and it comes up slowly and you can deal with it," he said. "But it's another if you're behind a 20- or 30-foot-high dam and it breaks and water rushes through."

The DNR also noted that the Diversion Authority would be financially liable for a dam failure but questioned whether the quasi-governmental organization has sufficient financial wherewithal to pay.

In addition, the DNR argues that the Army Corps overestimated the financial benefits to the community by at least $41 million. The claimed benefits are "misleading" because they include flood control projects that would occur with or without the diversion project and improperly include temporary economic impacts of constructing the project itself.

In short, the DNR said, "The proposed Project … simply shifts the burden of flooding from one sparsely developed rural area to another."

Melissa Samet, an attorney with the National Wildlife Federation familiar with the Army Corps, said Congress has expressly discouraged projects that alter the natural processes of rivers, result in the unwise use of flood plains, or encourage development into undeveloped areas.

"And this project absolutely does that," she said.

The DNR argues that the vast majority of Fargo's developed area is already protected by existing or planned flood projects and that remaining areas can be protected in an emergency the way Fargo has always done it — with evacuations and sandbagging.

But that's cold comfort to the people of Fargo, who look at every spring thaw with trepidation, said local officials. They say thousands of Fargo's buildings are at risk if rising flood projections come true and relying on a strategy of business as usual is dangerous.

"Are we going to flood this spring?" Fargo Mayor Tim Mahoney said, describing residents' mind-set in a radio interview this week. "We think people are tired of sandbagging."

Work to resume on Dakota Access Pipeline near Lake Oahe

By Mike Nowatzki Today at 9:34 a.m.

BISMARCK – The company building the Dakota Access Pipeline said Tuesday, Oct. 11, it looks forward to a "prompt resumption" of construction near Lake Oahe and hopes the federal government will assist local law enforcement officials dealing with protests of the pipeline.

Dallas-based Energy Transfer Partners released a statement saying it is pleased with a federal appeals court decision Sunday denying the Standing Rock Sioux Tribe's request for an emergency injunction to stop construction of the $3.8 billion, 1,172-mile pipeline that will carry 470,000 barrels of crude oil per day from North Dakota to Illinois.

The three-judge panel in Washington, D.C., also lifted a temporary suspension of construction activities within 20 miles east and west of Lake Oahe, a dammed section of the Missouri River.

"In light of Sunday's court decision, Dakota Access looks forward to a prompt resumption of construction activities east and west of Lake Oahe on private land. We reiterate our commitment to protect cultural resources, the environment and public safety," the company said.

Company spokeswoman Vicki Granado declined to specify when the company will resume construction in the 20-mile area, which includes the area along Highway 1806 where protest activities to block pipeline construction began Aug. 10. An estimated 2,500 to 3,000 American Indians and other pipeline opponents are encamped along the highway and have drawn international support.

The proposed construction area also includes a stretch west of Highway 1806 that was bulldozed on Sept. 3, the day after the Standing Rock Sioux Tribe filed court documents identifying that part of the route as containing burial grounds and other sacred sites. Angry protesters clashed with the pipeline's private security that day, with both sides claiming injuries, and a joint law enforcement task force is investigating the incident.

Last week, state archeologists concluded that no sacred sites were destroyed, but the tribe disputes that conclusion because its historic preservation officer wasn't allowed to participate in the survey. The tribe's ongoing lawsuit against the U.S. Army Corps of Engineers contends the agency didn't properly consult the tribe before granting permits for the project.

Energy Transfer Partners said the decisions by two separate federal courts show otherwise.

"The Army Corps and Dakota Access carefully considered the views of all potentially affected tribes that chose to participate in the consultative process prescribed by Congress, and fully complied with both the letter and the spirit of the National Historic Preservation Act," the company said. "Their careful and sensitive work has been reviewed and approved by highly qualified private and state-employed archeologists."

The pipeline was 87 percent completed in North Dakota at the end of September and is largely completed in South Dakota, Iowa and Illinois.

"We continue to believe that the Army Corps will soon issue the easement for approximately 1,100 feet necessary for the crossing beneath the Missouri River – the sole remaining authorization necessary for completion of the project," the company said.

In a joint statement Monday with the U.S. Department of Justice and U.S. Interior Department, the Corps said it won't authorize pipeline construction on Corps land bordering or under Lake Oahe until it finishes reviewing issues raised by the Standing Rock Sioux Tribe. The three agencies asked that the company voluntarily pause construction within 20 miles of the lake.

The company on Tuesday urged that any protests "be undertaken in a peaceful and law abiding manner." Authorities arrested 27 protesters at two construction sites Monday, including actress Shailene Woodley, bringing the total number of arrests to 123.

"All construction efforts will be undertaken in close coordination with state and local law enforcement officials, and we are hopeful their law enforcement efforts will be supplemented by those of the federal government," the company said.

State officials and lawmakers have decried the lack of financial and law enforcement support from the federal government, given that the Corps is withholding the lake-crossing easement and allowing protesters to camp on Corps-owned land. The state Emergency Commission voted last month to borrow up to $6 million from the state-owned Bank of North Dakota to cover overtime and other protest-related costs, and Monday's response involved deputies from Wisconsin – the first time out-of-state officers have been used.

Actress Woodley released from jail after arrest at Dakota Access protests

By Mike Nowatzki on Oct 10, 2016 at 9:59 p.m.

ST. ANTHONY, N.D. – Authorities arrested Hollywood actress Shailene Woodley and 26 other protesters at two Dakota Access construction sites in Morton County on Monday, Oct. 10, as pipeline opponents vowed to keep disrupting the project after an appeals court ruling Sunday that allows work to resume on a 20-mile stretch west of Lake Oahe.

Despite the court's ruling, the U.S. Army Corps of Engineers said Monday it won't authorize construction of the $3.8 billion pipeline on Corps land bordering or under Lake Oahe until it finishes reviewing issues raised by the Standing Rock Sioux Tribe. The Corps also repeated its request that Dakota Access LLC voluntarily pause all construction activity within 20 miles east or west of the lake. A company spokeswoman did not return a message seeking comment.

Monday marked the most arrests in one day since protests of the four-state, 1,172-mile pipeline began two months ago just north of the Standing Rock Sioux Reservation, where tribal members fear the pipeline will leak and contaminate their water supply and destroy sacred sites on ancestral lands.

Authorities were notified about 7:15 a.m. Monday that two protesters had attached themselves to construction equipment about 2 miles southwest of St. Anthony, Morton County Sheriff's Department spokesman Rob Keller said. Both were arrested for felony reckless endangerment, and a third person filming the event also was arrested, he said.

A few miles south along Highway 6, about 200 protesters converged on the west side of the road where the pipeline is strung but not yet buried, including Woodley, who live-streamed video of the protest on Facebook. The star of the "Divergent" film series was arrested at 12:05 p.m. on suspicion of criminal trespass and engaging in a riot, the same basis for most of the 27 arrests, said Cass County Sheriff Paul Laney, operations chief.

Woodley was released on $500 bond about 3:30 p.m. Her next court appearance will be Oct. 24.

Protesters erected an uncovered teepee in the pipeline corridor, and more than a dozen people who locked arms inside it were arrested. The 27 arrests brings the total to 123 so far. More than 100 law enforcement officers, many of them wearing riot gear, responded to the scene, directing protesters back across the fence line and forming a human barricade to keep them off the construction site. Protesters formed their own line less than 10 feet away, holding signs, pounding drums and yelling refrains such as "Respect our land, respect our water, honor our

treaties.” “They plan to continue building, and we plan to continue to disrupt,” a protester declared through a bullhorn. No physical violence was reported. But Laney disputed claims that it was a peaceful protest, noting protesters used threatening speech, refused to leave when asked and, at one point, surrounded a deputy who was arresting a protester, forcing another deputy to break up the circle. “This was not a protest,” he said. “This was a riot.” Watch the video below to see Woodley's arrest. Fast-forward to the last five minutes of the video to see the arrest.

Robby Romero, an Apache from Taos, N.M., criticized what he described as the militarized police response, complete with an armored Mine-Resistant Ambush Protected vehicle parked at the top of the hill on Highway 6 overlooking the protest. “This is a crazy response to a peaceful resistance to something that is so dangerous to all life,” he said, adding, “We will win this fight, peacefully. We come with prayer and feathers. They come with weapons of destruction.” Both protests took place outside the 20-mile zones east and west of the Missouri River at Lake Oahe where a federal appeals court had ordered Dakota Access LLC to pause construction while the court decided on the Standing Rock Sioux Tribe’s request for an emergency injunction. The three-judge panel in Washington, D.C., issued a ruling Sunday rejecting the tribe’s request and dissolving the 20-mile, no-work zone.

In a joint statement Monday with the U.S. Department of Justice and U.S. Interior Department, the Corps said it hopes to conclude its review soon. The agencies said they “continue to respect the right to peaceful protest and expect people to obey the law.” “We also look forward to a serious discussion during a series of consultations, starting with a listening session in Phoenix on Tuesday, on whether there should be nationwide reform on the Tribal consultation process for these types of infrastructure projects,” they said.

Officers from Wisconsin assisted in Monday’s response. Schools in nearby St. Anthony and Flasher went on lockdown. Laney said the 200 to 300 protesters who took part are a “distinct” group within the 2,500 to 3,000 mostly peaceful people camping along Highway 1806 about 25 miles away near the confluence of the Missouri and Cannonball rivers. He said protesters’ message has been heard “loud and clear” over the last 62 days, but added “the courts have ruled” and the company has a legal right to do construction. “If their determination is that they’re going to … do everything they can to stop this work, I guess we’re going to be here for a while,” he said.

SOUTH DAKOTA:

Fort Randall Dam Passed Test Posed By Historic 2011 Flood (Yankton Daily)

BY RANDY DOCKENDORF randy.dockendorf@yankton.net | 0 comments

EDITORS’ NOTE: The following is part of a series of periodic articles on the fifth anniversary of the 2011 Missouri River flood, its aftermath and a look at the present and future.

For Tom Curran, the 2011 Missouri River flooding at Pickstown forced him to take unprecedented action.

The Fort Randall Dam project manager opened up all the flood tunnels to handle the torrent of water.

“We had releases of 156,000 cubic feet per second (cfs),” he said. “It was the first time in the history of the dam that we fully opened all four flood tunnels.”

The 2011 releases – which amounted to one million gallons per second – more than doubled the old record of 67,000 cfs during 1997 flooding.

When it came to moving the flood water, the first preference was to run the flow through the Fort Randall power plant to gain hydropower, Curran said. The eight turbines produce a combined 320 megawatts of power.

Fort Randall produces enough power for a city of 250,000 people, according to U.S. Army Corps of Engineers estimates.

“We continued to run our hydropower (during the flood),” Curran said. “We put out about 40,000 cfs through the power plant. The powerhouse was generating full capacity for those three months.”

Besides hydropower, the alternatives were running the water through the flood tunnels, spillway or a combination of both.

Fort Randall, completed in 1956, stands slightly more than two miles wide, at 10,700 feet, and 165 feet tall with a 140-foot water fall. Lake Francis Case runs for 107 miles behind the dam and backs up to the Big Bend Dam.

Fort Randall forms part of the Missouri River system of dams, Curran said. As such, the six dams need to remain in coordination for moving the flood water.

“The dams work together as a whole. They balance what each reservoir can hold and the flow each one can put through the power plant,” he said.

“Each one is a little bit unique, but they operate as a system. When the upper reservoirs are near their capacity, the rest of the water has to be moved downstream through all the dams.”

LIFE CHANGES

The flood affected all facets of life up and down the river, Curran said.

The Corps provided technical assistance to the Yankton Sioux Tribe amidst its flooding concerns, he said. Charles Mix County and the tribe had sustained $1 million in damages during previous flash flooding, and tribal members were displaced from their homes.

Most tribal members lived in homes on bluffs or other sites protected from the Missouri River flooding in 2011, Curran said. However, the Corps did warn tribal members about the dangers of bank erosion caused by the flooding, he said.

Downstream, the flooding inundated farmland, primarily in Charles Mix and Bon Homme counties on the South Dakota side of the river. On the Nebraska side, the river flooded housing developments such as Lazy River Acres.

The Nebraska Department of Roads (NDOR) closed stretches of Highway 12 east and west of Niobrara, Nebraska, throughout the summer. As a result, traffic was diverted and commuters and first responders were forced to find alternative routes.

The flooding didn't shut down Niobrara State Park, Niobrara, Chief Standing Bear Memorial Bridge or the Ohiya Casino. However, a number of travelers avoided the area because they encountered accessibility problems or mistakenly thought those sites were closed.

As a result, the economy – tourism, retail businesses, restaurants and bars – took a major hit.

While traditional tourism may have suffered in some areas, Fort Randall Dam saw an influx of a different type of visitor, Curran said.

"We had people from all over the country who wanted to see what the water looked like (when it was) that high and when it was released," he said. "Our people (with the Corps) were visiting with people every day (about the flood). We had longer hours every day just because people were coming through, looking and asking questions. We also had questions about the reservoirs and parks."

In addition, the Corps worked with conservation agencies on issues dealing with wildlife, Curran said. The Corps also monitored the changing course of the Missouri River and the increased sedimentation caused by the flooding, he said.

Lake Francis Case and Lewis and Clark Lake remained open for recreation, Curran said. However, flooding affected area campgrounds, boat ramps and other sites.

"As a reservoir, we had record pool levels in 2011. We were pretty much a half-foot from being totally full," he said. "A lot of recreational facilities were flooded at that level, and a lot of the recreation areas were closed."

The Missouri River and Lake Francis Case saw a great deal of pent-up demand the following year, Curran said. The boating and fishing numbers soared after the flooding.

"It was really busy in 2012," he said. "Things really picked up and rebounded that year."

LESSONS LEARNED

In 2012, the Corps embarked on a number of projects as part of regular maintenance and from the flooding. The inspections looked at the gates, cables, spillway and embankment.

Curran, who has worked at Fort Randall since 1999, said he has always remained confident about the stability of the dam and reservoir. His confidence was reinforced during and after an unprecedented event such as the 2011 flooding, he said.

Fort Randall handled the stress despite months of intense flood pressure on the dam, he said.

"That was kind of the test. The dam held up great. We did really well with no operation problems," he said. "Afterwards, we had a really thorough survey of everything, and it was just the normal wear-and-tear items. We worked after the flood to see if everything was in good shape and if we're ready to go should this (flood) ever happen again."

In that respect, the flood showed the dam's capability, Curran said.

"It was interesting to see what would happen during a high-water event," he said. "The flood pushed everything to its limits, but there really wasn't anything that stuck out as a problem or issue."

Col. John Henderson, the Omaha District commander for the Corps of Engineers, visited Fort Randall Dam earlier this year.

Henderson reflected on the fifth anniversary of the 2011 flood and emphasized the importance of two-way communication between the Corps and stakeholders, according to a Corps publication.

"I think the timing of this trip is appropriate since we are only five years removed from the single most significant hydrological event to occur in this basin in the last 100-plus years," he said.

"One of the key lessons learned following that event was the need for an ongoing commitment to open and frank dialogue throughout the basin. This inspection trip is an example of our efforts to maintain that dialogue."

Curran still sees and hears about the flood's impact from those most affected by it.

"I think there are some people who were intimately involved with the high water and flooding who haven't forgotten about it," he said. "But there are other areas where things are improving. People are doing some of the things they had always planned to do, and it looks nice."

Echoing Henderson's sentiment, Curran said the flood showed the importance of communicating with all people up and down the river.

"As far as what was learned, I would say communication and getting the word out, again and again, to let people know what to expect," he said.

"We're working to provide people with a better understanding of how the dams and reservoir system work. We want them to have an understanding if anything like this (flooding) should ever happen again."

COLORADO:

Study: Human-caused warming burns more Western forests – Colorado Springs Gazette

By: KEITH RIDLER, Associated Press

Updated: October 11, 2016 at 4:47 pm

BOISE, Idaho (AP) — A new study of Western forest fires confirms what is already apparent — wildfire seasons are getting longer and more destructive.

But researchers with the University of Idaho and Columbia University also say humans are to blame.

The study made public Monday says human-caused global warming contributed an additional 16,000 square miles of burned forests from 1984 to 2015.

Researchers say the 16,000 square miles represent half of the forest areas that burned over the last three decades.

"We're no longer waiting for human-caused climate change to leave its fingerprint on wildfire across the western U.S.," John Abatzoglou, the study's lead author and an associate professor of geography at the University of Idaho, said in a statement. "It's already here."

The authors of the study, published online in the Proceedings of the National Academy of Sciences, say it's the first to try to quantify how much human-caused climate change has increased wildfires in Western forests. Some other factors that had to be considered as contributing to the increase, the report said, included a legacy of fire suppression in the West, natural climate variability, and human settlement.

The study found that longer and hotter dry spells are causing Western forests to dry out and become more susceptible to wildfires.

Specifically, researchers said, spring and summer temperatures have warmed by 2 to 2.5 degrees since 1950. Researchers said that warming accounts for 55 percent of what they call "fuel aridity" from 1979 to 2015. The study attributed the other 45 percent to natural climate variations.

The study found that since 2000 there's been a 75 percent increase in forested lands with elevated aridity and nine more days each year with dry forests especially susceptible to wildfires.

"Anthropogenic climate change has emerged as a driver of increased forest fire activity," the report says.

Park Williams of Columbia University's Lamont-Doherty Earth Observatory, and a co-author of the study, said the report provides a better understanding of the effects human-caused global warming has on Western forests.

"This knowledge will allow us to make more educated fire and land management decisions," he said.

One of those decision-makers is Idaho Forester David Groeschl, who said the report could offer some help in the future.

"We know that our fire season is getting longer," Groeschl said. "We know that we're seeing more and longer fires, and we know that we have increasing fuels out there as well."

The fuel aridity was particularly bad in Idaho in 2015 when an extended heat and drought left northern Idaho forests parched and in the worst condition since 1926, officials said.

That summer and fall, 600 square miles of U.S. Forest Service land burned. Idaho's bill for fighting wildfires soared to $60 million with some 100 square miles, about three quarters of it forests, burning on state, private and federal lands that are in forest protective districts designated as the state's responsibility.

Idaho has taken a number of steps aimed at the wildfire risk, including increasing the pay of in-demand, experienced firefighters who were leaving to take similar jobs with more money at other agencies. Idaho also recently formed a partnership with the U.S. Forest Service to take on landscape-scale projects by using the state's land management expertise that includes selling timber on federal land. The state's first auction of federal timber took place last month.

How successful the partnership will take years to determine.

The study released Monday concluded that the trend of increased forest aridity resulting in large wildfires is likely to continue for decades while there are enough trees to fuel the flames.

Protesters cause temporary shut-down of pipeline in northcentral Montana- KBZK TV Bozeman

Posted: Oct 12, 2016 8:28 AM MDT

GREAT FALLS -

The battle over the Dakota Access Pipeline in North Dakota came to Montana on Tuesday.

Protesters forced the temporary shutdown of five pipelines carrying oil from Canadian tar sands, including one at Coal Banks Landing south of Big Sandy in Chouteau County.

Spectra Energy confirmed to MTN News that trespassers tampered with a valve on its express pipeline on Tuesday, and that as a precaution it was shut off.

The environmental group Climate Direct Action said Tuesday that it had also successfully shut down express pipelines at locations in Washington, North Dakota, and Minnesota.

The group says it was attempting to shut the pipelines down over concerns about global warming, and in solidarity with members of the Standing Rock Sioux tribe's protest of the Dakota Access Pipeline.

Spectra Energy says it worked with law enforcement officers in its response to the tampering incident in Chouteau County, and that their primary concern was safety of the community and environment.

The website Unicorn Riot posted the following information on Tuesday:

> *Early this morning, five water protectors successfully shut down five pipelines across the northern United States that were delivering tar sands oil from Alberta, Canada. The action was in support of the call for International Days of Prayer and Action for Standing Rock.*
>
> *The individuals used manual safety valves and bolt cutters to access and shut down the flow of tar sands oil into the US. They are "calling on President Obama to use emergency powers to keep the pipelines closed and mobilize for the extraordinary shift away from fossil fuels now required to avert catastrophe."*
>
> *The actions were undertaken by Emily Johnson, 50, and Michael Foster, 52, of Seattle, WA, Annette Klapstein, 64, of Bainbridge Island, WA, Ken Ward, 59, of Corbett, OR, and Leonard Higgins, 64, of Eugene, OR.*

There is no word yet on whether any of the protesters might face charges.

Spectra released the following statement: "Spectra Energy has responded to a situation during which trespassers broke into a locked facility and tampered with a valve on its Express Pipeline Tuesday morning in Montana. We coordinated with law enforcement in this response. Our first concern is for the safety of the community and the environment, and tampering with this important U.S. energy infrastructure will not be tolerated. This pipeline provides a vital source of affordable, reliable energy to fuel the everyday lives of Americans. As a cautionary measure, we temporarily shut down this section of the Express Pipeline."

Butte firefighters teach students about fire safety- KTFM TV News Kalispell

BUTTE -

Butte firefighters said fire education starts here, in the classroom. After the kids saw firefighters put on their gear and learn about stop drop and roll. Firemen Pat Doherty then spoke about the most common house fires

"Most structure fires in the United States are from cooking materials. It's always best to stay in the vicinity and keep an eye on it," said Pat Doherty, Butte Fire Department.

During the predicted cold snap, families will be turning up the heat. However, Doherty explains to kids to watch out for the dangers that can sometimes come from using space heaters.

Doherty also adds it's never smart to leave them unattended.

"Space heaters are dangerous. In the case of people forgetting to unplug them or they keep them too close to stuff that's going to catch on fire," said Doherty.

Airport Disaster Exercise Set for Thursday – DRGnews.com

October 12, 2016 (Dakota Radio Group)
By: Press Release

PIERRE, SD- You can expect lights, sirens and a whole lot of activity at the airport later this week.

Thursday evening, from 5:30 – 7:30, the Pierre Regional Airport and Hughes County will conduct a full scale disaster exercise. The mock disaster scenario includes a hazardous materials response on a simulated aircraft. The exercise is required by the Federal Aviation Administration and designed to provide first responders and airport personnel with disaster response experience.

"This is really practice for all the responders," said Mike Isaacs, Pierre Regional Airport Manager. "We do everything we can to avoid aircraft accidents, but we want to be prepared in the event there's one we can't avoid."

Isaacs went on to say that the exercise requires all the activity that a real disaster would require. Those involved in the exercise will be assigned a variety of responsibilities that include everything from information gathering and dissemination to coordination of involved entities to response management to logistics and cost tracking.

"An Emergency Operations Center and Unified Command Post will be set up at the airport for this exercise," said Isaacs. "They will serve as the hubs of all disaster response and recovery efforts.

Approximately 50 people will be involved in the exercise including volunteers, city and county officials, and first responders.

The Federal Aviation Administration requires airports with commercial air service to conduct a full-scale disaster exercise every three years. Additionally, the South Dakota Office of Emergency Management requires counties to conduct a variety of exercises throughout the year.

The Thursday night exercise fulfills requirements for both Hughes County and Pierre Regional Airport.

National Fire Prevention Week (Hot Springs Star)

By John D. Taylor

A closer look at Hot Springs Volunteer Fire Department history

HOT SPRINGS – The advent of National Fire Prevention Week, Oct. 9 -15 this year, is a good time to look at the important role firefighters play in the community, and to consider what everyone can do to prevent fires.

Fire Prevention Week

Since 1922, Fire Prevention Week has been observed to commemorate the Great Chicago Fire, that tragic 1871 conflagration that killed more than 250 people, left 100,000 homeless and destroyed more than 17,400 structures.

The fire began on October 8, but did most of its damage on October 9, 1871 – why Fire Prevention Week is held on Oct. 9 annually.

Popular legend holds that while Mrs. Catherine O'Leary was milking a cow, it kicked over a lamp, ignited her barn, then lit the whole city of Chicago on fire. However, recent research by Chicago historian Robert Cromie has debunked this fairy tale – while retaining some elements of truth in the story.

The fire did, indeed, originate near the barn where Mrs. O'Leary kept her five milk cows. But there is no proof that her cow sparked the blaze. O'Leary's testimony says she and her cows were asleep, not milking, when the fire broke out.

Who started it then? Some blame some neighborhood boys who were near the barn sneaking cigarettes, some say a O'Leary's neighbor started the fire, another theory is that a meteorite shower that fell during Oct. 8 all over Michigan and Wisconsin may have started the fire.

Also, while the Chicago Fire is one of the most well known, it wasn't the biggest fire in American history. That notoriety belongs to the Peshtigo Fire, which also occurred on October 8, 1871, in northeast Wisconsin. It burned 16 whole towns, killed more than 1,100 people, and scorched 1.2 million acres. It began when several railroad workers, clearing land for tracks, unintentionally lit a brush fire. Before long, the fast-moving flames were whipping through the area "like a tornado," survivors said. Peshtigo, Wisconsin got the worst of it, within an hour, the entire town was destroyed.

These fires changed the way firefighters and public officials thought about fire safety. And on the 40th anniversary the fires the Fire Marshals Association of North America decided to mark the anniversary in a way to keep the public informed about the importance of fire prevention.

In 1920, President Woodrow Wilson issued the first National Fire Prevention Day proclamation, and since 1922, Fire Prevention Week has been observed. According to the National Archives and Records Administration’s Library Information Center, it is the longest running public health and safety observance on record.

Hot Springs VFD

On July 2, The Hot Springs Volunteer Fire Department (VFD) celebrated its 125th anniversary.

The fire company was formed, according to a VFD history by William T. Richer – VFD member Jenni Sotherland shared this with the Star – in January of 1890, when a group of Hot Springs citizens gathered at the Minnekahta Hotel to organize themselves into the VFD. At this meeting, John Gillespie was elected chief; H. C. Venette, first assistant chief; John Mueller, second assistant chief; Kenneth Harris, secretary and Wally Root, treasurer.

In those days, there was no citywide water system, so the only equipment the VFD needed was a large number of leather water buckets. To fight fires, the men formed two lines –Richer calls them “strings” – going to and from the fire and a water source. Usually, Fall River, water holes or cisterns were the water sources. One line of men passed buckets of water from the river to the fire, the other line returned the empty buckets.

In July, when the modern VFD was whooping it up with a masquerade ball at American Legion Post 71 they may not have been thinking about these roots, but they are where the VFD originated.

Early days

Later in 1890, the city began to pipe water into the business district, so it purchased its first fire-fighting equipment: two, high wheeled hose carts, and one hook and ladder wagon. The hose carts were drawn by men, the wagon pulled by a team of horses.

Throughout those early days the city’s firefighting ability grew. In 1893, the city bought another high-wheeled hose cart, placed iton College Hill (where the high school is today).

One interesting story from those days is connected to John Mueller, father of the Mueller Center founder. In 1896, when Mueller was the VFD’s first assistant fire chief, he bought a white horse, named “Old Granger” from Bill Perry.

Mueller used Old Granger to ride to and from fires, and pull the No. 1 hose cart to fire scenes.

For many years Mueller kept his stable much the same as the city’s fire equipment stables, with the bridle bit in Old Granger’s mouth, so the horse was ready to go. When an alarm sounded, Old Granger would leave his stall, make a run for the buggy shafts, where the No. 1 hose cart could be hooked up to him with one snap of the harness, and “away he would go,” says Richer.

Sometimes, Mueller was able to catch a ride on the horse, other times, Old Granger was the first responder to a fire.

Richer says, “The call of the fire alarm was greater to this noble horse than was the call of the feed box.” Mueller used Old Granger in this fashion for a quarter century, until 1915, when the horse was “pensioned.” The horse was so stiff and lame then he could hardly walk the streets, according to Richer. “But if an alarm came in, one would think he was a mighty young horse. He was able to forget his stiffness and lameness to answer the call.”

Richer says in 1916, when Old Granger was “pensioned” and put out to pasture near town, the horse heard an alarm call and in a few moments showed up in town to answer the call.

Granger answered his last fire call in 1917.

Also during these early days, the VFD sponsored three-day 4th of July celebrations, free to the public. Special trains brought large crowds of people into Hot Springs from surrounding areas and the entertainment included greased pig-catching and greased pole-climbing contests, rodeo-style bucking horses, baseball games, swimming contests, foot races, human wheelbarrow races, tug-of-wars, band concerts and reading the Declaration of Independence.

In 1899, the VFD fire hall became a dual-purpose building, hosting Hot Springs’ first opera hall as well as the fire hall. What happened was that the fire department remodeled their building, adding a small stage to the east end of the room, a set of bleachers in the west, and covering the remaining floor space with folding chairs advertising Happy Bill cigars. Two small dressing rooms were also built outside the building. The Fireman’s Opera House was in operation until about 1909, when the skating rink and theater opened. The opera house never made much money, but it gave city residents a place for entertainment.

Up until the end of World War I (1918), the fire fighting equipment of the city included three hose carts and one hook and ladder wagon or truck. The hose carts were housed in various parts of town: One in the lower end, one on College Hill, one on Minnekahta Ave. The hook and ladder wagon was kept at city hall. Fire alarms were anything that made noise -- train whistles, church bells and “men hollering at the top of their voices,” notes Richer.

There were no telephones in those days, so when fires occurred at night, VFD members “would generally exhaust themselves in running from their homes to the scene of the fire.”

Often, by the time the hose carts got to the scene, the fire was out of control, and the VFD’s efforts focused on keeping the fire from spreading to adjoining properties. “It was quite generally considered those days that if a property caught fires during the night time, there would be nothing left in the morning, except the lot. One example of this is how an April 1891 fire wiped out a whole city block of business buildings in “lower” town, the damage estimated at $35,000 – big money in those days.

Other big blazes of that era the 1891 blaze that took the Minnekahta Hotel, the 1892 blaze that took out several buildings where the Post Office now stands, an 1895 fire that destroyed the Jay

Crane store building, a 1903 fire that took a block of business houses what was People's National Bank and the Riverside Apartments, a 1907 fire that took the Catholican Hotel and bath house and the Siloam bath house, 1910's Gibson Hotel fire and 1915's Gillespie Hotel fire. In 1924, the High School building burned to the ground.

Motorization

In 1918, a movement was started to motorize the VFD. City businessmen, citizens and the fire company made donations of $1,875 which bought a combination Ford chemical and hose truck. This was put into service in June of 1919, when Dave Batchelor was foreman of the fire company. Batchelor's house burned down, a $3,000 loss, in 1908.

An REO Speedwagon Fire Truck equipped with a pump was purchased in 1924, after the high school fire, to increase water pressure, and town founding father F.O. Butler offered the fire company his Pierce-Arrow touring car, which was reworked into a hook and ladder truck. This unit remained in operation until 1938, when it was replaced by a new, Ford V-8 truck.

In 1934, the REO Speedwagon was converted into a smoke extractor, a move made possible by the ingenuity of Vic Englebert, H.C. "Swede" Nelms, and Fire Chief L. J. Bingham. These men added a 25-horsepower Waukesha motor to a large suction fan, salvaged from the State Soldier's Home. This rig was given credit for saving more property than any other equipment in the department, drawing smoke and gas from burning buildings at a rate of 6,500 cubic feet per minute, which made it possible for firefighters to get into burning buildings and extinguish fires.

Growth

Throughout the 1930s the VFDs gear grew, as Hot Springs grew, with horses and carts being replaced by larger and more powerful motorized equipment. In 1936, this enabled Hot Springs to get a 10 percent cut in insurance rates because of the efficiency of the fire department.

By the 1940s, there were 561 people in the VFD, with 65 active members and six living in Fire Hall, on call to fight fires. Engines and other gear were purchased by the city or the VFD via proceeds for insurance money or annual dances. But in 1942, city agreed to begin paying the VFD $200 per month to, with the understanding that the VFD would pay for all equipment, pay their own insurance, water, lights, telephone, gas, oil, fire station upkeep and other incidental expenses.

"Without a doubt the Hot Springs Fire Department is one of the very best strictly volunteer fire departments in the state…the department has brought home the South Dakota State Championship trophy a total of 11 times.

During the late 1940s, the fire chief was conducting "fire drills at both schoolhouses several times each year. These drills are not at regular intervals, but just whenever he takes the notion, giving no notice to teachers, janitors or pupils at the building." A general inspection of "every business house within the city" was also held annually, which revealed any fire hazards.

In 1948, after Frank Fetzner, Deputy State Fire Marshall, saw the VFD in action for the first time, he said the VFD handled themselves like a experts and that the city should feel mighty proud that they have such a group of fire-fighters.

After flood of 1948, a VFD American LaFrance pumper was used to pump out Evans Plunge. This took days. Also, extension ladder truck saved a “kid” marooned on the cliffs at Hot Brook, with two fireman saving the goat.

Also, 800 questionnaires and inspection blanks were sent home with school kids, asking that they report any fire hazards in their homes. Returning this would get the kids a ride on the fire truck. More than 700 of these came back, the kids ratting out their parents bad habits, even in the homes of firemen.

Emergency ambulance was first put into service in November of 1949.

The 1950s

These were high times for the VFD – in more ways that one, according to new VFD scribe Howard McBride. In 1950, Chief Vic Englebert resigned, saying “he had gone on a bender, got himself in jail and fined. Was called on the carpet by his boss and was given an enforced vacation for two weeks from his job.”

That same year the city floated a $15,000 bond issue for new fire station, and it carried 1,098 to 487 votes. The VFD bought three lots (where the Valley Hotel burned in 1946) for $3,500 in the city’s name. Many private citizens gave donations to this, including one widow who gave $100, quite a bit of money then.

In February of 1950, at the annual Fireman’s Masquerade Ball, someone set fire to Wally King’s masquerade suit, which produced 2nd degree burns on his legs, hips, chest and chin, and 3rd degree burns on both hands. King was in hospital for several months, and the masquerade ball ended – until this year.

In 1951, street names in the city were changed, and a new map was prepared showing the new names and locations. Firemen instructed to study this and become familiar with it.

William Watson, of Wind Cave National Park, came to a VFD meeting in April to compliment the VFD on their cooperation. Watson said the park and the state Game, Fish & Parks department couldn’t see eye-to-eye on their cooperative agreement, and he thought VFD should take care of Southern Hills fires. “If the rest of Hot Springs had the getup and go of the fire department, the town would be a hell of a lot better off,” Watson quipped, noting he wouldn’t be at Wind Cave much longer due to a transfer to Hot Springs, Arkansas.

In 1953 a fire at the Minnekahta Building, took the lives of a woman and her two daughters, although the father and his two sons escaped harm. The building was falling into itself when VFD arrived.

The last years of the 1950s brought a new aerial ladder, an Oelrichs chicken hatchery fire that cooked 3,700 of the birds, and a January fire in 20-below temperatures that the fire chief said was the first time he'd see the smoke extractor tube freeze.

1960s and 70s

After the 1961 flood, the VFD was called on to pump basements, but lacked the equipment to do so. It was also called to Angostura Dam for rescue work. In 1963 a new addition was put on the station. School building inspections revealed a few hazards, which were eliminated.

And the 1979's Evans Hotel Fire proved to be a seminal event for the city.

Modern VFD

Most recently, the VFD has had some major fires to contend with.

It fought 2007's Alabaugh Fire, which burned 10,324 acres, destroyed 33 homes, killed one resident, and forced two firefighters to take refuge in a fire shelter. Hot Springs' Mary Goulet lived in one of those homes and wrote a book about the fire, "Cascade of Flames."

In 2015, the Bitter Creek fire started south of Hot Springs, off Highway 71 at the intersection of Maitland and Ash Creek Roads. It burned about 87 acres, and firefighters from Cascade, Hot Springs, and South Dakota State stopped the spread.

And just after their 125th anniversary, in mid-July of this year, the Indian Canyon fire, which began after four days of temperatures topping 90 degrees and a lightning strike touched off a blaze about five miles southeast of Edgemont, scorching 14,133 acres

Today, the VFD has 65 active volunteers led by Chief Jim Stevens, 1st assistant Chief Bob Evans, 2nd assistant chief Wendell Hertel, and Secretary Treasurer Gerald Hanson.

Argyle VFD looking for help

The Argyle Volunteer Fire Department (AVFD) located between Pringle and Hot Springs, SD is seeking new members. Applicants should be over 18 years of age, in good physical health, have a clean driving record, and be able to pass a Law Enforcement Background check. Firefighters will respond to structural and wildland fires as well as assist with search and rescue operations, motor vehicle accidents and other emergencies in our coverage area. First Responders will assist and respond to medical emergencies and assist patients until ambulances arrive on scene. Prior experience is not necessary but certainly welcome. This is a volunteer non-paid position.

The Department provides Fire and EMS response to a 144 square mile area of southwestern Custer County and provides Mutual Aid to Pringle, Minakata, Custer, Hot Springs, Wind Cave, Custer State Park, and other nearby agencies in Custer and Fall River Counties.

Meeting are held at the fire station on the first and fourth Thursdays of each month at 7 p.m.

For more information, call (605) 673-5823; e-mail ArgyleVFD.SD@gmail.com, or check the Argyle Volunteer Fire Department Facebook page.

WYOMING:

USDA designates Park County in Wyoming as a primary natural disaster area (Northern Wyoming Daily)

CASPER — The U.S. Department of Agriculture (USDA) has designated Park County in Wyoming as a primary natural disaster area due to a recent drought.

“Our hearts go out to those Wyoming farmers and ranchers affected by recent natural disasters,” said Agriculture Secretary Tom Vilsack. “President Obama and I are committed to ensuring that agriculture remains a bright spot in our nation’s economy by sustaining the successes of America’s farmers, ranchers, and rural communities through these difficult times. We’re also telling Wyoming producers that USDA stands with you and your communities when severe weather and natural disasters threaten to disrupt your livelihood.”

Farmers and ranchers in Big Horn, Fremont, Hot Springs, Teton and Washakie counties in Wyoming also qualify for natural disaster assistance because their counties are contiguous.

Farmers and ranchers in Carbon, Gallatin and Park counties in Montana also qualify for natural disaster assistance because their counties are contiguous.

All counties listed above were designated natural disaster areas on Oct. 5, 2016, making all qualified farm operators in the designated areas eligible for low interest emergency (EM) loans from USDA’s Farm Service Agency (FSA), provided eligibility requirements are met. Farmers in eligible counties have eight months from the date of the declaration to apply for loans to help cover part of their actual losses. FSA will consider each loan application on its own merits, taking into account the extent of losses, security available and repayment ability. FSA has a variety of programs, in addition to the EM loan program, to help eligible farmers recover from adversity.

Other FSA programs that can provide assistance, but do not require a disaster declaration, include the Emergency Conservation Program; Livestock Forage Disaster Program;Livestock Indemnity Program; Emergency Assistance for Livestock, Honeybees, and Farm-Raised Fish Program; and the Tree Assistance Program. Interested farmers may contact their local USDA Service Centers for further information on eligibility requirements and application procedures for these and other programs. Additional information is also available online athttp://disaster.fsa.usda.gov.

STORIES

COLORADO:

Don’t go chasing wildfires – unless you’re Scott Kelleher

13Oct, 2016 by Anne Ju Manning – Source/Colorado State University

Most people drive *away* from fires burning in the mountains. Scott Kelleher drives straight at them – well, near them, anyway. And it's not for thrill seeking.

For two weeks in September, Kelleher drove the perimeter of a 6,000-acre prescribed burn in southern Colorado to set up 13 outdoor air samplers on steel stakes.

Kelleher's system is suited for monitoring smoke emissions for both controlled burns and wildfires. Field-testing the sensors during an actual, unplanned wildfire would prove challenging. So, Kelleher received permission from the U.S. Forest Service to tag along on a planned, prescribed burn, which are common in the Rocky Mountains and other densely forested areas.

"The long-term goals of this project are very motivating," Kelleher said. "It's applying science and technology in an affordable new way to make the lives of those responsible for monitoring smoke much easier, with the main thought of protecting public health in mind."

Field testing

Kelleher's first field-testing campaign took place in a swath of land between Pagosa Springs and Bayfield, Colorado, near Pargin Mountain. Working closely with his contacts at the forest service, Kelleher set up each of his monitoring checkpoints in strategic proximity to the forest service's monitoring zones.

The sensors Kelleher is testing are based off the principle of an Ultrasonic Personal Aerosol Sampler (UPAS) designed in the lab of his advisor, John Volckens, who is a professor in mechanical engineering and member of the CSU Partnership for Air Quality, Climate, and Health. The UPAS features an ultrasonic pump that draws in air, a sampling filter, rechargeable batteries, and an air flow rate sensor.

Kelleher's master's project involves adapting the UPAS for conditions suitable for prolonged outdoor monitoring. His new version, for which he is quick to point out he received many hours of help from other Volckens lab members, includes a hardened enclosure for weatherproofing; a solar cell for charging an extended-life battery; and a real-time, optical particle sensor that tracks the flow of particles 2.5 microns in diameter and smaller. "PM 2.5" is a standard measure for describing air pollution particles small enough to penetrate human lungs and cause health problems. The optical sampler contained in the device gives live updates.

The sensor also has a gravimetric analysis device that collects particles onto a filter. The filter is later weighed and analyzed for particulate matter concentrations. The entire device can be controlled remotely by smart phone.

The total cost of one of Kelleher's sensors is estimated at about $500, compared with particulate matter monitors used today that cost $10,000 to $20,000. The standard sensors usually require line power, and are large – about the size of a microwave oven.

Kelleher's unusual road trip involved seven rounds of 24-hour sampling. This involved traveling a route of 90 miles, changing out filters on each device and extracting information. In all, he was out in the fire for 14 days.

Automation in rural environments

A graduate of Montana Tech who grew up on a beef cattle, wheat and barley farm near the Canadian border, Kelleher is motivated by his work to bring the power of automation and monitoring to rural environments. Recognizing his penchant for engineering cost-effective solutions, and armed with his CSU master's degree in a couple of years, Kelleher hopes he can make a difference by bringing simple automation technologies to farmers or small businesses. The remainder of Kelleher's thesis will involve organizing and analyzing the data he collected at Pargin Moutain as well as follow-up prescribed burn experiments as needed. He will present his recent findings at the Second International Smoke Symposium (ISS2) in Long Beach, California next month.

"It was very cool to observe such a large-scale event and learn about the processes and effort that go into it," he said. "Hopefully, one day, my technology will enable anyone worried about air pollution to conduct monitoring right in their backyard."

NORTH DAKOTA:

Fox Island residents approve flood protection plan (Bismarck Tribune)

LEANN ECKROTH Bismarck Tribune 18 hrs ago

A $3.92 million Fox Island flood protection project has been approved 72-18 by property owners, who will pay part of its cost via a special assessment district, the Burleigh County Water Resource District Board announced Wednesday.

The project will involve raising a section of road and adding a levee to safeguard against a 20-foot flood. The Legislature has committed $2.8 million toward its completion, and the Burleigh County Commission has approved funding of $920,000 in yearly installments. Fox Island property owners will pay the balance.

The project was driven by the 2011 Missouri River flooding.

The raising of the road would start at the pump at Tavis Road and move west along Farwest Drive and Gallatin Loop, according to Michael Gunsch of Houston Engineering, consulting engineer for the water resource district. The levee would extend west from Gallatin Loop to the Missouri River bank, then run north to the Whispering Bay accessory channel, he said.

Gunsch said about 80 percent of the 91 property owners who voted favored the project. One submitted a blank ballot.

With the residents' approval on record, the board is moving forward with the project and paying a design fee of $325,000 to Houston Engineering.

Completion is planned during the 2018 construction season, but authorization must first be granted by the U.S. Army Corps of Engineers and the North Dakota State Engineer's Office.

Earlier precautions were taken when the county partnered with Bismarck in creating the Tavis Road floodgate after the 2011 flood and Bismarck raised Mills Avenue, according to Larson.

A Dec. 14 hearing has tentatively been set to allow those within the special assessment district to protest.

Sixteen residents in the far western Gallatin Loop area signed a petition saying the construction of the levee would damage their yards, said Greg Larson, a member of the water resource district board.

"We 16 receive none of the flood benefit, but receive 100 percent of the street and yard destruction," he read from the statement.

The homeowners signing the petition also asked that a different street be raised near their properties.

Board members agreed they did not want to change the protection plan or do more study at increased cost to those being assessed.

Each property owner in the assessment district can expect to pay an average of $3,790 toward the construction project, Gunsch said. In addition, he said, some of them will pay $943 each toward the system's operation and maintenance.

Sen. Bernie Sanders asking President Obama to halt North Dakota pipeline for full review (KFOR TV, Oklahoma City, and AP)

Posted 7:17 am, October 14, 2016, by KFOR-TV & K. Querry and AP Wire

BISMARCK, N.D. – Vermont Sen. Bernie Sanders and four other Democratic senators are asking President Barack Obama to halt construction of the four-state Dakota Access pipeline until a full environmental review can be completed.

In a statement, the senators said Thursday the request is due to a federal appeals court denying the Standing Rock Sioux's motion for a temporary work stoppage in southern North Dakota

within 20 miles of Lake Oahe. The feds stopped construction on land bordering and under the lake in order to review the permitting process.

An environmental review would likely delay the pipeline, which Dallas-based Energy Transfer Partners hopes to complete by the end of the year.

White House spokesman Patrick Rodenbush declined to comment.

The other senators are Patrick Leahy of Vermont, Dianne Feinstein of California, Ben Cardin of Maryland and Ed Markey of Massachusetts.

The proposed Dakota Access Pipeline would transport crude oil from North Dakota through South Dakota and Iowa and into Illinois.

The underground pipeline would transport 470,000 barrels of crude oil a day, which would be sent to markets and refineries in the Midwest, East Coast and Gulf Coast regions, according to Energy Transfer Crude Oil Co.

However, the Standing Rock Sioux Tribe says the pipeline would come within a half-mile of their reservation and could disturb or destroy sacred historical sites.

Also, tribal leaders are concerned about the consequences the pipeline would have on their water supply.

North Dakota sheriff out of town almost constantly as pipeline protest drags on (Fargo Forum News Service, WDAZ TV)

- By TU-UYEN TRAN Forum News Service
- 18 hrs ago

FARGO — In mid-August, Cass County Sheriff Paul Laney headed for southeastern Morton County, the scene of protests against the Dakota Access Pipeline, and, except for a few breaks, he's been there ever since. Serving as the elected sheriff of what's by far the state's largest county while consumed by policing the ongoing tribal protests of the oil pipeline has been a daily act of priority-balancing, Laney said.

"I'm very blessed to have a command team that I believe is second to none," Laney said. "They can hold the fort with most things, but there are certainly things that need my attention."

Laney, who is halfway through a third term after first taking office in January 2007, said he feels it's important for him to do everything he can to help Morton County in its time of need because Cass County got help during the flood fights of 2009, 2010 and 2011. In the worst of those floods, in 2009, hundreds of law enforcement officers from around the state and country came to Cass County for more than 40 days, he said.

"The fact that we've had to go out of state to bring in assistance," he said, "how do we in-state not help first?"

Hundreds of law enforcement officials from all over the state and other parts of the country have been helping police the protests at the request of Morton County Sheriff Kyle Kirchmeier, whose force is stretched thin. Laney has been the operations chief for the law enforcement presence to the protests.

Last week, a representative from the Western States Sheriffs' Association and the National Sheriffs' Association said members of both groups have pledged to help Morton County. Laney is a board member for the national group.

Cass County Commission Chairwoman Mary Scherling agreed with Laney's sentiment that pitching in is worth the heavy strain on the sheriff's time.

"When we've had floods, for example, we've relied on many many outside agencies to help us with all of our sandbagging and dike patrols and search and rescue and so on and so forth," she said. "The counties don't live in a bubble. We have to help each other and we're glad to be able to do that."

Scherling said she knows Laney is in "constant communication" with his subordinates in Fargo. Laney said he's been able to take care of business back in Cass County by phone, by email or with scanned documents.

Cass County Chief Deputy Col. Rick Majerus is in charge while Laney is out. The sheriff said he does come back to Cass County when he's absolutely needed.

Marty Johnson, Scherling's opponent in November's County Commission election, didn't return a phone message Wednesday.

The pipeline construction site targeted by protesters is near the Missouri River just north of the Standing Rock Indian Reservation. Protesters, many of whom are American Indians, say construction of the $3.8 billion oil pipeline would desecrate burial grounds and other sites sacred to Indians. They also say a rupture would threaten water quality in the Missouri River, which the pipeline must go under as it continues on its way to Illinois.

Laney estimated that there have been 7,000 to 8,000 protesters, though more recently the numbers have dropped to 2,500 to 3,000 who are in it for the long haul. The majority are peaceful but 300 to 400 are "extremely confrontational," he said, accusing them of trying to disrupt construction and intimidating farm workers. As of Tuesday, Oct. 11, the protests had led to 123 arrests.

State officials and lawmakers have criticized the lack of financial and law enforcement support from the federal government, given that the U.S. Army Corps of Engineers surprisingly withdrew its required approval of the pipeline's Missouri River crossing for further review -- an announcement made Sept. 9, just minutes after a federal court ruling in support of the pipeline's construction.

The number of law enforcement officials on the scene has fluctuated based on the need, though Laney said he couldn't say how many because of security concerns. Several of his deputies have rotated in and out of Morton County over the last few months, he said, but it's hard for him to stay away because he's one of three top commanders on the scene.

Cass County taxpayers won't bear the cost of deploying the deputies and Laney to the protest, and patrols in Cass County and jail security haven't been affected, a department spokesman previously told The Forum. The state Emergency Commission voted last month to borrow up to $6 million from the state-owned Bank of North Dakota to cover overtime and other protest-related costs.

Laney said the days are long there, leaving only enough time to outside of work for him to grab a bite and sleep. Deputies who volunteer to rotate in all work seven days a week with no time off until they rotate out again, he said.

"I'm not going to lie, we're all tired," he said, but law enforcement officers expect that they may have to make sacrifices.

Asked how long he thinks he'll be needed in Morton County, Laney said that depends on the protesters.

The company building the pipeline, which was 87 percent complete in North Dakota as of the end of September, said Tuesday that it intends to resume construction promptly after the Standing Rock Sioux Tribe's

request to stop work on the pipeline in places where it believes the project will desecrate sacred land was denied Sunday.

Protesters have also said they don't plan to leave anytime soon.

"This currently is a situation that there's no way one agency alone could handle this," Laney said.

Madison City Council member arrested in North Dakota pipeline protest (Bismarck Tribune, Wisconsin State Journal)

- Dean Mosiman, Wisconsin State Journal
- Oct 12, 2016

Madison Ald. Rebecca Kemble was arrested and jailed on Monday while acting as a legal observer of the continuing protests over a controversial oil pipeline in North Dakota that a Native American tribe says threatens tribal land.

Kemble's version of events contrasts sharply with statements by law enforcement, who characterized the event as a riot.

Kemble was among more than two dozen people arrested on Monday at two protests, Morton County Sheriff's Department spokesman Rob Keller said. She faces tentative charges of misdemeanor criminal trespassing, destruction of evidence, resisting arrest and engaging in riot.

She was taken to Morton County jail and released after posting a $1,250 bond Tuesday morning, Keller said.
Actress Shailene Woodley, who starred in the "Divergent" movie series and most recently in Oliver Stone's film "Snowden," was also among those arrested.

Kemble said Tuesday afternoon that she was wearing a hat that identified her as a legal observer and was videotaping a peaceful prayer ceremony when police arrived and began making arrests. She said she intends to fight the charges.

"I wasn't protesting. It wasn't a protest," she said. "I was legal-observing. I was targeted by law enforcement for my camera."

Kemble, 18th District, traveled with her husband over the weekend to Morton County to present the Standing Rock Sioux Tribe with a parchment copy of a recent City Council resolution expressing solidarity with those protesting the pipeline.

The tribe wants construction halted due to concerns of potential contamination of its water supply and says the pipeline will encroach on tribal burial sites and other cultural artifacts.

On Monday morning, Kemble said she went with others to attend a ceremony that started at an encampment on the reservation. The ceremony, she said, moved to the pipeline site near St. Anthony and featured prayer, drumming and dancing by tribes from Argentina and the Arctic Circle.

She said most people were beginning to leave after the event, except for about 16 people sitting under a tepee, when at least 40 police officers arrived.

A commanding officer, Kemble said, told the protesters they faced arrest if an officer touched them. She said most people backed up but police pursued. She said the commanding officer ran at her, grabbed her while she was holding her camera, put her hands behind her back, bound her with a zip tie, and took her camera as evidence, with police taking her and those arrested to jail. A Morton County's Sheriff's Department press release on Monday afternoon describes a different scene.

On Monday morning, authorities got a call that two protesters had locked themselves to equipment on private property near St. Anthony and were arrested and charged with a felony and misdemeanors, the release said. Another arrest was made and the group disbanded.

About two hours later, authorities were alerted to a convoy of about 100 vehicles assembling near the pipeline site, the release said. Law enforcement closed a road and told the protesters to disband. The crowd refused and 24 more people were arrested, it said.

In the statement, Cass County Sheriff Paul Laney said, "While some would like to say this was a protest, this was not a protest — this was a riot."

Kemble rejected the description. "What alternate universe was the sheriff in that day?" she said. "It was so peaceful. The whole day was steeped in prayer and ceremony.

"The police are fear-mongering."

Kemble said she'll present the parchment to tribal leaders Wednesday morning.

Last weekend, the Dane County Sheriff's Office sent 10 deputies from its special events team to the site of the protests, part of a state contingent of 40 members of law enforcement that have gone to provide assistance to the area.

Construction resumed Tuesday on the $3.8 billion, 1,200-mile pipeline on private land about 20 miles from the so-called Red Warrior Camp where thousands of protesters have gathered, The Associated Press reported.

Dean Mosiman covers Madison city government for the Wisconsin State Journal.

GOP Demands Punishment From AG Lynch Over Gold King Mine Disasters – The Daily Caller News Foundation (Washington DC pub)

Republican lawmakers are demanding the Department of Justice explain why criminal charges have not been leveled against an Environmental Protection Agency (EPA) employee allegedly responsible for a massive mine spill in Colorado.

“By not taking up the case, the Department of Justice looks like it is going easy on its colleagues in EPA,” three lawmakers with the House Natural Resources Committee wrote Wednesday in a letter to Attorney General Loretta Lynch.

Republican Rep. Rob Bishop of Utah joined fellow GOP colleagues Chairman Jason Chaffetz, also from Utah, and oversight subcommittee chairwoman Cynthia Lummis, who represents Wyoming, to send out the letter Wednesday afternoon.

“Its lack of action on these charges give the appearance of hypocrisy,” the lawmakers claim, “and seem to indicate that there is one set of rules for private citizens and another for the federal government.”

The Colorado mine spill resulted in three million gallons of dangerous mine waste being dumped into Colorado’s Animus River, turning it yellow and poisoning the drinking water for thousands of residents across three states and the Navajo Nation. The spill also dumped more than 880,000 pounds of toxic elements — like lead and arsenic — into the water.

The EPA had tried to keep the identity of the person responsible for the spill under wraps until June, when The Daily Caller News Foundation reported that EPA worker Hays Griswold was in charge at the Gold King Mine during the spill.

Someone removed Griswold’s name from an “independent” review of the disaster, according to documents obtained by TheDCNF in June.

An EPA inspector announced Wednesday Bishop’s committee wrote the letter that it found evidence an unnamed employee violated the Clean Water Act. The Department of Justice will not pursue the case, a spokesman told reporters, and is instead referring the case to the EPA’s leaders.

The lawmakers added that the “EPA disaster deserves the same level of accountability to which private citizens are held.”

EPA’s failure to hold its employees accountable for last year’s leak has become a standard operating procedure.

Senior EPA officials in 2015, for instance, largely ignored complaints by 16 women, mostly employees, accusing one agency official of sexual harassment. The employee got promoted despite the complaints.

Bishop’s committee held a hearing in May showing that the EPA paid a registered sex offender to retire rather than terminating his employment.

The child molester was a registered sex offender and was fired in 2014 for violating his probation – but the EPA, as its custom, reinstated him under the Merit Systems Protection Board reinstated him. The employee was eventually paid $55,000 to resign in 2015.

Hurricane-level Winds Possible In Pacific Northwest (CNN)

By Max Blau

CNN, October 13, 2016

Brace yourself, Pacific Northwest. What's left of a typhoon, which has made its way across the ocean, is expected to pummel parts of Oregon and Washington over the next several days.

The National Weather Service has said a pair of strong storms are set to hit the West Coast on Thursday and Saturday.

CNN meteorologist Dave Hennen said parts of Washington and Oregon could see gusts of up to 80 mph near coastal ranges Thursday. According to the weather service, rivers are expected to rise, with flooding remaining most likely in the Olympic Peninsula.

"Areas of ponding on roadways will slow Thursday commutes," the weather service said. "Small creeks and streams will rise and flood as well."

After a brief lull, the fierce winds could whip again through the Northwest at up to 100 mph. Hennen, who described this storm as a "monster," said it has the potential to match the pressure levels of a Category 3 hurricane on the Saffir-Simpson Hurricane Wind Scale. The weather service has cautioned residents to watch out for tree damage due to the high winds.

"Many of the wind-related deaths in western Washington occur when trees topple onto people in cars," it said.

Though it's still too early to tell, the weather service said the Saturday storm could also lead to widespread wind damage, power outages and coastal erosion.

"(There's a chance for) a worst-case scenario leading to a historical and destructive windstorm for the area," it said.

According to Hennen, a third storm may pass through the Pacific Northwest next week.

Crews Extend Lines At Colorado Fire; Containment 60 Percent (AP)

Associated Press, October 25, 2016

WESTCLIFFE, Colo. (AP) – Ground crews and heavy equipment are extending protective lines around a southern Colorado wildfire, and containment has reached 60 percent.

Fire managers say crews will keep building lines Tuesday at the Junkins fire, which has destroyed nine homes since it started on Oct. 17.

The burned area remained at 28 square miles late Monday. Full containment is expected on Nov. 15.

The fire started 11 miles east of Westcliffe when high winds blew a metal outbuilding into a utility pole and knocked down a power line.

Some residents remain evacuated from their homes.

Project of The Year 2016 Rehabilitation Runner Up: Eldorado Springs Canyon Pressure Pipe Rehabilitation (Trenchless Technology)

By Trenchless Technology Staff on October 24, 2016 Features, Pipe Relining, Project of the Year, Rehabilitation

The project was precipitated by extreme flooding in Colorado in September 2013. FEMA was quick to act as many foothill communities and towns had suffered catastrophic loss, with property damages of more than $1 billion. Part of the rebuilding effort included repairs to water systems and sustainability improvements.

The South Boulder Creek Division project for the City of Lafayette entailed updates to various water structures destroyed during the flood, including roughly 1,200 lf of 12-in. pressure pipe rehabilitation. Extensive evaluation of the pipeline completed after flooding had shown that the 40-plus-year-old pipe was pitted with pinholes and would require repair or replacement.

General contractor EZ Excavation performed a variety of work along the pipeline, including the rebuilding of outlet works and modifying the sand structure in Eldorado Canyon State Park. The work by EZ provided rare access to the normally inaccessible line, presenting an opportunity for trenchless rehabilitation. Insituform’s glass-reinforced InsituMain CIPP product was selected to rehabilitate the water line.

The steel raw water line, pressure-rated at 45 psi, runs parallel between South Boulder Creek and the side of a mountain. An elevated road, South Boulder Creek and adjacent walking trails at the foot of the slope are located inside the park near the project location. The existing water line runs under the trail at the far side of the canyon. Access is difficult because there is an approximate 30-ft vertical drop between the road and the pipe.

Installation was scheduled for December as the creek flow was low and could be diverted and contained within a 24-in. casing pipe. Additionally, most of the equipment had to be craned over the river from the

road using heavy equipment. The Insituform crew working on the installation had a jobsite roughly the size of a standard hiking trail.

The project was divided into two roughly 600-ft shots. The first installation started upstream at a sand trap structure being rehabilitated by EZ. The access to the first shot required a temporary ramp to be built from the park access road down to South Boulder Creek. An intermediate pit was dug for the second CIPP installation. Inversion of the second shot was completed quickly due to the 75-ft slope, but careful attention had to be given as there were a number of 11 degree bends down the line. The CIPP portion of the project was completed in three days to the client's satisfaction.

The flood of September 2013 came with a fury throughout the State of Colorado, causing $1 billion in property destruction and the loss of eight lives. In the aftermath, sustainability and rebuilding of potable water structures were of utmost importance. The structures in the river water source were washed out and barely intact after the flood. Merrick designed the outlet works and sand structure modification project, awarded to EZ Excavation. EZ then contracted with Insituform to rehabilitate the raw water line which takes water from the structures down into town as a part of the municipal raw water system.

More than a year was spent planning and strategizing with not only FEMA, but also the Department of Environmental Quality (DEQ), Corps of Engineers, Division of Parks and Wildlife, City of Louisville, Farmers Reservoir Irrigation Company, Denver Water and Eldorado Springs Water. While the project was awarded in March 2014, construction did not start until the second half of 2015 to meet the state's request to have all four construction projects completed concurrently.

The steel water line was hand laid against the rocky walls of the canyon opposite the roadway in areas that were washed out. More than 40 years in age with a portion that had a 75-ft fall down the canyon, the project required Insituform to install a reinforced CIPP liner solution for pressure pipe and potable water pipe. This liner, the next generation of Insituform's glass-reinforced InsituMain product, is unique in that it uses a new specialized glass material from Owens Corning. Patents are pending on the specialized design.

Prior to construction, preparatory work performed by EZ included cutting a temporary roadway into the river for access to the structures and then carting equipment over to each structure via an excavator. Insituform also strung out hoses across the river using cabling systems.

Weather was also a challenge. When it finally came time for installation of the pressure CIPP in late December 2015, a massive snow storm brought snow and 10 degree temperatures throughout the canyon. The installation went on as planned, with the two shots installed over a three-day period.

The combination of difficult project location, working with multiple government entities, contractors and engineers during the planning process, inclement weather and the use of a next generation pressure pipe solution all contributed to making the Eldorado Springs pressure pipe project award-worthy.

NORTH DAKOTA:

Flood risk meetings set in 3 Souris River Basin cities (AP)

- Updated Oct 24, 2016

MINOT, N.D. (AP) — Meetings are being held this week to give the public an opportunity to comment on flood risk management alternatives for the Souris River Basin in North Dakota.

The U.S. Army Corps of Engineers and the Souris River Joint Water Resource Board scheduled meetings Monday in Mohall, Tuesday in Velva and Wednesday in Minot.

The corps says the study is a separate but parallel effort to a flood protection project. The corps earlier this year began what is expected to be a three-year study of permanent flood protection for the basin, an effort that could cost $1 billion.

A June 2011 flood caused by heavy spring snowmelt and rains damaged or destroyed thousands of homes and other structures in Minot and caused an estimated $1 million in damage in the region.

CALL 6: Dozens of Indiana officers deployed to North Dakota pipeline dispute, but who's paying? (RTV, Indianapolis)

Kara Kenney
6:00 PM, Oct 24, 2016

INDIANAPOLIS -- Dozens of Indiana police officers and sheriff’s deputies have been deployed to North Dakota, where thousands of people are protesting the building of a 1,200-mile pipeline.

The team from Indiana includes 37 officers from the Indiana Department of Natural Resources, Lake County Sheriff’s Department, Marion County Sheriff’s Office, Brookville Police Department, Griffith Police Department, Hammond Police Department, Michigan City Police Department, Munster Police Department and Schererville Police Department.

Four Marion County Sheriff’s Office deputies left on October 23 and return on November 7, according to MCSO spokesperson Katie Carlson. “The federal government pays for it through FEMA,” said Carlson.

More than 80 people protesting the Dakota Access pipeline were arrested Saturday during a demonstration where about 300 people gathered at a construction site in North Dakota and prompted law enforcement officers to use pepper spray.

John Erickson, spokesperson for the Indiana Department of Homeland Security, also said there is no cost for Indiana taxpayer.

“Professionals of all types can be deployed to other states through what is called an EMAC (Emergency Management Assistance Compact) request,” said Erickson. “They are only deployed when another state provides a request. When other states need assistance, we in Indiana evaluate and send help if possible, based on if we have the resources that fit the request.”

Indiana is acting as a "team player," as it helps North Dakota with security during the pipeline dispute.

"We do this because we may one day need help from another state. In the recent past, Indiana has sent a variety of public safety professionals at the request of other states, including emergency medical personnel, planners, public information officers, emergency management leadership, safety officers, liaison officers, etc," said Erickson.

FEMA-RELATED STORIES:

Why We Should Not Demonize Residents Who Refuse To Evacuate During Hurricanes (Washington Post)

By Jacob Deflitch

Washington Post, October 25, 2016

Predictions for Hurricane Matthew were reasonably good. Meteorologists, emergency managers and elected leaders effectively made the case that it was a dangerous storm. Evacuation orders were issued. Yet, some were ignored. And, where they were followed, some may have backfired.

Meteorologists and public officials sometimes seem shocked when residents are reluctant to evacuate. Sometimes we criticize those who refuse to leave. But it would be more constructive to better understand them.

The reasons for staying home are complex. They are frequently not due to ignorance or complacency, but a result of the enormous disruption and even hardship that vacating one's home presents. In other cases, they reflect a failure of meteorologists to characterize the range of dangerous hazards a hurricane poses, in addition to solely wind, which residents may not adequately appreciate.

It would serve meteorologists and other storm communicators well to try to see the situation through the public's eyes, recognizing that the public cannot be lumped into one, single group. Residents of coastal communities impacted by Hurricane Matthew are composed of different age, ethnic and income groups. Each has its own, unique story; and each group makes evacuation decisions challenging for different reasons.

It would also help meteorologists to identify the misconceptions that different audiences have about storms to sharpen future communication efforts.

To demonstrate the complexity and diversity of evacuation decisions, I made the drive from Stillwater, Okla., to coastal areas in Florida, Georgia and South Carolina to speak with residents.

I spoke with local residents in two separate situations: (1) locals who rode the storm out on Tybee Island, Ga., and (2) evacuees who were stuck in a traffic jam on U.S. Route 278 in South Carolina returning home after the storm.

In both situations, circumstances emerged that show why evacuation decisions are complicated.

Riding the storm out on a Georgia island

After reading a story that a number of residents of Tybee Island stayed behind, despite personalized calls from the mayor, I made the drive south onto the Island.

I spoke with five residents who rejected evacuation orders and stayed at their residences during the storm.

"We knew if we got off the island, we would have a hard time getting back on," said Karen Kelly, a Tybee Island resident.

Kelly said she was motivated to stay to help neighbors. She readied for the storm beforehand, bracing for power outages. She filled bathtubs with water and prepared food.

Kelly said she would probably make the same decision again. "If it's a [Category] 4 or 5, I am most likely to leave. If it's a 3 or less, I am most likely staying," she said.

Two other residents I spoke to chose not to evacuate based on the predicted storm intensity. Calvin Ratterree, a bar owner on Tybee, said he would most likely not evacuate for a Category 1 or 2 storm. Barney Burke, another resident, said he would leave only if peak winds were forecast to exceed 120 mph.

Only one of the residents I spoke to declined to leave because of a lack of confidence in the forecast. "When they first told us about the storm, we didn't think it was actually going to come up here," said resident William Mackey.

Gridlock returning home after the storm in South Carolina

A number of residents who followed evacuation orders regretted it, in hindsight.

On Sunday, Oct.10, after Matthew had passed, hundreds of residents from Beaufort County, S.C., found themselves stuck on U.S. Route 278, unable to return to their homes. Frustration reached a climax. Those I spoke with admitted that they may not evacuate the next time.

Their reasoning was not due to a poor forecast of Matthew, but instead, the evacuation process, specifically the return home. Multiple residents realized that their neighbors who never left home rode out the storm unscathed.

The residents who evacuated were envious of their neighbors, who did not have to deal with the hassle of the evacuation process, including the congestion on the return home.

Some residents mentioned that evacuation was financially taxing. Evacuation requires, at a very minimum, housing for multiple nights, dining and transportation to and from their destination. The cost to evacuate is considerable, and some simply are challenged to afford it.

Conclusions

Meteorologists are often too eager to label those who do not evacuate as complacent. Yet, these decisions are often shaped by burdensome past evacuation processes. Those who choose not to evacuate often have understandable reasons for remaining behind.

This is not to say that reasons for not evacuating are the most prudent or safe, but we need to try to understand how the public makes these decisions and try to make the evacuation process less onerous.

Through my discussions with residents, a trend in the responses became evident: A majority of the residents who stayed behind made their decision based on the hurricane category. That is, they put misplaced trust in the Saffir-Simpson scale, which rates a hurricane based on wind speed.

By focusing on the Saffir-Simpson scale, residents discounted the risks posed by flooding rain and storm surge, which the scale does not address. Meteorologists and emergency managers should be aware of the public's overreliance on hurricane category and consider deemphasizing it. Instead, they should stress the dangers from the full range of hurricane hazards in making the case for evacuation.

Most importantly, meteorologists and those who work with them must look at evacuation through the eyes and experiences of coastal residents rather than through their own.

Scientists Are Bewildered By Zika's Path Across Latin America (Washington Post)

By Dom Phillips And Nick Miroff

Washington Post, October 25, 2016

RIO DE JANEIRO — Nearly nine months after Zika was declared a global health emergency, the virus has infected at least 650,000 people in Latin America and the Caribbean, including tens of thousands of expectant mothers.

But to the great bewilderment of scientists, the epidemic has not produced the wave of fetal deformities so widely feared when the images of misshapen infants first emerged from Brazil.

Instead, Zika has left a puzzling and distinctly uneven pattern of damage across the Americas. According to the latest U.N. figures, of the 2,175 babies born in the past year with undersize heads or other congenital neurological damage linked to Zika, more than 75 percent have been clustered in a single region: northeastern Brazil.

The pattern is so confounding that health officials and scientists have turned their attention back to northeastern Brazil to understand why Zika's toll has been so much heavier there. They suspect other, underlying causes may be to blame, such as the presence of another mosquito-borne virus like chikungunya or dengue. Or that environmental, genetic or immunological factors combined with Zika to put mothers in the area at greater risk.

"We don't believe that Zika is the only cause," Fatima Marinho, director of the non-communicable disease department at Brazil's Ministry of Health, said in an interview.

Brazilian officials were bracing for a flood of fetal deformities as Zika spread this year to other regions of the country, Marinho said. However, "we are not seeing a big increase."

Researchers and health officials remain cautious about the lower-than-expected numbers. The latest studies have found more evidence than ever that the virus can inflict severe damage on the developing infant brain, some of which may not be evident until later in childhood.

But researchers so far have learned a lot more about Zika's potential to do harm than its likelihood of doing so.

Scientists at the U.S. Centers for Disease Control and Prevention are closely watching Puerto Rico, which has reported more than 26,800 cases of Zika. More than 7,000 pregnant women could be infected by the end of the year, according to the CDC.

But although the outbreak has spread this year to more than 50 nations and territories across the Western Hemisphere, U.N. data shows just 142 cases of congenital birth defects linked to Zika so far outside Brazil.

In Colombia, a country praised for some of the most rigorous standards for detecting and monitoring Zika, the government has tallied more than 104,000 Zika cases, including nearly 20,000 pregnant women. It has the second-highest number of Zika infections in the world after Brazil.

But so far, Colombia has had just 46 babies born with congenital nervous system damage linked to Zika. And the number of new Zika cases in Colombia has fallen so sharply that the government in July declared the epidemic over, saying the virus will remain a threat but no longer spread rampantly.

Colombia is investigating 332 more cases of birth defects for a possible Zika link, but health officials there had been prepared for many more.

"Our focus on Zika has changed," said Ernesto Marques, an epidemiologist at the University of Pittsburgh who is working on a project to develop a vaccine for the virus.

Marques is from Recife, the city in northern Brazil hardest-hit by the Zika outbreak, and he was part of the team that first identified the virus as a possible culprit when deformed infants began showing up "almost every day" in Recife's maternity wards at this time last year.

At the time, Marques said scientists were focused on identifying Zika as a "causal agent" for the sudden increase in birth defects, especially microcephaly, in which babies are born with undersize heads and often calcified brain tissue.

"Now we've settled on Zika as the smoking gun, but we don't know who pulled the trigger," said Marques, speaking from Recife, where he is working with government researchers.

One of the leading theories, said Marques, is that northeastern Brazil's last dengue outbreak was in 2003 — relatively long ago — so perhaps mothers in the area had relatively fewer antibodies to cope with Zika, which is spread by the same mosquito.

"Sexual habits and hygiene may also play a role," he said, explaining that researchers are looking at whether sexual transmission can infect the uterus and placenta with the virus, potentially exposing the fetus to elevated risk.

"We suspect the villain has an accomplice, but we don't know who it is," Marques said.

Many question marks

Researchers caution that it will take years to fully identify the dangers Zika poses to babies' brains, and microcephaly is just one threat from the virus. A Zika infection poses the greatest danger toward the end of the mother's first trimester of pregnancy, and its harmful effects on fetal development may not be apparent at birth or manifest themselves until later in childhood.

Marcos Espinal, the director of communicable diseases and health analysis at the Pan American Health Organization, said U.N. health officials were right to put the world on high alert earlier this year because so little was known about Zika.

"If you don't know about something, you better take preventative measures to minimize the risks," Espinal said. "So maybe the fact that we don't have a lot of microcephaly means that we were doing our jobs" and helped women avoid infection.

At the peak of Zika alarm earlier this year, several Latin American countries urged women to delay pregnancy. El Salvador's government recommended waiting two years. The widespread anxieties produced by the outbreak may have led to an increase in abortions in Latin America, a region where the procedure is widely banned. Anecdotal evidence suggests more women have been quietly terminating pregnancies over worries that their babies might be deformed.

This may also help explain the relatively low number of babies born with Zika-related birth defects outside northeast Brazil.

"It is very difficult to work out truly what is going on," said Oliver Brady, an epidemiologist at the London School of Hygiene and Tropical Medicine who has been working with the Brazilian government on Zika.

Until last year, Brazil reported about 150 cases annually of microcephaly, a condition that can also be caused by diseases like herpes and syphilis. Claudio Maierovitch, a former senior Brazilian health official responsible for monitoring Zika when the epidemic started, said the figure was probably an undercount, and around 500 cases of microcephaly a year pre-Zika would be a more accurate number.

When the microcephaly outbreak was first identified in Brazil, spooked health officials erred in the other direction and overdiagnosed the condition. Eventually, nearly 5,000 newborns that had been diagnosed with possible microcephaly turned out to be fine, according to Marinho, the Brazilian health official.

But that still leaves at least 2,000 instances of Zika-related birth defects in the country, with an additional 3,000 cases under investigation.

A big problem in determining whether Brazil has a higher rate of Zika-related birth defects is that no one is sure how many people caught the virus in 2015, when it was little known and widely confused with dengue.

"The fact is we don't have any idea how many cases there were," said Maierovitch, meaning it's possible Brazil's birth-defect totals could simply be a reflection of a Zika outbreak that was far more pervasive than anywhere else.

An eye on U.S. territory

Puerto Rico is the next laboratory for understanding Zika. CDC researchers are watching for Zika-related birth defects on the island, but the mainland United States appears to have averted a major outbreak so far.
